

Official Report of the Games of the XXIIIrd Olympiad Los Angeles, 1984

*If there must be one purpose
for why I play
let it be that
I am given the chance
to be part of a concept that is bigger
than myself,
something that works according
to the trust
each human element has in the other,
an idea that is going after what
will make of the whole
bigger parts . . .*

*Official Report of the
Games of the
XXIIIrd Olympiad
Los Angeles, 1984*

*Volume 1
Organization and Planning*

Published by the Los Angeles Olympic Organizing Committee
Paul Ziffren, Chairman
Peter V. Ueberroth, President
Harry L. Usher, Executive Vice President/General Manager
Richard B. Perelman, Editor-in-Chief

Readers should note the following regarding the text of the Official Report:

- Use of male pronouns in the text imply the female throughout as appropriate.
- Measurements have been stated as actually made or used; thus, most measurements are stated using the U.S. Customary System. Interested readers should find little difficulty in converting the measurements presented to metric measurements if desired.
- The editors followed a general policy of identifying individuals by function rather than by name. It was felt that this would provide a clearer understanding of the interaction between departments and organizations and more properly reflect the collective accomplishments made during the organizing and operational periods.

Preface

The compilation, design and publication of this *"Official Report of the Games of the XXIIIrd Olympiad"* has been a labor of love for the small corps of designers, editors, writers and others who worked to produce it. In view of the short time in which it was compiled, written, designed and printed, the *"Official Report"* is only a mere summary of the organizing, planning and staging done between 1979 and 1984 for the second Olympic Games held in Los Angeles.

Readers looking for interesting anecdotes, colorful stories and wistful recollections will probably be disappointed. We have tried to recreate the story of the LAOOC and the organizing effort in a concise but instructive manner, concentrating on the actions and decisions rather than on the interplay of organizations and personalities. The goal was to summarize the LAOOC's procedures in determining which facilities to use and services to provide, and to describe the actual delivery of those services during the time of the Games. Our approach was similar to that of an historian or textbook writer, rather than a novelist. Inevitably, individual credit was overshadowed in the historical process of describing what happened and why. This was consistent with the underlying assumption that those who organized the Games did so for the collective good of the event, rather than for individual attention and glory. Interested parties will find the names of the LAOOC staff members as at the end of the planning period listed in Chapter 39.

In our quest for details to recount the complexity and enormity of the Olympic Games as an international

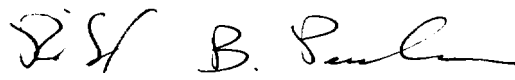

event, we have made liberal use of photographs, specially-commissioned drawings and waves of statistics and summary tables. Most important among these are the venue architectural drawings and accompanying tables. They present in precise detail the physical elements provided for the operation of each major competition and support site. By reviewing the physical provisions required to stage our Games, future Olympic organizers and other interested parties may be able to better determine the scope of their own endeavors. Because the detailed architectural review extends to all competition venues, organizers of major single-sport events, such as world or regional championships, may also find the data useful.

Attention has also been paid to the organizational structure during the time of the Games. Those interested in the management structure of the LAOOC and its program to control the development process are encouraged to review Chapter 3 in its entirety, those sections of Chapter 30 dealing with the commissioner program and the sections of Chapter 37 dealing with the venue development process. The difficult shift from organization by central departments to a venue-specific structure was made possible by the strong commissioner program and the clear delegation of authority to the commissioners through the *"Commissioner's Mandate for the Preparatory Phase"* and the *"Commissioner's Authority Memorandum."* Each chapter of the *"Official Report"* reviews the work of the central departments and their functions. To create this report, raw data was gathered from each department, more than 20,000 pages of internal after-action reports were reviewed and finally the material was condensed into the final manuscript. Our staff of editors and writers worked diligently to produce the manuscript in a remarkably short four months. Drawings,

photography and special art were produced and selected over the same period. Design and printing took roughly seven months. We hope the result will be judged worthy of the Games that preceded it.

We owe thanks to many people who gave their time long after their responsibilities to the Organizing Committee had ended. Those who have contributed most directly are listed on the staff page at the back of both volumes. But the greatest thanks must be given to those who came to compete and, most of all, to those who came to work in support of the Games of the XXIIIrd Olympiad. Again, we must recognize the unfailing support of the people of Southern California, who willingly gave of themselves to volunteer for thousands of positions which helped to make the Games successful.

We have written of the agony of the organizational process and the rejoicing in the success of the final product. Our report recounts an extraordinary period of achievement and intensity culminated by the great quadrennial festival of sport which is the Olympic Games. The organizing effort was difficult but manageable, required both tenacity and vision and was, in the end, frugal, but hardly "spartan." In the following pages, you will find our story.

Richard B. Perelman
Editor-in-Chief

Los Angeles, California
June 1985

1

Reflections

There was so much that was so good.

None of us who organized the Games of the XXIIIrd Olympiad can forget the moments of power and wonder compacted into those 16 days of ceremonies and competition that went by so swiftly. The brilliance of the athletes combined with a great outpouring of support from tens of thousands of volunteers and paid staff who came from all over the city of Los Angeles, the state of California, across the USA and even from foreign nations to assist in a great undertaking, made the Games a greater success than anybody could have imagined.

Who did not feel a shiver of excitement when the trumpeters began the fanfare to signal the beginning of Opening Ceremonies? Who didn't share the smile of the effervescent Mary Lou Retton as she jumped, tumbled and vaulted her way through the individual all-around competition? How many felt the pain of Gabriela Andersen-Schiess as she completed the women's marathon race?

All of this and much more was the fruition of an idea spawned by a small group of dreamers who began to imagine the return of the Games to Los Angeles back in 1939. Then, the memory of the Games of the Xth Olympiad in 1932 was fresh, as was the astonishing news that in the middle of a worldwide depression, the Games had been concluded with a surplus of more than \$1 million. But it was 52 years between Olympic Games in Los Angeles and the dreamers suffered many disappointments before an agreement to again host the Games was signed in the Roosevelt Room of the White House on 20 October 1978. The task undertaken then was almost as unbelievable as an Olympic Games with a financial surplus in the middle of the Depression: the Games of the XXIIIrd Olympiad would be organized entirely by a private corporation, separate and apart from local or federal government.

The skeptics were many and they would have laughed had they been present when, on the first day of the lease, the LAOOC's office was closed and locked because the Organizing Committee had no credit rating. Yet six months from that date, a \$225 million agreement for U.S. television rights was signed with the American Broadcasting Companies (ABC), ensuring a firm financial base for the Games and a windfall for the Olympic Family which realized more than \$33 million from that agreement alone.

The small group called the LAOOC began to grow slowly and as it did, preparations for the Games progressed. The triumphs and failures of past organizers were examined and it was clear that most had operating surpluses which turned into deficits because of overwhelming construction costs. So the LAOOC set out to contract for the use of existing sports arenas and stadiums all across Southern California. Already rich in sports facilities, the Los Angeles area proved capable of providing suitable venues for the Games' 21 competition sports and two demonstration sports. Two stadiums were available to seat 90,000 or more spectators. Five major sports halls—two in Los Angeles and one each in Anaheim, Inglewood and Long Beach—joined the LAOOC to stage a special Olympic event. One by one, homes were found in which the competitions could be carried out.

Funding for the Games also required new thinking. The primary sources of revenue—government funding and lotteries—were either unavailable or, in the case of the lottery, illegal in the state of California. Commemorative coin programs had provided large sums to prior organizers, but the possibilities of introducing a successful program appeared remote in a country that had not minted a commemorative coin since 1954. Thus, the previously trivial revenue sources of television rights, ticket sales, sponsorships and supplierships had to be investigated. The success of the agreement with ABC paved the way for increased television revenue far beyond the

projections of most observers; development of the sponsorship program was not far behind.

Rather than allow a wide variety of sponsors, suppliers and licensees with the attendant confusion and over-commercialization, the LAOOC strictly limited the number of corporations and firms which were granted "official" sponsor or supplier status. Sponsors were required to make much larger contributions to the Games—in money and materiel—than in previous years and, in return, their exclusivity and prestige in association with the Olympic movement was guaranteed. Although 50 sponsors had been planned for, the actual number totaled just 29. The total number of sponsors, suppliers and licensees combined had exceeded 150 at both Montreal and Moscow, with more than 300 at Lake Placid for the Olympic Winter Games in 1980. The LAOOC had less than one hundred.

The planning period in 1981 and 1982 was difficult. With little contact between the LAOOC and its predecessors for the Games of the XXIInd Olympiad, the organizers were on their own. Staff was added to do concentrated work in a specific area, then asked to perform completely unrelated tasks in another area because additional development was needed. This flexibility in assignment proved to be a hallmark of the LAOOC's management strategy over the next two years.

The most memorable feature of the planning period was the completion of major tasks. The first world-class velodrome in the western United States was completed on time and under budget in 1982, as a gift of one of the sponsors who wanted to leave a lasting legacy to the Southern California area. The swimming pool at the University of Southern California was another sponsor gift. It, too, became part of the legacy of facilities left to Los

Angeles by those who wanted the Games to be more than a two-week sporting event. Each facility was conceived and constructed for permanent use. The velodrome is used for training by cyclists from all over the country and competitive cycling is being introduced to an entire generation of Los Angeles residents. The swimming facility, while not an architectural monument, is an excellent outdoor facility which can be used year-round, thanks to the temperate Southern California climate.

As the construction projects were completed for those few facilities for which existing arenas or stadiums were not available, the planning progressed to the testing stage. The LAOOC assumed that volunteers would be effective in the management and operation of the Games, but this was not a certainty. The LAOOC further assumed that the temporary nature of many of the support facilities would not detract from the dignity and stature of the Games, but few were really sure. The Games needed a shakedown; an opportunity to check the reality of the planning which had transpired so far.

The first trial came at the January 1983 meeting of the IOC Executive Board and the NOCs, at which representatives of 141 nations gathered to discuss the Games and see what the LAOOC had planned. Volunteer drivers, hosts and hostesses performed admirably and experimental design concepts were well received; the meeting was a success. The next step was to test sports events.

Perhaps the most over-managed sporting event in history began on 7 May 1983. The III FINA World Water Polo Cup was held at Pepperdine University before some modest audiences and almost all of the LAOOC's department managers, each of whom had hands-on roles in areas they would manage 18 months later. Senior managers planned months for an operation that would cover a one week period. Although the LAOOC discovered how much there was to learn, the competition went relatively smoothly and the volunteers worked well; another success.

Imbued with confidence from the water polo event, LAOOC next tested new facilities that had been built specifically for the Games. The 1983 events in cycling, swimming, diving and synchronized swimming were both exhilarating and frustrating. Exhilaration came from the flawless performance of the physical facilities and a world record in the 800-meter freestyle by Soviet Olympic champion Vladimir Salnikov on the first day of swimming competition. Frustration came from the lessons which were learned through hard experience: understaffed concessions on some days, problems with parking on other days and equipment and supplies that didn't always arrive as planned. LAOOC staff members learned while they worked. All through these events, however, the volunteers proved their worth again and again and began to assume management roles at some of the events.

With the experience already gained and a growing desire to test new ideas, the LAOOC planned a 1983 event in gymnastics—the most complex of the sports to be staged at indoor arenas. The vibrant Look which had developed slowly through the cycling and swimming events blossomed inside Pauley Pavilion in an explosion of color which lent a festive atmosphere to the competitions. Two more events were held and by the end of the year, the organizers were sufficiently confident that their major assumptions were correct and that the final stage of planning could proceed.

Since the next six months were spent in the revision and finalization of detailed plans for each site, the time passed quickly. After the Olympic Winter Games in February 1984, at Sarajevo, the focus turned to Los Angeles. The planning was complete and the procurement of people and materiel began in earnest.

On 8 May, the Organizing Committee watched the beginning of the unprecedented 82-day, 15,000-kilometer torch relay and was informed of the end to any possibility for participation by the Soviet Union in the Games. It was at

once the brightest and darkest day for the LAOOC, but the boycott gathered support only from nations already aligned politically with the USSR, and their athletes suffered in silence. The torch relay overwhelmed an entire nation as it moved across the country toward Los Angeles, drawing crowds numbering in the hundreds of thousands in major cities and hundreds in small towns whose total population was only slightly larger than the number who turned out to see the Olympic flame pass by.

Inevitably, it became clear that those who could come, would. By the entry deadline of 2 June, a record 141 nations affirmed their participation in Los Angeles. The large turnout of nations spoke eloquently to the validity of the professed fears of those who said they must stay away for reasons of security and confirmed the desire to celebrate the festival of man and sport which is the Olympic Games.

The pace quickened daily in the Olympic city and people turned out by the thousands to sign up for Games positions from management to food service worker. Each had his or her own reason to want to play a part in history, but each recognized the special nature of the event. It happened in their city only once in the lives of their grandparents and parents; it might not happen in Los Angeles again, ever. It was a chance to be part of something that was bigger than themselves, bigger than the athletes and venues and villages put together and more than all the words that were written about the Games. It was going to be special and they wanted to make it that way.

The theme changed from playing a part in history to making history. The visible signs of the Games increased and with it the excitement within the city. The colorful flags and banners that decorated the streets of Los Angeles and many surrounding communities were

Olympic. No one had to say so; no symbols were needed on the decorations to signify the importance of what they represented. The vibrancy of the colors flying freely in the breeze epitomized the strength and vigor with which the host city had prepared itself for the visitors from foreign lands. Welcome!

Everyone was smiling on 14 July when the villages at UCLA, USC and UC Santa Barbara opened. The first athlete to register at the UCLA Village was Zou Zhenxian, a triple jumper from the People's Republic of China. His presence marked a return to the city where Chinese participation in the Olympic Games had begun 52 years earlier. Print journalists poured into Los Angeles and found a home at the Main Press Center, a huge complex which spanned across an entire city block. Those who wore LAOOC's staff uniforms looked at each other with considerable amazement: the time had actually come!

The pace was frantic at all of the sites as the preparations concluded and the competition management began. Final training was underway and the Opening Ceremonies loomed just ahead.

It was a bright, warm day on 28 July 1984. The anticipation and excitement was almost unbearable. For Los Angeles, it was a day unlike any other before it. For the spectators, it was an opportunity to attend the hottest show in town—even though it hadn't opened yet and was for one performance only. For the athletes, it was their moment to shine—they were all winners on this day. For the organizers, it was the realization of a dream which few had believed just five years before and which now seemed impossibly ready to come true.

Then, it began. The chill of emotion still overtakes those who remember the church bell which signaled the start, the Rocket Man who welcomed the world from the skies and the beginning of the "*Fanfare Olympique*." In a wonderfully stunning moment, 88,000 spectators welcomed the athletes, guests and officials of 140 nations with a card stunt that transformed the Coliseum into a collage of national flags united

under the Olympic rings. Welcome to the athletes! Welcome to our city! Welcome to America!

So much happened and so little can be described in words. How many cheered themselves hoarse as the athletes marched into the stadium, from Greece and China and Romania and from the United States? How many gasped in disbelief as Rafer Johnson climbed a staircase that escalated with him to light the Olympic flame? Who was not moved to tears when Vicki McClure and 11,000 athletes, performers and spectators held hands, swayed and sang "*Reach Out and Touch*."

For the thousands of athletes, officials and spectators—joined by 2.5 billion television viewers around the world—the Games could not have opened more brilliantly. Then, the competitions began. Basketball, boxing, cycling, equestrian and eight more sports began on 29 July and continued non-stop through the gathering darkness on the 12th of August when a weary Carlos Lopes crossed the finish line of the men's marathon in an Olympic record 2:09:21. There is so much we want to remember.

The grace and power of Romania's Ecaterina Szabo. The powerful exhilaration of the USA's Jeffrey Blatnick, who overcame Hodgkins disease, then burst into tears after winning a gold medal in Greco-Roman wrestling. The victory of shooter Xu Haifeng, whose gold medal in the free pistol competition was China's first-ever Olympic medal and the first medal awarded at the Games. The glowing smile of FRG high jumper Ulrike Meyfarth, who won a gold medal in the same event a dozen years before in Munich as a girl of 16 and repeated her victory as a woman in Los Angeles at the age of 28.

Reflections

Who can forget the brilliance of Carl Lewis, who stormed to four gold medals like his predecessor, Jesse Owens, some 48 years earlier? Or the grace of diver Greg Louganis off both the springboard and platform? Or the emotional victory of marathoner Joan Benoit, who overcame not only her competition, but the many who said women could not or should not compete in the event.

For the LAOOC, it was a time of tension. The planning was over and although the Games ran smoothly, day after day, it was the waiting that was difficult. What might go wrong? What else can be done to make things better? As it turned out, the efforts were more than good enough.

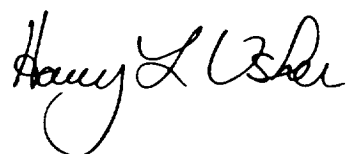

People wanted to be part of the event. Even if they had no tickets, they came for an afternoon of sun and pin-trading in Exposition Park. Those who wore the colorful uniforms of the LAOOC, by and large, were volunteers taking vacations or just quitting their jobs to work tirelessly to stage the Games. The competition took place over an area of thousands of square miles—in small high schools used for training sites and in giant stadiums like the Rose Bowl, where more than 100,000 people gathered to watch France and Brazil duel for the football gold medal. There was an intensity, a strength of will, an esprit de corps, which ensured the successful outcome of the Games.

It was a dream and, like all dreams, it had to end. The Games drew to a close with Lopes and his fellow competitors. The Closing Ceremonies flickered brilliantly, then concluded, as did the Olympic flame. On the morning after, construction crews began dismantling the physical elements of the Games to return Los Angeles to its pre-Games appearance. Soon gone were the athletes, the banners, the massive magenta gateways and the light traffic. The Olympic holiday was over.

But the dreamers had their day, and, best of all, they were able to share it with so many of us. We laughed and cried and screamed for our favorites for more than two weeks and never felt sorry. We were part of something so much bigger than ourselves and were so much better for it. We played our part in history. The dreamers, the organizers, Los Angeles, the United States and 140 nations proved the relevance of the Olympic movement in today's world and validated the difficult work of the International Olympic Committee, the International Federations and the National Olympic Committees.

Good luck to our brothers in Seoul and Calgary, where the next Games will be staged. Good luck to the IOC and its partners in the Olympic movement. Congratulations to the athletes who came, the staff who endured and the volunteers who gave so joyously of themselves to make so many proud of Los Angeles. Only a few can understand the true depth of your gift to a city, a country and a movement which means so much to our troubled world today.

Thanks.

2

Award of the Games of the XXIIIrd Olympiad

Prior to 1984, only two cities had ever hosted the Olympic Games twice—Paris in 1904 and 1924 and London in 1908 and 1948. Los Angeles thus became the third city to enjoy this honor. That the Games returned to Los Angeles was not an accident nor was it the result of a sudden inspiration on the part of civic and sports leaders in Los Angeles. Instead, the return of the Games was the result of a half century of planning, hard work and continuous effort by a large number of determined individuals and organizations in the city. Civic, business, labor and sports leaders all contributed to the return of the Games to Los Angeles in 1984.

2.01 Impact of the Games of the Xth Olympiad

The most amazing fact about the 1932 Olympic Games was that they were extremely successful despite the worldwide economic depression. Thirty-seven nations sent a total of 1,408 athletes to compete in the Games. The competitors competed in 135 events in 14 sports, two demonstration sports and cultural and

arts competitions at nine different venues. A total of 1,247,580 spectators bought \$1,246,580 worth of tickets, which ensured that the Games would raise enough money to pay back the state of California for the one million dollar bond issue approved in 1928 to finance the Games.

The Games of the Xth Olympiad continue to be remembered for its innovations. The Organizing Committee of the Xth Olympiad (known as the XOC) constructed the first Olympic village in Baldwin Hills at a cost of \$500,000. The women had their own village nearby in the Chapman Park Hotel. The Organizing Committee also introduced simplified entry forms and instantaneous transmission of results over telex lines to radio stations and newswire services.

The economic impact of the Games of the Xth Olympiad was considerable, particularly in light of the economic problems of the era. With the monies raised through the sale of tickets and the salvage of the Olympic village and sale of its bungalows, the XOC retired the California State Bond and distributed the remaining surplus to the city and county of Los Angeles.

The Games resulted in a tremendous rise in prestige for the city of Los Angeles as the city successfully hosted its first major international

activity. The city did acquire a number of international-quality sports facilities, including the refurbished Coliseum, the Los Angeles Swim Stadium, Long Beach Marine Stadium and a renovated Olympic Auditorium. The Games of the Xth Olympiad, most importantly, inspired many youngsters to become involved in sports competition and large numbers later competed in the Olympic Games themselves. Finally, the Games of the Xth Olympiad inspired many business, civic and sports leaders to dream of bringing the Olympic Games back to Los Angeles. Thus 1932 was both a beginning and an end of an era, one upon which Angelenos built their Olympic dreams and plans.

2.02 Formation of the Southern California Committee for the Olympic Games

With the dissolution of the XOC in 1933, a six year period passed before Angelenos seriously thought about bringing the Olympic Games back to Los Angeles. Then in 1939, Angelenos created a new organization, the Southern California Committee for the

Olympic Games (SCCOG). In the following decades, the leaders of the SCCOG continually campaigned for a return of the Olympic Games to Los Angeles. Despite a long series of setbacks, the SCCOG leadership maintained its ardor and eventually achieved the original goal of hosting a second Olympic Games in Los Angeles,

The original proposal to organize a group to bid for the Olympic Games in Los Angeles a second time was the indirect result of correspondence dispatched by Avery Brundage, at the time president of the American Olympic Association and a member of the IOC. In his letter, which he wrote 20 November 1938, Brundage suggested that the Southern Pacific Association of the Amateur Athletic Union might be of assistance to the Olympic movement. In the final paragraph, he recommended the formation of a Southern California Committee for the Olympic Games. The initial organizational meeting was held late in 1939. As incorporated, the SCCOG had three purposes—to sponsor athletic events in the Los Angeles area in order to raise funds for amateur athletics; to contribute to the United States Olympic Fund; and to maintain contacts with the IOC for the purpose of soliciting the IOC's approval of holding the Olympic Games in Los Angeles again.

1 Opening Ceremonies of the 1932 Olympic Games were held in the newly built Los Angeles Memorial Coliseum.

In September 1939, this new committee wired Avery Brundage and proposed that Los Angeles be considered as the site of the 1940 Games. Following the cancellation of the 1940 Olympic Games by the IOC, the SCCOG turned its attention to promoting sports events and raising funds for its campaign to return the Games to Los Angeles. The SCCOG staged the highly successful Los Angeles Coliseum Relays in track and field from 1940–1968, which continued as the Compton Relays from 1969–1972. At its peak, the meet drew 61,762 spectators and helped maintain local interest in a major Olympic sport.

2.03 Candidature as the United States city to bid for the Games from 1947-1972

The Southern California Committee for the Olympic Games continued to work to bring the Olympic Games back to Los Angeles throughout the late 1940s, the 1950s and the 1960s. In 1947, the SCCOG organized a delegation led by Mayor Fletcher Bowron as chief spokesperson. This group traveled to Stockholm for the 1947 IOC Session and presented a proposal to host the 1952 Games. However, the IOC awarded the 1952 Games to Helsinki. The SCCOG sent a delegation to London for the 1948 Olympic Games and campaigned hard for the right to organize the 1956 Olympic Games, but the IOC chose Melbourne. Since several U.S. cities had bid for the 1956 Games, the United States Olympic Committee (USOC) passed legislation which established a screening process and gave the USOC the right to designate one city to make an official presentation.

For the next four Olympiads, the USOC chose Detroit over Los Angeles and other cities as the official U.S. representative. Yet these bids by the Southern California Committee for the Olympic Games were not totally in vain, for they kept alive the idea of bringing the Olympic Games back to Los Angeles. The constant bids allowed proponents of the Games in Los Angeles to continually update plans and budgets in case the USOC and the IOC accepted a proposal from the SCCOG. Internationally, these efforts did not go unrecognized. The IOC awarded the distinguished Olympic Cup Award to the SCCOG in 1965, in recognition of its contributions to Olympism.

While active in pursuing the Olympic Games, the SCCOG also worked to bring the Olympic Winter Games to California. The SCCOG helped to organize the California Olympic Commission, which successfully sought and acquired the 1960 Olympic Winter Games for Squaw Valley.

2.04 Bid for the Games of the XX1st Olympiad

In late 1967, Los Angeles Mayor Sam Yorty asked noted industrialist (and yachtsman) John Kilroy to chair a committee which would bid for the 1976 Olympic Games. The mayor's committee promptly began the most serious attempt yet to win the Games for Los Angeles. Known as the Los Angeles 1976 Olympic Committee (LA76), the group had a mixed public-private composition.

One important contribution of the 1970 bid was that it introduced two novel ideas to the international sports community. The proponents of the Los Angeles bid floated the idea of private financing for the Games. While relying on public funds in the official proposal, Kilroy was willing to resort to private funding if government monies proved to be unavailable. This idea represented a revolutionary departure from traditional Olympic practice, whereby government subsidies formed most, and sometimes all, of the funding for both Games preparations and operations.

Negotiations by the LA76 Committee also led to the establishment of an IOC television policy for the first time. The ability of local sports organizers to sign a three million dollar television contract for the Rose Bowl American football game on New Year's Day convinced committee members that a contract well in excess of ten million dollars was realistic.

In addition to its forecast of greater television revenues, the LA76 Committee built its carefully budgeted proposal around the concept of using television revenues to finance the Games—a rather radical approach at that time. The LA76 Committee also forecast a profit of 12 million dollars. For the first time, Los Angeles was able to defeat Detroit in balloting by the USOC to select the U.S. representative. At the USOC meeting at Chicago, San Francisco actually turned out to be the closest domestic competitor, as Detroit lost its iron grip on the USOC nomination.

A large group of individuals headed by Kilroy and Mayor Yorty visited Dubrovnic, Yugoslavia, in October 1969 to make the official presentation. Surveys at the time indicated that Los Angeles was the probable, even inevitable, winner. Other cities bidding for the Games included Montreal and Moscow.

In the voting, however, Los Angeles was eliminated on the first ballot. The

results of the second ballot awarded the Games to Montreal, although Moscow had received the most votes on the first ballot. While the Los Angeles delegation was very disappointed, the efforts of the LA76 Committee did contribute to keeping the idea of another Olympic Games alive in Los Angeles. Valuable work had been done, both in developing a proposal and in soliciting international support.

2.05 Bid for the Games of the XXIIInd Olympiad

The importance of the 1974 bid lay in the fact that it kept the Los Angeles option before the IOC and demonstrated that Los Angeles continued to be interested in hosting the Games. Attorney John Argue stepped forward in 1972 to become president of the SCCOG and along with the new mayor of Los Angeles, Tom Bradley, organized a new attempt to win the Games. When the United States Olympic Committee (USOC) sent its routine letter to many U.S. mayors asking them if their city would be interested in hosting the Games, only Los Angeles responded favorably.

Argue and Mayor Bradley traveled to Vienna in 1974 with a delegation of Los Angeles political and business leaders to again present a proposal to the IOC at its annual session. However, the IOC passed over Los Angeles in favor of Moscow. Argue was not deterred, for he believed that a strong bid attempt in 1974 would strengthen the SCCOG's bid for the 1984 Olympic Games even if Los Angeles did not win the rights to host the 1980 Olympic Games. The final vote was extremely close, despite the fact that the IOC had never assigned two consecutive Olympic Games to the North American continent.

The failure to win approval in 1974 ended an intermediate period of Olympic history for Los Angeles. Leaders from Los Angeles had not only hosted but also had aggressively pursued the Games and had spent time and energy on their crusade. They believed that they were closer to their goal than ever before and redoubled their efforts. Their bid attempt in 1978 might have been routine, except for some major changes in the environment which radically altered several factors in the Olympic bidding formula.

2.06 Bid for the Games of the XXIIIrd Olympiad

Success once again crowned the efforts of Los Angeles in this third period, but not before a great number of major and potentially far-reaching changes had been made by both the leaders of Los Angeles and the IOC. The bid for the 1984 Games was a complicated affair, with many different groups and factions contending for influence in determining the exact nature and financial responsibilities of the 1984 Games. The taxpayers and

voters of Los Angeles expressed a great interest in the Games and their input helped Olympic organizers focus on a new, previously untried direction. The IOC, under great pressure, agreed to take on the risks of organizing the Olympic Games in an entirely new fashion.

The core of the Los Angeles proposals always had been to use existing sports facilities in order to minimize capital construction costs. This idea remained the central point in the 1978 Los Angeles bid. Given the runaway costs which plagued the organizing committee in Montreal, this position became even more important as it became clear that those cities which needed to build extensive new sports facilities could not hope to balance their budgets without extensive governmental funding. Taxpayer resistance to increased governmental expenditures at every level—local, state and national—reinforced this position.

The basic Los Angeles Olympic proposal had developed over a number of years. It had slowly come to include the idea that the Olympic Games should not cost the taxpayers any money. Voters wanted absolute, binding legal safeguards which would ensure that they and their children would not be taxed to hold the Games. In 1970, such an idea may have been too revolutionary, but by 1978, following the fiscal problems of Montreal, the idea could no longer be easily dismissed.

The bid for the 1984 Olympic Games began as a joint civic-private endeavor, as had been the case with the previous bids. The political structure of Los Angeles city government dictated that any city endeavor would involve strong City Council involvement, which meant in turn that the Council exercised an important role in the outcome of the Olympic bid. The IOC Charter required that a contract to host the Games be signed with a city government, so Council support was crucial to the bid process.

On 24 October 1975, the Los Angeles City Council moved that the City Administrative Officer (CAO) be instructed to update the 1980 Olympic Games cost-revenue study in anticipation that Los Angeles would seek the 1984 Olympic Games.

The Los Angeles campaign for the 1984 Games officially started on 14 April 1977. On that date, John Argue, president of the SCCOG, sent a letter to Mayor Bradley requesting his support of the SCCOG application to the IOC to host the 1984 Games in Los Angeles. Argue's letter advocated that a "spartan" Olympic Games be staged. While the early emphasis of Olympic supporters was on the term "spartan," it required time and the emergence

Award of the Games of the XXIIIrd Olympiad

of other interest groups to define "spartan" as a no-cost-to-taxpayers approach. Bradley relayed Argue's letter to the City Council along with an additional note of his own personal support. In his note, Bradley stressed that he hoped that a way could be found for the Olympic Games to pay for themselves. On 2 May 1977, the City Administrative Office released the long-awaited cost-revenue study in response to the City Council request. The report pointed out the various difficulties which potentially threatened to plague an Olympic Games in Los Angeles. The CAO, after a series of meetings with the Montreal Olympic Organizing Committee, estimated that Los Angeles would face a deficit of between \$200.5 and \$336.5 million should the city attempt to organize the Games. The CAO assumed that no federal or state subsidies, lottery funds or funds from the sale of commemorative coins would be forthcoming. The CAO's figures differed substantially from the budget which the SCCOG had presented and which had forecast a surplus of \$750,000.

Nevertheless, On 6 May 1977, two committees of the City Council, heard an official Olympic proposal by the SCCOG, and testimony from city officials including Anton Calleia, chief administrative assistant to the mayor.

Both committees recommended that the Council authorize the mayor to pursue the Olympic bid. On 12 May 1977 the Council voted 12-0 to accept these recommendations. Mayor Bradley formally petitioned the USOC on May 18 to designate Los Angeles as the U.S. candidate city for the 1984 Olympic Games. This procedure had become more complicated since 1974.

The rejection by voters in Colorado of Denver's bid to host the 1976 Winter Olympic Games had been an embarrassment to the USOC, since the IOC had already voted to award the Games to Denver. The resultant loss of prestige by the USOC in the international sports community led the USOC to tighten its application requirements for host cities. As a result, the USOC now wanted firm proof that the residents in any area of the United States that was bidding to host the Games actually favored holding the Olympic Games in their area.

Mayor Bradley received the USOC request in a letter, and promptly recommended on 31 May 1977 that a public opinion poll be conducted by an independent public opinion survey firm. While the USOC would have preferred a referendum, it was decided that a poll would be just as accurate and much more cost-effective from the taxpayers' point of view. At the time, six U.S. cities had indicated to the USOC that they were interested in holding the Olympic Games—Atlanta, Boston, Chicago, New Orleans and New York

as well as Los Angeles. New York City was the only candidate to ultimately mount a serious challenge to Los Angeles. The answer which the USOC expected about public opinion in Los Angeles was soon forthcoming. The Field Research Corporation (FRC) conducted its survey 2-10 August and polled 1200 city and county adult residents (18 or older).

Field designed the questionnaire to simulate a referendum on the Olympic Games issue. Interviewers first asked respondents whether they had read, heard or seen anything recently on Los Angeles and the 1984 Olympic Games. Then interviewers read a brief statement explaining that the city had made an offer to host the 1984 Games and that the purpose of the survey was to determine whether people in Los Angeles favored or opposed hosting the Games. Respondents then answered a question on whether they favored or opposed holding the Games. In order to ensure that the survey respondents would have equal opportunities to be informed about the issue, a set of arguments for and against the city's sponsorship of the Games was prepared from available sources, including newspaper accounts and city materials. Interviewers handed the respondents

these arguments on a printed card and asked the recipient to read the arguments. In order to control for sequence bias, the FRC rotated the order of presentation for the pro and con arguments. After exposure to both arguments, respondents again were asked the same favor or oppose question. The intention was to discover to what extent, and in what direction, opinion had shifted.

Following this question, interviewers asked a number of short questions in order to determine why a respondent opposed or favored the Games. A series of questions on financial options for the Games followed and the session ended with questions which focused on whether or not the respondent would attend any of the events.

The FRC survey released on 31 August 1977, indicated that 70 percent of the 1,200 people surveyed in Los Angeles supported the bid for the 1984 Olympic Games, however, only 35 percent were supportive if city or county tax funds would be required. The results also indicated that 44.6 percent favored the Games if state tax funds were used and 59.5 percent favored them if federal funds were needed. Without considering the financial issues, 30.4 percent of the respondents were very strongly in favor of the Games, 19.4 percent were strongly in favor and 20.2 percent were moderately in favor for a total of 70 percent. The poll reinforced the opinion that no public funds should be used to finance the Games.

L.A. Picked for Olympic Bid

Errant Judges: Way Sought to Ease Them Out

"The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior."

—Article III, Section 1, U.S. Constitution.

BY PHILIP HAGER
Times Staff Writer

WASHINGTON—A lawyer rose in U.S. District Court one day in Utah and began to present his case. He was somewhat taken aback when he heard the judge begin to hiss.

"Like a snake, he was going 'Ssssss' all the time I was speaking," the astounded attorney recounted later. "I never ever have been before a judge of this kind."

Such bizarre judicial performances strike some legal observers as falling considerably short of the "good behavior" standard imposed on federal judges by the Constitution. And critics of the courts say that instances of "bad behavior"—ranging from erratic conduct to conflict of interest—and physical or mental impairment—ranging from senility to alcoholism—too often go uncorrected in the federal judiciary.

The problem, they contend, is that there is no way to get rid of errant or impaired federal judges, short of the laborious process of impeachment, which has not been used on a federal judge in 40 years and has worked successfully only four times in U.S. history.

Wins Over New York; 'Spartan' Event Stressed

BY KENNETH REICH
Times Public Writer

COLORADO SPRINGS—Los Angeles was voted the official United States candidate city for the 1984 summer Olympics Sunday after a presentation that stressed a "Spartan" games conducted on a financially sound basis.

The designation by the U.S. Olympic Committee executive board allows the city—which hosted the 1932 Olympics—to bid for a return of the games before the International Olympic Committee in Athens next May.

With little international competition presently in prospect, Los Angeles is a solid favorite in Athens, although city representatives expect continued hard negotiating over details of financing and facilities for the games.

This probably will begin next week in Monte Carlo, where a small Los Angeles delegation to the convention of International Sports Federations will confront individual federation representatives who have traditionally been in the forefront of costly demands upon host cities.

But, based on the experience here over the weekend, Los Angeles officials will go to Monte Carlo encouraged in their belief that, as attorney John C. Argue of the private Southern California Committee for the Olympic Games put it Saturday, "We don't have to give away the store" to win the games.

Having resisted for the most part pressures from USOC officials to make major new commitments for publicly financed facilities, Los An-

members present being empowered to cast two votes.

Significantly, the vote came after Mayor Bradley and Gov. Brown stressed that Los Angeles wanted to turn the Olympics away from the spiral of increasing deficits seen in recent years, and after New York Gov. Hugh Carey had, by contrast, promised New York would put on "the greatest Olympiad in the history of the world" with New York state guaranteeing to pay any deficit.

Brown, who spoke first but has been tipped to the fact that Carey would make such a guarantee, cautioned the USOC board that "politicians come and go, guarantees by elected officials in one year may mean something quite different many years later, and the best guarantee of the commitment of any given city is its underlying economy."

Los Angeles, he asserted in a forceful closing presentation for the city, has an outstanding economy and the bedrock of that economy is "a private sector which is vibrant, which is growing, which in recessionary times, which in boom times, has been on an upward curve," and is not, he added, dependent on "the largesse of Washington or anywhere else."

The governor, summoned here at the last moment by Los Angeles representatives who had feared a pro-New York trend might set in, had arrived at 1 a.m. by chartered jet. He spoke to the USOC board shortly after 8 a.m.

After the board voted in a closed-

2 On 25 September 1977, the "Los Angeles Times" reports the USOC's choice for the 1984 Olympic bid.

5 Members of the USOC, LAOOC and Los Angeles city officials met with IOC officials in June 1978 and included (from left) F. Don Miller, Robert Kane, Los Angeles Mayor Tom Bradley, then IOC President Lord Killanin, John Argue, Anton Calleia and John Ferraro.

The USOC sent a nine-member delegation to Los Angeles to inspect the proposed Olympic facilities in mid-September. It toured the various proposed Olympic venues, concentrating on the proposed Olympic village sites at USC and UCLA. The tour convinced the USOC delegation that the two Olympic village option indeed was a viable concept. Los Angeles won official USOC approval at Colorado Springs on 25 September 1977 by a vote of 55-39. Atlanta, Chicago, Boston and New Orleans had dropped out of the bidding following their initial expressions of interest in June 1977, leaving New York as Los Angeles' only rival. The Los Angeles delegation stressed the need for a "spartan" Olympic Games conducted on a financially-sound basis. In the end, Los Angeles became the official U.S. candidate city for the third straight time. The SCCOG had focused its resources on gaining the approval of the U.S. Congress and the California State Legislature. Federal support was forthcoming through House Concurrent Resolution 368, which unanimously passed the House of Representatives on 6 October 1977 and the Senate on 7 October 1977. In California, an amendment to an existing bill was introduced which exempted the Olympic bidding procedures from the environmental impact reports required by the California Environmental Quality Act. The original bill failed, but the amendment was passed by a vote of

75-0 in the Assembly and 33-0 in the State Senate. It became law on 16 September 1977. Also introduced was Senate Concurrent Resolution 48, a resolution in support of the Games in Los Angeles. Introduced 21 June 1977, the Assembly adopted it the next day as did the State Senate. While the state of California remained hesitant about committing funds, it did provide the necessary political support at a time when positive signs of support were necessary to keep the bid preparations moving forward. Meanwhile, the IOC, in light of the financial problems suffered at Montreal and the resulting judicial inquiry into the financial affairs of the Montreal Olympic Organizing Committee by provincial and federal Canadian officials, voted at its 1977 session meeting in Prague to require that future city and federal governments both contractually commit themselves to assume all financial liability arising out of their organization of an Olympic Games so that the IOC would not be responsible for any potential cost overruns. However, the IOC found itself in a difficult position that limited its ability to maneuver. The IOC had become accustomed to choosing one city from among a group of applicants, each of which tried to outdo the others in offering facilities and services.

However, when Tehran dropped its bid in 1977, the field of cities seriously interested in hosting the Games shrunk to only one. On 31 October 1977, IOC President Lord Killanin announced that Los Angeles was the only candidate for the 1984 Olympic Games. The IOC Session scheduled for May 1978, would consider the Los Angeles proposal, which gave Los Angeles several months to refine its plans. Killanin visited Los Angeles early in November and held two days of talks 5-6 November 1977 with Los Angeles Olympic leaders. He also met individually with members of the City Council. On 13 January 1978, the SCCOG and the mayor's office jointly presented to the City Council a 149-page official reply to the IOC questionnaire. This proposal was spartan, both by name and in comparison to the bids of other cities in the past. It pledged that the city of Los Angeles would run the Games in a "prudent, businesslike fashion." The proposal also set the Athens IOC meeting as a deadline, after which the city's interest in the Games would lapse should the IOC fail to reach an agreement acceptable to Los Angeles. The city then submitted responses to the official IOC and International Sports Federations questionnaires in February 1978 under a cover letter from Mayor Bradley dated 25 January 1978. The reaction by the IOC and President Killanin was not encouraging to Los Angeles Olympic supporters. On 10 March 1978, Killanin wrote a letter that emphasized that the IOC would be

the final authority on all questions concerning the Games, and that the IOC would insist that Los Angeles assume total financial responsibility for hosting the Games. As the months rolled by and the IOC continued to hold fast to its position that Los Angeles would be financially responsible for the Games, opposition within the City Council continued to stiffen. The public debate in Southern California over the funding options and potential cost of the Olympic Games prompted the Los Angeles City Council to vote 11-1 on 6 April 1978 to place an Olympics cost-control measure on the November 1978 ballot. The passage of this amendment to the city charter was extremely important for the future direction and structure of the Olympic organizational efforts since it prohibited the expenditure of city funds without a legally-binding guarantee of reimbursement. The voters in Los Angeles overwhelmingly approved the Olympics cost-control charter measure in November 1978-74 percent voted yes. After 7 November 1978, other sources of financing had to be sought, since it was obvious that the city would not spend any of its tax revenues to organize the Olympic Games. The approval of Charter Amendment "N" served to officially guarantee that the Olympic Games would not be financed

3

4

5

Award of the Games of the XXIIIrd Olympiad

by government funds. Neither the state nor the federal governments had responded to a variety of overtures from Mayor Bradley regarding possible use of state and federal funds. By November, it was also quite clear that under the existing state and federal leadership, no funds would be forthcoming from state sources and probably not from federal sources for support of the Olympic Games.

The only available option was private financing, although the IOC had to be convinced that this solution was both possible and necessary. The passage of the cost-control charter amendment by the voters strengthened the hands of negotiators from Los Angeles in the discussions over financial responsibility by giving them a legal basis from which to resist the IOC's demands.

The SCCOG continued to play a leading role but the honor also brought additional burdens. It became evident that additional funds would be required in order to finance the bid by Los Angeles and make a formal presentation to the IOC and avoid relying on public tax revenues. A fund-raising luncheon was held that netted \$40,000 and a follow-up letter brought in another \$160,000. These funds allowed the bid to proceed without public expense. These funds helped pay the fares of those city officials who traveled to meetings with the IOC on behalf of the bid. The SCCOG had also funded the \$38,620 deposit to the IOC when the initial bid was submitted.

Without the efforts of the SCCOG, the bid might well have evaporated at this point, given increasing public resistance to the expenditure of any public funds on the Olympic effort.

The period from April to August 1978 was one of constant negotiation to amend the bid. Mayor Bradley had indicated in his 25 January letter that Los Angeles would be glad to meet with the IOC in order to clarify any questions the IOC might have regarding the Games. The first session between the IOC and Los Angeles delegations following the submission of the IOC questionnaire by Los Angeles officials took place at the Fiesta Palace Hotel in Mexico City from 9–11 April.

For the first time, it began to appear as if the IOC and Los Angeles might be able to agree on some major points. It was agreed that the Organizing Committee would be selected by Los Angeles, in consultation with the USOC. The USOC would be entitled to place the two IOC members in the United States, its president and its secretary-general on the Organizing Committee. The Organizing Committee would receive all revenue generated by the Games, except for one-third of the television rights fees. In addition, the future Organizing Committee was given the right to conduct its own contract negotiations with the U.S. television networks. The IOC could observe the negotiations at any time and had the right of final approval. The Los Angeles delegation was able to convince the IOC that because of the television expertise available in Los Angeles that it should handle the television negotiations.

The IOC also agreed to waive Rule 21, which assigned all proceeds from the Games to the IOC. However, the IOC did not agree to alter its stance on Rule 4—that the Games were to be awarded to a city and that the city would be financially responsible for the organization of the Games. Nonetheless, significant progress had been made in the Mexico City meeting and the parties involved signed a protocol which listed the decisions which had been reached. The lack of any explicit IOC commitment to surrender control over the cost issue by renouncing Rule 4 fueled the public and City Council debate in Los Angeles. Athens, Greece, was the next stop in the negotiation circuit. The IOC had scheduled its annual session for Greece and expected to select the sites for both the 1984 Olympic Winter Games and 1984 Olympic Games at its meeting.

In Athens, the IOC continued to hold fast to Rule 4 and to demand that the city unilaterally accept city and taxpayer liability. Searching for a way out of the impasse, the IOC recommended that Los Angeles seek an insurance policy that would protect the city against a possible deficit. Some of the Los Angeles delegation present in Athens had reservations about the possible success of such a venture but were eventually convinced that it was essential to obtain the award of the Olympic Games, even if only on a conditional basis.

By 18 May 1978, an agreement still had not been reached. Therefore, the IOC voted to conditionally award the Games to Los Angeles. The IOC added a provision that the city had until 31 July 1978 to sign a final agreement and abide by IOC terms or else the IOC would withdraw its provisional award and seek new bids. Progress, however slight, had been made and for that reason Athens was a milestone. Los Angeles at least had the Games. The IOC could still take them away and many items still needed to be worked out, but Los Angeles had a provisional franchise.

2.07 Agreement of the IOC with the city of Los Angeles, the Los Angeles Olympic Organizing Committee and the United States Olympic Committee

The IOC's continued insistence on Rule 4 unnerved city councilmen, many local media representatives and much of the general public in Los Angeles. This continuing controversy in Los Angeles over the bid led bid supporter and local public relations executive Hank Rieger to enlist support. After a telephone conversation with John Argue, who was still in Europe following the conclusion of the Athens meeting, Rieger coauthored a letter with David Wolper, a television and movie producer, and Rodney Rood, vice president of the SCCOG, and sent it to Mayor Bradley and the media. The letter of 25 May 1978, proposed the idea of a private negotiating committee. With the IOC deadline drawing near, Bradley named an elite, seven-man private blue-ribbon

6

7

committee to pursue the bid on 1 June 1978. The committee named itself the Los Angeles Olympic Organizing Committee, although it was commonly referred to as the Committee of Seven or the Blue-Ribbon Committee.

The change in strategy proved to have profound consequences. With one stroke, Mayor Bradley removed himself from the Los Angeles team and created a new, private sector group to handle further discussions and to investigate if the 1984 Games could be brought to Los Angeles on a financially acceptable basis. Selecting seven active proponents of Los Angeles' bid, the mayor gave a fresh start to the negotiations while at the same time stressing that Los Angeles was committed to a private sector Olympic Games which would not use taxpayer dollars. The new diplomatic team consisted of John Argue, Rodney Rood, David Wolper, Howard Allen, Justin Dart, William Robertson and Paul Ziffren.

The Committee of Seven quickly convened on 5 June and again on 12 June to develop an acceptable contract with the IOC. Unanimously, the new group declared that if a contract could not be obtained which guaranteed that the city would have no liability, then it would recommend that the Games not be held in Los Angeles. On 15 June the insurance committee of the Committee of Seven concluded that neither insurance nor surety offered a feasible alternative to the problem posed by Rule 4.

The LAOOC met with USOC leaders in New York on 18 June 1978 to discuss the bid. The organizers negotiated a memorandum of agreement which stated that the LAOOC would conduct the 1984 Olympic Games without financial liability to the taxpayers of Los Angeles. The USOC agreed to be jointly and severally liable with the LAOOC for all commitments entered into by the latter which related to the organization and performance of the Olympic Games. A further agreement stipulated that the profits from the Games would be split three ways, with 40 percent going to the USOC, 20 percent to the national sports governing bodies and 40 percent amateur sports in Southern California.

A meeting was then held with the IOC in Montreal on 19 June 1978, the purpose of which was to convince the IOC that a private group could organize the Olympic Games and that such a solution represented the only possible option for Los Angeles. The LAOOC and USOC representatives presented the IOC the memorandum of agreement which had been agreed upon in New York. The LAOOC delegation informed the IOC that the city of Los Angeles would not be a party to the contract and that the LAOOC would have full responsibility and financial liability for the organization and operation of the 1984 Games.

Unconvinced of the abilities of the private sector, the IOC's leaders still continued to insist in early July that the city of Los Angeles assume financial liability for the Olympic Games. This position finally led Mayor Bradley to decide that unless the city had no financial responsibility, the effort to

bring the Olympic Games to Los Angeles would have to be abandoned. Lord Killanin's cable to Bradley which rejected the proposed changes to Rule 4 increased opposition within the Council, caused continued public debate and finally led Bradley to deliver a letter withdrawing the city from the bid process to the City Council. While Council President John Ferraro deferred the withdrawal to the Council's Ad Hoc Committee on the Olympic Games, Bradley advised the IOC that the bid could not be continued unless the IOC changed its direction.

Within one day, Lord Killanin offered to reopen negotiations and proposed that the deadline for signing a final agreement be extended past the rapidly approaching end of July. Those few hours in mid-July 1978 were as close to a turning point in the campaign as there ever was, since it briefly appeared that the bid by Los Angeles was finally dead. The mayor's Blue-Ribbon Committee, meanwhile, continued to search for a partner which would guarantee to cover any potential deficit. The USOC was an attractive partner, since its long-standing relationship would tend to boost the IOC's confidence in its negotiating partners. A final agreement with the USOC required a series of meetings, but ultimately the USOC agreed to guarantee the Los Angeles position. Without that guarantee by the USOC, the Games might well never have come to Los Angeles.

Reaching an agreement with the IOC depended on the resolution of these financial issues, but there were also a number of other issues. The financial issue was actually a double one of fiscal control and liability—who would be in charge and who would be responsible in the case that a deficit resulted. Two secondary issues were those of the selection of an Olympic village or villages and the choice of the individual sports venues.

In the aftermath of Mayor Bradley's withdrawal letter, the IOC extended the deadline for agreement from 31 July to 21 August 1978. A meeting of the LAOOC with Bradley on 24 July 1978, reaffirmed the position that the bid effort would continue on the basis that the city taxpayers would not be financially liable.

By late August, the IOC was slowly coming to the conclusion that a private committee could and would organize a successful Olympic Games in Los Angeles. That new position was reflected in the IOC Executive Board vote on 31 August 1978 in Lausanne when it agreed to recognize the Los Angeles team and accept the terms offered by Los Angeles, subject to a postal vote of the IOC members. The IOC agreed to drop its insistence on Rule 4. Finally, on 8 October 1978, the IOC announced that its membership had approved the position of the Executive Board by a vote of 75-3 with seven abstentions.

Four days later, on 12 October 1978, the Los Angeles City Council ratified the pact by a vote of 8-4. Three members of the City Council were

6 July of 1978 is a difficult time for Olympic planners as (from left) Los Angeles Mayor Tom Bradley, City Council President John Ferraro and 'Blue Ribbon' committee members Howard Allen and John Argue discuss the Olympic bid with City Council members.

Award of the Games of the XXIIIrd Olympiad

absent. The vote was extremely close, since eight was the minimum number needed for passage, with the mayor adding key support during periodic discussions among council members. Once the IOC membership and the Los Angeles City Council had approved the contract, the parties arranged a formal ceremony in Washington, D.C., IOC President Lord Killanin and Los Angeles Mayor Bradley officially signed the contract on 20 October 1978, in the Roosevelt Room of the White House. In Los Angeles, members of the LAOOC and Los Angeles civic officials gathered at 1000 at the Los Angeles Memorial Coliseum to light the stadium's torch.

The decision by the Blue Ribbon Committee to bring the USOC into the negotiations as a full partner was made in June 1978. However, a basic agreement was not consummated until 10 December 1978 at Colorado Springs. The parties agreed that 75 percent of the Organizing Committee and its Executive Board would be nominated by the original committee members and 25 percent by the USOC. Along with procedural safeguards for the financial protection of both parties, an agreement on the division of any surplus was concluded with 40 percent to go to the USOC, 20 percent to U.S.

national governing bodies and 40 percent to the LAOOC for the development of youth sports programs in the Southern California area. Soon after, the seven members of the LAOOC named 52 additional individuals to the Board of Directors of the Organizing Committee after consulting with Mayor Bradley and others. This group met for the first time on 15 February 1979 and the 61 members elected John Argue as initial chairman and Paul Ziffren as initial secretary.

The parties signed the final contract on 1 March 1979. Signatories included Comte de Beaumont of France, head of the IOC's Finance Commission, and IOC Director Monique Berlioux for the IOC, USOC President Robert Kane and Executive Director F. Don Miller for the USOC and Rodney Rood for the city of Los Angeles. Argue, while not present in Lausanne for the ceremony, later added his signature as required.

The LAOOC retained an executive search firm in November 1978 to find qualified candidates to be the executive director of the 1984 Olympic effort. The nationwide talent search for a chief executive produced a number of candidates and at a breakfast meeting at the Hyatt Airport Hotel on 26 March the Committee of Seven debated the choices. Ultimately, it was felt that what was needed was an entrepreneur—a person who had experience in starting with very little and building a major organization. That afternoon, the

Executive Board of the LAOOC met at the offices of the Citizens Savings and Loan Association near the Los Angeles International Airport, where the Board voted to select Peter V. Ueberroth as the chief executive of the LAOOC.

After considering a number of candidates, the Executive Board, which included representatives of the USOC, elected Paul Ziffren as chairman of the LAOOC. He thus succeeded Argue, who returned on a full-time basis to his law practice. The organizing effort officially began on 26 March 1979. This was exactly 1,951 days prior to the opening of the Games of the XXIIIrd Olympiad on 28 July 1984.

2.08 *Reflections on the award to Los Angeles*

The process which resulted in the acquisition of the Olympic Games for Los Angeles for the second time was a long, complicated and difficult one. The dynamics involved in obtaining the bid, the environment in Los Angeles, changes in the Olympic movement, the impact of the Montreal Games and a changing international situation all created a scenario whereby traditional sources of funding were not available. As a consequence, when the bid was

finally ratified and accepted by the parties involved—the IOC and the city of Los Angeles, it was clear that Olympic history would be made—that the Olympic Games would be entirely financed by private sources and would be totally organized by a private, non-governmental committee.

The leadership of the Southern California Committee for the Olympic Games played a key role in bringing the Games to Los Angeles, as did the seven members of the Blue-Ribbon Committee—John Argue, Howard Allen, Justin Dart, William Robertson, Rodney Rood, David Wolper and Paul Ziffren. Mayor Bradley and his administrative assistant Anton Calleia, members of the City Council, the United States Olympic Committee and the voters of Los Angeles all contributed to the final shape of the contract which enabled the Games to return to Los Angeles.

The specific peculiarities of the political and socio-economic structures of Los Angeles and the United States may well mean that many of the lessons of Los Angeles are not applicable to other societies and cities. However, Los Angeles can serve as an example of how creative thinking and flexibility by Olympic officials and potential organizers offer the best way to meet the complex challenges posed by an ever changing world environment and thus to preserve the Olympic movement.

9 Newly appointed LAOOC President Peter V. Ueberroth (left) discusses some initial plans at a May 1979 breakfast with SCCOG President John Argue (center) and Gwynn Wilson, assistant manager of the 1932 Los Angeles Olympic Committee.

3

Formation and Management of the LAOOC

3.01 Nature and status of the LAOOC

The LAOOC was created on 15 June 1978 as a non-profit, private corporation under the laws of the state of California. The LAOOC was the formal, corporate version of the "Committee of Seven" appointed by Los Angeles Mayor Tom Bradley, which helped to negotiate the city's successful bid with the International Olympic Committee.

The LAOOC was unique among organizing committees in two fundamental areas. First, the LAOOC was entirely independent of all governmental agencies and, second, there were no elected officials on LAOOC's Board of Directors.

This allowed the LAOOC the independence it needed to address its second major difference: no governmental funding. On 7 November 1978, the voters of the city of Los Angeles passed a charter amendment which prohibited any capital expenditures of the city of Los Angeles on the Games that would not, by binding legal commitment, be paid back. This charter amendment was passed 18 days after the signing of the contract between the IOC and the city of Los Angeles. As a consequence of this voter-approved amendment, the LAOOC had to be self-financing and could not rely upon local government for grants or loans. For the first time in Olympic history, an Olympic Games organizing committee resembled a private corporation rather than a public agency.

The United States Olympic Committee (USOC)—in the absence of financial guarantees by the city of Los Angeles—pledged to cover the LAOOC's deficits, if any. Any surplus was to be allocated as follows: 40 percent to the United States Olympic Committee, 20 percent to the National Governing Bodies of sports within the United States and 40 percent for amateur youth sports in Southern California.

The Articles of Incorporation stated clearly that the "specific and primary purposes of the corporation are charitable and educational purposes to promote international goodwill through the sponsorship of the XXIIIrd Olympiad and other amateur sports and cultural activities." By-laws to the Articles of Incorporation defined the details of the operations of the LAOOC. The format of the membership of the board of directors included membership by both national members nominated by the United States Olympic Committee and local members nominated by the original members of the corporation. The stated responsibility of the board was to set broad policy and to assist in securing widespread cooperation and support necessary to achieve its goals. An executive committee of not more than 20 members was formed with specific responsibility to "administer, organize and conduct the XXIIIrd Olympiad under the broad policies established by the board of directors."

The by-laws further noted the structure of the LAOOC staff, including a president, executive vice president/general manager and other vice presidents and a chief financial officer.

3.02 Board of Directors

The LAOOC Board of Directors was announced on 26 January 1979. This group represented the guiding force behind the LAOOC. The board consisted of a number of Olympic medalists, the two IOC members in the United States, leaders of the United States Olympic Committee, and a broad representation of civic leadership from almost every field of endeavor within Southern California.

3.02.7 Members of the Board and their selection

The board of directors was the highest authority of the LAOOC. Its members met four times each year and were responsible for approving the annual budget, accepting recommendations of the executive committee and reviewing progress in the various facets of organizing the Games. The enthusiasm of the board members, their strong support of the management of the LAOOC, and their efforts toward resolving difficulties for the LAOOC were essential to the success of the Games. The LAOOC Board of Directors consisted of the following:

- *†Howard P. Allen
- *†John C. Argue
- * Roy L. Ash
- Alex Baum
- Samuel S. Bretzfield
- * Yvonne Brathwaite Burke
- Hannah Carter
- *†Justin Dart
- Willie Davis
- Dr. Evie G. Dennis
- Gene Edwards
- Leonard Firestone
- J. Robert Fluor
- M. J. "Mike" Frankovich
- Camilla Frost
- Walter B. Gerken
- Monsignor Louis Gutierrez
- Frank G. Hathaway
- Philip M. Hawley
- * Robert H. Helmick
- Harold W. Henning
- Bob Hope
- * Lawrence Hough
- * Rafer Johnson
- * John B. Kelly, Jr.
- * Maureen Kindel
- Christopher Knepp
- John R. MacFaden
- David Maggard
- Patricia McCormick
- Charles D. Miller
- * Col. F. Don Miller
- Jerry Moss
- R. J. Munzer
- John Naber
- William H. Nicholas
- Parry O'Brien
- Peter O'Malley
- Wilber Peck

- * Stephen R. Reinhardt
- Robert O. Reynolds
- *†William R. Robertson
- * Douglas F. Roby
- J. J. Rodriguez
- *†Rodney W. Rood
- * Julian K. Roosevelt
- Peter Schnugg
- Robert D. Selleck
- * William E. Simon
- Willie Stennis
- * Peter V. Ueberroth
- * Harry L. Usher
- * Gilbert R. Vasquez
- Fred Isamu Wada
- Jeffrey S. Wald
- * E. Cardon Walker
- * Lew Wasserman,
- Barbi Weinberg
- *†David L. Wolper
- Dr. Charles E. Young
- Richard D. Zanuck
- *†Paul Ziffren
- Dr. James Zumberge
- *Member of the Executive Committee
- †Charter Member of LAOOC and member of "Committee of Seven"

The LAOOC had a total of 30 meetings of its board of directors between November 1978 and December 1984. Decisions of the board were taken by a simple majority. Reflecting the spirit of volunteerism within the LAOOC, the members served without compensation. In general, the meetings of the board of directors were open to the public and members of the press.

3.02.2 The Executive Committee

The board of directors appointed the executive committee from its membership, with a mandate to review policies and issues in depth, and to make recommendations to the full board. It was composed of 22 members. Their names are indicated by an asterisk on the board of directors list above.

The LAOOC Executive Committee met 30 times between 26 January 1979 and 31 December 1984. Its meetings were generally held immediately prior to those of the full board of directors. Upon his retirement as executive director of the United States Olympic Committee, Robert Kane resigned from the LAOOC Board of Directors and Executive Committee to become a vice president of the LAOOC. He was replaced by William Simon, the new Executive Director of the USOC. Upon the deaths of Justin Dart and John MacFaden, LAOOC President Peter Ueberroth and Executive Vice President Harry Usher were elected to the executive committee and board of directors respectively.

3.02.3 LAOOC Chairman, Paul Ziffren

Appointed 26 March 1979 as chairman of the LAOOC, Paul Ziffren brought a long record of success and civic leadership to his position. A senior partner in the prestigious Los Angeles firm of Gibson, Dunn & Crutcher, Ziffren is one of the area's most prominent attorneys.

He graduated from Northwestern University in 1935 and from the Northwestern University School of Law in 1938. He was later special assistant to the chief counsel of the

Bureau of Internal Revenue in Chicago, and became U.S. Attorney in charge of the tax division. Upon moving to California, Ziffren became deeply involved in the Democratic National Committee, serving as a member from 1953–1960 and on the executive committee from 1956–1960. From 1957–1960, he was a member of the Democratic National Advisory Committee.

A dedicated civic leader, Ziffren is a trustee of Brandeis University, Waltham, Massachusetts, and is a member of the board of directors of Community Television of Southern California (KCET), the Music Center Foundation, Pacific Mutual Life Insurance Co., and Pacific Bell and Pacific Telesis Group. He was recently named to the IOC's International Court of Arbitration.

3.03 Citizens Advisory Commission

In early 1979, it became obvious that citizen support and involvement would be needed to facilitate staging of the XXIIIrd Olympiad. It was for this reason that the Los Angeles Olympic Citizens Advisory Commission was established by Chairman Ziffren. The LAOOC could take advantage of the knowledge and skills of the numerous and varied cultural, ethnic and other diversities of the Los Angeles residents.

Initially, recommendations for membership were sought from the LAOOC Board of Directors and the mayor of Los Angeles' office. Eventually people from all over Southern California, of all age groups and of all backgrounds were represented. The support was tremendous and membership was halted at a workable 3,000.

3.03.1 The subcommissions

Most of the members of the Citizens Advisory Commission chose to serve on one of 25 subcommissions, which were created to focus on the many aspects of the Games, as follows:

- Awards
 - Bill Schroeder, chairman
- Beverly Hills
 - George Fenimore, chairman
- Business
 - Edward Carter, chairman
- Ceremonies
 - Jerry Weintraub, chairman
 - Sidney Poitier, vice chairman
- City and County Government
 - Yvonne Brathwaite Burke, chairwoman
 - Siun Park, co-vice chairman
 - John Lovell, co-vice chairman
- Cultural and Fine Arts
 - Dorothy Chandler, honorary chairwoman
 - Maureen Kindel, chairwoman
 - Olive Behrendt, vice chairwoman for performing arts
 - Camilla Frost, co-vice chairwoman for visual arts
 - Richard Sherwood, co-vice chairman for visual arts

- Demonstration Sports
John R. Hubbard, chairman
- Disabled Persons
Max Strauss, chairman
Victoria Richart, co-vice chairwoman
Sam Overton, co-vice chairman
- Finance
Roy L. Ash, chairman
- Governmental Liaison
Lew Wasserman, chairman
Rodney Rood, vice chairman
- Hotels and Housing
William Edwards, co-chairman
Joseph Woodard, co-chairman
- International Relations
Warren Christopher, chairman
- Labor
Andy Anderson, co-chairman
Bud Mathis, co-chairman
- Licensing and Merchandising
Card Walker, chairman
- Medical
Anthony F. Daly, Jr., M.D., chairman
- Olympians
Rafer Johnson, chairman
Pat McCormick, co-vice chairwoman
Wally Wolf, co-vice chairman
- Physical Facilities
John C. Argue, chairman
- Publicity, Public Relations and Publications
Barry Diller, co-chairman
Walter Gerken, co-chairman
- Religious Activities
Monsignor Louis Gutierrez, chairman
- Santa Barbara/Ventura County
Barry Berkus, vice chairman
Ron Hertel, vice chairman
Tom Horton, vice chairman
- Sports Federations
Elvin "Ducky" Drake, honorary chairman
Richard D. Zanuck, chairman
M. J. Frankovich, co-vice chairman
Phil Gersh, co-vice chairman
- Television
David L. Wolper, chairman
- Visitor Relations
Esther Wachtell, co-chairwoman
Dr. Charles E. Young, co-chairman
- Youth Activities
Phil Bardos, co-chairman
Charles Ducommun, co-chairman

The caliber of the people involved in the Advisory Commissions was extremely high. It seemed everyone wanted to become involved, including physicians, attorneys, teachers, housewives, entertainers and political leaders. The enthusiasm and support from commission members was overwhelming.

3.03.2 **Typical activities of the advisory commissions**

By becoming involved in an area of their choosing, the LAOOC Advisory Commission members provided Organizing Committee staff with invaluable advice and resources.

For example, the Business Advisory Commission and the Labor Advisory Commission provided LAOOC with the resources of top caliber business and community leaders and experienced representatives from the many labor unions which could in some way impact the Games.

The Finance Advisory Commission was subdivided into three areas—audit, investment and planning—all of which members assisted on a regular basis in lending support and suggestions to the LAOOC Finance Department and advising the board of directors of the LAOOC's financial condition including projections of income and expenses.

Two Government Advisory Commissions were established, one dealing with federal and state agencies, the other with city and county government. Both these commissions utilized the members as liaisons to all levels of government.

Many of the members of the Medical Advisory Commission later volunteered their professional services in the areas of personnel, emergency medical services, polyclinics, doping control, equipment and supplies. As many as 300 Los Angeles area physicians were responsible for overseeing medical needs at each of the competition and training sites and participated in the selection of additional medical volunteers at each of those facilities. Early on, subcommissions were set up representing several medical areas: dental, eye care, orthopedics, athletic training, physical therapy, and so on.

The members of the Liaison Advisory Commission for Disabled Persons assisted the LAOOC by identifying three major areas of concern where they felt the LAOOC could best benefit the handicapped: accessibility, employment/job opportunities and transportation. With regard to transportation and employment/job opportunities, members of the commission identified potential resources from within the disabled community.

With regard to accessibility, a group was formed by the Liaison Advisory Commission for Disabled Persons that kept the LAOOC advised on projects under construction. The commission toured many of the venue facilities to make sure all venues and training sites were accessible to the handicapped.

¹ After a nationwide search, Peter V. Ueberroth (left) is named President of the LAOOC on 26 March 1979. The dual announcement includes the naming of Paul Ziffren (center) as LAOOC chairman. On 1 February 1980, Harry L. Usher (right) is hired as executive vice president/general manager.

Formation and Management of the LAOOC

Assistance was received from Daniel Freeman Hospital in putting together a brochure to be distributed to all disabled persons who purchased tickets to the Games. This guide provided the disabled community with information on transportation, parking, toilets, seating, etc.

LAOOC took special pride in its Olympians Advisory Commission because Olympic athletes were able to become involved again in the Games in a variety of ways. They participated in the Spirit Team program, and at the Olympic orientation workshop related their special feelings about being Olympians. They participated in the speakers bureau and selflessly and enthusiastically escorted disadvantaged youth, senior citizens and disabled to Olympic events during the Games.

The members of the Sports Federation Advisory Commission were divided into 23 sports. Each subcommittee functioned directly under its respective sports commissioner and provided the basis for the volunteer support at each of the venues.

The members of the Youth Advisory Commission were asked to assist the LAOOC staff in working with over one million children involved in the many youth sports programs, which began in 1982. Not only were thousands of youth given the opportunity to participate in all of the Olympic sports, but they also became involved in the cultural and academic aspects of the Games. Also, approximately 100,000 disadvantaged youngsters were given the opportunity to see the Olympic Games as beneficiaries of the LAOOC Patrons Program.

3.03.3 Olympic orientation workshops

The LAOOC felt that it was important for the members of the Citizen Advisory Commission working with and representing the LAOOC to be knowledgeable about the Olympic Games and the Olympic family. Therefore, the Olympic orientation workshop was created—an Olympic learning experience designed to broaden the knowledge of people assisting in all facets of staging the Games.

The objects of the workshop were many:

- To provide a vehicle for each Citizens Advisory Commission member to become involved in the 1984 Olympic Games and the LAOOC
- To provide an interesting and educational experience which would be useful in their LAOOC activities during the 1984 Games
- To provide knowledge of the Olympic Games which would aid in better understanding their roles as advisors to the LAOOC

- To offer them the opportunity to meet and discuss the Olympic Games with prominent Olympians who relayed their personal Olympic experiences
- To generate new areas of thought and broaden their knowledge of matters relating to the Olympic movement by providing a wide range of information covering every aspect of the Olympic world

The ultimate goal of this workshop was to make the members of the advisory commission Olympic experts and qualified representatives of the LAOOC during the Games in Los Angeles.

This group of knowledgeable commission members became the core for the tens of thousands of volunteers who became the staff of the Games. Thus, the ultimate aims of the advisory commission were achieved: to give the community the opportunity to become involved with the Olympic Games and to serve as ambassadors and representatives of the LAOOC in educating the public on the universal theme that is the Olympics.

The workshops were begun on 21 October 1981 and continued through a series of ten sessions, given repetitively to accommodate the large number of advisory commission members. Each session consisted of three to four presentations in different areas over a 90-minute period. In addition to the segments regarding technical preparations in sports and other areas, a former Olympian was usually asked to speak about his experiences in previous Games. Advisory commission members thus had an opportunity to learn first-hand about the nature of the Games and the special events and qualities that each prior host city brought to the organizing task.

Ten workshops in all were presented, with four in 1982, five in 1983 and one in February 1984. Certificates of completion were distributed to advisory commission members who attended all ten sessions.

3.04 Management of the LAOOC

The management of any Olympic Games requires a special staff to undertake the enormous project involved in staging an Olympic Games. The LAOOC's staff was small by comparison to other organizers, but performed well above the expectations of most observers.

3.04.1 The LAOOC President, Peter V. Ueberroth

In order to fulfill the goal of self-financing, the Los Angeles Olympic Organizing Committee needed an efficient and innovative manager to find new ways to deal with problems that had plagued the Olympic community for years.

The Board of Directors, after a nationwide search that took several months, appointed Peter V. Ueberroth as president on 26 March 1979.

Ueberroth's quiet efficiency and drive for success stamped the LAOOC as an organization bound for success. His background would suggest nothing less; he founded a small travel concern 20 years ago and turned it into a 1,500-employee giant, the second largest travel company in the nation.

Olympic innovation became an LAOOC trademark under Peter Ueberroth's administration. He, John Argue and television producer David Wolper played a primary role in negotiating the largest television rights contract in Olympic history, a \$225 million dollar deal with the American Broadcasting Companies.

Under Ueberroth's direction, the Organizing Committee turned to existing expertise in the private sector, rather than go into business for itself in many areas. The number of corporate sponsors was drastically reduced with an emphasis on a few, very outstanding companies. Sports commissioners, a radically new concept in sports management, were introduced.

Ueberroth himself tried out for the U.S. Olympic water polo team in 1956. He still enjoys golf, tennis and body surfing. He became a patron of amateur sports history and, as he said, "a student of the Olympic Games."

3.04.2 The Executive Vice President and General Manager, Harry L. Usher

A prominent Los Angeles attorney, Harry Usher was charged with overall operating responsibilities for the Games on 1 February 1980. Usher came to LAOOC from his legal practice, with a specialty in entertainment law. That background served him well, as most of the LAOOC's venues, sponsorships and licensing agreements were negotiated and signed during his tenure.

After his graduation from Stanford Law School, Usher joined a private law firm in Los Angeles. His successful legal career included a term as president of the Beverly Hills Bar Association and he joined the LAOOC from his own firm, Litz & Usher.

3.04.3 The Executive Operations Committee

The Executive Operations Committee was composed of the senior operating managers of LAOOC. Its mandate was to oversee the day-to-day operations of the Organizing Committee, ensure the integration of departments, and manage the preparations for the Games. From its inception in November 1982, it met twice a week until the Games, when its meetings became daily.

The membership of the group changed over time, but in the months just prior to the Games included the executive vice president/general manager, group vice presidents for construction, external affairs, human resources, Olympic Family operations, planning and control, sports and support operations and vice presidents for Games staffing, security, ticketing and transportation. One or more commissioners was also present as representatives of the entire commissioner group. The planning director served as the general secretary for the entire group and formulated agendas and lists of items for immediate action. Minutes were confidential, but were distributed to non-group members including department heads for finance, government relations, legal, news, Olympic Arts Festival and youth.

3.04.4 Organizational structure

The LAOOC found that because of the changing nature of tasks required during its years of preparation for the Games, its organizational structure needed to evolve.

Accordingly, the management ethics of the LAOOC stressed flexibility and continual change. The staff understood the need for shifting and narrowing of responsibilities as the organizing committee grew.

To reinforce this flexibility, the LAOOC never published an organization chart after early 1981. By not drawing boxes around staff members, people were not organizationally limited in what they could do and were more open to change. The key managers and their areas of responsibility are shown in Chapter 39, as they existed in the months immediately preceding the Games.

Department managers and staff were encouraged to recruit people they were familiar with to work for the Organizing Committee. The challenge and prestige of the Games helped to attract staff members, even though the employment term was limited.

As the LAOOC grew, the sharing of relevant information became a problem. Departments which could combine with others on common activities, sometimes regarding the same site, had no information about the work of other groups. A series of weekly status reports was begun in November 1982 and continued through late June 1984. These reports summarized the activities of each department within the previous week and the projected activities for the coming week. Reports were due each Friday by noon and were distributed to each department head approximately four hours later. In November 1983, a once-per-month "projected activities report" summarized the accomplishments of the past month and the projected areas of endeavor in the next

one to three months. This report was substituted for one of the weekly status reports and helped to focus the long-range activities and goals of each department-as well as point out obvious omissions and areas which were not being addressed. Status and projected activity reports were also a leading contributor of agenda items for the executive operations committee, as senior management was made aware of individual department activities through these reports.

Less frequent but equally important were meetings of the department heads which were held on a regular basis in 1982 and early 1983, then cancelled until late in 1983. These meetings continued until mid-June 1984 and served as a clearing point for information which affected all departments and an opportunity to ask questions of senior management regarding various issues. These sessions were very worthwhile and proved to be a good forum for discussion of issues among the entire management staff. It was also a secure way to disseminate confidential or sensitive information without the production of a written memorandum. Commissioners held weekly meetings with the senior management to discuss mutual issues and items of interest during the period when they were part-time employees. Commissioners were included in the all-management staff meetings as they joined the LAOOC on a full-time basis.

3.05 Management in the pre-Games period: 1979-1980

3.05.1 Early development and planning

In 1979, LAOOC President Peter V. Ueberroth developed a broad strategy for approaching the preparations for the Games of the XXIIIrd Olympiad. The key strategies were those involving the financial sources, the public image approach, and the timing of the LAOOC's growth.

In developing these strategies, Ueberroth was guided by the thoughts of LAOOC Chairman Paul Ziffren and John Argue, one of the chief negotiators in the acquisition of the Games from the IOC. Ziffren was experienced in the public image area from a long career as a political adviser, and Argue had had dealings with the chief organizers of several prior Olympic Games.

Among the guiding principles they established were:

- Based upon the Montreal experience of significant construction cost overruns, the LAOOC would try to avoid the building of any sports facilities. Those that were absolutely necessary would be built early and with someone other than the LAOOC responsible for cost overruns.
- Also based upon the experience of prior organizers, the LAOOC would not get into the "host broadcaster" business with its attendant considerable expense (\$50 million in Montreal). Rather, the successful bidder for the United States television rights would be required to serve as host broadcaster and provide appropriate facilities at its expense.
- The LAOOC would focus on arranging for the competition portion of the events and, where possible, contract to appropriate on-going businesses the support functions, such as food service or transportation.
- All members of the Olympic Family would pay their own way to the Games in every regard, unless later financial income allowed the LAOOC to subsidize some of these costs.
- Financial and security matters would be kept private to the LAOOC to the extent possible. The public's right to know about the LAOOC's internal operation and problems would be considered similar to that of any private, not-for-profit agency. Thus the public right to information was significantly less than that of a public agency or prior organizing LAOOC; but not as limited as that of a private company within the United States.
- Spending and staff size should be as constrained as possible for as long as practical during the early years of the LAOOC. This principle allowed the LAOOC to understand both its fiscal resources and the job to be accomplished prior to committing funds to any non-essential items.
- A small number of sponsors pledging significant revenue would be better than a lot of companies each giving a much smaller amount. This principle was in direct contrast to the philosophies at prior games and was therefore considered a risky concept.
- A new management concept was necessary to operate the venues. Prior games had shown that sport experts were not always good site managers, and had shown that shifting from centralized planning to decentralized operations was very difficult. Therefore, LAOOC decided to utilize a long-term but part-time position called "commissioner" to run each site. Commissioners were successful businessmen, but not necessarily sport experts. They were part-time for several years before joining as full-time staff members for the last six months.
- There would be no governmental funding of any type. The LAOOC would pay for everything it ordered but not for items a governmental agency provided as part of its normal responsibilities to the public.
- Generally, the LAOOC would use an entrepreneurial approach, rather than a big business or governmental approach in conducting its affairs and would look for key executives with that background.

Most of the above guidelines were formulated in 1979, although they continued to evolve as the organization experienced success in some of its efforts and frustration in others.

2 Kevin Lewis (left) and Russell Derek discuss plans to aid the physically challenged during the Games' competitions.

3 Former Olympians employed by the LAOOC include (front row, from left) Andrew Strenk, Hugo Salcedo, Jan Palchikoff, Jan Romary and Ronald Tomsic; (middle) Michael O'Hara, John Pennel, William Schmidt, Steve Gay and John Carlos; (back) Anita DeFrantz, Stephen Pickell and Wayne Collett.

3

Formation and Management of the LAOOC

Notable by its absence from this list of operating strategies was a nationalistic or even a local political focus. Although everyone associated with the LAOOC wanted Los Angeles and the United States to look good during the Olympics, the overriding goal in the first three-year period of planning was for the LAOOC to stage a modest but successful Games without losing money or requiring taxpayer funding.

3.05.2

Early financial planning

In June 1979, the LAOOC engaged two major accounting firms, Arthur Young & Co. and Peat, Marwick and Mitchell, to conduct a financial study covering both revenue and expenses for the period June 1978 to September 1984. The firms were to prepare a workable plan based on a spartan service level.

The result of the study was a financial plan that served the LAOOC as a guideline in all of its future planning phases. It concluded that a reasonable although modest Games would generate a surplus of \$21 million. The summary of this financial plan was released to the public and media in September 1979. It formed the basis for the public's image of the LAOOC's finances for several years.

The plan proved amazingly prophetic despite some noticeable oversights. Perhaps the largest was that no funds were allocated for normal police protection, whereas the various public agencies eventually were paid over \$30 million by the LAOOC. A second major item not contemplated at the time was the creation of the Olympic Look, known as "festive federalism." The Look cost \$15 million. It was also true that as revenues exceeded expectations, the LAOOC allowed expenditures across the board to rise in a similar fashion.

3.05.3

The Games of the XXIInd Olympiad in Moscow—an opportunity missed

Though each organizing committee must ultimately prepare its Games consistent with its own goals, objectives and resources, past committees have relied heavily in their formative stages upon the experiences of the organizers of the previous Games. For the LAOOC, this would have been the 1980 Olympic Games in Moscow.

Senior representatives of the LAOOC did attend the 83rd Session of the International Olympic Committee in Moscow in July 1980. However, in

conformity with the wishes of United States President Jimmy Carter, the Los Angeles delegation left Moscow before the Games began, thus denying itself the opportunity to see the inner workings of an Olympic Games prior to conducting its own.

3.05.4

Revenue acquisition

A quick review of Moscow, Montreal and Munich Olympic financing revealed that 90 percent of each organizing committee's revenues was derived from governmental sources. This represented a bleak picture for a committee dedicated to the principle of staging the Games without government funding. Moreover, lotteries were illegal in the state of California and could not even be considered as a revenue source. A program for selling commemorative coins was eventually approved by the United States Government, but the approved program was a watered-down version of the one originally envisioned and promised only a fraction of the revenues.

The LAOOC looked at its available resources and concluded that it must substantially boost the value of non-governmental revenue over all prior Games. The three strongest possibilities were broadcast rights sales, sponsor and supplier payments and ticket revenue. To finance a Games with a \$500 million budget would require an eight-fold increase in these revenues from the last three Olympics.

Because the IOC prohibited any sponsor contracts from being concluded prior to the conclusion of the 1980 Olympics, the LAOOC spent 1979 and the first half of 1980 laying the groundwork and arranging for interim funding. Television rights sales bidding procedures were used to solve this interim funding problem by the creative approach of requiring a refundable deposit for the right to bid on the United States television rights.

These initial activities paid off handsomely as the Organizing Committee was able to announce, right after the conclusion of the Moscow Games, nine sponsorship agreements totaling \$30 million in cash, plus millions more in in-kind commitments. Also announced was the sale of U.S. television rights to the American Broadcasting Companies for \$225 million. These early agreements provided a revenue to the LAOOC that was six times the amount Montreal had collected from all television and sponsor/supplier contracts. The Los Angeles Olympic Games began to look financially feasible, even to hardened skeptics.

The LAOOC decided to postpone exploring the third major revenue source, ticketing, until the Games drew closer. Tickets were made available for sale in June 1983.

4

5

4 Roone Arledge, president of ABC news and sports (standing), announces ABC's \$225 million television rights purchase.

5 In early 1980, the fledgling LAOOC staff meets to initiate plans and programs.

The overall result of the approach taken by the LAOOC to secure its financial base was extremely positive. By the end of the Games, the Los Angeles organizers had raised almost \$628 million from non-governmental sources compared with \$72 million raised by the Montreal organizers in 1976.

3.05.5 Site acquisition

The third major activity for the LAOOC during the early years, after the development of the strategic plan and the revenue acquisition, was securing sites and facilities to be used during the Games. These included not only major sporting facilities throughout Southern California, but also the villages, a main press center facility, office space and other ancillary buildings.

The Organizing Committee found itself in two distinctly different situations, depending upon how the city had listed a particular facility in its proposal to the IOC. A few facilities were named in the proposal as certain to be used. These included UCLA and USC as the two villages and the Coliseum for the main stadium. Fortunately, most facilities were named in the proposal as possibilities, with no commitment on the part of the organizers, thereby reserving the right to change a facility should it be necessary.

Where the facility was promised in the initial proposal, a monopolistic position was created where the facility owner or operator had considerable leverage over the Organizing Committee. After a few discussions with each of these agencies, the LAOOC elected to contract first with the other facility owners.

Consequently, the first facility agreements announced were those for basketball and yachting. As an example of how this process worked, Los Angeles has two very successful basketball teams, each with its own major indoor arena. Both sites wanted Olympic basketball played in their facility. The LAOOC used the competition between the two sites to obtain a contract for the use of The Forum that featured reasonable terms. The Organizing Committee intended to use this contract to set the general pattern for such items as the facilities' share of concessions, parking, and novelties for all future venue contracts.

While the LAOOC was negotiating to acquire its early facilities, it also focused on those facilities that would require construction. These were archery, canoeing/rowing, cycling,

hockey, shooting, swimming and the endurance portion of the equestrian competition. Of these, canoeing/rowing, cycling and swimming were expected to be the most expensive.

The LAOOC actively pursued its planned program of identifying sponsors to fund the construction of the major facilities and was shortly able to announce the sponsors for cycling and swimming.

Following these actions, the LAOOC was able to announce nine venue contracts completed in 1980, four years before the Games; ten contracts for venues in 1981; three in 1982; and five in 1983.

3.06 Management of the planning period: 1981–1982

With its strategic goals established, its revenue base secured through the initial sponsorships and the ABC television agreement and a site acquisition process under way, the LAOOC began to focus on the hiring of key staff and the development of its departmental structure. Mandates, budgets, time lines and basic policies for each department involved in organizing the Games then developed.

3.06.1 Commissioner program

An innovation in Olympic management was introduced on 25 November 1980 when the LAOOC announced that the management of individual sports at the Games would be handled by sports commissioners. One of the major problems experienced by organizers at past Games and by the International Sports Federations which are responsible for managing the sports competitions was the continuous shift in personnel working with each IF. As past organizing committees grew, different people were placed into a liaison role with the IFs until the Games-time manager for that sport was named, usually about one year prior to the Games. Each new person who dealt with an IF had to spend a lengthy period to indoctrinate himself with the nuances of the sport(s) concerned and with the appropriate IF officials. The LAOOC determined that it would be more efficient to establish a permanent point of contact with each IF early and continue with that person as the responsible manager for each sport throughout the planning period and, ultimately, through the Games. During the early years, the commissioners were paid a small retainer each year. Then, six months prior to the Games, each took a leave of absence from other employment to take active control of a sport. Between their appointment dates and their times of assumption of full-time staff positions, the commissioners traveled widely to familiarize themselves with the

International Sport Federations and officials and to become true experts in their respective sports. Commissioners attended world championships or world cups and regularly reported to their respective federations during congresses or other meetings. Commissioners also used these opportunities to distribute technical literature and to answer general questions about the organization of the Games, in addition to observing the conduct of the event at which they were present.

During the early period of planning, the LAOOC worked to identify these commissioners and to provide them basic orientation. Thus when the time approached for the Games and the commissioners became full-time managers, they were already intimately familiar with the various details of organizing their sport and in many cases had their sport management team already assembled.

3.06.2 Development of a master plan

In June 1981, a planning department was created and given a mandate to develop a master operating plan for each department, specifying the task to be undertaken, the personnel required, key milestone deadlines and a rough budget. Planners worked with each existing department to identify the major responsibilities and tasks that lay ahead and noted areas which were not covered or were felt to be outside the scope of the departments interviewed. For areas in which no staff had yet been assigned, the planning group reviewed reports from past organizers and spoke with knowledgeable people in the local area about the specific tasks.

This master plan was developed by a small group of planners over a ten-month period. At the conclusion of their efforts, the plan became the basic mandate for the departments as each was created.

3.06.3 Integrated scheduling based on the master plan

One outcome of the master plan was a computer-generated task network (or Program Evaluation and Review Technique, PERT) involving 20,000 items, carefully interrelated in time sequence. As was the experience with prior organizing committees, the first complete run of the PERT network showed the Games being ready several years after the announced time for opening ceremonies. By juggling and realigning the plan, everything was scheduled to be ready by 28 July 1984.

After working with this schedule for several months, the LAOOC discovered that it was not a useful management tool. There were many different ways for a department to execute its mandate. The approach selected would depend upon the style of the department manager and upon the circumstances presented as various alternatives were tried. To develop the PERT network, a specific approach had been selected; when this was rejected by the department, the usefulness of the network was diminished.

However, the PERT exercise had identified many of the key tasks and helped to acquaint each department with its own responsibilities and how they affected other departments or groups. This interrelationship of the tasks defined by the PERT exercise helped to impress upon each department manager the need for inter-departmental communication and information; these needs were eventually met by the period staff meetings and weekly status report summaries.

By January 1983, the LAOOC had dropped the massive PERT network and switched to a simpler master schedule that consisted of only 600 key dates for all departments and sports combined. This master schedule did not attempt to interrelate the key dates as had been the case in the PERT network; rather, it was small enough for each department to familiarize itself with the key dates of other departments with which it was involved. In addition to the master schedule, many departments had their own detailed schedules to track internal progress.

This master schedule approach was used by all departments through the end of 1983 and as a senior management aid until May 1984.

3.06.4 Management planning sessions and retreats

During 1981, 1982 and early 1983, the basic policies, goals and departmental plans were extensively discussed at a series of management retreats. Through this process, senior management defined its plans for the Games and developed an understanding of other departments' goals and activities. This shared vision was critical as the growth of the LAOOC exploded both in terms of manpower and complexity as the Games approached.

The retreat program was designed to assist senior management define the LAOOC's direction and views in broad terms by gathering senior managers and planners in a relaxed environment outside of the LAOOC's offices. Representatives of all major departments were present: only a handful in 1981, 13 in 1982 and 19 in 1983.

6

7

8

6 Scale models of the Olympic venues, such as The Forum (basketball) shown here, are on display at the IOC Executive Board meeting in Los Angeles.

7 As the LAOOC staff grows rapidly in 1983 and 1984, so do the size of general staff meetings.

8 The Technology Department displays numerous Games systems at the 1983 IOC Executive Board meeting.

The general agenda was defined by the executive vice president/general manager during all three sessions, each of which lasted one day for approximately eight hours. Participants were asked to prepare long-range planning papers for review by other participants, usually defining the six-month and one-year goals for their respective departments. For the 1983 meeting, each department manager, whether or not asked to participate, prepared a vision paper of up to 10 pages which defined the goals, operating assumptions, service levels, workplan and unresolved issues facing that department. This forced each department to present its scope as it understood it and to forecast the major remaining tasks in its area. These papers helped other departments understand the areas of activity for each department and emphasized those activities that were not being undertaken by any department and required attention.

**3.06.5
Operating plans**

Beginning in fall 1982, each commissioner prepared an operating plan for his particular sport. The first drafts of these plans focused on the competition aspects of the sport. These plans usually contained detailed information on the architectural and construction requirements for the field of play, needs for competition staffing, scheduling and training facilities and special items expected to be provided by support departments. Drafts were circulated to all affected operating departments. These led to meetings between commissioners and in-house sports staff to resolve numerous issues. This effort was very beneficial as sports-specific support services management reviewed a common plan for the first time at many sites. The support departments prepared brief, generic operating plans that outlined the service programs for all sites in early 1983 which were then presented to the commissioners. These documents were integrated into what became the preliminary operating manuals for each site.

**3.07
Period of testing and refining**

In 1983 and early 1984, LAOOC's plans coalesced. This period saw rapid staff growth coupled with staging of a series of events that provided the new staff with direct experience and built confidence. At the end of this period, the LAOOC understood how it wanted to stage the Games and had the key players in place to achieve that objective.

**3.07.1
Explosive growth in the staff**

Few organizations grow with the vigor of an Olympic Games organizing committee. Between January 1983 and April 1984, the LAOOC grew sevenfold, from 200 to 1,400 staff members. In summer 1983, to accommodate this growth, the Organizing Committee moved into an 180,000 square foot

former helicopter design and engineering facility to allow all its staff to be under one roof.

This tremendous growth in staff occurred just as the organization had mapped its overall strategy, giving each new staff member a relatively specific set of responsibilities to execute.

**3.07.2
Meetings of the
IOC Executive Board and
the NOCs in Los Angeles**

The LAOOC departments had their first opportunity to test their plans at the IOC Executive Board meeting attended by over 140 NOCs in January 1983 at the Biltmore Hotel. More countries were represented at this meeting than at any prior event in the history of Los Angeles.

The LAOOC departments turned out in force, arranging such diverse areas as accreditation, government relations, materiel supply, medical services, press operations and travel. The meetings also provided an opportunity to evaluate staff members on their planning ability, operational flexibility and resiliency under pressure. Each department that participated in the preparations for and operations of the meeting were required to file detailed operating plans and budgets and were to train volunteer staff members.

One of the most notable outcomes of the meeting was the success enjoyed by the many volunteers who assisted the permanent staff in various duties. Many of the volunteers who participated in the meeting became group leaders for other 1983 events as well as for the Games.

Having so many NOCs represented in Los Angeles also provided the LAOOC with a unique opportunity to survey each NOC's plans and needs for the Games. The resulting information presented the LAOOC with a valuable base of information which was extensively used in determining the Games needs of the delegations.

Through extensive discussions with key IOC and NOC representatives, many LAOOC policies were refined during the meetings.

**3.07.3
Revised budgets**

In spring 1983, the LAOOC completed a major and last revision of its Games operating budgets. By this time, most of the key management staff was hired, operating plans were drafted and initial tests had been completed at the IOC/NOC meeting in January. Finally, the basic policies had been set and operating plans determined so that the LAOOC was able to make an accurate estimate of its Games expenditures.

In the following months, there was a continual refining of the budget as new needs surfaced. However, no new major budget cycles were instituted.

Each department was required to present carefully compiled sets of service-level assumptions, a summary of staffing and equipment line items, a list of equipment and services which would be provided at no cost by sponsors or suppliers and a list of potential cuts which could be made from the list of line items.

Based on this budget review, the actual Games budgets were drawn up and a reporting system against the budgeted amounts was begun.

3.07.4 Sporting events in 1983

The LAOOC hosted a series of international sporting events during summer and fall of 1983. Where the January IOC/NOC meeting provided the initial opportunity for the LAOOC to test its management plans, the summer sporting events provided a strenuous, in-depth sports-specific rehearsal. It was felt that the use of individual events would be more appropriate for testing purposes than a single, large-scale event which would simulate the Games' environment. By focusing on a single sport and venue, each could be tested thoroughly on a department-by-department basis, and any problems or questions could be solved quickly within the context of a one-venue location or an event of short duration. Although major systems such as venue communications and transport could not be tested, any shortcomings exhibited by individual departments were apparent.

The program of events included archery, canoeing, cycling, gymnastics, rowing and swimming (including separate events for all four disciplines). This program was devised so that each of the sites built specifically for the Olympic Games—the new swimming pool and velodrome—were included. Intensive testing of new venues under rigorous standards of international competition was considered essential by LAOOC to certify that the sites would work properly for the Games. Gymnastics was included in the program so the LAOOC could test its procedures for an indoor event and because gymnastics, with its specialized apparatus, was the most complicated.

An international-class shooting competition was held at the Prado Recreational area following the completion of the ranges in the spring of 1984. In addition to these LAOOC-managed and sponsored events, there were additional competitions during 1983 at Olympic sites in athletics, equestrian, hockey, judo, modern pentathlon, volleyball, wrestling and yachting. LAOOC commissioners and staff from other departments participated in most of these events and gained additional experience in the operation of their sport.

In addition to validating the LAOOC-constructed facilities, the LAOOC benefited from its 1983 events in several areas. The summer competitions provided the first comprehensive test of the LAOOC's plan to extensively recruit, train and employ volunteers in venue positions. The LAOOC was generally pleased with the results.

Additionally, various LAOOC departments experimented with different approaches to providing services at the 1983 competitions. Through this testing, departments refined their plans for the Olympic Games.

The 1983 sporting competitions forced the organization to select an approach, and to become operational. As a result of the test events, the LAOOC developed confidence at all levels of planning, and gained valuable operational experience. In fact, the LAOOC gained so much from the events that future organizers may wish to explore the possibility of conducting one or two events two years prior to the Games, rather than just one year.

3.07.5 The venue development process

The final months of the testing and refining period were devoted to the venue development process. After the 1983 events, departments understood how they wished to conduct their affairs during the Games. There were, however, conflicts between departments and conflicts between departments and site managers. There also was a series of alternative approaches to various sites which required resolution.

To resolve these issues and to generate solid site plans, including architectural requirements and staffing levels, teams composed of staff from all departments of the Organizing Committee were created.

Each venue development team created a definitive report, setting forth the responsibilities of each department at that site, the site manpower plans, space needs and space program and blueprints describing how space would be used. Through an extensive process of consulting and cajoling, resolution was achieved on all but a few issues which were then referred to senior management. At the conclusion of this intensive six-month practice, LAOOC senior management, including the executive vice president/general manager, approved the plans for each venue, village and each of the other key sites.

In the approved venue development plans, changes were made only through a formalized review process. With the completion of these detailed reports, the fabrication and procurement of needed items and the recruitment of staff could begin in earnest, since a detailed plan of the requirements for both people and things was in existence.

9

10

9 The LA83 Gymnastics competition is held in UCLA's Pauley Pavilion as a dress rehearsal for venue staffers in preparation for the Olympic Games.

10 LA83 is the theme of a series of pre-Olympic events at selected venues in the year prior to the Games. The XXXIInd World Archery Championships is held from 19–22 October and is the last such event in 1983.

Formation and Management of the LAOOC

3.08 "Venuization" and implementation

Initially, all past Olympic organizing committees began with a few staff members organized along departmental lines. As these committees grew, additional staff were added to the departments. These new members developed loyalties to their departments, such as food services, health services, technology, and so on.

During past Games, however, each venue became a self-contained unit with its own technology, human resources, health services, competition management, food service and security staff. To switch from the departmental organization of the early days to the venue organization at the time of the Games required a major adjustment which each organizing committee had to accomplish between three and twelve months prior to their Games. The LAOOC called this tumultuous process "venuization."

During this period, as venuization developed, the commissioners focused on putting together management teams, acquiring a Games staff and training it properly.

3.08.1 Explosive growth in site management

In early 1984, the sports commissioners became full-time. Among their initial activities, the commissioners assembled key management teams and brought them into the organization. With the senior management of each site in place, the Organizing Committee began its growth from 800 staff members in January 1984 to almost 70,000 in July.

As the site management staffs were identified, group meetings and seminars were held to bring an even finer level of operating detail to the plans compiled during the venue development process. More importantly, each of the staff members grew accustomed to working together and within the LAOOC's overall structure, so that the staff would adjust immediately upon "going operational" at the venue.

Also, training programs regarding specific responsibilities for site managers of central service functions were held for groups such as venue press chiefs, venue technology managers and so on. Weekly meetings of the venue directors were held, even though many of these managers were not members of the full-time LAOOC staff, much as the commissioners had not been in the years (rather than months now) prior to the Games. These meetings provided a forum to discuss and disseminate policies and regulations relevant to all LAOOC departments. Central operating departments were asked to make presentations summarizing their areas of responsibility and to highlight specific areas of concern for the venue directors to deal with during the Games period.

3.08.2 Mandate of the commissioners

The LAOOC's executive operations committee spent several weeks in December 1983 defining the authority to be delegated to the commissioners during the coming six-month period, the roles of the various operating departments and how the reorganization to venuization should occur.

The result of these deliberations was the "Commissioners 'Mandate for the Preparatory Phase," a document which was widely distributed among the management staff. It served to guide major transition in the delegation of authority to the operating site managers.

This document was distributed on 16 January 1984 and defined clearly the place of each sport within the integrated whole of the Games:

Summary (Overview)

"The commissioner has overall responsibility for the operation of the venue prior to, during and after the Games;

"In some specific areas, the commissioner has direct responsibility for providing services at the venue;

"In other areas, the commissioner coordinates services provided by support departments;

"One of the commissioner's prime focuses is to blend together in to an organic whole services provided by each of the departments at the competition site;

"The commissioner is encouraged to question anything and everything planned by the staff at the site. The commissioner should feel free to propose changes and achieve consensus with departments impacted by the changes. If the departments will not agree with the commissioner, the commissioner's VP and the departments' VP will decide;

"The commissioner should strive to prepare and operate the venue in a manner consistent with overall LAOOC policy. The commissioner is not staging a world championship. Rather the LAOOC is staging 23 sports which create an integrated event perceived by the world as a unified whole. Consequently, deviations between sports as to services which will be recognized as different by anyone other than the IF are not appropriate.

Commissioner's objectives

"The primary objective is to make the Games work. Whatever emergencies occur, the show must go on. The public's perception of the commissioner's venue and the overall Games should be of a smooth, functioning and integrated event.

"The commissioner's second goal is to make the venue function for each of the audiences. These are: Competitors, TV Public, IFs, NOCs, Spectators, Press (written and photo) and Staff

"Finally, the events at the venue should be staged at a reasonable cost, not a minimal cost, not a spartan cost, not a lavish cost, but at a cost which provides for a reasonable show.

Constraints

"There are several constraints within which the commissioner must manage:

- *The approved venue development plan provides a group of constraints which are similar to a budget in a normal organization.*
- *The commissioner may not exceed the staffing numbers in the approved venue development plan without approval of Games staffing control.*
- *The commissioner may not change the physical layout of the venue as reflected in the venue schematic drawing without the approval of venue review committee and the departments affected by the change.*
- *Some things are simply not available at the last minute. These will probably include uniforms and shoes and will clearly include new accreditations.*
- *Changes in the level of service or scope of operations provided by the support departments should be jointly negotiated by the commissioner and the support department. Services at the venue should be consistent with the plans at other sites and LAOOC overall policies.*
- *The commissioner must manage the venue within LAOOC policies. Existing policies are attached, others are in the process of being developed.*
- *One of the commissioner's early tasks will be to develop a budget for the areas directly under her/his control. The assumptions for such preparation will be given to the commissioner shortly together with a statement of the commissioner's budgetary authority.*

Resources

"The commissioner will have a variety of resources available to assist in preparing and operating the venue. Primary among these are:

The existing LAOOC support departments will assign managers, with the commissioner's concurrence, to the venue team. These support departments generally bring extensive knowledge regarding their specialty area which should be built upon in planning the venue.

The commissioner should assemble the venue key management team. If these members, such as a venue director, have not yet been assigned to the venue, the commissioner should recruit them. Candidates must be approved by the commissioner's VP and Harry Usher.

Responsible for all four phases

"The commissioner is responsible for all four phases of operation at the venue. The commissioner or her/his chief operating officer must have a detailed understanding of all activities planned at the venue and a deep involvement in assuring that they will work. These four phases are.

- *Preparatory—The activities between now and move-in to the venue. The preparation and approval of operating plans are among the major tasks during this phase. The commissioner should force the development of plans for each of the groups providing services at the venue and integrate these plans together.*

- *All major decisions should be made during this phase so that during subsequent phases the staff are simply and smoothly executing the plan.*
- *Move-in—Beginning with the access to the site, this is the period of installing the equipment, testing it and training the staff.*
- *Operations—Athlete training and the actual competition.*
- *Close-out—Managing the take-down of the venue, the safe removal of all goods and equipment to LAOOC's warehouse and the rehabilitation of the site.*

Key tasks

"The commissioner is responsible for ensuring that all necessary preparations are made during the preparatory period by each department to ensure the smooth functioning of the venues. A list of generic tasks which each venue team should address during its preparatory days will be distributed later. The key activities are:

- *Building a venue management team*
- *Becoming intimately familiar with the venue and its operations*
- *Understanding what role is to be played by the venue owner/operator and incorporating them in to the venue team*
- *Integrating the services delivered by each of the functional areas*
- *Preparing an operating manual including a detailed schedule of activities from move-in through close-out, and detailed job duties for each venue staff position*
- *Obtaining, orienting and training the management and Games' staff"*

Following this general overview, specific guidelines regarding 31 separate departments and their authorities and responsibilities were attached.

3.08.3 Recruitment of Games staff

With the management team in place for each venue, including representatives of each of the key departments providing services at that site, the process of Games staffing began in earnest. This involved identifying, processing and training the tens of thousands of volunteers and paid staff who would assist during the Olympics.

Though ultimately each site would become responsible for its own staffing, a central department (Games Staffing) assisted in processing nearly 100,000 names received by LAOOC prior to 1984. This central group then monitored the progress made by each of the areas. Each commissioner and his management team worked to attract other individuals among their acquaintances, associates and friends. The interest shown by these groups was dramatic, and some sites were able to attract almost all of their staff by word-of-mouth advertising. In addition to staffing assistance lent by the Games Staffing Department and the recruitment by the commissioners and other site managers, some centralized departments took responsibility for recruitment of staff for their roles in each venue. An example of this was in Press Operations, which procured all of its staff members independently of the Games Staffing Department or the site management groups.

3.08.4 *Table top exercises*

In May, three months prior to the Games, each venue and other sites conducted a simulation of the site's operation. The site management team, generally about 20 members, simulated the operation of the site utilizing architectural drawings and blueprints. They examined every aspect of the operation of the site, from the arrival of the first security guards until the completion of the close-out. During these discussions, the site management team searched for overlooked items, identified conflicting areas and verified that the people flows within the sites were satisfactory. Also included was a vast series of "what if" questions designed to probe and test the site's contingency plans.

Although the exercise was only with blueprints and drawings, the questions and situations posed by the commissioner or site manager probed the knowledge of the participants and forced responsible parties to think about situations they could encounter during the Games. Further, key service managers began to associate names and faces with actual authority and responsibility for key areas which they would have to rely on during the Games. It became clear that interaction among venue department managers increased substantially after the "table top" meetings, and that the venueization process was boosted considerably.

3.08.5 *The Soviet withdrawal and Eastern Bloc boycott*

As the time of the Games rapidly approached, a contingency for which the LAOOC had prepared occurred. On May 8, the Soviet Union announced it would not participate in the Games of the XXIIIrd Olympiad. Over the next two weeks, they were joined by 14 other countries.

The LAOOC's response to this situation was swift and immediate. The LAOOC quietly but thoroughly contacted each of the NOCs to urge them to participate in the Games. Valuable support in making these calls was received from several members of the Olympic movement.

Simultaneously, the LAOOC began implementing its contingency plans to cut back services where appropriate, reflecting the potential reduction in the number of competitors.

The required adjustments to the fields in appropriate sports were made in concert with the International Federations concerned and with the IOC at the meeting of the IOC with the IFs in Lausanne in late May. The LAOOC was pleased to note that a full schedule of competitions was planned and that many NOCs had asked permission to bring additional competitors to replace those athletes from the boycotting nations.

The LAOOC and Olympic fans around the world regretted that the strong teams represented by the USSR and a few other countries would not compete, but, overall, the impact upon the Games was minimal. With 141 nations meeting the 2 June deadline to announce their intention to compete, the LAOOC was assured of hosting the largest number of nations ever to compete in an Olympic Games—well ahead of the previous high of 122 nations that attended the Games of the XXth Olympiad in Munich in 1972. Although adjustments were made in individual sports, little overall impact was felt by the absence of boycotting athletes from a logistical and operational standpoint.

3.08.6 *Torchlight III*

A day-long exercise involving the top six managers at each site and the LAOOC Operations Center was conducted one month before the opening of the Olympic villages.

"Torchlight I" was a law enforcement command post exercise conducted in late 1983 and involved the senior operating officers from each of the law enforcement agencies in Games' law enforcement activities. Typical problems were posed and the agencies were responsible for stating the resources they would use and notifying other offices of their standard procedures. The LAOOC participated in this exercise as observers and as occasional responders to direct questions from law enforcement. "Torchlight III" was a similar though substantially larger exercise conducted on 15 June 1984, and the LAOOC was a full participant.

For the "Torchlight III" simulation exercise, a series of problem scenarios had been developed. These problems were presented to the various sites and departments at pre-determined intervals. The sites attempted to resolve the problems, not by deploying staff and moving resources, but rather by stating the resources they would use and notifying other offices according to their standard procedures.

The "Torchlight III" exercise provided a comprehensive test of each of the site management teams and the systems connecting the sites.

Most of the exercise was carried out via telephone as the site commissioner and managers responded to serious and non-serious incidents involving their site. Some uses of EMS, paging and radio communications were carried out as well. The exercise required some quick judgments and serious consideration of worst-case possibilities involving architectural disasters (collapse of a grandstand), competition problems (a team walks off the field in protest), security concerns (terrorist attack) and venue service questions (a panic develops after a spectator faints following the consumption of a hot dog) which were unlikely, as well as common occurrences for which a procedure had to be developed at each site (lost child). The exercise was especially effective because it continued throughout the day and new facts and situations were

injected at irregular intervals for each site, each requiring an immediate response.

While each of the sites was working with the various scenarios independently, the LAOOC also activated an Operations Center for centralized reporting of significant problems and resolution of questions requiring decision-making by the senior management. While this center worked as planned, it was overwhelmed by the simultaneous bombardment of major incidents at the sites. Since each site needed significant and interesting problems scenarios to work with, the avalanche of bombs, collapsing bleachers, floods, food poisoning, electrical storms, high winds and terrorist activities was more than could be handled and was not a realistic simulation of what to expect at the Games. Simulation exercises involving an operations center held by future organizers should probably be more realistic and involve only a few sites at a time.

Several venue sites continued to use these kinds of exercises in their training periods to sharpen the skills of their department managers.

3.09 *The Games*

As always in the organization of Olympic Games, the last months before opening ceremonies are the most hectic. It is during this time that the movement to the venues occurs, the final construction details are completed and the bulk of the staff commences work and training. For the LAOOC, this period was no exception.

In fact, for the Games of the XXIIIrd Olympiad, the last months were particularly hectic. Under its contracts with the venues, the LAOOC generally did not take exclusive possession of a site until—on average—two weeks before the commencement of competition. This meant that in large part the LAOOC had to concentrate all the modifications required to bring a venue up to Olympic standards into that two-week window. Obviously, wherever possible, the LAOOC negotiated earlier access.

This also meant that whereas other organizing committees had moved their key management staff to the sites six or seven months prior to the opening ceremonies, in general the LAOOC staff did not move until less than a month before the Games.

3.09.1 *Commissioner's Authority Memo*

As a follow-up to the widely-distributed "Commissioner's Mandate for the Preparatory Phase," a final "Commissioner's Authority Memo"

was distributed on 17 June 1984, one month prior to the opening of six major sites: the IOC headquarters at the Biltmore Hotel, the Main Press Center, the Olympic Arrival Center at the Los Angeles International Airport and the three villages at UCLA, UCSB and USC. This document defined formally the extent of the commissioner's authority at his site over various areas which had been touched on previously in the January 1984 directive.

The general mandate remained exactly the same. The "show" had to go on and it had to be a good one, within the framework of an overall event, the Olympic Games. Now into the actual operational phase, however, the commissioner was able to (and required to) utilize new powers and responsibilities:

- Budget; each commissioner had a budget against which expenditures could be authorized. All commissioners had an upper spending limit of \$20,000 per transaction with an aggregate limit equal to their remaining budget. Central departments retained control of their own budgets including those portions of that department's budget allocated to the venues. However, the commissioner could request release of such funds from the Operations Center.
- Food services; the commissioner was responsible for all food services, including the disposal of unused food; distribution of such food to charitable or other such concerns was encouraged. The commissioner also had complete authority over all venue-related hospitality and party functions.
- Housing; commissioners could authorize rooms at the LAOOC's expense for venue staff members as long as charged to the venue budget.
- Language services; the commissioner had the complete authority to determine the priorities for the use of the language services staff assigned to the venue.
- Materiel supply; the commissioner was able to order all supply needs for his venue and could procure supplies from any source, if the materiel supply group was unable to deliver them. Commissioners could also reallocate supplies from one departmental function to another on the site, at his discretion.
- Personnel; with reasonable cause, a commissioner could suspend or have terminated any LAOOC Games staff member at the venue. The Games staff member, whether paid or volunteer, should have explained to him the reason for the disciplinary action and have a chance to respond. While the commissioner had complete authority to authorize overtime for any staff, as long as he stays within his budget, only the Operations Center could authorize changes in a staff member's rate of pay.

Formation and Management of the LAOOC

- Press operations; commissioners had the right to admit non-accredited written press and photographers into public areas only, using their limited number of venue passes. These persons were not allowed to go into zones open only to accredited members of the media.
- Venue access privileges; commissioners had the power to change the access privileges of any venue staff member by increasing or decreasing the zones which that staff member was allowed to enter. Decreases, however, should also have involved consultation with the venue manager for the functional department in which the staff member worked.

Commissioners were not authorized to issue new Olympic Family accreditations ("A", "B", "C", "D", "E", "F", "G", "I", "O"), or to make major changes in the architecture or construction of the venue. Competition starting and ending times were noted to be especially sensitive for the international broadcasters, and session start times were only to be changed with the concurrence of the IF concerned and the host broadcaster. The Operations Center was notified if the session start time varied by more than five minutes from the prepared schedule. Other specific cases were dealt with by specific directives distributed after the "Commissioner's Authority Memo" was completed.

In general, this document helped to clarify the role of the commissioners as the chief executive officer at each site and established their lines of authority over certain areas, and the requirement that they seek the approval of the Operations Center or LAOOC senior management on other issues.

3.09.2

The Operations Center

As the competition and site management moved to the venues during June and July 1984, the complexities involved in communicating and managing increased geometrically with the number of sites activated. To meet this need, the LAOOC activated its Operations Center in early July with a carefully selected and trained staff.

After much internal debate as to what the nature of the Operations Center should be, it was determined that its primary function would be to serve as a communications and information center, providing services on behalf of sites to senior management and on behalf of central departments and senior management to the sites. This concept was tried during the "Torchlight III" exercise and worked

successfully, although the multiple calamities introduced into the exercise overwhelmed the ability of the Operations Center to react properly.

The Operations Center plan was finalized in late June 1984. It consisted of five duty officers, each of whom was either a group vice president or vice president. Each individual's duty officer shift was four hours per day with the remaining time spent administering their on-going operations. On each shift, there was also an information officer who was a middle manager in the LAOOC and was relatively familiar with all operations.

Departments and sites were distributed among five desks, based on logical groupings of the departments and regional groupings of the sites. Each desk had its own telephone number and was staffed by one or two desk officers per shift, depending on the time of day.

The Operations Center also included several administrative and support personnel who assisted in the maintenance of the running logs and reference manuals. Adjacent desks in the same physical area were available for staff from the news, security and transportation departments. A special office area was created for the LAOOC's executive vice president/general manager in the middle of the Operations Center area located in a section of the LAOOC's administrative headquarters.

Staff selection and training was especially important. Operations Center staff had to have extensive knowledge of and experience within the LAOOC in order to be effective in working with all departments and sites. Since most of the LAOOC's staff had been assigned to sites already, the Operations Center staff was assembled by reassigning key staff which, in some cases, was to the detriment of the site managers. But, it was necessary.

All Operations Center staff underwent a two-week training program including 20 hours of classroom training that consisted of a departmental review of general plans and staffing for the Games period, and the types of problems that could involve the Operations Center. The second section of training required desk officers to take tours of the venues, villages and other sites. By actually seeing the sites involved, the desk personnel had a better idea of the physical nature of problems reported. The final phase of training required the desk teams to assemble reference notebooks for each of the departments and sites for which the desk was responsible. The most important ingredients of these materials were the names, telephone numbers (home, site and mobile, if available) and organizational structure of key staff at each of the departments or sites involved.

The Commissioner's Authority Memorandum listed the services to be provided by the Operations Center that were of key interest to the site managers:

- Approval to spend over \$20,000 for any single transaction
- A contingency budget which could be used if the commissioner's budget was exhausted
- Resolution of disputes between a commissioner and a central department
- Reallocation of scarce resources between sites
- Collection of issues, problems and "for your information" notices for transmission to senior management and the dissemination of senior management decisions to the departments and sites as necessary
- A clearinghouse for problems of various types, especially those requiring communications through the Operations Center with a responsible department or agency and follow-up

The Operations Center began partial operations from 9–13 July from 0600 to 2000. During this time, a flood of telephone calls was received for the previous occupants of the office space used by the Operations Center, Language Services and Press Operations. Two telephone receptionists had to be hired to take messages to inform callers of the new numbers for those departments. On the evening of 13 July, the Operations Center commenced 24 hour operations and did not close until 12 August at 1500.

One of the most important activities was the continual updating of the lists of telephone numbers. One person was assigned to this project on a full-time basis. The need for accurate telephone numbers was important, and the lists proved to be of extreme value. More routine was the use of a three-part "incident form," which was used to record any significant incidents or problems reported to the Operations Center. Once a specific incident was resolved, the form was recorded in the daily logbooks and then filed chronologically, by department and by the Operations Center desk. Approximately 1,000 incidents were recorded in this matter.

Typical incidents which were handled included:

- Access problems due to non-completion of construction activities at sites when the requirement for accreditation badges was activated (the Operations Center helped to develop procedures to allow the admittance of necessary construction personnel)

- Bomb scares or bomb threats of various types
- Electrical outages (whether from overloaded circuits or destroyed electrical lines)
- Games staffing payroll problems, particularly involving transportation
- Installations of or demands for additional technology equipment
- Village staff requests for additional electric "golf-cart"-type vehicles

The use of the Operations Center as a communications point for decisions and information was very effective.

The duty officers were well chosen because of their wide background within the LAOOC and broad understanding of the various departments. However, they were more useful in the field than at the Operations Center. The ability to see what was actually happening as against what had been planned was much more valuable than waiting for problems to be communicated by telephone and provided an additional dimension of the Operations Center information base.

The Operations Center was essentially organized to handle major incidents which could not be resolved by the sites themselves. After years of controlled, centralized planning and direction, the Games provided the entrepreneurial commissioners in charge at each site to be on their own. Not surprisingly, the sites operated relatively autonomously during the Games. They prided themselves on their ability to solve as many problems as possible without outside assistance. They did not want to report their operating status on a regular basis and wanted to be left alone to run their own venues as desired—within the overall framework that had been previously agreed to through the venue development process and the commissioner's authority memoranda.

Fortunately, no major incidents occurred which could not be effectively handled at the sites. As a result, the main role of the Operations Center was to facilitate communications between departments and sites and to disseminate decisions of the senior management and general instructions, such as procedures for site close-out. With excellent communications tools such as EMS, pagers, radios and various types of telephones available, decisions or information could be reliably passed to the responsible senior managers without difficulty.

The Operations Center worked well enough as planned, although some modifications would have been useful. In future Games, organizers using a decentralized management scheme with a central Operations Center should require that each site designate a person responsible for communicating routinely with the Operations Center. Further, the desk concept would have worked far better had the sites been better informed as to the

structure and reporting requirements of the center. Finally, the knowledge gained by the duty officers in the field was extremely valuable and a program of roving scouts to report independently on overall operations at the sites might be valuable for operations as widely spread as in Los Angeles.

3.09.3 Senior management during the Games

To effectively govern this far-flung network of sites, the executive operations committee met daily, reviewing problems identified in the prior day and anticipating events and difficulties forthcoming. Represented at these meetings were the LAOOC president and executive vice president, the group vice presidents responsible for each of the departments and venue management and key managers for selected departments, such as security, transportation, news and the Operations Center.

The management of the games was greatly enhanced by the sophisticated technology employed in the communications network. Several thousand pagers were distributed among key managers and staff, most with digital displays. Messages could be sent to these displays from any of the 1,700 Electronic Messaging System (EMS) terminals, conveniently located at every Olympic site, including hotels. Longer messages could also be sent via the EMS terminals to any accredited person, who would then recover the message from any other electronic mail terminal. Finally, an extensive telephone network was established connecting each of the sites, key executive cars with mobile phones and a selected number of executives with hand-held portable phones which allowed them to be reached wherever they might be.

This extensive communication network meant that senior management was never out of touch. Thus, all critical problems could immediately be communicated to the appropriate managers via paging, telephone, or radio for appropriate action as they developed.

This allowed the management of the LAOOC to be relatively mobile and spend the bulk of their time observing and correcting operations in the field, rather than requiring them to be glued to the telephone in an office. Management was thus constantly involved in comparing what was actually occurring to what had been planned and making adjustments where necessary.

Because the commissioner program placed talented entrepreneurial managers in charge of each venue, the Games ran very smoothly. Though there were a myriad of small problems, few major problems were encountered; these were easily handled. From the public's perception, the Olympics flowed very smoothly.

3.09.4 Site management

Site management was entrusted to the commissioners, village mayors and to department managers who had their own sites, such as the Biltmore Hotel for Protocol and the Main Press Center for Press Operations. Frequent visits were made to many of the sites by senior management and by roving duty officers from the Operations Center.

It wasn't until after the Games that the significance of the "venuization" process and the clear definitions of policies and procedures that it generated was realized and appreciated. The tumultuous reorganization of the Organizing Committee's structure and reassembly into venue teams while continuing to operate out of the Marina Center was well worth the effort and allowed the teams the ability to begin functioning immediately upon opening operations at the sites. This was greatly aided by the new communications devices, especially the EMS network and the handheld radios used by many venue management staff.

Long-standing policies regarding area access by accreditation only and authorization of expenditures were closely followed. Late-arriving instructions such as reporting responsibilities to the Operations Center, close-out procedures and distribution of gifts were either lightly regarded or ignored because of the crush of last-moment preparations.

In general, policies and procedures were complied with that were distributed by the end of May, while many of the directives issued after the middle of June (when the "Commissioner's Authority Memorandum" was distributed) got lost in the tumult and excitement of the Games.

3.10 Post-Games close-out

With the conclusion of the first sport, modern pentathlon, eleven days prior to closing ceremonies, the LAOOC began a new phase: close-out. Securing the site after the conclusion of competition, returning materials to the warehouse and returning the facility to its original state was the beginning of the end.

The post-Games period, as would be expected, had an entirely different emphasis from the preparations. The focus was on demobilizing the venues, disposing of assets, discharging of staff, reconciling financial accounts and beginning the official report.

11

11 During the Games, daily problems are identified and reviewed by the executive operations committee at the LAOOC's Operations Center.

Formation and Management of the LAOOC

Within a week after closing ceremonies, the LAOOC had returned most of the sites to the venue owners. Within two weeks, all of the venues and villages had been returned. To facilitate this process, a special close-out team supervised operations as the sites, one by one, completed competitions, were sealed and then deactivated.

The physical assets of the LAOOC were consolidated at the Main Distribution Center, a large warehouse. The items collected there represented the complexity of the Games: beds, refrigerators, televisions and video recorders, flashlights, computer tapes, desks, uniforms and a potpourri of other items. The bulk of these items were sold back to the original manufacturers or given to governmental and other agencies. Those items of considerable memento value, such as posters, uniforms and festive federalism Look items were sold to the public at a retail sale and then an auction.

The drop in staffing was perhaps the most dramatic. One week after the Games, the LAOOC staff had dropped from almost 70,000 to 2,000 people. Three weeks later, there were 450 people on staff. Two months after the Games, there were 150 people engaged in purging files, paying bills and closing accounting records and drafting the official report. By the end of 1984, the LAOOC staff totaled 75 people.

3.11 The LAOOC legacy

The Los Angeles Olympic Games were financially successful beyond the dreams of its original advocates. A \$215 million surplus was realized by the Organizing Committee. The surplus was greater than that of all prior Olympic organizing committees combined.

But the success of the Olympic Games cannot be measured by the amount of surplus alone. The impact of the Games upon Los Angeles transcended the event. For two magical weeks, the city was united and enchanted. The eyes of the world focused on Los Angeles and saw not smog, not traffic jams, not crime, rather a city rejoicing. They saw a city that was warm, vibrant and friendly and they saw a transportation system that actually worked. The citizens of Los Angeles as well as all Americans discovered a new pride in themselves, their city and their country. The international guests who had traveled to Los Angeles found themselves at home in a city of many languages, many people and much hospitality.

The LAOOC did not cause all of this to happen, but did contribute much to make the Olympic experience in Los Angeles special. It was the people who grabbed hold of the LAOOC's message to "play a part in history" and embraced the athletes of 140 nations who represented most of the countries of the world by marching in the Opening Ceremonies.

It was the Organizing Committee, however, that marshaled the forces necessary to stage the Games and presented the spectacle to the world. In retrospect, it can be seen that many of the overall policies adopted for Los Angeles played a significant role in the success of the Games:

- Existing facilities proved more than satisfactory and were already equipped with operating personnel, procedures and support facilities. The endless worries over construction completion were never a factor and the resulting surplus was properly predicted by those who had noted Montreal's excess of operating revenues over operating expenditures.
- Financing was challenging, but LAOOC creativity and effective private sector fund raising made it work as never before in Olympic history. The outpouring of support for the Games, in both money and materiel, from the sponsors, suppliers and television rights-holders was beyond the original expectations of all Los Angeles organizers. The concept of a limited number of corporate partners—far less than for any previous Games—provided the impetus for each of the selected companies to put forward their best efforts to make the Games successful.
- The growth of support in Los Angeles and throughout much of the USA via the Citizen's Advisory Commission was an important factor in the early life of the Organizing Committee. Many people who wanted to get involved at an early stage became members of the commission and through their support and dissemination of information within the communities, the LAOOC drew widespread support in its formative years. Those who completed the Olympic orientation

workshop series became very familiar with specific details of the LAOOC's overall program for putting on the 1984 Games.

- The commissioner program was a tremendous success. In addition to bringing in proven management to each sport in the Games, the commissioner system placed each International Federation in permanent touch with the senior executive for the sport three to four years prior to the Games. This gave each IF a chance to educate the commissioner in the nuances (rather than just the broad outlines) of the sport and to allow the commissioner to see enough world and regional championship competitions to develop his own ideas for improvement at Los Angeles. During the Games, the management ability of the commissioners ensured that the sports themselves would run smoothly.
- Competitions and other events staged by the organizers in the pre-Games period proved very useful. Not only did the organizers get to work directly with the sports and personalities that would later be present at the Games, these actual events sharpened the skills and presented the issues and problems that larger-sized events such as the Games would pose. In retrospect, there was no substitute for these hands-on experiences.
- The venue development process, though extremely difficult, was extremely important and very useful. Complete manpower, site and transport plans came out of this process. Although unanimity was not always achieved in the compilation of the plans, the process provided an opportunity for every involved department to plan for its own responsibilities and observe the effect of the planned operations of others at the site.
- The arduous process of changing from a centrally-controlled organization based mainly at one facility to a decentralized operating strategy—known as "venuization" at the LAOOC—was made easier by the important step of recruiting and training the venue management personnel well in advance of any move to the sites. The ability of each site to function in the crucial first days of the LAOOC's exclusive access to that site was a direct reflection of the amount of time which had been spent by the venue management team as a unit prior to the move.
- Attention must be paid to the organizational processes and requirements after the Games had begun. Instructions for the Operations Center and the procedures for venue close-out following the completion of the competitions should have been finished and disseminated well in advance of the flight of centralized staff to the sites for their Games-period assignments.
- The impact on the community must not be forgotten. Although technically only one of the many sectors of endeavor for an Olympic organizing committee, the means by which the attention and interest of the host city and country become fixed upon the Games must be developed in order to assure its overall success. The banners and flags in vibrant colors which draped the city in May and June, the daring Olympic Arts Festival beginning on 1 June and the immense impact of the torch relay were the primary means for the LAOOC to rally the local communities in Southern California and Americans all across the nation and generate a great outpouring of support which completed the ingredients for the success of the Games of the XXIIIrd Olympiad.

The LAOOC also had a vast impact on the Olympic movement. In the late 1970s, when Los Angeles made its successful bid, it accepted a challenge to host the Games in an Olympic world rocked by terrorism, enormous cost overruns and resulting debt and an about-to-occur boycott of the 1980 Games. With these burdens, Los Angeles faced enormous challenges; the future of the Olympic movement was at stake. And Los Angeles succeeded in every area. The Games of the XXIIIrd Olympiad had more National Olympic Committees represented than ever before, were completely self-funding and were incident-free.

The LAOOC had taken to heart Pierre de Coubertin's 1908 dictate that *"the games must be kept more purely athletic; they must be more dignified; more discreet; more in accord with classic and artistic requirements; more intimate, and, above all, less expensive"* and demonstrated that the Olympic movement was still valid in this modern world.

4

Growth of the LAOOC and the Organization of the Games: A Chronology

25 September 1977 Approval is given by the USOC for Los Angeles to be the candidate city from the United States to host the Games of the XXIIIrd Olympiad. The Southern California Committee for the Olympic Games (SCCOG) wins the USOC vote in a meeting at Colorado Springs, Colorado.

31 October 1977 IOC President Lord Killanin announces the closure of the application period to host the Games, with Los Angeles the sole bidder.

18 May 1978 During the 80th Session of the IOC in Athens, Greece, a provisional award of the Games is made to Los Angeles, conditioned on the signing of a contract between the IOC and the city of Los Angeles.

31 August 1978 The IOC Executive Board approves a contract between the IOC and Los Angeles, subject to approval by the IOC membership.

7 October 1978 Overwhelming approval of the IOC-Los Angeles contract is made by the IOC members: 75 in favor, three against, six abstentions and one null vote.

12 October 1978 Los Angeles City Council approval is given to the IOC-approved contract.

20 October 1978 Signing of the contract between the IOC and Los Angeles takes place, allowing Los Angeles to host the Games of the XXIIIrd Olympiad from 28 July to 12 August 1984. The signing is held at the White House in Washington, D.C.

7 November 1978 Los Angeles City Charter Amendment N is passed by voters, prohibiting any capital expenditures by the city of Los Angeles on the Olympics that would not, by binding legal commitment, be paid back.

26 January 1979 The LAOOC Board of Directors, consisting of 59 community leaders and activists, is named.

1 March 1979 A contract among the IOC, USOC and the LAOOC is signed at IOC Headquarters in Lausanne, Switzerland.

26 March 1979 Paul Ziffren is selected as chairman and Peter V. Ueberroth as president of the LAOOC.

26 September 1979 A record \$225-million television rights agreement is signed by the American Broadcasting Company and the LAOOC in Nagoya, Japan.

1 February 1980 Harry L. Usher is named executive vice president/general manager, assuming overall operating responsibilities for the Games.

24 March 1980 An agreement is signed by the LAOOC, city of Long Beach and the Southern California Yachting Association for use of the Long Beach Marina as the yachting venue in 1984.

30 April 1980 An agreement is signed with California Sports, Inc. for use of The Forum as the basketball site.

29 May 1980 An agreement is signed with the city of Long Beach securing El Dorado Park as the site of archery in 1984.

11 June 1980 An agreement is signed with the Los Angeles Coliseum Commission for use of the Los Angeles Memorial Sports Arena as the boxing venue in 1984.

10 July 1980 An announcement is made of agreement between the LAOOC and the city of Long Beach for use of the Long Beach Arena for Olympic volleyball and the Long Beach Convention Center Exhibition Hall for fencing.

15 July 1980 A license agreement is signed by the LAOOC with the city of Pasadena for use of the Rose Bowl for Olympic football in 1984.

16 July 1980 The First Official Report of the LAOOC is presented to the International Olympic Committee at the 83rd Olympic Session in Moscow, USSR.

4 August 1980 The official opening of the four-year quadrennial for the XXIIIrd Olympiad takes place. Ceremonies in Los Angeles and New York highlight the event, along with the introduction of the official Olympic symbol, the *Star in Motion* and the Olympic mascot, *Sam the Olympic Eagle*.

The Organizing Committee's first nine sponsors are announced, ushering in a new era in Olympic financing. Named are: Coca-Cola Co., Anheuser-Busch, Inc., McDonald's Corp., Arrowhead Puritas Waters, Inc., Canon USA, Inc., Southland Corp., United Airlines, First Interstate Bank and Dentsu, Inc.

The first LAOOC licensee, Cervantes Neckwear, Inc., is also named.

7 August 1980 A new world-class swimming and diving stadium at the University of Southern California is announced as the site of Olympic swimming in 1984. The facility will be underwritten by the McDonald's Corp.

28 August 1980 The building of a new world-class velodrome to serve as the site of Olympic cycling is announced. The velodrome will be underwritten by the Southland Corp.

19 November 1980 The LAOOC and Los Angeles Coliseum Commission announce that the Los Angeles Memorial Coliseum, site of the 1932 Games, will again host the Opening and Closing Ceremonies in 1984, as well as the athletics competition.

25 November 1980 A new management concept for Olympic sports is announced: the commissioner system. In each sport, experienced business managers will be invited to manage Olympic events, working part-time into 1983, then joining the Organizing Committee full-time 6–12 months prior to the Games.

4 December 1980 The Atlantic-Richfield Company becomes the newest LAOOC sponsor. ARCO will finance seven international-class tracks in the Los Angeles area and help with refurbishment of the Los Angeles Memorial Coliseum.

6–12 December 1980 IOC President Juan Antonio Samaranch and Director Monique Berlioux tour Los Angeles sports facilities and meet with local leaders and Olympic officials.

19 December 1980 Ooh La La, Inc., a manufacturer of cloisonne jewelry, is named as the third LAOOC licensee.

15 January 1981 Announcement of agreements for three more competition venues is made: judo at California State University at Los Angeles; weightlifting at Loyola Marymount University's new Albert Gersten Pavilion; and wrestling at the Anaheim Convention Center.

Sponsorships are announced with Sports Illustrated and the American Express Co.

19 January 1981 The LAOOC names its first "Official Supplier," Brother Industries, Ltd., which will supply the LAOOC with typewriters for the Games.

5 February 1981 California State University at Dominguez Hills is selected as the site for the to-be-constructed Olympic velodrome.

20–25 February 1981 A meeting of the IOC Executive Board is held in Los Angeles.

25 February 1981 An agreement on basic terms is signed by the LAOOC and the University of California, Los Angeles. UCLA's Pauley Pavilion is named as the site of Olympic gymnastics.

12 March 1981 A sponsorship agreement is announced with the Coca-Cola Company/Foods Division, makers of Minute Maid Orange Juice and other products.

26 March 1981 An agreement is signed by the LAOOC and California State University at Fullerton for use of Titan Gymnasium as a site for Olympic handball.

30 March 1981 The LAOOC offices will move onto the campus of UCLA in the summer of 1981. A new, three-story office building will be constructed on the campus and will house the LAOOC from mid-1982 through the Olympic Games.

9 April 1981 A report is made by the LAOOC to the IOC Executive Board. An LAOOC recommendation to include tennis and baseball as demonstration sports is accepted.

23 April 1981 Santa Anita Park is announced as the site for Olympic equestrian events.

30 April 1981 The LAOOC and USOC join to seek legislation in the United States Congress to authorize minting of Olympic commemorative coins.

18 May 1981 The LAOOC and COPAN-83, the organizing committee of the 1983 Pan American Games, sign an agreement of mutual support.

24 June 1981 Bright and Associates is selected to design pictograms for the Olympic Games.

29 June 1981 An agreement is reached to use Lake Casitas as the site of Olympic rowing and canoeing.

9 July 1981 Construction begins on the Olympic velodrome. The open-air facility is slated for completion in mid-1982.

13 July 1981 LAOOC officials Peter Ueberroth, Harry Usher and Glenn Wilson meet with President Ronald Reagan at the White House in Washington, D.C.

Deputy Chief of Staff Michael Deaver is appointed White House liaison to the 1984 Olympic Games.

14 July 1981 Peter Ueberroth, Harry Usher, USOC President William Simon and Executive Director F. Don Miller testify before a hearing of the Senate Banking Committee on the proposed Olympic commemorative coins.

30 July 1981 Moochie's Team Outfitting Co. of Los Angeles is announced as the LAOOC's fourth licensee. The company will manufacture stadium seat cushions.

10 August 1981 An agreement is announced between the LAOOC and the city of Los Angeles for use of the Los Angeles Convention Center as the Main Press Center during the Games.

18 August 1981 The LAOOC and General Motors announce a new sponsorship agreement with the Buick Motor Division, which will supply the "Official Automobile" of the Games.

2 September 1981 Levi Strauss joins the LAOOC's sponsorship family as the "Official Outfitter" of the Games.

15 September 1981 An agreement is announced between the Los Angeles Dodgers, Inc. and the LAOOC, placing the 1984 Olympic baseball tournament in Dodger Stadium.

16 September 1981 The LAOOC announces that the Converse Rubber Co./Allied Corporation will be a sponsor of the 1984 Games and will provide the "Official Athletic Shoe."

23 September–1 October 1981 The 11th Olympic Congress and 84th IOC Session are held at Baden-Baden, Federal Republic of Germany.

The LAOOC presents its Second Official Report to the IOC on 1 October.

13 October 1981 ABC Publishing is granted rights to publish the "Official Olympic Guide to Los Angeles."

1 November 1981 LAOOC marks 1,000 days to go before Opening Ceremonies.

9 November 1981 An agreement is announced with the California Museum of Science and Industry, providing the LAOOC with additional parking spaces in the Coliseum and Exposition Park area. The Organizing Committee also announced it will spend \$800,000 to repair and renovate existing areas in Exposition Park.

18 November 1981 An announcement is made of a sponsorship agreement with the Westinghouse Electric Corp. Westinghouse will provide the "Official Office Furniture" of the Games, while affiliated companies Longines-Wittnauer/Swiss Timing will be the "Official Watches and Clocks" and "Official Timekeepers;" and Perrier will be the "Official Mineral Water" of the 1984 Games.

3

2

4

- 1 At a 28 August 1980 news conference, it is announced that an Olympic velodrome is to be built at California State University at Dominguez Hills.
- 2 The LAOCOC symbol, the Star in Motion and mascot Sam the Olympic Eagle are introduced on 4 August 1980.
- 3 The announcement of the construction of a new world-class swimming and diving stadium at USC is made 17 August 1980. Funding was provided by the McDonald's Corporation.
- 4 LAOCOC President Peter V. Ueberroth (center), IOC Director Monique Berlioux (right) and IOC President Juan Antonio Samaranch take a venue tour in December 1980, including this stop at the Coliseum.

Growth of the LAOOC and the Organization of the Games: A Chronology

5

7

8

6

9 Olympian John Naber (right), McDonald's mascot Ronald McDonald and LAOOC mascot Sam the Olympic Eagle help break ground for the new Olympic Swim Stadium on the campus of USC on 30 December 1987.

5 President of the FEI, H. R. H. Prince Philip, The Duke of Edinburgh, tours the equestrian sites on 25 September 1982.

6 Ground breaking ceremonies for Coliseum improvements are held on the 59th birthday of the stadium on 17 April 1982.

7 Representatives of the International Federations meet with the IOC Executive Board on 17 February 1982 in Pasadena, California.

8 Ronald Reagan, president of the United States (left), accepts IOC President Juan Antonio Samaranch's invitation to open the Games in 1984. With them in the 29 January 1982 meeting is LAOOC President Peter V. Ueberroth (right).

1 December 1981 First-time radio rights are granted for the Olympic Games, ABC Radio acquires exclusive U.S. rights (excepting Spanish language rights) and will serve as host coordinating broadcaster for world-wide radio.

3 December 1981 An announcement is made of the sale of television rights to the 32-nation European Broadcasting Union for approximately \$19.8 million.

8 December 1981 An announcement of official Olympic hotels, with more than 15,000 rooms committed for LAOOC use in 1984 to house Olympic Family members (IOC, NOCs, IFs, press, sponsor representatives) is made.

9 December 1981 The United States Senate approves the Olympic Coin Program by voice vote. The bill had previously been voted out of the Senate Banking Committee by a 14-0 vote on 15 October.

11 December 1981 Fuji Photo Film Co., Ltd. becomes the LAOOC's sponsor for "Official Photographic Products." Fuji will also service credentialed photographers in regard to development of film in 1984.

30 December 1981 Ground-breaking ceremonies for the Olympic Swim Stadium are held at the University of Southern California, site of the new facility.

4 January 1982 Molten Rubber Industry Co., Ltd. is announced as the supplier of the "Official Basketball" of the Games.

6 January 1982 A sponsorship agreement with the Sanyo Electric Corporation is announced at Caesar's Palace Hotel in Las Vegas, Nevada. Sanyo will manufacture the "Official Video Products of the Games."

8 January 1982, Dedication ceremonies are held for the newly-completed Albert Gersten Pavilion on the campus of Loyola Marymount University, site of weightlifting in 1984.

22 January 1982 Easton Aluminum, a world leader in the manufacture of arrow shafts for competitive archery, is announced as an LAOOC licensee. Easton's commitment includes funding for youth archery ranges and development programs in excess of \$325,000. The site for the first range will be the Cheviot Hills Recreation Center.

29 January 1982 A White House meeting among U.S. President Ronald Reagan, IOC President Juan Antonio Samaranch and LAOOC President Peter V. Ueberroth is held. Reagan accepts Samaranch's invitation to open the Games in 1984.

Groundbreaking ceremonies are held at California State University at Los Angeles for the first of six Olympic training tracks to be installed prior to the 1984 Games. Present was IAAF President Primo Nebiolo. A "Reclaflex-S" surface will be installed by the Rekortan Sports Corporation.

1 February 1982 A joint announcement by the IOC, LAOOC and Network Ten/Australia details a television rights agreement of \$10.6 million for exclusive TV rights to the Games for Australia.

1-7 February 1982 Week-long meetings of the IOC Executive Board, IOC Commissions and International Federations are held in Los Angeles at Pasadena's Huntington-Sheraton Hotel. At the final news conference, IOC President Juan Antonio Samaranch states that he is convinced that the Games will be "impeccably organized." Included in the program are meetings of the IOC Executive Board, IOC Medical and Press Commissions, a meeting of the International Federations and a meeting between the IOC Executive Board and the International Federations.

2 February 1982 Pepperdine's Raleigh Runnels Memorial Pool is announced as the site for water polo for the 1984 Games. The announcement, made at Pepperdine, is attended by FINA President Ante Lambasa.

2 March 1982 Olympic venues for modern pentathlon and shooting are announced at Coto de Caza and Coal Canyon, respectively. Shooting events will be held on a to-be-constructed \$18-million facility to be financed privately.

9 March 1982 Analytical drug testing facilities will be installed at the University of California, Los Angeles. The complete analytical laboratory needs of the Games will be handled there under the supervision of the UCLA Medical School and Department of Pharmacology. The main lab facilities will be located in the Louis Factor Health Sciences Building in the UCLA Center for the Health Sciences.

5 April 1982 Campagnolo-USA, Inc. is named "Official Supplier of Technical Assistance" for the 1984 cycling events. The Houston-based company and Italian parent will supply equipment, parts, tools and technicians to assist competitors in 1984.

7 April 1982 A combination groundbreaking and 59th birthday party are held at and for the Los Angeles Memorial Coliseum. LAOOC improvement programs, funded by ARCO, including public address, dressing room, electrical and sewer improvements are also detailed. The LAOOC will install a new Hi-Play systems grass field as well as a new world-class running track.

14 April 1982 An announcement is made that names East Los Angeles Community College as the site of hockey in 1984. The announcement includes a demonstration of the sport.

24 April 1982 The first of two new junior archery ranges, at the Cheviot Hills Recreation Center, is dedicated.

30 April 1982 Edgar N. Best is appointed LAOOC's Director of Security.

14 May 1982 A working group from the Association of National Olympic Committees (ANOC) visits the LAOOC to examine preparations. An announcement of the first nine Olympic attaches is also made.

20 May 1982 The US. House of Representatives passes a commemorative coin program for the 1984 Games by a 302-44 margin. The program calls for three coins to be issued, one in 1983 and two in 1984.

21-23 May 1982 The initial Olympic Youth Sports Festival is held at California State University at Los Angeles (CSULA). Competition for youth takes place in archery, athletics, gymnastics and synchronized swimming.

The athletics competition is held on the new training track installed at CSULA. Dedication ceremonies are held immediately prior to the competition, a regional championship of the ARCO Jesse Owens Games.

26 May 1982 It is announced that the University of California, Santa Barbara will serve as satellite housing during the Games for the expected 1,200 rowing and canoeing competitors.

27 May 1982 The LAOOC gives its Third Official Report to the International Olympic Committee at the 85th IOC Session in Rome, Italy. The LAOOC announces that it would accept inclusion of the K-4 canoeing event for women in 1984, as well as an agreement with FIFA to play preliminary football competitions on four separate fields. In Rome, the LAOOC also reports to the Medical and Press Commissions.

23 June 1982 The Times Mirror Company becomes the sponsor of the 1984 Olympic Arts Festival, the cultural component of the Games of the XXIIIrd Olympiad.

1 July 1982 The U.S. Senate approves the Coin Program Bill passed by the House of Representatives.

8 July 1982 The newly-completed Olympic velodrome at California State University at Dominguez Hills is dedicated. USA Olympic gold medalists Eric Heiden and Sheila Young Ochowicz take the first official lap in the new facility.

9-10 July 1982 The first event in the velodrome, the 7-Eleven/Bicycling Magazine Grand Prix, takes place before overflow crowds of 3,000 and 4,000.

12 July 1982 Television rights sales are announced to TV New Zealand (\$500,000) and to the Kanlaon Broadcasting System for the Philippines (\$400,000).

22 July 1982 U.S. President Ronald Reagan signs into law the congressionally-approved Olympic Commemorative Coin Program. Public Law No. 97-220 authorized the minting of up to 52 million coins: 50 million in silver dollars and two million 10-dollar gold pieces.

9 August 1982 The LAOOC moves into its new offices at 10945 LeConte Avenue on the southern edge of the UCLA campus. The three-story building was completed on time as a joint effort of the University and the Organizing Committee.

13 August 1982 Xerox Corporation is announced as an "Official Sponsor" of the Games. Xerox will supply photocopiers and telecopiers for use in 1984.

8 September 1982 The LAOOC's Envoy Program, modeled after the Sports Commissioner Program, is announced. Envoys will be selected by the LAOOC from qualified U.S. citizens in the Southern California area to serve as liaisons with Olympic attaches and National Olympic Committees around the world.

13 September 1982 Joint announcement is made that the internationally-known film exposition FILMEX will present a special sports film festival in 1984, just prior to the beginning of the Games. The festival will feature a 50-hour marathon of features and shorts using sport as a metaphor for the human condition and a complete retrospective on past official Olympic films.

15 September 1982 The LAOOC exercises its option and terminates its agreement with Coal Canyon and begins examination of possible sites for the shooting competition in 1984.

An LAOOC team attends a meeting of secretaries-general from European National Olympic Committees in Moscow, USSR, and comments upon the Association of National Olympic Committees' working group report compiled in May.

22-25 September 1982 The Federation Equestre Internationale (FEI) Bureau meets in Los Angeles and tours the sites for equestrian competition during the Games. Led by its president, H.R.H. Prince Philip, Duke of Edinburgh, the bureau examines Santa Anita Park and Fairbanks Ranch (a possible site for the speed and endurance competition of the three-day event). During the bureau meeting, it is agreed that the final day of jumping will be held at Santa Anita Park, where a single-ring stadium will be constructed.

29 September 1982 ARA Services, Inc., one of the world's largest service management companies, is announced as an LAOOC sponsor. ARA will plan and implement the massive food service program required for Olympic athletes and team officials in 1984, as well as carry out all facets of athlete and team official transportation.

The American Telephone & Telegraph Company and Pacific Telephone & Telegraph are announced as LAOOC sponsors and "Official Sponsor of the 1984 Olympic Torch Relay." Included

Growth of the LAOOC and the Organization of the Games: A Chronology

in the agreement are AT&T, PT&T, AT&T Directory Services, AT&T Long Lines Division and Western Electric Company. State-of-the art Bell System technology will be on display during the Games to provide new dimensions in communications for the worldwide news media and Olympic staff.

4 October 1982 An announcement is made that the LAOOC has commissioned a new piece of sculpture by Los Angeles artist Robert Graham to decorate the peristyle area of the Los Angeles Memorial Coliseum. Installation is expected in June 1984.

28 October 1982 An agreement is signed between the city of Los Angeles and the LAOOC, guaranteeing that local taxpayers will not have to bear Olympic-related city costs.

A private study commissioned by the LAOOC reveals that the 1984 Olympic Games will pump more than \$3.3 billion into the Southern California economy. Economic Research Associates, an independent research and consulting firm, estimates a direct impact of \$949 million in the local area and an induced impact of \$2.37 billion.

29 October 1982 The International Festival of Masks will take place on 20-22 July 1984 as part of the Olympic Arts Festival. The exhibition of international masks will run from 20 July to 12 August at the Craft and Folk Art Museum.

6 December 1982 Refurbishment of the East Los Angeles College (ELAC) Stadium through a grant from the Weingart Foundation is announced. The Weingart Foundation, a non-profit philanthropic corporation, commits \$3.2 million to the project which will ready the ELAC Stadium for hockey during the 1984 Games as well as improve the ELAC auditorium.

Motorola Communications & Electronics, Inc. is named as an official sponsor in the area of radio communications equipment.

15 December 1982 Details of the LAOOC's ticket distribution plan are made public. Under the program, public orders will be filled on a first-come, first-served basis, with ticketholders for oversubscribed events selected through a computer-controlled random draw. A special Olympic Patron Program, designed to bring 100,000 disadvantaged youth, handicapped and senior citizens to the Games while offering premium seating, is also announced.

Two major exhibitions, "The Automobile and Culture" and "In Context," are announced as features of the Olympic Arts Festival. They will be presented by the Museum of Contemporary Arts in partnership with the LAOOC.

16 December 1982 Transamerica Corporation is named in San Francisco, California as an official sponsor in the areas of insurance and rental cars.

Transamerica's insurance and Budget Rent-A-Car subsidiaries will provide services to help support the staging of the 1984 Games.

11 January 1983 The 15 official fine arts posters are unveiled during a gala reception at the Los Angeles Municipal Art Gallery in Barnsdall Park. Thirteen of the 16 artists who produced posters attended the event, along with arts and community leaders.

M & M/Mars is designated an official sponsor and producer of the "Official Snack Foods" of the Games.

14-21 January 1983 Five hundred sixty delegates from 141 nations gather in Los Angeles for the 22nd meeting between the IOC Executive Board and the National Olympic Committees. Included in the program were meetings of the IOC's Olympic Movement, Press and Television commissions, as well as the Second General Assembly of the Association of National Olympic Committees.

The IOC and the LAOOC agree on a villages' pricing structure that will charge delegates \$35 per day, and IOC approval (subject to FIFA confirmation) is given to preliminary football sites in Annapolis, Maryland, Boston, Massachusetts and Stanford, California. The LAOOC also organizes a demonstration of rhythmic gymnastics and synchronized swimming at the Beverly Hills High School Swim-Gym and entertains 431 delegates with "in-home" dinners at 53 Southern California residences.

Among the highlights is the presentation of medals to the family of 1912 Olympic pentathlon and decathlon winner Jim Thorpe on 18 January, following an October 1982 IOC Executive Board decision to reinstate his amateur status.

26 January 1983 Exclusive television rights are awarded to the Los Angeles Olympic Japan Pool (LAOJP) for \$18.5 million. The LAOJP is composed of the National Japanese Network (NHK) and the National Association of Commercial Broadcasters, representing more than 100 broadcast organizations.

2 February 1983 The Levi's Olympic Children's Art Project is unveiled, with more than 300,000 youngsters in grades kindergarten-sixth expected to participate. An awards fund of \$70,000 to bolster school art programs will be distributed based on participation in the program.

19 February 1983 LAOOC Chairman Paul Ziffren announces that the LAOOC's Citizens Advisory Commission has reached the overall membership goal of 3,000. Persons still interested in assisting in the Games are urged to apply for volunteer staffing positions.

28 February 1983 It is announced that the first United States appearance of the Royal Opera of London's Royal Opera House, Covent Garden will be made during the Olympic Arts Festival. The Royal Opera will give 11 performances in Los Angeles, all at the Dorothy Chandler Pavilion.

2 March 1983 An agreement is announced among the LAOOC, Los Angeles Raiders professional American football club and the Los Angeles Coliseum Commission regarding use of the Raiders' proposed "luxury boxes" in the Los Angeles Coliseum. Under the agreement, if the boxes are built the LAOOC will occupy 166 of the 174 boxes during the Games in return for a rental fee of \$3 million.

4 March 1983 LAOOC President Peter V. Ueberroth states clearly the Organizing Committee's policy concerning government monies and the 1984 Games: "Any government services we request, we will pay for, but we will not pay for services we do not order."

Ueberroth notes the positive aspects of the Games, which include \$3.3 billion in economic benefits to the Southern California area, the most comprehensive arts festival ever staged in the United States, numerous physical facilities and improvements and a strong youth program.

5-6 March 1983 Eighty-four members of the LAOOC's Olympic Spirit Team gather for initial meetings in Los Angeles. Ranging in age from 23 to 91, the group attends orientation meetings, tours venue sites and is involved in community youth events.

15 March 1983 The Olympic Torch is lit at the Los Angeles Memorial Coliseum in tribute to the late Hungarian sports leader Dr. Arpad Csanadi, who died on 7 March. Csanadi was the Secretary General of the Hungarian NOC, the IOC member in Hungary and the Honorary Sports Director of the IOC. The LAOOC is represented at Csanadi's 16 March funeral in Budapest by Vice President/Sports Charles G. Cale.

Southern Pacific Company is named an official sponsor in a joint announcement in Los Angeles. Southern Pacific will provide financial support for the Games and for a special civic project.

16 March 1983 It is announced that the LAOOC will stage seven 1983 events at Olympic venues. Events will include the III FINA World Water Polo Cup in May, an international cycling invitational in July, an international swimming competition in July, the II American Cup of Synchronized Swimming in August and regattas for rowing and canoeing at Lake Casitas in September.

21 March 1983 The Los Angeles Beautiful-LAOOC Olympic Youth Beautification Program is launched at Roosevelt High School. The program will be funded by royalties and other proceeds from sales of Armstrong Nurseries' "Olympiad," the official rose of the 1984 Olympic Games.

21-28 March 1983 The 86th session of the International Olympic Committee is held in New Delhi, India. The LAOOC makes its Fourth Official Report to the IOC on 26 March.

During the session, it is agreed that boardsailing will be included in the Games, that six teams will participate in the demonstration sport of baseball and that the demonstration tennis events would consist of 32-player singles competitions for men and women, open to all players 20 years and younger, regardless of status. IOC President Juan Antonio Samaranch agrees to exhibit his collection of Olympic philately as a part of the Olympic Arts Festival.

Additionally, the FIFA gives final approval to the LAOOC's preliminary football sites at Annapolis, Boston and Stanford.

24 March 1983 An announcement is made that the world-renowned Les Ballets Africains dance troupe from the People's Revolutionary Republic of Guinea will perform during the Olympic Arts Festival. The five scheduled Los Angeles performances will be the first for Les Ballets Africains in the United States in 13 years.

14 April 1983 The First Interstate Bank Olympic Youth Art Contest for students in grades 7-12 opens. Students in 12 western states will compete in two divisions for district, county, state and grand prizes. Scholarship awards will be given to the grand prize winner, runner-up and third-place finisher.

22 April 1983 An announcement is made of television rights sales to the 43-nation Union of Radio and Television Organizations of Africa (URTNA).

26 April 1983 An agreement is reached between the LAOOC and the Ventura County Board of Supervisors for reimbursement of Olympic-related costs for services requested and provided by the county.

29 April 1983 The LAOOC, along with the United States Olympic Committee, files suit in the U.S. District Court in Los Angeles against local ticket broker Murray's Tickets for unauthorized use of Olympic symbols. The action also seeks to have the court stop Murray's from falsely representing that it has Olympic tickets.

3 May 1983 An announcement is made that a major international loan exhibition of 120 French Impressionist landscape paintings, including 45 from the Louvre, will be one of the major cultural components of the 1984 Olympic Arts Festival. The exhibition, entitled *A Day in the Country: Impressionism and the French Landscape*, will be on view at the Los Angeles County Museum of Art on 28 June 1984 through 16 September 1984.

7 May 1983 The first of the LAOOC's LA83 summer sports events, the III FINA World Water Polo Cup, begins at Pepperdine University. Continuing through 14 May, the round-robin

- 10 On 21 January 1983, 560 delegates from 141 nations gather in Los Angeles for the 22nd meeting between the IOC Executive Board and the National Olympic Committees.
- 11 A highlight of the meetings between the IOC Executive Board and the NOCs in January 1983 is the return of Olympic medals to the family of Jim Thorpe, 1912 Olympic pentathlon and decathlon winner.
- 12 NOC delegates tour the UCLA village on 21 January 1983.
- 13 Los Angeles Mayor Tom Bradley helps launch the LAOOC Youth Beautification Program at Roosevelt High School on 12 March 1983.

Growth of the LAOOC and the Organization of the Games: A Chronology

14

14 A ceremonial lighting of a flame starts the Olympic Torch Relay in New York.

15 A five-kilometer run begins the ceremonies for dedication of a new training track, funded by ARCO, at Birmingham High School.

16 It is announced on 25 November 1983 that for the first time in Olympic history, the organizing committees for the 1984 Winter and summer Olympic Games will join forces and resources to produce a medalion commemorating both Games and the friendship between the people of the host cities.

17 A limited, signed edition of Olympic fine arts posters are presented to U.S. President Ronald Reagan and First Lady Nancy Reagan (left) on 7 May 1983, by LAOOC Olympic Arts Festival Director Robert J. Fitzpatrick and Vice President of Communications Michael O'Hara (right).

15

16

17

tournament brings the world's top eight teams to the site of the 1984 Olympic water polo competition.

A new training track, funded by ARCO, is dedicated at Birmingham High School. Ceremonies include a five-kilometer run and the renaming of the school's athletic facility as Tom Bradley Stadium. The dedication also culminates Birmingham High School's "Olympic Awareness Week."

The "Olympic Neighbor" community of Long Beach holds a membership kickoff meeting, with Olympic gold medalists Pat McCormick (diving, 1952 and 1956) and Tommie Smith (athletics, 1968) participating. Long Beach is the first community to officially join the LAOOC's new Olympic Neighbor Program.

18 May 1983 Exclusive television broadcasting agreements are signed between the LAOOC and the Canadian Broadcasting Corporation (CBC) and the Latin American Broadcasting Organization (OTI). The agreements provide that the CBC and OTI will purchase the exclusive over-the-air rights to the Games for \$3 million and \$2.15 million, respectively, one third of which will be paid to the IOC.

20 May 1983 An agreement in principle is reached between the LAOOC and Orange County for reimbursement for all Orange County costs, including security.

Windsurfing International, Inc. and the LAOOC announce the signing of a license agreement between Windsurfing International and Windglider, guaranteeing inclusion of two boardsailing events in the Games.

31 May 1983 At a meeting of the IOC Executive Board and the General Assembly of International Sport Federations in Lausanne, Switzerland, the LAOOC reports on preparations for congresses, accommodations and transportation of the International Federations.

2 June 1983 IBM is announced as the official personal computer and office systems sponsor for the Games. The company is providing IBM personal computers, IBM multi-function word processor Display writer systems, an IBM Sytem/38 general purpose computer and other equipment.

4 June 1983 The second Olympic Youth Sports Festival is held at California State University of Los Angeles, with 3,000 Southern California boys and girls in attendance. Sports include archery, judo, synchronized swimming and athletics.

8 June 1983 The LAOOC, Los Angeles Turf Club, Inc., and Watt Industries/San Diego Inc. announce the Fairbanks Ranch Country Club in San Diego County will host the middle day of the three-day endurance event in the Games.

14 June 1983 More than 5.5 million tickets to the 1984 Olympic Games go on sale throughout the United States. Ticket mail order forms are available at Sears, Roebuck and Co. stores nationally, First Interstate Bank branches in Southern California and Manufacturers Hanover Trust branches in the greater New York metropolitan area.

20 June 1983 Initial processing of the 1984 Olympic ticket orders begins at a First Interstate Bank facility. On this day, the LAOOC had received approximately 100,000 orders and 40,000 telephone calls to the information number listed in the ticket brochure. Between 1.2 million and 1.5 million of the seven million brochures available in the United States had been distributed.

21 June 1983 The Prado Recreation Area in San Bernardino County is named shooting site for the Games. The 50-acre site near Chino is chosen because of its location, about an hour's drive east of Los Angeles, and on the prospect of a permanent shooting facility for Southern California.

30 June 1983 It is announced that the LAOOC will move its operations headquarters to a 180,000-square-foot facility in Culver City by late summer.

1 July 1983 Official invitations from the LAOOC to the recognized National Olympic Committees in 151 countries are hand-canceled and mailed at the Worldway Postal Center in Los Angeles. U.S. Olympic medalists Anita DeFrantz and Bob Seagren join U.S. Postal Service officials for the mailing.

8 July 1983 Cyclists from around the world compete in the Murray/7-Eleven International Cycling Invitational at the Olympic velodrome. The event, on 8-9 July, is the second of the LA83 events.

14 July 1983 Some of the world's top swimmers match skills at the LA83 McDonald's International Swimming Meet. The four-day event includes swimmers from 20 countries and is the first competitive use of the new Olympic Swim Stadium at USC.

15 July 1983 Announcement is made that the Chengdu Acrobatic and Magic Troupe from the People's Republic of China will travel to the United States for the first time to perform in the 1984 Olympic Arts Festival. The troupe, based in Sichuan Province, features acrobats, magicians and clowns.

19 July 1983 Olympic Arts Festival officials announce that up to eight Los Angeles theater productions will be presented during the summer of 1984 as a central part of the Festival. The Olympic Arts Festival will provide \$100,000 that will be divided among the theaters selected by recommendation of a panel.

21 July 1983 More than 60 Olympians gather at a press reception at LAOOC Headquarters in Westwood to officially introduce the Olympic Spirit Team to members of the media.

28 July 1983 LAOOC marks one year to go before Opening Ceremonies.

Details of the 1984 Olympic Torch Relay are revealed in simultaneous press conferences in New York and Los Angeles. The journey will last approximately 80 days, covering thousands of kilometers between New York City and Los Angeles, and is expected to raise millions of dollars for youth sports in America.

5-7 August 1983 The LA83 Sunkist American Cup II Synchronized Swimming Championship begins at the Olympic Swim Stadium.

16 August 1983 Groundbreaking ceremonies for the 1984 Olympic shooting site at the Prado Recreational Area are held.

18 August 1983 David L. Wolper, an internationally renowned filmmaker who brought *Roots* to television screens throughout the world and produced the 1972 documentary *Visions of Eight*, is named commissioner and executive producer of ceremonies for the Games.

27 August 1983 Action begins in the 1983 McDonald's International Gymnastics Championships at Pauley Pavilion, as gymnasts from 13 countries, including the top U.S. Olympic hopefuls, start competition.

12 September 1983 The Southern California Rapid Transit District (RTD) and the LAOOC announce that sales of bus tokens bearing the Olympic symbols will enable the RTD to fully fund special bus lines for spectators attending the Games. Sales are expected to generate at least \$3 million, allowing the addition of 475 buses.

An agreement is reached between the LAOOC and the city of Monterey Park on payment for Olympic-related security costs.

22-25 September 1983 Lake Casitas in Ventura County is the site of the Foster Farms Lake Casitas International Regatta. More than 400 rowers and canoeists participate in the event.

27 September 1983 After meetings in Washington, D.C., with congressional leaders and Assistant to the President Michael K. Deaver on preparations for the upcoming Games, LAOOC President Peter V. Ueberroth states: *"The exclusion of any invited nation from the 1984 Olympic Games in Los Angeles is clearly not an option of the host country. The Games were awarded to Los Angeles on condition that all eligible nations would be welcome in our country. It is important to remember that the Games do not belong to the United States just because they are taking place on our soil. The Games belong to the world."*

2 October 1983 Dedication ceremonies for the new world-class track in the Los Angeles Memorial Coliseum are held with LAOOC and ARCO officials presiding. The ceremonies are preceded by the completion of the Coliseum Invitational 10-kilometer run.

19-22 October 1983 The best archers in the world converge on El Dorado Park in Long Beach for the XXXIInd Archery World Championships. The event is the last of the LAOOC-hosted LA83 competition.

24 October 1983 The LAOOC hosts its Olympic sponsors at the Sheraton Grande Hotel in downtown Los Angeles. The three-day meeting, with more than 300 representatives of 30 Olympic sponsors and 59 licensees in attendance, focuses on the solidification of Olympic corporate sponsors plans for 1984.

It is announced that a federal court judge has entered a stipulated final judgment that precludes Mervyn's, a Northern California-based department store chain, from selling its recently-developed line of Olympic-themed merchandise.

5 November 1983 The Los Angeles Raiders professional American football team announces it is postponing construction of luxury boxes on the Coliseum rim until after the Olympics. As reasons, team officials cite court delays in ruling on appeals of the legal decisions allowing the teams' move to Los Angeles and uncertainties as to whether they could complete construction in time for the Games.

10 November 1983 The U.S. House of Representatives unanimously approves a resolution recognizing *"the right of every individual eligible under the rules of the International Olympic Committee to participate in the (Los Angeles Games)."*

18 November 1983 LAOOC President Peter V. Ueberroth announces that Soviet sports leaders are planning to visit Los Angeles during the first week of December to make final preparations for the Soviet team to compete in the Games.

25 November 1983 An announcement is made that for the first time in Olympic history the organizing committees for the 1984 Winter and Summer Olympic Games will join forces and resources to produce a medallion commemorating both Games and the friendship between the people of the host cities.

28 November 1983 The LAOOC's request to include two events for wheelchair-bound competitors in the 1984 Games wins preliminary approval from the IOC and the International Amateur Athletic Federation (IAAF).

29 November 1983 LAOOC Chairman of the Board Paul Ziffren is appointed to the Court of Arbitration for Sport by IOC President Juan Antonio Samaranch.

1 December 1983 The Los Angeles Olympic Committee-UCLA Analytical Laboratory becomes only the eighth laboratory in the world, the first in the United States to receive accreditation from the IOC. The laboratory will be used for doping control tests at the Games.

Growth of the LAOOC and the Organization of the Games: A Chronology

7 December 1983 LAOOC concludes a week-long visit by 13 Soviet Olympic officials. USSR NOC President Marat Gramov states that the Soviets will announce their decision whether to attend the Games no later than 2 June 1984, in accordance with the Olympic Charter.

12 January 1984 The program and ticket brochure for the 10-week, 400-event Olympic Arts Festival was announced in Los Angeles. Beginning 1 June and continuing through the end of the Games on 12 August, 76 companies will comprise one of the largest arts undertakings of all time. A total of 1,200,000 ticket brochures are scheduled to be distributed, with the average ticket price set at \$16.

24 January 1984 The Los Angeles County Board of Supervisors approved an agreement involving security costs incurred by the county sheriff's office regarding the Games. In addition to the \$2.3 million payment for basic security services by the sheriff, the LAOOC agreed to improvements in Exposition Park totaling \$1.8 million. New irrigation, landscaping, lawns, lighting systems, recreational equipment, rest-rooms and signs will be installed, along with parking lot and roadway improvements and repairs.

25 January 1984 A seven-person delegation from the NOC of the People's Republic of China concluded a lengthy visit to Los Angeles and meetings with the LAOOC. A team of more than 300 Chinese will come to Los Angeles, a stark contrast to the two-person delegation to the Games of the Xth Olympiad in 1932. Chen Xian, vice president of the Chinese NOC noted that "wherever we visited, we were showered with warm welcomes. All this convinces us that the XXIIIrd Olympiad will be a great success."

6 February 1984 The Fifth Official Report to the International Olympic Committee is presented by the LAOOC. The report was made during the course of the 87th Session of the IOC at Sarajevo, Yugoslavia. The LAOOC also reported to the Press and Television commissions.

9 February 1984 Final approval was given by the International Amateur Athletic Federation (IAAF) to hold two events for wheelchair-bound athletes as exhibition events on 11 August, during the final full day of athletics competition at the Games. Since IOC approval had already been given, the approval by the international federation for athletics completed the procedures necessary for inclusion of an 800-meter race for women and 1,500-meter race for men.

23 February 1984 Distribution of more than 500,000 handbooks for youths began in grades four to eight at Beethoven Elementary School in Venice, California. The 176-page books document the history and tradition of the Games and will be distributed to libraries and to youngsters in Los Angeles, Orange and Ventura county schools. The handbooks are a joint effort of the LAOOC and the Junior League of Los Angeles, Inc.

28 February 1984 The unique Look of the 1984 Olympic Games was unveiled as an alliance of designers, artists and architects presented a festive montage of vibrant colors and bold forms which will reflect the cultural diversity of Los Angeles as well as the international spirit of the Games. Fabric structures and scaffolding will be combined with painted cylindrical columns, miles of fence fabric and ceremonial backdrops in hot colors such as magenta, vermillion and chrome yellow in a playful pattern to inspire a look called "festive federalism."

1 March 1984 The LAOOC received notification from the United States Department of State of the denial of the visa application of Oleg Yermishkin, nominated by the USSR NOC to serve as Olympic attache. LAOOC President Peter Ueberroth communicated the visa denial to the USSR NOC via telex and expressed his hope that another person would be nominated as soon as possible.

6 March 1984 The official sports artist of the 1984 Olympic Games, Ernie Barnes, previewed five sports posters commissioned by the LAOOC and the Los Angeles Area Chamber of Commerce. Posters depicting athletes in athletics, basketball, boxing, gymnastics and "The Neighborhood Game" were shown and will be distributed through retail outlets in signed and unsigned editions. Barnes' association with the Games will include a series of talks with students at local schools.

10 March 1984 The Angelita, a gold-medal winning yacht from the 1932 Olympic Games will lead all boats into the Olympic harbor as flagship for the 1984 Olympic yachting competition. Owen Churchill, who skippered the yacht to the victory in 1932 was present at the announcement, along with crew members John E. Biby, Jr. and Richard F. Moore.

20 March 1984 Accord on the transfer of the Olympic flame from the National Olympic Committee of Greece to the LAOOC was announced. The LAOOC agreed to end the acceptance of contributions for participation in the Youth Legacy Kilometer program on 10 April and the Hellenic Olympic Committee will transfer the flame to the LAOOC in early May at Olympia, Greece.

28 March 1984 The final route of the Olympic flame was unveiled, including passage through 33 states and the District of Columbia. The 15,000 kilometer route (9,000 miles) will pass through 41 of the USA's largest cities and more than 1,000 smaller communities. Contributors to the Youth Legacy Kilometer program will run or designate the runner for nearly 4,000 kilometers with cadre runners selected by Olympic Torch Relay sponsor AT&T carrying it the rest of the way.

2 April 1984 The LAOOC opens its community relations office in Exposition Park, serving the south-central Los Angeles area. Designed to serve as a center for Olympic-related information and coordination of programs, the Exposition Park office will serve to enhance community involvement in the Games.

4 April 1984 A supplemental security agreement for \$1.825 million with the Los Angeles County Sheriff's office was announced by the LAOOC. The sheriff's office will coordinate security aspects of athlete transportation during the Games.

IOC President Juan Antonio Samaranch and LAOOC President Peter Ueberroth concluded a two-day meeting in San Juan, Puerto Rico. It was announced that the Association of African NOCs would hold its pre-Olympic meeting in Los Angeles and that the Closing Ceremonies of the 1984 Games, rather than the Opening Ceremonies of the 1988 Games, would include the transfer of the 1920 Antwerp flag to the mayor of Seoul, Korea, site of the 1988 Olympic Games.

10 April 1983 Competition begins at the newly-constructed Prado Recreational Area Shooting Range near Chino, California. More than 500 athletes from 50 countries registered for competition on five new ranges in 11 Olympic events. The range worked well throughout the seven-day event and proved itself ready for Olympic shooting competitions in the summer. The LAOOC also announced a \$200,000 contribution to the beautification of Pershing Square, across the street from the Biltmore Hotel-site of the 88th Session of the International Olympic Committee later in 1984. The contribution was made to the Pershing Square Redevelopment Project, a privately sponsored fund, and was used to complete first-phase landscaping in time for enjoyment by visitors to Los Angeles during the Games period.

14 April 1984 The first of five Olympic Youth Jamborees was held at Manual Arts High School with 1,500 young participants competing in seven events. The opening ceremony featured the lighting of a jamboree flame which burned throughout the day. Four subsequent jamborees were held in the South Bay area, the San Fernando Valley, Ventura County and East Los Angeles.

Los Angeles Mayor Tom Bradley declared 14 April as "Olympic Spirit Team Day" in the city and presented commendations to Spirit Team members in recognition of their support of the Olympic movement and their promotion of Olympic ideals among youth.

19 April 1984 Additional sales of exclusive television rights to nations in Asia and the Caribbean brought the record total of nations with viewing rights to 146. Included in the latest round of rights sales were the People's

Republic of China, Malaysia, South Korea, Chinese Taipei and nations represented by the Asian Broadcasting Union and the Caribbean Broadcasting Union.

24 April 1984 A special LAOOC delegation led by President Peter V. Ueberroth met with the leadership of the IOC and of the NOC of the USSR to resolve remaining difficulties which might prevent the attendance of the USSR at the Games. The parties agreed on a resolution which noted the measures to be taken to satisfy the Soviet requests.

2 May 1984 The draw for team pairings in the Olympic football tournament took place at the Huntington-Sheraton Hotel in Pasadena under the auspices of the Federation International de Football Association (FIFA). FIFA Secretary-General Sepp Blatter supervised the draw in the presence of LAOOC Football Commissioner Alan Rothenberg and Vice President/Sports Chuck Cale.

4 May 1984 LAOOC Senior Vice President Philip N. Brubaker and Archery Commissioner Jim Easton are named as mayors of the Olympic Villages at the University of Southern California (USC) and University of California, Los Angeles (UCLA). Each man is an alumnus of the university which will be the site of his mayoral responsibilities.

8 May 1984 The longest Olympic Torch Relay in history began in New York City at the United Nations Plaza with the granddaughter of Jesse Owens, Gina Hemphill, and the grandson of Jim Thorpe, Bill Thorpe Jr., carrying the torch together for the first kilometer. The second kilometer was run by 91-year-old Abel Kiviat, roommate of Jim Thorpe at the 1912 Olympic Games in Stockholm. The brief opening program featured 1960 Olympic decathlon champion Rafer Johnson, IOC President Juan Antonio Samaranch, LAOOC President Peter V. Ueberroth, Los Angeles Mayor Tom Bradley and New York Mayor Ed Koch. The National Olympic Committee of the USSR announced that it will decline the invitation of the LAOOC to participate in the Games of the XXIIIrd Olympiad. The announcement was made public in a statement released by Tass, the official Soviet news agency.

10 May 1984 Hundreds of hotels, restaurants, transport services and other businesses joined the Olympic Hospitality Program and pledged to maintain price levels charged to the public during the first six months of 1984. The program was presented by the Greater Los Angeles Visitors and Convention Bureau in cooperation with the LAOOC.

18 The UCLA Olympic Village is opened 14 July 1984. Present at the ribbon cutting ceremony are (from left) UCLA Chancellor Charles Young, LAOC President Peter V. Ueberroth, UCLA Village Mayor Jim Easton, Los Angeles Mayor Tom Bradley and Los Angeles City Councilman Zev Yaroslavsky.

19 Symbolic torch run kicks off Youth Jamboree at Manual Arts High School in Los Angeles.

20 The Robert Graham sculpture at the Coliseum unveiled on 1 June 1984 to begin the Olympic Arts Festival.

Growth of the LAOOC and the Organization of the Games: A Chronology

12 May 1984 The People's Republic of China formally accepted the invitation to attend the Games of the XXIIIrd Olympiad. Formal acceptance was communicated to LAOOC envoy Charles Lee, in Beijing with an LAOOC delegation for meetings with the Chinese NOC.

18 May 1984 A special LAOOC delegation headed by President Peter V. Ueberroth traveled to Lausanne, Switzerland to meet with international sports officials including representatives of the NOC of the USSR. The Soviets continued to decline the invitation to attend the Games, but the LAOOC left the possibility of acceptance open until 2 June in accordance with the Olympic Charter.

23 May 1984 Highly successful ticket sales for both the Olympic Games and Olympic Arts Festival were announced. More than a third of the Olympic Arts Festival's 427 performances sold out with the opening events still nine days away. Of the 368 event sessions for the Games, 186 are sell-outs with tickets remaining to 182. Nearly 3.4 million tickets have been purchased through the U.S. mail-order system with almost 1.4 million tickets available to the U.S. general public in 17 different sports.

28-30 May 1984 LAOOC officials met with representatives of the International Federations and the IOC Executive Board in Lausanne, Switzerland. Plans were made for the replacement of teams not participating in Los Angeles and the solo event in synchronized swimming was added, bringing the total number of events in Los Angeles to 221.

1 June 1984 The Olympic Arts Festival began its 73-day program of performances and exhibitions with the unveiling of the monumental archway in front of the peristyle entrance to the Los Angeles Memorial Coliseum. The work of Robert Graham was highlighted by the two headless, nude sculptures—male and female—which adorn the top of the gateway. The Festival's initial performance, Pina Bausch's Wuppertaler Tanztheater's performance of "Cafe Muller" and "Rite of Spring," took place at the Pasadena Civic Auditorium.

2 June 1984 As the deadline for acceptance of the invitation to participate in the Games passed, 141 National Olympic Committees signaled their acceptance. The total sets an all-time record for participation in the Games, well ahead of the previous high of 122 set in Munich in 1972. Two days later, the NOC of Angola overcame communications difficulties and accepted the invitation, upping the total to 142.

An exercise to test the traffic management plan for the Exposition Park area was successfully carried out by the LAOOC and five state and local public agencies. The Southern California Rapid Transit District utilized 170 buses and the LAOOC employed 200 additional school buses to simulate public ingress to the area and athlete, employee and media shuttle systems.

The California Department of Transportation, Los Angeles Department of Transportation, Los Angeles Police Department and California Highway Patrol all participated in the exercise.

7 June 1984 Nine Olympic Ticket and Information Centers open for sale of Games tickets and to provide Olympic information for residents and visitors. Approximately one million Games tickets in 16 sports were available for sale at the seven Los Angeles County offices as well as at single locations in Orange and Ventura counties,

11 June 1984 The LAOOC Community Relations office in East Los Angeles opened at East Los Angeles Community College in Monterey Park. The office will assist in coordination and operation of four LAOOC-sponsored community projects in the area, including two area beautification projects, an exhibit honoring Latino Olympians and the installation of a sculpture in front of the Monterey Park Civic Center.

12 June 1984 The LAOOC announced that Uhlmann fencing scoring equipment will be used at the Games in place of VISTI equipment from the USSR.

The LAOOC also announced that the Olympic boardsailing exhibition featuring freestyle, long distance and slalom events will take place in the waters off East Beach in Santa Barbara on 10-11 August.

20 June 1984 Peter C. Jordano is announced as mayor of the Olympic village for canoeing and rowing athletes at the University of California, Santa Barbara. Athletes from 35 nations will be housed at UCSB.

11 July 1984 After a rousing tour across the United States in which millions of Americans turned out for a glimpse of the Olympic flame, the torch relay entered the state of California, host state for the Games of the XXIIIrd Olympiad. The flame was carried to the Oregon border by 11-year old Ethan Halpern, a student from Northridge, California, and passed to Betty Bickart, a registered nurse from San Jose, California.

14 July 1984 The three Olympic villages and Main Press Center open for business two weeks prior to the Games. Welcoming ceremonies are held at all three villages and journalists began their Olympic coverage with accreditation procedures at the Main Press Center, located at the Los Angeles Convention Center in downtown Los Angeles.

24 July 1984 The 88th Session of the International Olympic Committee opens in the Dorothy Chandler Pavilion of the Los Angeles Music Center. Governor George Deukmejian of California delivers the keynote address at the session, the first held in Los Angeles since 1932. Addresses were also made by William E. Simon, pres-

ident of the United States Olympic Committee and by Juan Antonio Samaranch, president of the International Olympic Committee. Samaranch presented an Olympic flag to Los Angeles Mayor Tom Bradley, to be placed in the City Hall of Los Angeles "as a mark of recognition to the city and citizens of Los Angeles in thanks for all they have done for the Games and for the Olympic movement."

25 July 1984 The LAOOC makes its Sixth Official Report to the International Olympic Committee and its final pre-Games review of the preparations. The report is presented in the Crystal Ballroom of the Biltmore Hotel, site of the 31st Session of the IOC 52 years prior. The IOC session in 1932 had 18 members present; in 1984, there were 83.

28 July 1984 With 92,655 spectators present in the Los Angeles Memorial Coliseum and a television audience estimated at more than two billion, the Games of the XXIIIrd Olympiad open with magnificent Opening Ceremonies. President Ronald Regan of the United States declared the Games open and the Olympic flame was carried into the stadium by Gina Hemphill, granddaughter of the great Jesse Owens and, with Bill Thorpe, Jr., the initial torchbearer 82 days previous. Hemphill passed the flame to 1960 Olympic decathlon champion and LAOOC board of directors member Rafer Johnson, who lit the Coliseum torch, signifying the return of the Games to Los Angeles 52 years after the close of the Games of the Xth Olympiad. The oath for the athletes was taken by 1976 Olympic 400-meter hurdles champion Edwin Moses of the USA and the judges' oath was recited by Sharon Weber, a gymnastics official from the USA.

4 August 1984 Following completion of the shooting competition, the LAOOC announced the gift of the Prado Recreational Area Shooting Range to the San Bernardino County Department of Parks and Recreation for continuing use as a world-class competition facility.

12 August 1984 Spectacular Closing Ceremonies marked the end of the Games of the XXIIIrd Olympiad in Los Angeles. Preceded by the victory of Portugal's Carlos Lopes in the men's marathon in Olympic record time (2:09:21), the ceremonies included the award of the Olympic order in gold to LAOOC President Peter V. Ueberroth and the extinguishing of the Olympic flame.

During the 16 days of the Games, 7,078 athletes from 140 nations took part in competitions in 21 medal sports and two demonstration sports, competing in 221 events. In all, 80 Olympic records were set and another eight equaled: 12 world records were set and one was equaled. A record spectator turnout totaling almost 5.8 million saw the Games in person and a huge television audience in the billions enjoyed the view from Los Angeles.

28 August 1984 Equipment and supplies worth approximately \$702,000 were donated to the County of Los Angeles for use in adult and juvenile detention facilities, hospitals and other health care facilities and programs for the homeless.

4 September 1984 The LAOOC announced the distribution of \$10.9 million to the beneficiaries of the 1984 Olympic Torch Relay. The YMCAs, Special Olympics, the Boys Clubs of America and the Girls Clubs of America were the primary recipients of the 82-day torch run funds raised by the sale of Youth Legacy Kilometers.

11 September 1984 An estimated surplus of approximately \$150 million was announced by the LAOOC, concluding the most financially successful Olympic Games ever. The larger-than-expected surplus came as a result of heavy ticket sales just prior to and during the Games as well as excellent United States television ratings which required no return of rights fees to the American Broadcasting Companies, holders of USA television rights,

In all, revenues totaled \$619 million against \$469 million in expenses. The largest single revenue source was the sale of television broadcast rights at \$239 million, followed by ticket sales at \$151 million and licensing/sponsorship agreements at \$121 million. Personnel costs topped the expense list at \$99.5 million, followed closely by construction expenses at \$91.7 million and security at \$42.4 million.

10 October 1984 The LAOOC presented a gift of more than \$1 million in communications and transportation equipment to the Los Angeles Police Department. The gift included more than 225 pieces of security communications equipment and 162 motorcycles used during the Games.

12 October 1984 The LAOOC donated approximately \$400,000 in Olympic apparatus and equipment used at Lake Casitas for the canoeing and rowing competitions and the flags and poles representing the nations residing at the UCSB Village to the UCSB Foundation, a non-profit corporation which administers gifts to the university. Distribution or sale of the items will be used to benefit amateur canoeing, kayaking and rowing clubs in Ventura and Santa Barbara counties.

15-21 October 1984 The LAOOC sells its remaining equipment and merchandise at a public retail sale and open auction. Sales of Games uniforms, Look items and office equipment grossed almost \$1 million during the five days of retail sales and two days of auction. The proceeds will be used to fund a permanent museum exhibit in Los Angeles commemorating the Olympic Games.

5

Accreditation and Access Control

5.01 Accreditation concepts, goals and requirements

5.01.7 Need for accreditation

The sole purpose of accreditation was to provide a system of identification for individuals participating in any aspect of the Games. This system was designed to discern their function and therefore, the privileges to which they were entitled. The accreditation system developed by the LAOOC not only identified each individual by name, country and function but detailed each venue that could be entered and when and where the individual was entitled to be seated in a venue. The system further identified an individual's access to special transportation, food, hospitality or accommodations services.

The Accreditation Department was formed to organize and implement efficient procedures for the identification and registration of all persons involved in the Olympic Games and for

controlling the access of these persons to villages, competition and training venues and other controlled areas. To accomplish this, the Accreditation Department determined the access and site privileges for each member of the Olympic Family, including 8,700 press, 11,000 athletes and officials and over 90,000 support personnel. It then produced the identification badges and developed the computer support systems.

The first development and testing of an accreditation system began in late 1982 in preparation for the January 1983 IOC Executive Board meetings in Los Angeles. Design work began on a computer-supported accreditation system that would print badges on demand on various colors of paper stock. Accreditation at the meeting went well, despite frequent malfunc-

tions. It showed at a very early stage that a computer-supported system could work for the Games, but that considerable work in planning and operations would be required.

To begin the planning and testing of the computer system, the Accreditation Department hired a full-time director in March 1983. The director was responsible for the development of the system for the LA83 events held that summer. Because the director was hired late, the systems were developed quickly and were not adequately tested during the LA83 events.

Accreditation badge elements

Several important elements went into the fabrication of every accreditation badge, including:

- Personal Identification (PID) number, badge number and Identity Card (ID) number
- General information (name, function, country and organization)
- Category ("A," "B," "C," "D," "E," "F," "Fo," "Fx," "G," "J," "K," "L," "O")
- Access zone privileges
- Photograph

- Pictogram (sport/ticket requirement)
- Bar code
- Insurance information
- Color stock (color differed for each badge category)
- Preprinted stock with Star in Motion, Games of the XXIIIrd Olympiad
- Signature of accredited individuals

The following security features were also incorporated into the fabrication of every accreditation badge:

- Badge serial number
- LAOOC trademark
- Security seal
- Corporate seal

During the pre-Olympic competitions, the Accreditation Department developed operating plans, identified and trained volunteer staff and implemented the actual accreditation and badging process. These LA83 events provided valuable planning and operational experience to the department and formed the basis of the Olympic operation.

¹ An athlete and his accreditation badge are rarely parted.

Key elements of accreditation badge

- 1 Identification (in English and French) of the Games in Los Angeles
- 2 Star in Motion symbol
- 3 Photograph of badge holder
- 4 Letter designating accreditation-type
- 5 Name, function and country of badge holder
- 6 Access zone privileges
- 7 Pictogram for site access
- 8 Bar code of Personal Identification Number (PID) of badge holder
- 9 Personal Identification Number (PID) of badge holder
- 10 Signature of badge holder
- 11 Designation of insurance status of badge holder
- 12 Badge stock serial number
- 13 Seal and copyright designation of the LAOOC

5.01.2 Separation of accreditation and access privileges

In accordance with the Olympic Charter (1978 Provisional Edition), the LAOOC was required to issue accreditation cards to individuals participating in the Games. The charter specified only the categories “A” — “G” and vaguely identified privileges that were to be granted to persons in these categories. At previous Games, the accreditation badge not only provided identification as required by the charter but provided access to seating and other privileges.

The LAOOC decided to separate privileges and access and developed a revolutionary concept that divided the functions of the accreditation badge into two areas: one for identification and one for access. In doing so, the LAOOC fulfilled the charter mandate to provide accreditation, but reserved the right to determine access privileges. A ticket system was developed in support of the accreditation and access control system whereby eligible Olympic Family members had to obtain complimentary tickets for selected high-demand events. This helped to reduce the need for Olympic Family seating at some venues, allowing greater use by the spectating public.

The ticketing system was operated by the LAOOC Ticketing Department. It required that all members of the Olympic Family (accredited “A” — “G”) use a ticket to attend the Opening and Closing Ceremonies. For most sports events, tickets were not required for Olympic Family members, except for athletes (“F”) and team officials (“Fo”) who were required to use tickets when attending events at venues other than their own. For pre-selected high-demand events, tickets were generally required for Olympic Family members, except for category “A” (IOC members and guests).

Categories of badges

The following accreditation badge categories are mandated by the Olympic Charter (1978 Provisional Edition):

- “A”; IOC members and honorary members, IOC director and one guest each.
- “B”; IOC commissions, IOC secretariat, IF presidents, IF secretaries-general, and 12 transferable badges. IF presidents and secretaries-general allowed one guest each. OCOG presidents and secretaries-general of Sarejevo, Calgary and Seoul.
- “C”; NOC chefs de mission, assistant chefs de mission, Olympic attaches, transferable badges given to the chef de mission of each eligible NOC, and to the president of each IF. OCOG delegations (up to six persons) from Calgary, Sarejevo and Seoul reporting to the IOC Session.
- “D”; IF jury members, technical officials (sports-specific referees, judges, umpires, timekeepers).
- “E”; Media (newspaper, radio, TV and support and auxiliary personnel).
- “F”; Athletes, coaches, administrative, technical personnel, or other officials of each NOC (“Fo”); extra team officials (“Fx”).

- “G”; Distinguished guests of the LAOOC.

Two additional badge categories were created by the LAOOC in response to specific accreditation needs. They were:

- “J”; IF special, sport-specific accreditations for executive board members.
- “O”; Observers from cities bidding for future Olympic Games.

5.01.3 System tools: Badges and equipment

Badges for both the Olympic Family and support personnel served to provide positive identification and indicate the access privileges of the bearer. These criteria influenced the information layout on the badge and ultimately led to the creation of a two-part badge for support personnel.

The badges were large and easy to read with oversized access zone numbers which were generated by computer and individually assigned. There were seven zone numbers at each sport venue (1-6,9) and an eighth zone number (Ø) that allowed access to all zones. Functions within each zone were grouped according to common activities. The individual’s function determined which zones were assigned.

To maintain system consistency, common areas in the villages were assigned access zone 7, and the athlete living quarters within the villages were defined as access zone 8.

The pictogram further defined access and was grouped on the badge with the access zone information. Sport pictograms utilized stick figures to represent access availability to individual sport sites. Other pictograms which used two or three letter codes represented villages, training sites or groups of venues called regions. In all there

were 47 different pictograms: 25 sports venues; five regions or groupings of sport venues in close proximity to each other; three villages; one for all training sites; seven support sites including the Biltmore Hotel and the Los Angeles International Airport Olympic Arrival Center; three conditional entry pictograms for individuals requiring limited entry; one ticket pictogram and one pictogram-an infinity symbol-which allowed access to all venues.

The letter category (“A” — “G,” “J” or “O”) was located on the badge adjacent to the name, function and country information.

The other side of the badge contained a line for the badge holder’s signature, a line indicating if the individual was covered by the Olympic Family insurance program and a line for a personal identification number (PID). A PID number was assigned to each participant, Olympic Family member and staff member. In the case of the Olympic Family member, the PID number matched the Olympic identity card number.

Several elements of the badge were designed to thwart counterfeiting or duplication. These elements included a background security pattern on the badge stock, a security seal on the photograph portion of the badge, an LAOOC corporate seal, a serial number for control of blank unprinted badges and a bar code. Badges were printed on colored paper stock that varied for each letter category as required in the Olympic Charter: ivory for “A” badges; purple for “B” badges; green for “C” badges; orange for “D” badges; yellow for “E” badges; blue for all “F” badges; pink for “G” badges; magenta for “J” badges; gray for “O” badges.

Access zones

Zone number	Name	Area defined
1	Field of play	The competition field or court.
2	Team preparation area	Venue warm-up area, team locker room, feeding area, training rooms, rest areas, passage to field of play.
3	Venue operations	Offices, trailers, storage, work areas, pertaining to the facility.
4	Press operations	Seating, sub center, commentator area, camera positions, mixed zone, formal interview area.
5	Olympic Family lounge	Area for hosting entertainment of VIPs and Olympic Family.
6	Competition administration	Offices, trailers, work areas for IF and LAOOC competition offices.
7	Village common area	All village areas except the residential halls and suites.
8	Village housing area	All village areas including athlete housing areas.
9	Public areas	All areas coincident with spectator access by ticket.
0	All venue zones	All of the above non-village areas.

Accreditation and Access Control

1

Accreditation badges

- 1 "L" accreditation badge generated for LAOOC permanent staff and Games staff.
- 2 "A" accreditation badge generated for IOC directors, members, honorary members and guests.
- 3 "B" accreditation badge generated for IF presidents, IF secretaries-general, IF technical delegates, IOC commission members, IOC secretariat, NOC presidents, NOC secretaries-general, executive members of OCOGs and guests.
- 4 "C" accreditation badge generated for NOC chefs de mission, assistant chefs, Olympic attaches, OCOG members, special NOC members, guests and transferable passes for multiple individuals' use.
- 5 "D" accreditation badge generated for IF officials and juries.
- 6 "E" accreditation badge generated for media. Subletters designated specific types of media.
- 7 "F" accreditation badge generated for competing athletes. Subletters designated athletic function ("F" —athlete, "Fo" —official, "Fx" —extra official).
- 8 "G" accreditation badge generated for distinguished guests of the LAOOC.
- 9 "J" accreditation badge generated for members of IF executive boards.
- 10 "K" accreditation badge generated for contractor personnel functioning within controlled zones at Olympic sites.
- 11 "Ks" accreditation badge generated for law enforcement personnel functioning within controlled zones at Olympic sites.
- 12 "O" accreditation badge generated for observers from organizing committees and "bidding cities" for 1992.

2 Bar code readers detect deauthorized badges at venue entry points.

2

Bar codes, a series of lines of uniform height and varying width, were printed with particularly dense ink to be read by an electronic scanner or wand. The bar code graphically represented information on the identification of every accredited individual. It provided additional security and discouraged counterfeiting or duplication of badges. It also provided easy repeal of a badge if necessary. In most cases, badges were revoked because they were lost or stolen or because of the termination of an LAOOC staff member.

A badge presented at a venue or village was electronically scanned or 'read' by a bar code reader (BCR). As a lightpen attached to the BCR was run over the bar code, the BCR registered an audible tone and a visual display indicating either an authentic or deauthorized badge. BCRs were 2.9 by 6.3 by 10.7 inches, weighed 3.5 pounds, and required 110 volts and five amperes of power. Each BCR was coded to recognize up to 684 invalid six-digit badge numbers.

A network of 300 BCRs at 46 sites were programmed for one of two uses: 1) at external venue access points to check for deauthorized badges, and 2) at credential centers, badges were wanded as final step in issuing and activating a badge.

The bar code system was highly successful. More than 200 carriers of deauthorized badges were identified prior to entering various venues. Certain difficulties with the system did arise, however. Originally, the bar code was to be printed straight and squarely on the lower front side of the badge. Printing errors on approximately 7,000 "E" badges—the bar code was not properly or fully aligned on the badge—precluded proper reading by the BCR. Therefore, "E" badges were not scanned at venue entry points. Fortunately, this did not prove to be a problem. Also, original plans called for an invisible bar code to prevent duplication. An error in the printing specifications prohibited this and, as a result, the bar code was visible and discernible. This error did not cause significant problems as no counterfeit badges were ever discovered.

The bar code system was well conceived and well managed and developed into a significant psychological deterrent to individuals who sought access to venues or secured areas where they did not belong.

The system was operated from the 14th of July through the 12th of August 1984 by volunteer access control staff and paid security guards. In the final analysis, the bar code reader was a very effective mechanism and added a new and simple dimension to access control during the Games of the XXIIIrd Olympiad.

The four basic steps in the badge production sequence included:

- Identification of individual
- Determination of site access
- Determination of zone access
- Badge issuance

A letter category ("A"—"G," "J"—"L" and "O") was assigned based upon the individual's function. A pictogram was then assigned to indicate the sites that could be accessed. The zones the individual could enter were then assigned and finally the badge was produced. The highest level badge issued had an infinity pictogram, with "0" and "8" access zones. These symbols accessed an individual to all venues and all zones (0) and to all areas in the villages (8). For high-demand events or locations, even an appropriately accredited individual—including those with infinity pictograms and all-zone access codes—were required to be on an access list. This applied to the Coliseum press box, certain hosting facilities and finals in high-demand sessions at sports venues.

Once all the elements of the individuals' identity and access were identified, badge production was initiated. The process for badging Olympic Family members and LAOOC support staff differed slightly (see sections 5.02.3 and 5.03.3).

The computer systems developed for the LAOOC accreditation system, while revolutionary, were troublesome. The system stored information on the applicant, linked that to a personal identification number (PID) and ultimately printed a badge with the name and number, the appropriate access information and a bar code. In no other Olympic Games had this entire process been automated. As a precautionary measure a backup system utilizing a personal computer (PC) was utilized. Only 50 of 70,000 badges were printed by this backup system as the IBM System 38 computer performed reliably and nearly flawlessly and met all requirements of the LAOOC. Additional processing capacity was needed to support the accreditation operation, since several LAOOC departments utilized the computer time available. As a result, the badge printing process was often extremely slow causing delays and long waits for staff.

In addition, system development and programming was started very late (March 1983), was never completed and the system was not fully tested. Data entry for Olympic Family members did not begin until 20 June 1984. As a result, there was a significant level of data entry error and the verification procedures were inadequate. It is essential that future organizers develop the accreditation computer system at least six months to a year in advance of the Games and adequately test its operation.

5.02 Accreditation and access privileges of Olympic Family members

5.02.1 Identification of Olympic Family members

Rule 38 of the 1978 Provisional Edition of the Olympic Charter specified that the Organizing Committee (OCOG) establish an identity card for the purpose of identification of the holder and for entry into the host country:

"The Olympic identity card establishes the identity of its holder and constitutes the document authorizing entry into the country in which the city organizing the Games is situated. It allows the holder to stay and to carry out his Olympic duties there for the duration of the Games and for a period not exceeding one month before and one month after the Games.

"The Olympic identity card also allows free entry to the Olympic villages and it authorizes access to the sites where the competitions, ceremonies and demonstrations connected with the Games are held, and also to the reserved seats in the stands, unless the OCOG shall decide to issue an additional identity card for these two purposes.

"With the agreement of the IOC, and in special cases, the OCOG may request that the Olympic identity card be countersigned on behalf of the government of the country of the holder confirming the holder's nationality and his right to travel to the country of the Games and to return to his own country. In the absence of such a countersignature, the holder of an Olympic identity card must have in his possession an official document confirming his identity and nationality.

"The Olympic identity card shall be made available by the OCOG for use by the persons as indicated in the by-law. . ."

During the accreditation system design phase, it was decided that the identity card would not be used for anything but entry into the U.S. in place of a visa. Instead, an accreditation badge would be issued to provide identification and access privileges for Olympic Family personnel. Since the identity card was for a single purpose, there were few constraints placed on its design. Since the U.S. government agreed to accept the identity card instead of a visa for entry to the U.S., the U.S. State Department was interested in incorporating security features to avoid counterfeiting or transfer to unauthorized persons. Thus, a security pattern was printed on the inside of the card.

In connection with the identity card, the State Department needed lists of persons to whom cards were issued,

3

4

3 The LAOOC's accreditation computers store information and a personal identification number for each job applicant and ultimately print a badge with the name, number, the appropriate access information and a bar code.

4 Color and letter-coded badges differentiate staff, athletes and Olympic Family members at a glance. A background security pattern on the badge stock discourages counterfeiting or duplication.

Accreditation and Access Control

Olympic Family accreditation privileges

Category	Who	Pictogram	Entry privileges Opening/Closing ceremony	Village zones	Venues/seating access	Venue zones	Training sites	Other privileges
A	IOC directors, members and honorary members and one accompanying guest each.	Infinity	With complimentary ticket seating in A stand.	7,8	Access to all venues and seating in A stand for all events	0	All sites	Food: Privileges in Olympic villages. Transportation: shuttle to Coliseum from Biltmore Hotel. Car and driver for each director, member and honorary member. Access to press bus system. Insurance: provided by the IOC.
B	IF president and secretary general. Demonstration sport IF presidents and secretaries-general. IF technical delegates. One accompanying guest for each.	Sport specific	With complimentary ticket seating in B stand.	7	Access to all venues and seating in B stand. In own sport, IF accredited B will not need a ticket. For selected high-demand events, access to the venue and seating require a ticket.	0	Only sites in their own sport.	Food: Privileges in Olympic villages. Transportation: shuttle to Coliseum from Biltmore Hotel. Car and driver for each president and secretary-general. Access to press and public bus system. Insurance: provided by the IOC.
B	IOC press and athlete commissions.	Infinity	With complimentary ticket seating in B stand.	7	Access to all venues and seating in B stand on 'as available' basis. For selected high-demand events, access to venue and seating require a complimentary ticket.	4,5	None	Food: privileges in Olympic villages. Transportation: access to press and public bus system and pool-vehicles. Insurance: provided by the IOC.
B	IOC Medical Commission	Infinity	With complimentary ticket seating in B stand.	7	Access to all venues and seating in B stand on 'as available' basis. For selected high-demand events, access and seating require a ticket.	1,2,3,5	All sites	Food: privileges in Olympic villages. Transportation: access to press bus system and public bus system. Insurance: provided by the IOC.
B	IOC recognized IF presidents and secretaries-general of sports not on the Olympic program.	Ticket	With complimentary ticket seating in B stand.	7	Access to all venues and seating in B stand on 'as available' basis. For selected high-demand events, access to venue and seating will require tickets.	5	None	Food: privileges in Olympic villages. Transportation: access to press bus system. Insurance: provided by the IOC.
B	IOC secretariat	Ticket	With complimentary ticket seating in B stand.	7,8	Access to all venues and seating in B stand on 'as available' basis. For selected high-demand events, access and seating require a ticket.	0	None	Food: privileges in Olympic villages. Transportation: access to press and public bus system. Pool of two vehicles. Insurance: provided by the NOC.
B	LAOOC chairman, president, executive vice president and accompanying guest.	Infinity	With complimentary ticket seating in B stand.	7,8	Access to all venues and seating in B stand on an 'as available' basis.	0	All sites	
B	NOC president and secretary general and one accompanying guest each.	Ticket	With complimentary ticket seating in B stand.	7,8	Access to all venues and seating in B stand in 'as available' basis. For selected high-demand events, access to venue and seating will require a ticket.	2,5	All sites	Food: privileges in Olympic villages. Transportation: cars and drivers allocated based on team size for use by all members of the delegation. Access to the athlete, press and public bus systems. Insurance: provided by the IOC.
B	Organizing Committee for cities of Sarajevo, Calgary and Seoul; their president and secretary-general and one accompanying guest for each.	Ticket	With complimentary ticket seating in B stand.	Guest pass only	Access to all venues and seating in B stand on as available basis. For selected high-demand events, access to venue and seating will require a ticket.	5	None	B accredited persons from NOCs not participating in competition will not have access to zone 2, team preparation areas. Food: privileges at Olympic villages. Transportation: access to press and public bus system. Insurance: provided by the IOC.
B	Transferable passes, IOC guests.	Ticket	With complimentary ticket seating in B stand.	On guest pass only	Access to all venues and seating in B stand on as available basis. For selected high-demand events, access to venue and seating will require a ticket.	5	None	Food: privileges at Olympic venues. Transportation: access to press and public bus system.
C	Chefs and assistant chefs de mission	Ticket T (team)	With complimentary ticket seating in C stand.	7,8	Access to all venues and seating in C stand on 'as available' basis. For selected high-demand events, access to venue and seating will require complimentary ticket, Access through athlete's entrance to venue where team is competing and do not require tickets.	2,3,5	All sites	Food: privileges at Olympic villages. Transportation: cars and drivers will be allocated based on team size for use by all members of the delegation. Access to athlete, press and public bus system. Insurance: provided by the LAOOC.

Category	Who	Pictogram	Entry privileges Opening/Closing ceremony	Village zones	Venues/seating access	Venue zones	Training sites	Other privileges
C	Olympic attache	Ticket	With complimentary ticket seating in C stand.	7,8	Access to all venues and seating in C stand on 'as available' basis. For selected high-demand events, access to venue and seating will require a ticket.	2, 3, 5	All sites	Food: privileges at Olympic villages. Transportation: cars and drivers will be allocated based on team size for use by all members of the delegation. Access to athlete, press and public bus system. Insurance: provided by the LAOOC.
C	OCOGs (6 for each reporting delegation i.e. Sarajevo, Calgary, Seoul)	Ticket	With complimentary ticket seating in C stand.	7	Access to all venues and seating in C stand on 'as available' basis. For selected high-demand events, access to venue and seating will require a ticket	3, 5	Village sites only.	Food: privileges at Olympic villages. Transportation: access to press and public bus system. Insurance: available for purchase.
C	Transferable passes, international federations	Ticket	None	None	Access to all venues and seating in C stand on 'as available' basis except baseball and tennis IF which may only access their respective sport venue. For selected high-demand events, access to venue and seating will require a ticket.	5	None	Transportation: Access to press and public bus system.
C	NOCs	Ticket	With complimentary ticket seating in C stand.	None	Access to all venues and seating in C stand on 'as available' basis. For selected high-demand events, access to venues and seating will require a ticket.	5	None	Transportation: access to press and public bus system.
D	International federation officials and juries	Sport specific	With complimentary ticket seating in D stand.	None	Access to own sport venue only. No ticket required. Not eligible for high-demand tickets.	1, 5, 6 zones varied by venue.	Own sport sites only. No access to village training sites.	Transportation: access to press and public bus system. Access to system transporting from 'D' living accommodation to respective venue. Insurance: provided by the IOC.
E	Media	Infinity	With complimentary ticket seating in E stand.	Restricted access. With village press pass only.	Access to all venues in E stand and photo positions. For selected high-demand events, access to the venue and seating will require a ticket.	4	All sites	Transportation: access to press and public bus system. Insurance: available for purchase.
F	Athletes	Sport specific	Closing Ceremony seating in F stand with complimentary ticket. Not entitled to Opening Ceremony ticket.	7, 8	Access to own sport venue. Access to F stand at all other venues only with a ticket.	1,2	Own sport sites only.	Food: privileges at Olympic villages. Transportation: access to athlete, press and public bus system. Cars and drivers will be allocated based on team size for use by all members of the delegation. Insurance: provided by the LAOOC.
Fo	Team officials	Ticket T (team) or sport specific	Closing Ceremony seating in F stand with complimentary ticket. Not entitled to Opening Ceremony ticket.	7, 8	Access to own sport venue. Access to F stand at all other venues only with a ticket.	1,2	Own sport sites only.	Food: privileges at Olympic villages. Transportation: access to athlete, press and public bus system. Cars and drivers will be allocated based on team size for use by all members of the delegation. Insurance: provided by the LAOOC.
Fx	Extra team officials	Sport specific	None	7	Permitted to access only the venue in their respective sport. No seating provided. Not eligible for high-demand tickets.	2	Own sport sites only.	Transportation: access to athlete, press and public bus system. Cars and drivers will be allocated based on team size for use by all members of the delegation.
G	Distinguished guests of the LAOOC	Ticket	With complementary ticket seating in G stand.	None	Permitted to access all venues and seating in the G-stand. For selected events, access to the venue and seating will require a ticket.	5	None	Transportation: access to press and public bus. Insurance: available for purchase.
J	International federation, executive board	Sport specific	None	None	Access to B stand in their respective sport only, no ticket required. Not eligible for high-demand tickets.	5 varied to some degree by venue.	Own sport sites only. No access to village training sites.	Transportation: access to press and public bus. Insurance: provided by the IOC.
O	Observers from organizing committees and 'bidding cities' for 1992.	Infinity	None	7	Permitted access to all venues and seating in C stand, if available.	3, 4, 5	None	Transportation: access to press and public bus. Insurance: available for purchase.

Accreditation and Access Control

similar to their standard "crew lists." These lists were required six weeks before arrival of individuals in the U.S. To satisfy this request, an Olympic Family list was designed, sent with the cards, and returned to the State Department with the names of those to whom cards were issued. A copy of the family list was also required to be returned to the LAOOC by 2 June 1984 to be used as a verification of those coming to the Games, and as a means of entering names so that badges could be printed.

The IOC also required that an identity card manual be prepared by the LAOOC that would explain the types and use of the identity cards and provide instructions for their preparation. The manual also contained general instructions for obtaining accreditation badges.

Approvals were required on all documents related to identity cards, including the cards, lists and manual, not only from LAOOC management, but also from the IOC and the U.S. State Department. The most sensitive point was the requirement to return the lists by 2 June 1984. Most of the NOCs objected to this date on the ground that it was too early to identify their team members. However, the IOC endorsed this date, since a time frame of eight weeks before the start of the Games was established at the 1980 Moscow Games.

In February, 1984, Olympic Family lists and identity cards were mailed to the IOC, International Federations and the more than 150 National Olympic Committees. The number of identity cards sent to the NOCs was based on estimated delegation size as provided by the group concerned. The cards were sent in numerical sequence with specific numbers assigned to each NOC. A total of 22,319 identity cards and the necessary Olympic Family lists were sent with 19,470 cards going to the NOCs, 418 cards to the IOC and 2,431 cards to the International Federations.

On 2 June 1984, all completed lists were to be returned to the LAOOC. One copy of the list was to be sent to the U.S. embassy in the respective country of the applicant; for the IF, the respective embassy was in the country of the IF's headquarters. However, only 57 NOCs returned their lists on time.

Therefore, the LAOOC initiated telex and telephone messages to urge NOCs to send them. A complete set of lists did not reach the LAOOC until mid-July. The data from these lists was utilized to create the badge themselves with the name, Olympic function, sport and organization of the various Olympic Family members. These lists were also used as the basis of data entry. Many problems were encountered with coding and data entry of the Olympic Family lists due to incomplete information, incorrect spelling of names, difficulty in distinguishing between first and last names and omissions of critical information.

Nevertheless, the data entry process was completed by 6 July. Approximately 45 NOCs were able to review and correct the computerized Olympic Family list prior to their arrivals in Los Angeles. The result for those who properly completed the lists was an accreditation operation that ran more smoothly and minimized delays caused by the need to reprint badge inserts.

5.02.2 Identification of Olympic Family privileges

Certain Olympic Family member privileges are mandated by the Olympic Charter, such as venue access and free seats in the main stadium. In addition to these privileges, the LAOOC offered additional privileges to Olympic Family members to make their stays more comfortable. These privileges ranged from free medical insurance to food and transportation.

The accreditation badge of each individual indicated the privileges available to the badgeholder. These were defined by the letter category, the pictogram which identified the venues that could be entered; and the access zones, identifying the intra-venue zones that could be accessed.

For the 1984 Olympic Games, the IOC requested that privileges be granted to the following additional groups not specified in the 1978 Olympic Charter: team officials in excess of those allowed under Rule 40 of the charter, observers and executive board members of the International Federations.

In the development of its accreditation policies for the Olympic Family, the LAOOC determined that these additional groups would be accredited with the following conditions:

- They would be accredited in finite numbers so that the established systems would not be unduly overloaded.
- Venue access would be limited so as not to interfere or overload working places for the press, the field of play or Olympic Family hosting areas,
- The accreditation of these additional groups would be on a cost-recovery basis so that the LAOOC would not incur added expense by accrediting them.

In negotiations with the IOC, the following accreditation agreements were reached and then implemented for the Games.

IF Executive Boards

The LAOOC agreed in May, 1984 to accredit a maximum of 20 additional people from each IF, ostensibly from each IF's Executive Board. A new letter category ("J") was given to this group. The IF was financially responsible for the accommodations of the individuals. Access was limited to their respective sport site and to one or two zones within the venue.

5

6

7

5 Olympic Family members are mailed Olympic identity cards, which serve as visas, for presentation upon entry into the United States.

6 The busy Olympic Arrival Center at the Los Angeles International Airport assists Olympic Family members as they clear U.S. Customs.

7 At the OAC, a pre-printed, unlaminated badge insert is pulled and compared to an individual's Olympic identity card. If correct, the insert is signed by the individual before proceeding to the camera operations position.

Observers

The IOC requested that six people be accredited from cities bidding on the 1992 Olympic Games. Organizers of international amateur competitions also fit into this group. The letter category "O" was given to this group. This group was allowed access to all venues and seating in the "C" stand, if available.

Extra officials

The number of team officials allowed for each NOC was specified by Rule 40 of the 1978 charter. The expenses of these officials were heavily subsidized by the LAOOC for village housing, hence the Rule 40 formula for accrediting team officials was closely observed by the LAOOC. Numerous NOCs, however, wanted additional team officials to fulfill their needs for more coaches, trainers and technicians. These NOCs debated this point at length with the LAOOC for over three years and ultimately the LAOOC agreed to accept extra team officials, but at the expense of each NOC and under the condition they not be housed in the Olympic villages.

The LAOOC negotiated the number of extra officials with each NOC. The letter "Fx" (subletter "x" for extra) was chosen to identify extra coaches, doctors and support help on the badge. Extra officials were given the same privileges as other team officials (except village residency), including access to team preparation areas and transportation. The NOC bore all food and housing costs for each extra official. The access of "Fx" badge holders to venues was limited to the respective sport in which they participated or coached and only access to the team preparation area (zone 2) within the venue. With this approach, the LAOOC minimized concerns that the extra officials would interfere with venue operations and the field of play, yet the "Fx"-accredited official was still able to fulfill a legitimate role.

Transferable "C"

By charter rule, one transferable "C" badge is to be allocated to each NOC for every 20 athletes, and 12 transferable "C" badges to each International Federation. This badge represents a valuable tool by which venues are accessed and privileges dispensed, and in previous Games the transferable "C" could be indiscriminately distributed and redistributed to any individual whether they were accredited or not. The badges bore no names or pictures and the OCOG had no way of knowing the identity of the person receiving the badge. Therefore, if lost or stolen, the badges presented a potential security risk. To curtail abuse of the transferable "C" badge, restrictions were developed by the LAOOC. Each NOC and IF was encouraged to issue a transferable "C" pass

to one individual only whose name and photo would be printed on the badge; in effect, making it an additional full "C" for Games accreditation. Should the NOC or IF be unable to assign the pass to one person, the pass had to be issued to individuals already accredited as an Olympic Family member. The pass then served as an upgrade of an existing accreditation. The pass was made highly visible by the placement of a red dot which was affixed to the badge prior to lamination. With this system, the LAOOC was able to provide the flexibility required of a transferable "C" and did not compromise the security need to clearly establish the identity of the carrier.

"O" and "J" badges

The LAOOC created two other categories of badges. The "O" badge was allocated to individuals affiliated with other OCOGs, bidding cities or similar organizations. The "O" (for observer) accreditation allowed access to all venues via an infinity pictogram. Access zones 3, 4, 5, 6 and 7 on each badge allowed access to venue and press operations and the Olympic Family Lounge and non-residential areas in the village.

The "J" badge category was developed to include IF members who served on an executive council or committee but had no official competition function during the Games. Each IF was allowed twenty "J" badges. The "J" badge-holder had access to B-stand seating in his respective sport, only. All expenses of the "J" card holder were paid by the IF or the individual.

Olympic Family accreditation credentials issued

"A"	192
"B"	886
"C"	1,057
"D"	1,415
"E"	8,700
"F"	7,432
"Fo"	3,379
"Fx"	309
"G"	246
"J"	295
"O"	162
Total	24,073

With the development of a simple yet flexible accreditation system the LAOOC was able to accommodate the needs of individual NOCs and sport federations, yet not complicate the management or operation of the system or compromise the safety of Games' participants.

5.02.3

Procedures for Olympic Family accreditation

Accreditation of Olympic Family members was conducted by two separate LAOOC departments. The Accreditation Department accredited all members except the media. The LAOOC Press Operations Department took operational responsibility for accrediting the media in January 1982. This

division reflected the separate clientele of each function and the desire to significantly improve communications with those client groups.

Olympic Family members arriving in Los Angeles went through the credential process at either the Olympic Arrival Center (OAC), at Los Angeles International Airport, the Biltmore Hotel or the Main Press Center for media only (see chapter 23). Rebadging centers were also established to replace lost badges or reissue incorrect badges.

Olympic Arrival Center

The OAC was open from 10 July to 11 August 1984. On arrival, Olympic Family members cleared customs and were transported to their specific in-processing centers. All "A" and a majority of the "B" and "G" Olympic identity card-holders were driven to the Biltmore for in-processing. "D," "J" and the remainder of the "B" and "G" card-holders were processed at the OAC.

After receiving the Olympic Family lists on 2 June 1984, all information was input into the accreditation computer system according to Olympic Family category (IOC, IF, NOC). From this, over 13,000 (unlaminated) individual badges ("inserts") were pre-printed and filed at the OAC in boxes called the "insert bank." The badge numbers matched the number on the Olympic Identity Card held by each individual.

On arrival at the OAC, Olympic Family members or guests were escorted to the LAOOC Accommodations/Finance desk to settle their account or outstanding fees. When the account was settled, the individual was issued a "zero balance" receipt and proceeded to the credential area. After arriving at one of the two accreditation terminals, the Olympic Family members or guests presented the Accommodations/Finance receipt, their identity card and/or passport to the terminal clerk. The receipt was stamped "accreditation received" and returned to the individual. The pre-printed badge was pulled from the insert bank and compared to the identity card or passport to assure that all information was correct. If correct, the insert was signed by the individual, the passport and identity card were returned and the individual proceeded to the camera operations position.

If the pre-printed insert did not correspond to the identity card, a new insert was printed with the correct information and the computer file was corrected. After signing the new insert, the subject proceeded to the camera stand. Once the photograph was taken it was glued to the insert, placed in a plastic pouch and the entire pouch was laminated, creating a physically-complete badge. The badge was then handed by the BCR, thereby activating the badge. Finally the photograph was imprinted with the LAOOC seal, completing the badging process.

At the conclusion of the badging process the Olympic Family members were transported to their accommodations free of charge by the LAOOC.

Number of Olympic Family accreditations issued per day

	Biltmore	OAC	Total
10 July	0	73	73
11 July	0	10	10
12 July	0	129	129
13 July	0	95	95

10 August	7	16	23
11 August	4	2	6
Total	1,349	13,601	14,950

Biltmore Hotel

The badging center at the Biltmore was designed to handle fewer individuals than the OAC, but essentially the process worked in the same manner. All pre-printed badge inserts of persons scheduled to reside at the Biltmore were transferred to that location. In addition, the Biltmore accreditation center issued badges for special accreditations, such as observers from bidding cities and individual requests for accreditation by persons not otherwise entitled to accreditation by the Olympic Charter.

The Biltmore accreditation center was located in a large room adjacent to LAOOC service departments, such as Accommodations/Finance and Ticketing. Approximately seven staff members per shift operated the center and its two computer terminals, three printers and backup personal computer. The accreditation center was operational from 14 July to 12 August 1984.

Each Biltmore Hotel resident seeking accreditation was required to present a "zero balance" receipt from Accommodations/Finance. The badging process at the Biltmore was identical to that at the OAC.

Accreditation and Access Control

At the Biltmore, the pre-printed badge inserts were filed by letter category for the persons scheduled to reside there. Difficulties arose when more NOC "B" badge holders than anticipated arrived at the Biltmore for accreditation. This was caused by the appearance of "B"-accredited NOC members who were not scheduled to be housed at the Biltmore.

The most current resource files of NOC family lists were kept at the OAC and the Biltmore lists did not always reflect the changes or additions made at the OAC. Therefore, it was often necessary for the Biltmore accreditation center to telephone the delegation registration desk at the OAC before the individual at the Biltmore could be verified and accredited. This sometimes resulted in long delays for guests. Similarly, International Federation "B" cardholders could not be accredited at the Biltmore until the payment had been received at either the OAC or the hotel. While accreditation at the Biltmore proceeded smoothly, operations could have been streamlined by installing an automated (on-line) verification procedure identical to that at the OAC.

The Biltmore Hotel accreditation center accredited 1,349 persons. Approximately 90 percent of the inserts which had been pre-printed were printed correctly. The most common corrections were misspelled names, changes in access (granted after a special request had been made and approved), failure to locate a pre-printed insert because it had been misfiled and changes to the Olympic Family list. As noted above, more "B" cardholders arrived at the Biltmore for accreditation than were originally anticipated, and therefore a substantial amount of time was spent voiding the inserts at the OAC and then reissuing them at the Biltmore. There were relatively few remakes or reissues of (IOC) "A" cardholders because the family lists were accurate. The Biltmore also accredited IOC "B" badges. Among these, virtually all of the IOC secretariat badges had to be reissued because of a special request to have the access zones changed.

Rebadging centers

Olympic Family rebadging centers were located at the UCLA, USC and UCSB Villages. UCSB was also an initial accreditation center for competitors residing at the village.

Rebadging centers were utilized by the Olympic Family when a badge was lost or was in error and needed to be corrected and reissued. Transferable "C" exchanges (replacement badges) were also printed and issued at these centers. No initial data entry was anticipated at the rebadging centers, although a few badges were printed and issued for the first time.

Because all voided badges were handled by the OAC, good communication was essential between the rebadging centers and the OAC. There were no significant problems with this facet of accreditation.

5.02.4

Special cases: Nature and disposition

The Biltmore Hotel was the location where special requests for accreditation were determined. Special requests fell into two categories: "G" accreditation by invitation and "gift" accreditation.

"G" badge accreditations

The grant of "G" accreditations for distinguished guests was considered by the LAOOC for the head of state, chief of government and/or minister of sports of participating countries. The number of "G" accreditations granted to each country was determined by the LAOOC. A letter was sent to each NOC on 29 July 1983 asking each to specify their "G" accreditation requests. Only 60 NOCs had responded to this letter by February 1984. Each individual with a "G" accreditation was also entitled to a "G" accreditation for an accompanying person.

In April 1984, the LAOOC responded to requests submitted by the NOCs. A telex was sent to the NOC outlining which "G" badge had been approved, followed by a letter and a form for the NOC to complete and return prior to a specified date. Less than 50 percent of the NOCs returned the form by the stated deadline.

During the week prior to the Opening Ceremonies, as well as throughout the Games, there were numerous requests for "G" accreditations which were considered on an individual basis by the LAOOC. There were also numerous changes in the names of holders of "G" accreditations. As a consequence of the many changes and new approvals, the Biltmore did a heavy volume of on-line printing and persons receiving new accreditations often experienced a delay in receiving their badges.

Gift badges

The LAOOC anticipated that many requests for gift or non-charter-mandated accreditations would be made at the Biltmore. One LAOOC executive was designated as the person to whom the requests for accreditation should be addressed. Initially it was believed that all requests would be made to that executive personally. However, the number of requests was so great, particularly from 20-22 July, that it was impossible for one person to handle them. The requests were made orally and in

writing to accreditation staff and also through the Protocol office. The requests took all forms, e.g., on scraps of paper, on formal letterhead, handwritten, typed, some with complete information and some with no information other than a name. Persons making a request were told by were told by the accreditation staff that a decision would take 24 to 48 hours. Nevertheless, those persons often returned two or three times a day to inquire about the status of the request.

In responding to the large volume of requests, new procedures were developed. All persons requesting accreditation through their IOC affiliation were required to present a letter signed by the director of the IOC. All persons seeking accreditation through IOC President Juan Antonio Samaranch were required to present a letter signed by him. All persons requesting accreditation through their NOC affiliation were required to present a letter signed by the president of their NOC. Persons requesting a change in accreditation category or in access privileges were required to present reasons for the change.

The requests for gift accreditation fell into the following categories:

- Spouses, children, relatives of Charter-mandated accredited persons
- Friends and associates of IOC officials
- Family and friends of IF officials
- Former Olympians
- Members of U.S. national governing bodies
- Observers from bidding cities
- Ambassadors from foreign nations and members of local consulates
- Press requests, which were referred to the Main Press Center

Grants of gift accreditations were all approved or disapproved by the president of the LAOOC. If a gift accreditation was granted it generally fell into one of three categories:

- "B" accreditation; had standard NOC or IF access. These were granted at the request of various people in unusual circumstances. A maximum of 50 of these were granted.
- "C" accreditations; had a ticket pictogram and zone 5. No function was put on the badge, just an organization affiliation. There were more than 150 of these, primarily for children or family members of "A" and "B" cardholders.
- "O" accreditation; had infinity pictogram and zones 3, 4, 5, 7. These people were not entitled to seating. This type of accreditation was for people affiliated with other OCOGs, bidding cities or similar organizations. There were a total of 162 granted.

In total, almost 400 gift accreditations were issued, far in excess of original LAOOC estimates.

5.03

Accreditation and access coding of staff

5.03.1

Concept of the staff badging system: "K," "Ks" and "L"

The concept of badging support personnel was developed in January 1984. It was decided that the 44,000 estimated LAOOC paid and volunteer staff would receive a two-part "L" badge (for LAOOC) regardless of their job function or access requirements. Only Olympic Arts Festival staff and some marathon road course marshals would not be included. For non-LAOOC personnel-referred to as contractors—the "K" badge (also two-part) was assigned. There were four categories of "K" personnel, three of which were eliminated from the complete badging process. They were:

- Those requiring access only to public areas
- Those whose access requirements were infrequent or for emergencies only
- Law enforcement personnel whose uniforms and badges were sufficient when accompanied by a generic non-personalized badge issued at a site

To handle these contractors, the LAOOC developed the public area-only badge, the construction pass, the emergency service pass, and the temporary work pass and the "Ks" generic law enforcement badges. These proved to be essential to the eventual success of the on-line badge print program by eliminating more than 18,000 individual applications and badges.

More importantly, by creating different categories of badges the LAOOC could differentiate the services and perquisites available to support personnel. For example, all "L"-badged employees were entitled to a free box lunch for every eight hours worked, insurance coverage and a uniform at LAOOC expense. The LAOOC did not wish to be in a position where it would have to feed thousands of contractors or security personnel, at an expense which would have run into millions of dollars. In order to participate in the box lunch program "K" badge holders or their employers were required to purchase the meal coupons from the LAOOC. It was felt that it was not necessary to provide perquisites to individuals or companies from which the LAOOC was purchasing services.

**5.03.2
Procedures for accreditation
of LAOOC staff**

The LAOOC staff accreditation badge had two parts. The upper portion of the badge contained information on the identity of the person, including name, letter category ("L"), PID number and bar code. The lower portion of the badge contained the access information including the site pictogram, access zones, job title, location and badge capture or non-capture indicator. By separating the badge into two parts the LAOOC had the ability to create the two badge portions at different times. More importantly, the two-part badge provided the flexibility to change an individual's access privileges without remaking the entire badge and especially without the re-taking of photographs.

The accreditation procedure for LAOOC staff took place in six distinct stages.

First, it was necessary to identify the individual applicant and match him to a particular job function. For each job function the LAOOC assigned a unique number, called a requisition number. When an application was submitted and assigned to a requisition number, the applicant was automatically processed for a security clearance. Fingerprints of each applicant were taken to complete the security check process. The Security Department entered the results of the police agency review into the accreditation computer system, and if the clearance was negative, the individual was deleted from the requisition and the system blocked any Games assignment for that person.

The second part of the accreditation procedure required the applicant to be photographed at an accreditation center. Once a photo was taken, it was glued onto a pre-printed insert containing the applicant's name and was placed in a plastic pouch and laminated. The badge was filed at the accreditation center. This completed the upper portion of the two-part badge.

The third step was for the staff member to be assigned site and access privileges, which were placed on the lower half of the badge. It was the responsibility of a venue management team, composed of the commissioner, the venue director, the venue access control manager, the venue security manager, competition director and an accreditation/access control staff member to determine access assignments. Where access to multiple sites was necessary, the application was reviewed by the Accreditation Department. The site and access privileges assigned were input into the accreditation system and later matched to the individual's application number.

Next was for the generation of the lower portion of the badge. These access credentials were prepared for mass printing from 24 June to 15 July. An average of 5,000 badges per day were run.

8

9

10

8 Non-LAOOC support personnel, or contractors, are assigned one of four categories of "K" badges.

9 Games staffing applicants are photographed at accreditation centers around Los Angeles in the months preceding the Games.

10 Games staffing photos are glued to a pre-printed insert containing the applicant's name and placed in a plastic pouch and laminated.

Accreditation and Access Control

The fifth step in badge production was matching and assembling the two badge parts; the upper portion (identification) and the lower portion containing the access information.

The final step was distribution.

5.03.3 Processing the LAOOC staff applicants

Most applicants for Games positions came to the LAOOC in two different ways: as a direct referral from someone already employed by the LAOOC or by drop-in to one of the four staffing and recruitment centers. The process of issuing a Games credential to LAOOC support personnel began by completing a Games staffing application. All existing LAOOC personnel were also required to complete this application. The information from this form was filed into the computer system and the applicant's name and application number were linked to a job requisition number thus filling a specific position. The new staff member was given a completed "Terms and Conditions" letter to read and sign. This form detailed the conditions of employment, the rate of pay (if any), the applicant's name, application number and job requisition number.

The applicant was then required to visit one of eight accreditation centers, four of which were established at the staffing centers. The accreditation centers each had the same equipment and staffing level. Space, equipment and personnel requirements were defined based on the projected flow of people to be accredited each day.

The identity of Games staff members was verified before going through the actual badging process. Staff members were required to present a "Terms and Conditions" (proof-of-hire) letter along with a photographic identification card (preferably a California driver's license). If the subject could not produce both of these items, he would not be processed for a credential and the supervisor of the Games Staffing Center would be notified.

After the individual's identity had been verified, he was processed through the following credential fabrication procedure:

- Step 1; the badge was printed following data entry. In the event of a misprinted badge, the insert was removed from the printer, stamped void, notated with the reason for voiding and initialed by the person who voided it. A new insert was then printed.
- Step 2; the Games staff member was photographed. Each sheet of self-processing film had space for four photographs.
- Step 3; the printed badge was removed from the printer and signed by the subject.
- Step 4; the strip of film was pulled from the camera and placed into a 60-second flow timer. When the film dropped out of the bottom of the flow timer, the negative was peeled away and discarded.

- Step 5; the now-developed photographic sheet was cropped and each of the four subject photos was detached from the strip and glued to a corresponding place on the badge.
- Step 6; the badge was laminated.
- Step 7; the badge was wanded with the bar code reader.

At the conclusion of each day, the identification credentials were counted against the number of badge forms that were actually printed, not including misprints.

The identification badges were then taken to the LAOOC's administrative headquarters (the Marina Center) and placed in a locked box daily to be collated and stored until final distribution.

Three mobile accreditation units (MAUs) were established to credential large groups of people unable to get to an accreditation center. These units were set up in three 20-foot recreational vehicles and were equipped with a camera and provided work space for four. Since none of the MAUs were on-line to the accreditation computer system, MAU badging procedures varied greatly from those at the accreditation centers. In total, the mobile accreditation units produced more than 10,000 credentials or 16 percent of the staff/contractor total.

The mobile accreditation units' function was to travel to remote sites and process groups of 100 or more. The department requesting the services reserved an MAU in advance and the MAU staff pre-printed the badge inserts needed for the group appointment. The objective was to match the pre-printed insert to the verified individual applicant, take the photograph and laminate the insert.

Approximately 800 square feet of space and two 110-volt electrical outlets were required for the MAU. The MAU could accommodate 120 people per hour if properly scheduled. While the concept of the mobile accreditation centers was good, the units proved difficult to manage efficiently. Departments requesting the service usually did not know who would attend the session. Typically, the no-show rate was 50 percent; moreover, many applicants asked to have their pictures taken for later attachment to a not-yet-printed insert. In total, 36 percent of pictures taken had to be secured for later use at the central offices.

Access credentials—the lower portion of the badge—were prepared by computer in mass print runs and matched to the identification portions—the upper part of the badge—that had been previously filed in PID number order. Mass print runs were done between 24 June and 15 July, averaging 5,000 per run.

Initial mass prints were defined by pre-determined PID ranges: 1 to 5,000; 5,001 to 10,000 and so on. Typically, about 80 percent of the access credentials within a range were printed. The

Two-part badge processing

Activity	Personnel resources	Equipment needs	Estimated time	Unit rate
Access credential printed	Data staff	Computer printer	21 hours	Three seconds
Separate stock and badges	10 clerks	4 laminators	14 hours	200 laminated in 13.5 minutes with 5 persons
Match badge parts and rivet	3 assembly lines, 3 persons per line, 4 sorters	3 rivet guns	23 hours	10 seconds per badge
Security stamp	1 person per assembly	Security imprinter	550 hours	

remaining 20 percent were not printed since those individual PID numbers were not assigned to a requisition at all or were assigned to a requisition which had not been assigned access zones.

The mass print runs were usually done overnight and took about three hours and batches were ready for fabrication by 0830 when the badge making crew came on. Printing time averaged 800 access credentials per hour, aided greatly by the fact that the bar codes were not printed on the access credentials. The access credential stock was not serially numbered, reconciled or controlled as was the ID stock.

The matching and assembly of identification and access credentials involved laminating, matching and riveting and was very time consuming. Up to 30 people at a time were utilized on several occasions in order to achieve the desired output rate of 5,000 two-part badges per day. In total, 5,750 man-hours were required to produce more than 60,000 two-part badges between 24 June and 28 July.

The final process in badge production was distribution. The completed two-part badges were sorted by site code and distributed accordingly. The distribution scheme was as follows:

- All "L" and "K" badges assigned to a specific site code were distributed to that location.
- Badges for staff assigned to the Marina Center were distributed at the Marina Accreditation Center (MAC).
- "Ks" badges with multi-site access privileges were distributed at the MAC since they were not assigned to a specific location.

Distribution to venues and other sites was accomplished by:

- Delivery via accreditation vehicles and personnel
- Inter-office mail via LAOOC courier
- Pick-up by personnel from the given site
- Issuance at accreditation centers upon fabrication after 14 July 1984

Distribution occurred between 10 July and 12 August 1984, with most of the deliveries occurring during July.

The most severe badge distribution problems occurred as a result of the movement and reassignment of personnel during those weeks after the fabrication of two-part badges began. Access credential information content was defined as of the date of printing, thus badges were distributed to the site listed on the badge even if a person had been reassigned.

5.03.4 Issuance of captured or non-captured badges

LAOOC management was concerned that support personnel might misuse their badges to observe events during times they were not working, or to negotiate their way into sites and zones beyond those authorized. It was reasoned that a badge had "power" if used by a forceful person. Although it was expected that some Olympic Family members would attempt to gain maximum advantage from their badges, it was decided that these situations would be dealt with when they occurred. However, the support personnel could be deterred from misuse of the badge by not allowing the badge to leave the site. This could be accomplished by issuing a person's badge at the beginning of his shift and capturing it again as that person completed his shift.

Arguments against this plan were that it was effective only in single site applications and costs to administer the procedure were excessive. The captured badge system also required supplemental identification cards for staff use on LAOOC transportation, as well as for verification of LAOOC association for use on public transport systems (LAOOC employees were allowed to ride at no charge upon presentation of identification with the LAOOC). One advantage of a captive badge system was that it would reduce the chance of individuals losing their badges.

Venue management was less than enthusiastic about the captive badge and had great concerns about potential delays in checking through large numbers of staff as well as the space and personnel required to manage the system. However, with the approval of the larger venues, the LAOOC's Operations Committee decided to implement a captive badge system at all venues and villages.

The captive badge decision required accreditation to expand the role of the venue access control manager and to develop procedures for staff check-in, storage and issuance of badges. The number of check-in lines was enlarged for each site to ensure that each shift could be checked in within two hours.

This caused an overall increase in staff check-in personnel at the venues and villages.

Overall, the captive badge system was effective and very few incidents of badge misuse by staff were reported. A small number of "L" badges, mostly for LAOOC senior managers, were approved for non-capture. These badges generally had all-site pictograms.

5.03.5

Procedures for accreditation of non-LAOOC staff

Accreditation badges for non-LAOOC staff were given the letter category "K," for contractor. The "K" badge, like the "L" badge, had two parts and was fabricated in essentially the same manner. The upper portion of the badge contained personal identity information such as the letter category ("K"), name, PID number and the bar code. The lower portion of the badge included the site pictogram, access zone, job title, company name and captive or non-captive indicator. Like the "L" badge, the two parts of the "K" badge were fabricated at different times and later physically riveted together.

The accreditation procedure for non-LAOOC staff member "K" badge holders varied only slightly from that for "L" badges. The initial step was to identify the individuals and organizations under contract. In January 1984, the LAOOC formed the Contractor Accreditation Unit which began to actively identify contracting organizations and develop a roster of more than 400 companies. As contractor companies were identified, each was given one or more requisition numbers and all applicants working for the company were assigned that requisition number. This differed from the LAOOC staff application process in which the individual applicant was assigned a job with a unique requisition number. Because contractor requirements were so difficult to assess, the decision to abandon the requisition process for contractors simplified and expedited initial processing of applications. It allowed for the preparation of individual identification cards before job title and location information were available. The decision to utilize the two-part badge proved to be of critical importance.

Once contracting firms were identified and assigned the requisition number, individual applications could be accepted and assigned. This activated the individual's ability to receive a contractor accreditation badge. When the individual application was filed, a security agency check was initiated. The assignment of access privileges would be blocked by the computer if an individual did not receive clearance. The next step required the applicant to be photographed at one of the credentialing centers or, if available, the mobile accreditation unit. After the photo was taken it was glued onto a pre-printed "K" badge insert containing the applicant's name and

company. The insert and photo together were then laminated and filed at the Marina Center. This completed the preparation of the upper portion of the two-part badge.

The next step was for the contractor to request site and access privileges based upon job functions and requirements. If single site access was requested, it was the responsibility of the venue management team to assign the privileges at their respective venues. This team was composed of the commissioner, venue director, access control manager, venue security manager, competition director and a member of the contractor accreditation unit.

If the contractor requested multiple site access for an employee, an infinity pictogram or other broad access privileges, the request was reviewed and approved or denied by the director of Accreditation and the Access Privilege Review Board. The five-member Access Privilege Review Board was established by management and composed of department representatives from competition and venue management, villages, Games staffing, security and accreditation. The assignment of multiple site access to contractors was restricted to the fullest extent possible. The use of the conditional access pictograms and the strongly-enforced policy to assign people to a single site whenever possible was generally successful.

Once the access and site privileges were assigned and input, the computer was then ready to generate the lower portion of the badge. The access credentials were prepared by mass badge print. The final step was assembly. The completed badges were then distributed to the assigned venue or, in the case of multiple-site badges, stored at the Marina Center for pick-up.

Public area badges

A public area badge (PAB) was developed for contractor personnel who required regular, recurring access to competition venues but only to public (spectator) areas. The badges were issued to concessionaires, maintenance companies, contract crowd management companies and other groups to identify personnel at a site who were admitted based on a shift assignment roster. The rosters were received or controlled by the LAOOC venue access control manager or a company representative accountable to the LAOOC.

The PAB was a laminated one-part badge made from pre-printed badge stock. The badge identified the personnel working in public areas by venue and company name. Each PAB had an individual serial number printed on it. With the company name on the badge, the contracting company could be held accountable for its employees.

11

11 A captured badge system prevents misuse of badges.

12

12 A time-consuming process of marching up the proper portions of the two-part accreditation badges is followed by assembly and lamination of each badge.

The PAB allowed site access but eliminated the need to issue permanent or temporary credentials on an individual basis. Additionally, the PAB gave contractor employees a sense of identification with the overall Olympic activity.

Each access control manager was issued a small extra supply of public area badges to use as necessary. The venue access control managers worked directly with the contractor at each site to develop the most feasible system to distribute and manage the badges on a daily basis. While there were reservations about the public area badge program, the administrative difficulties in trying to run security checks and fully accredit thousands of people hired close to the opening of the Games were impossible. In all, more than 12,500 PABs were issued.

5.03.6

Processing of non-LAOOC staff applicants

Detailed procedures were followed for obtaining and processing applications for accreditation of non-LAOOC personnel (i.e., contractors and outside third parties). This processing differed only slightly from LAOOC staff processing.

Each contractor and third party group which required access to Games sites was given a contractor identification

Accreditation and Access Control

number and assigned to a specific LAOOC department. An LAOOC department contact explained LAOOC access control policies and procedures to each contractor and helped determine the number of applications required.

Applications were then issued on a strictly controlled basis to the contractor by the LAOOC Security Department. Each contractor was required to maintain an LAOOC Accreditation Application Log to account for each application form by number. All applications were individually numbered and became unusable if copied, since the computer system rejected duplicate numbers.

The contractor was responsible for completing each application form with the full name and job title of each employee as it appeared on company payroll records. The contractor instructed each employee how to complete the application form clearly and completely. The forms were confidential documents and employees were instructed to mail the completed form directly to the LAOOC Security Department or return it to the company contact who returned the forms directly to the LAOOC.

Periodic computer printouts by contractor number verified the status of applications returned and processed. The contractor was provided copies of the printout to reconcile its log of applications against that of the LAOOC. If any names appeared on the printout that were not on the contractor log, the contractor notified the LAOOC for directions.

All documents were completed carefully and submitted prior to 20 April. All necessary clearances were required prior to photographing and laminating badge inserts. Contractor access information was keyed into the accreditation computer system and within two weeks after submission of the completed forms, contractor employees were requested to make an appointment for badge preparation.

Contractors could request the dispatch of a mobile unit to handle preparation of pre-printed ID cards (upper portion of the badge). The request was subject to Accreditation Department approval and MAU availability.

Contractor employees presented proof of identity at the accreditation center and had photographs taken. At the same appointment, each applicant was fingerprinted for the background check. The photograph was affixed to the upper portion of the badge, the badge was laminated and filed at the Marina Center by PID number.

Based on contractor requests and requirements, access privileges were assigned to each employee. Data processing generated a computerized access list for each contractor. Access credentials were then printed in sequence by PID number. Those per-

Statistical summary of the contractor accreditation program

Standard "K" badges produced on IBM System 38		Total
Applications processed	43,517	
Identification cards prepared	28,574	
Badges distributed	28,500	28,500

Grand Total		46,845

sons who did not clear the security check were removed from the accreditation computer file.

Accreditation hand matched (upper) ID cards by PID number with the associated access credentials (lower), and physically riveted the two parts together to complete the badge. If the two matching badge parts (ID card and access credential) were not easily found, the Accreditation Department resolved the problem by using the on-line computer system.

Completed "L" and "K" badges were stored together in sequence by access credential location code. Those badges with multiple access were stored at the Marina Accreditation Center in PID number sequence. Accreditation later forwarded all badges except those with multi-site access to venues.

5.03.7

Special procedures for security personnel

In May 1984, it was decided to use a special generic badge for uniformed law enforcement personnel. The badge used the letters "Ks" (for security), did not include a photograph of the bearer and was issued to the law enforcement agency and not to a specific individual. Several factors led to the decision to use this special badge:

- More than 38 law enforcement agencies were involved and each rotated many of its regular staff for Olympic duty assignments.

13 Access control points and restrictions are visible at the venues.

- Some agencies wanted to charge the LAOOC for time to accredit their personnel.
- Distinctive uniforms and police agency badges were already in use in each jurisdiction.
- Computer processing time was overtaxed as it was.
- Law enforcement personnel had a history of abusing access privileges to events.

Law enforcement agencies made their request for generic "Ks" badges through the LAOOC Security Department. Once the number of credentials were agreed upon, the Security Department submitted that request in writing to the Accreditation Department. The request detailed the number of generic "Ks" badges required and the access zones to be assigned.

The generic credentials were produced using standard "K" badge stock. The agency name and venue location were printed on each badge, which also included a bar code and a unique PID number. The phrase "no photo required" was printed in the photo area to further indicate that it was a non-individualized generic badge that required the individual to have a uniform and law enforcement agency badge in order for the "Ks" badge to have any validity.

The issuing agency supervised the disbursement and collection of badges among its own officers. This control proved very effective. In total, the LAOOC issued nearly 3,700 generic "Ks" badges.

5.03.8 Staff accreditation requirements in the Games period

Several varieties of badges were developed for the actual Games period in order to accommodate unique situations or requirements. A temporary pass sub-system was established to handle problems which arose when an individual requiring access to an Olympic site did not have the appropriate credential.

Construction

This pass was for entry to an Olympic site by construction personnel prior to the opening of the site for the Olympics. The pass used an adhesive backing and was attached to a person's clothing. These passes were issued by either the construction site supervisor or the site security manager. At their discretion, the pass could be date stamped to provide limited access to the site.

This pass system worked adequately but problems arose when construction at the site continued into the training and competition dates.

Course marshal

This pass was developed along the same lines as the construction pass. It was issued to Games personnel involved in working the edge of the public area on the course for the marathons and race walks. It was primarily a form of identification since it did not give special access to the bearer.

Emergency service pass

The emergency service pass gave access to a non-credentialed person on an emergency basis upon clearance from venue security. The emergency term did not mean necessarily a life-threatening situation but rather an important but unplanned visit to an Olympic site. This pass was used sparingly since no major "emergencies" presented themselves at the venues, but was worthwhile because it eliminated the need to provide full accreditation to a great number of people who might have needed access to a site once or twice during the course of the Games.

Temporary change of access

This type of pass was used for temporary access until a permanent access credential replaced it or additional access was no longer required. The temporary change of access pass was not used a great deal, owing to the quickness with which a new access credential could be generated.

Temporary work pass

The temporary work pass was developed to give access to credentialed personnel who required additional access and who had lost or never received a credential. This pass allowed the individual to function at a specific site, but only for a limited, predetermined amount of time, usually one day. This type of pass was heavily used during the Games because of the relatively high number of Olympic credentials that never arrived, or arrived late, at the Olympic sites. At several venues, photographs were affixed to the temporary work pass and the pass was laminated, creating a "semi-permanent" credential. At other venues, the pass was valid for several days, and, in special situations, used for multi-site access.

Venue pass

The venue pass was used by the commissioner to give access to a limited number of individuals (usually uncredentialed) for VIP or protocol reasons. The number of venue passes given out per competition session was determined prior to the start of the Games and varied with the size of the venue.

Olympic Family lounge

This pass resembled a standard size business card and was designed to give access to the Olympic Family lounge at each venue. The commissioner was given a supply of these cards to give out to anyone who already had access to the specific site but not to the lounge (zone 5).

Village NOC guest

The village NOC guest pass was developed to allow guests of the NOCs to visit their delegations at the Olympic villages. The number of guest passes per delegation was determined by the size of the delegation in residence at the village. In addition to these NOC specific passes, the mayor and administrative officer at the village were given a set of guest passes to handle overflow and special delegation requests. The guest passes were sequentially numbered, marked with the country and village abbreviations and laminated.

14

The system worked well, requiring only the addition of an inter-pass system to move the NOC guests from the main entrance of the village to the credential/pass exchange area.

As the Games progressed, it became apparent that issuance of temporary passes would not satisfy all the needs for access changes and that the individual assignments of access privileges were not completely accurate. In many cases, the original assignment was accurate but the individual or group later required a different set of access privileges. The rate of production and fabrication of access credentials did not allow for a major distribution of new, individual access credentials (i.e. access credentials linked to individual PID numbers). Instead, generic access credentials were printed en masse with the required access privileges, but with a generic PID number (999999). The production of these credentials was several times faster than that of the individualized access credentials. The generic production was done on two levels: a request or case-by-case basis and in anticipation of requests from venues or departments.

When a new access credential was generated and assigned to an individual, the existing access credential on the badge was removed and the new one riveted on.

The combination of temporary and special access passes along with the ability to change access privileges gave the system the great flexibility

14 To gain entry into the village press areas, each journalist exchanges his Olympic credential for a village press badge.

Accreditation and Access Control

which was necessary for successful operation of Games access control in the face of changing individual responsibilities on a day-to-day basis.

5.04 Access control

5.04.1 Nature of access control requirements

The primary function of access control was to control passage into and within Olympic sites to those persons authorized. Authorized entry was determined by the letter designation on the identification (ID) portion of the badge and the pictogram shown on the access portion of the credential. Passage within an Olympic site was controlled by the zone numbers listed on the access credential.

Successful implementation of the access control could only be accomplished after the proper identification, credentialing and access privilege assignment processes were completed.

Expecting errors in all three phases of implementation, a sub-system of temporary badges was established to give temporary access to those individuals who required access but did not have the appropriate credentials.

In addition, special credentials were developed for those persons who needed to be at a site on a long term basis but did not require access to

secured zones within the site (public area badges).

The two phases of accreditation and access control were bound together by the ultimate goal of accurately identifying all personnel having a proper function within the Olympic sites. The access control phase could not be effectively implemented unless the accreditation phase had successfully identified those individuals and given them proper credentials.

The two general areas of venue access control were at entry points and between intra-venue access zones. Access control staff were known as staff check-in clerks and access controllers. The clerks were primarily based at the Olympic staff entry point while the access controllers were positioned at access control points throughout the venue. These personnel rotated assignments throughout the course of a day.

Access control within a village focused on the control of entry points. Personnel were divided between two entry points: the staff entry point (for Games staff) and the main entrance (for athletes, Olympic Family members and accredited media). Personnel were trained to work exclusively at one entry point and did not work the other.

5.04.2 Relationship of access control to security

Access control was responsible for access and internal movement within a site while security personnel were concerned with controlling personnel for security and safety purposes. At various access control points, such as the athlete entrance where security was in charge, guards functioned as access controllers. As a general rule, however, access control and security shared responsibilities at each venue access point.

Access control personnel in the villages were again concerned with the administrative functions of access control, while security personnel were concerned with the safety of village residents and integrity of the village fence lines. Law enforcement officers were present in all phases of access control, especially in situations where a person was refused entry. If the situation appeared volatile, law enforcement removed the individual from the premises.

The law enforcement officers had no direct reporting relationship to access control management. It was, therefore, the responsibility of the supervisor for each shift to understand the duties of law enforcement and to coordinate the responsibilities of the access control staff with those of law enforcement and the contract security personnel.

Unlike the venues, the villages had only two zones-the village common area (zone 7) and the housing areas (zone 8). Contract security personnel, backed up by law enforcement officers, operated the magnetometers at the entrance to and within each village. Access control staff was not present at these areas.

5.04.3 Recruitment of access control management and staff

The basic operating philosophy of access control was based on the dual concepts of volunteerism and venue autonomy. While the initial intent was to have paid access control managers and volunteer access controllers and staff check-in personnel, this concept changed in March 1984 and became an all-volunteer work force. Senior management felt that a significantly stronger level of management and a higher level of commitment would be obtained by using volunteers at every level and outweighed the potential for reduced time availability.

Within a venue, the access control manager (ACM) operated the access control system. The ACM reported directly to the venue director and/or commissioner. The ACM was autonomous and only contacted the access control staff at the Marina Center for

materiel and assistance in the arbitration of access control problems.

Large venues had assistant access control managers and all venues had one or more staff check-in supervisors who operated the staff entry points. These three positions—ACM, assistant ACM, and staff check-in supervisor—made up the access control management team at each venue.

Access control staff stationed at staff entry and working directly under the staff check-in supervisor were called staff check-in clerks. Access controllers staffed zone control points at the venue.

Within a village, the access control manager reported to the director of administration. The ACM was autonomous from the access control staff at the Marina Center also. Some of the villages had assistant access control managers and all had one or more staff check-in supervisors.

The major difference between the structure of the access control staff at the villages was that village employees were paid, whereas all venue access control staff was volunteer. The village operation was 24 hours-per-day for 33 days whereas each venue was only operational during the competition period. It was felt that the longer duration of village operations required paid employees to insure adequate staff levels over the entire term.

Manpower planning was essentially completed during the fall of 1983 as part of the venue development process. The number of access controllers was determined by the Accreditation, Security and Venue Development departments. They established access control points and determined which points should be covered by access control and which by security.

One access control manager was assigned to each venue. The number of assistant managers and supervisors was determined by the size of the staff and the length of the operating day.

Recruitment of managers was done through the accreditation/support operations management or venue management and were approved by both the commissioners and accreditation management. A direct mail campaign to the Southern California Football Officials Association produced the core of supervisors and assistant managers, a few managers and a significant number of working staff (approximately 100 in total). A similar campaign with martial arts groups netted about 60 staffers. The access control managers recruited about 150 of their own staff. The balance (about 800) came through referrals and the staffing centers. Attrition was generally very low among all categories. Of the original 22 access control managers hired, only four were replaced, primarily for an inability to commit the required time. There was no management attrition during the Games.

5.04.4

Training of access control staff

Management training began shortly after recruitment and at least four months before the start of the Games. The training sessions were held in the evenings, initially bi-weekly, then once a week. The access control supervisors were included during the last two months of training sessions.

The general format was stand-up presentations augmented by detailed written handouts. The training emphasized the goals and values of the Accreditation Department and its role at each venue. A portion of the training was devoted to role-playing. Access problems and situations were simulated, and managers were taught how to use the system.

A full-time training coordinator was added at this time who focused on the training objectives. Some venue directors and security managers also attended the training sessions. Access control managers were given suggested training materials and a plan to train venue staff members.

In general, the training program was started too late, since it could have been more effective. It was, however, more than satisfactory, especially given the time constraints.

5.04.5

Operations of access control during the Games

Entry to an Olympic venue was given to those needing access, generally a competing athlete, a working member of the press, a delivery person, a ticketed spectator, an Olympic Family member or an Olympic staff member. Signs at several points outside of the

venue directed people to the appropriate entrance. In addition, these signs indicated the credentials and access privileges necessary for access through that particular entrance.

Competing athletes entered through the athlete entrance, usually aboard a bus coming from an Olympic village. As the athletes departed the bus, their credentials were inspected by either an access controller or a security officer to verify that the letter designation was "F" and the pictogram on the access credential corresponded to the sport being played at the venue. After the badge bar code was wanded, the athlete passed into the venue.

A working member of the press entered through the press entry. His or her credential was checked for the appropriate letter designation ("E") (almost all of which had infinity pictograms). This process was conducted by an access controller. The credential was not wanded due to problems in the printing of bar codes on the "E" credentials.

A delivery person entered the venue through a designated vehicle delivery entrance. A security officer checked the delivery person's credential and then checked a delivery log to make sure that the delivery was scheduled. The security guard then inspected the vehicle and wanded the credential. The delivery person was then allowed to enter the venue.

A ticketed spectator gained entrance to the venue through the use of a spectator gate. Neither access control nor security checked spectators.

An Olympic Family member entered a venue through the VIP/guest entry point. This point was usually manned by access control, security and protocol. Each Olympic Family member's

credential was inspected for the appropriate letter designation and pictogram by an access controller. In some situations, particularly at high demand sport events, the access controller asked the Olympic Family member for a ticket. If the credentials were in order, the bar code of the credential was wanded and the Olympic Family member was allowed entry.

An Olympic staff member requiring entrance into a venue entered through the staff check-in point. Those staff members who had captive badges picked up their credentials from a staff check-in clerk. They proceeded to a bar code stand where their badges were wanded and proceeded to their work station. Those individuals who possessed non-captive badges proceeded directly to the bar code stand. It was at this point that their credentials were checked for the appropriate pictogram. The bar code was wanded and they entered the venue.

Personnel who arrived at the wrong entry point were directed to the right area. In cases where an individual arrived without a credential or with an inappropriate credential, access control determined the validity of their claim for venue access. If the claim was legitimate, access control issued a temporary work pass or an emergency service pass.

Entry to an Olympic village, like a venue, depended on the individual and the reason for access. Signs at several points outside of the village directed people to the appropriate entrance.

Accreditation and Access Control

An athlete entered the village either through the athlete bus entrance or on foot through the main entrance. Those arriving by bus had their credentials inspected by a security officer or by a check-in clerk at the main entrance. The person that did the check-in verified that the letter designation was an "F." After the badge bar code was wanded, the athlete passed into the village.

A bar code reader was located at the main entrance only. A working member of the media entered through the main entrance. His credential was checked for the appropriate letter designation ("E") by an access controller. The member of the media would then go through a security inspection point and be escorted into the credential exchange section of the entry area. At this point, the journalist exchanged his Olympic credential for a village press badge and entered the village press area. The number of media allowed in each village was limited to 200 at any one time at the UCLA or USC villages and to 40 at UCSB.

Olympic Family and vehicle delivery entry into the villages was basically the same as at the venues. Staff check-in also followed the venue procedure.

Guests of NOC delegations entered the village through the main entrance. If a pass was available each delegation was allocated a number of guest passes based on its delegation size—the guest went through the security inspection point and was escorted to the credential exchange section of the entry area. At this point, the guest exchanged some form of identification for one of the NOC's guest badges. The guest was then escorted to the waiting area where he or she was met by a representative of the NOC and admitted to the village.

All Olympic credentials contained bar codes encoded with the personal identification number (PID) of the credential holder. The purpose of this bar code was to discourage the illegal duplication of credentials and create a method for voiding a credential. The PID number was read by a bar code reader at each external Olympic site access point. The bar code readers themselves were small electronic devices which were programmed to compare PID data contained on the badge bar codes against a pre-determined set of invalid PID numbers and then inform the access clerk via audible and visual signals.

At each entry point at a venue, the credential was wanded to test its validity. Those which had been deauthorized were captured and the credential holders were detained.

The job of wanding (reading the bar code) was performed by both access controllers and security officers. The responsibility for usage, updating, and maintenance belonged to access control.

Once a determination was made to deauthorize a credential—usually

because a credential was lost or stolen, or the holder had abused his access privileges—the background information was put into the accreditation computer system and a report was generated. This report was distributed to all the venues to be added to the memory of the bar code readers. This procedure was updated on a 24-hour basis.

The movement of personnel within an Olympic site was controlled entirely by zone numbers found on the Olympic access credential. Access control points which demarcated the entry into new zones were manned by access controllers and/or security officers. It was the function of the person manning this point to visually identify the appropriate zone number on the Olympic credential. The credential holder could only pass through this point when his or her access credential contained the appropriate zone number.

Internal signage was developed which pictorially showed the access credential codes necessary to gain entrance through the access control points. These signs were placed on both sides of the access control point to allow for efficient flow from both directions.

5.05 Summary and recommendations

The Olympic accreditation and access control planning and operations systems were highly successful in many areas while other areas required last-minute development.

Accreditation badge design

The two-part badge for LAOOC staff and contractors was a new concept in badge design and was highly flexible. It allowed the identification portion of the badge to be prepared prior to the assignment of site and access privileges and facilitated the changing of access privileges, if necessary, after a badge was issued. Thus, accredited persons did not have to have their picture re-taken if their site or access codes were changed. Since individual picture-taking was the most difficult part of the accreditation process to control, the two-part badge system provided major advantages to the organizers.

The badges for Olympic Family members were organized mostly along the requirements outlined in the Olympic Charter. However, the LAOOC was required to design special solutions for additional team officials in excess of the charter limits ("Fx"), for additional non-competition-related IF officials ("J") and for observers from future Games organizers, organizing committees of various other sporting events and for committees from cities considering a bid for a future Olympic Games ("O").

The badges themselves were attractive, lightweight and easy to read, even from a distance. The use of larger letters for name, function and organization as generated by computer-based badge printing systems is highly recommended for future organizers of all kinds of events where accreditation is required. The many security features incorporated in the badges proved worthwhile as forgeries of accreditation badges were not in evidence.

Accreditation badge processing

The credentialing operations worked because of a core group of staff who were dedicated to overcoming any shortcomings in the system. The overall design of the system was adequate and produced a majority of the badges correctly and on time.

The task of processing individual applications and matching them to specific job requisitions, site and access code assignments was extremely complex. Thousands of changes were made after original input had been made and re-issuance of badges was sometimes necessary. To assist this, it would have helped to have had sufficient computer capacity to be able to process changes and re-print necessary identification and access code badge sections quickly.

In the future, it is essential to develop and test badge printing software well in advance of the Games and at a level which will simulate the required capacities for Olympic Family, staff and other accredited groups. Because data on the actual Olympic accredited personnel—whether Olympic Family, staff or others—is always late in coming, it is necessary to be prepared to generate thousands of badges at the last minute. The personal computer-based back-up system for Olympic Family badges was a worthwhile protection device.

All groups requiring accreditation must be well informed of the procedures for accreditation. It might have been helpful to publish a short document for staff and contractors which detailed the accreditation process in much the same manner as the Identity Card Manual did for the Olympic Family.

A very high level of pre-Games turnover among the contractor employees made the distribution program more complex than it should have been. It might have been more efficient to have the access credential portion of the badge attached at the venue and not at the main accreditation center. This was done towards the end of the Games.

Access control staff, recruitment and training

The recruitment function went quite smoothly and the quality of personnel was very good. Attrition was minimal. The decision to use an all volunteer staff proved successful as a high level of dedication and motivation to get the job done was evident at almost every venue.

Bar code operations

The BCR program worked as much from its image as a sophisticated system as it did from the reality of its detection ability. Very few technical problems occurred and the system proved to be a great deterrent as only a handful of fraudulent badge-users were actually detected.

There were irregularities in the print quality of the bar coding on the "E" (media) badges and on some Olympic Family credentials. Some were mistakenly de-authorized at the OAC, which caused undue delay and some unpleasantness for those individuals affected when they tried to enter a venue or village. The media credentials were not read at any site because so many were improperly printed.

Olympic Family operations

Olympic Family accreditation went very well. More than 15,000 people were accredited and the overwhelming majority were processed in a quick, courteous and efficient manner.

Contributing to this success were the following factors: insistence that the computer system and its operation be understood; careful coding and fastidious proofreading of Olympic Family lists; advance verification and revisions of the largest NOCs' family lists by the respective chefs de mission; advance chef arrivals and processing through delegation registration; and knowledgeable and decisive leadership combined with willing and conscientious workers.

Access control summary

Venue access control fell into two functional areas: the staff entry/exit point and access zone control. On a systems level, each of the procedures of these functional areas worked according to the original design. Some problems arose in the efficiency of the staff entry point because of weaknesses in the credentialing process which placed a heavy reliance on the temporary pass sub-system of access control rather than the primary system of Olympic credentials. Although the accreditation system worked in general, a large quantity of the staff badges did not arrive at the appropriate site until after the Games began. This resulted in a need to issue major quantities of temporary passes.

Zone control had a few problems, most with the ineffectiveness of interior signage and restrictions on access privilege assignments. Overall, the Olympic accreditation and access control operations were generally successful because the systems worked and because alternate methods were developed to adjust to unique sets of circumstances.

6

Administration

6.01 Nature of services offered

From the earliest days of the LAOOC in 1979 through the close-out and tear down period following the Games, one of the constant needs of the staff was for general administrative services.

No successful office can operate efficiently without well-managed communications, conference, mail and reception services, but this became all the more important as the LAOOC grew from 11 persons at the end of 1979 to 1,530 just prior to the Games.

The Administration Department provided general office services for the LAOOC including:

- Business cards
- Conference room reservations
- Courier services
- Food and beverage services within the office complex
- Mail delivery, pick-up and postage
- Office furnishing, in conjunction with the Material Logistics Department
- Office movement, packing and unpacking
- Photocopying, in conjunction with the Technology Department
- Parking for staff and visitors
- Reception services
- Satellite office negotiations and set-up
- Security at the LAOOC offices, in conjunction with the Security Department
- Shipping, receiving and warehousing at the main office site

- Telecopier and telex services, in conjunction with the Technology Department
- Telephone service, in conjunction with the Technology Department
- Travel services, in conjunction with the Finance Department
- Word processing services

Administrative services were handled by a senior member of the administrative support staff from inception through late 1982, when an Administration Department was formed. At its peak in the pre-Games period, there were 39 people working in Administration, eight in word processing and four in travel.

6.02 Office environment: 1979—1981 in Century City

In the LAOOC's infancy, office space was established on half of a floor in a modern office building in the Century City area of west Los Angeles, at 10100 Santa Monica Boulevard. As the staff was small, needs were modest and were handled (at peak) by the office manager (a senior support staff person), one receptionist, one mail clerk and one supply clerk.

Facilities in this period (April 1979-July 1981) included one large and one small conference room, a communications center with one telex machine and one photocopier, a reception area and a small kitchen.

Parking was available in the building and was purchased for employees by the LAOOC. Guests who parked in the

building's underground garage were provided with complimentary parking by use of adhesive labels (validations) purchased by the LAOOC, representing blocks of time.

6.03 Office environment: 1981—1983 in Westwood

As the staff enlarged, the Century City headquarters became crowded rather quickly. An agreement with the University of California, Los Angeles (UCLA) was made for office space on a temporary basis in advance of the construction of a new office building which would house the LAOOC's administrative headquarters. The UCLA campus is located in west Los Angeles, not far from the Century City offices.

The LAOOC moved to the University Extension building in July 1981 and occupied the entire sixth and half of the seventh floor for a total of about 30,000 square feet. Facilities similar to those in Century City were installed, including two conference rooms. Security facilities were installed for the first time and included the wearing of picture identification badges by employees and temporary identification badges by guests. Guest identification badges were color-coded for regular visitors (blue) and for special guests (red), including IOC members and members of the LAOOC Board of Directors. A security guard was on duty during non-business hours.

Daily appointment sheets were compiled and distributed to inform all of the approximately 50 employees about business being transacted in other departments. Mail delivery to the LAOOC was enhanced when the United States Postal Service granted a special ZIP code for all LAOOC mail: Los Angeles, California 90084 USA. By acquiring this special code, no street address was required and all LAOOC mail could be addressed in the same way from approximately July 1981 through the end of the existence of the Organizing Committee. In view of the many moves which were to come, this proved to be a wise action and saved considerable confusion among those wishing to contact the LAOOC.

While the LAOOC occupied a floor and a half in the Extension Building, a new structure was being built directly across the street in an existing UCLA parking lot. This three-story building became the LAOOC's administrative headquarters in July 1982, just after completion of the building itself. This new headquarters provided more space and facilities for the LAOOC, which had now grown to approximately 100 people. The LAOOC contributed more than \$3 million to the construction of the project, in effect paying its rent in advance in order to assist with the construction of the building.

The building offered more facilities and featured special furniture components and security arrangements. The interior offered about 55,000 usable square feet (70,000 square feet gross) for use and included a total of seven conference rooms. Office furniture was supplied by Westinghouse Office

Systems through a sponsorship agreement with the LAOOC. These modular work stations provided much-needed flexibility in the design and size of work spaces for the different groups which were placed in the building. Security was given a high priority and special precautions were taken to keep intruders away. Search lights were mounted on the roof of the building and closed-circuit television cameras were placed on the roof as well as inside the building to monitor the movement of people, especially after business hours.

Communications services included two telex machines and full-time operators to go with them. Two high-speed telecopiers were installed for both manual and automatic use. In addition to a receptionist, two full-time switchboard operators were hired and were present from 0800—1800 daily.

Conference rooms included four rooms seating 10—14, a third floor room for executive use only, seating 20, a first-floor conference area for 25—50 and an auditorium-style room which could accommodate up to 150 persons. Conference rooms were reserved on a booking basis only by the receptionist. No special equipment or facilities for audio-visual use, food service or sound support were provided in any of these rooms.

Food and beverage services were available at several points. Each floor had a small area designated for coffee service, while soft drinks and mineral water were provided by sponsors Coca-Cola and Perrier. Orange juice and non-carbonated fruit drinks were made available as well. An employee lunch area was available in a separate room on the first floor, which also contained several vending machines supplied by UCLA. A microwave oven was also provided by UCLA to heat prepared foods from the vending machines. A notable favorite among staff members was microwave-prepared popcorn.

An executive dining room was set up in September 1982. Hot lunches were served daily (at no charge) to executives who signed up for one of two sittings (1145 and 1300) ahead of time. Luncheons were arranged for department meetings if desired and the dining room could accommodate 24 people. Eventually, a cold sandwich, soup and fruit menu was arranged and all department executives were expected to sign up for at least two lunches per week for the purpose of exchanging ideas and sharing status reports on matters of common interest. This goal was reached in early 1983 and led to the formation of the successful cafeteria concept at the Culver City headquarters building some months later. The 1300 seating became available for business lunches with non-Committee staff (guests).

1

2

Mail delivery was increased to twice per day for both inter-office mail and posted mail. Memorandums distributed to management staff or to all staff were handled as part of the mail runs throughout the building. Outgoing mail volume in July 1983 reached 41,000 pieces and special courier service deliveries averaged 500 per month.

LAOOC office furniture was a modular system integrated with movable partitions which segmented the open office areas into work stations and included desks, credenzas, files, storage units, tables and chairs. The design of the new building was basically open down both hallways with closed offices lining the outer sides and ends and conference and utility rooms in the middle. This enabled the Administration group to revise the floor plan periodically for the benefit of new employees without having to tear down permanent walls. Eventually, however, the number of persons working on all floors simply exceeded the building's capacity, requiring the move to larger quarters in Culver City.

Office supplies and smaller-sized furnishings were handled by an on-site supply room which operated from 0900-1200 daily. Orders submitted after those hours were delivered the following morning.

1 In spring of 1980, Soviet Olympic planners visit with LAOOC President Peter V. Ueberroth at the LAOOC's first administrative headquarters in the Century City area of west Los Angeles.

2 In July 1982, a growing LAOOC staff moves into a new, three-story building on the campus of UCLA.

3 Temporary partitions and walls divide the interior of the LAOOC administrative headquarters into suitable workspace while festive banners and shapes hang from the ceiling to brighten the environment.

Administration

Staff parking began in UCLA's Lot 1, part of which had been used as the site of the building itself. Parking was purchased by the LAOOC from the university and was limited to an agreed number of spaces. Some of these spaces were used for guests, but this became increasingly difficult as the number of permanent staff increased. Finally, the LAOOC purchased parking in a number of lots on the UCLA campus as well as in the surrounding commercial district. The LAOOC provided free parking to all staff members, generally within a four to six-block walk of the Organizing Committee headquarters. Volunteers and business visitors parked in a commercial parking lot across the street from the LAOOC building and had their parking tickets paid by the LAOOC by use of a sticker system similar to that used in Century City.

After the completion of an agreement with Xerox, photocopying machines were placed on all three floors of the new building. One high-volume copier was placed on each of the three floors and a second high-volume copier was present on the third floor. Twelve smaller machines with varying capabilities and speeds were placed strategically throughout each floor. Special attention was paid to unique needs for oversized copying and enlargement to handle larger-sized jobs on a reservation basis, including some rudimentary binding involving GBC brand combs. The copy center operator also coordinated all photocopy repairs, re-orders of supplies, routine maintenance and service calls.

A reception area was provided for visitors and all non-LAOOC employees were issued a visitor's badge upon entry. Badges previously used at the Extension Building were discarded and a single, red "visitor" badge was issued. Guests were not issued badges until verification of their appointment with an LAOOC staff member was made and some form of personal identification was shown. LAOOC staff members entered and exited from the back of the building, where their picture identification badges were kept. These badges were also changed in early 1983 to a smaller size for ease in issuance and storage.

Security was very tight and was limited to persons with legitimate business with the LAOOC. A well-respected local protection firm was hired to provide around-the-clock security for the building, including holidays and weekends. The reception area was staffed for visitors and included monitor apparatus for the television cameras placed throughout the building. Security guards at the back entrance handled the ingress and egress of LAOOC employees, who were required to turn in and pick up their identification badges every time they entered or exited the building.

Shipping and receiving services at the Westwood building were kept to a minimum, since there was very little storage space available. The major task with regard to shipping and receiving was the movement of equipment and supplies between rented warehouse space and the LAOOC office

when supplies were needed. Necessary storage was usually relegated to corners of offices and sometimes in hallways.

Word processing was established as a separate service in May 1983. Its main functions were to assist support staff in the preparation of long documents (greater than five pages) and the generation of large numbers of generic letters, usually to five or more addressees. In addition, the word processing group provided proofreading services, gave seminars on the operation of office automation equipment supplied by IBM, and tested prospective word processing applications. Turnaround time for most projects was eight hours on a first-come, first-served basis, with rush projects scheduled at the discretion of the group manager. Longer projects required advance scheduling to meet particular deadlines. At its peak in Westwood, the word processing group included a manager and four operators, including one person working on an evening shift. Equipment included five IBM Display writers, two special printers and a special feeder for addressing envelopes.

As the staff, contractors, consultants and volunteers working in the LAOOC office moved past 500 persons in mid-1983, it became clear that new, much larger facilities would be needed. Although it had been thought at one point that sufficient room would exist in the UCLA building to house the entire administrative staff for the Games, it was necessary to find another home.

Although the majority of the LAOOC staff left the UCLA building in August 1983, several functions remained. The Ceremonies Department was housed at Westwood through the Games period, and staff from the UCLA Village, gymnastics and tennis were present in the months leading up to their occupancy at the sites of their venues and villages. In addition, the Westwood building was used as a Games staffing center for people living on the west side of Los Angeles and in the San Fernando Valley.

6.04 Office environment: 1983—1984 in Culver City

In its search for a final site for its administrative headquarters, the LAOOC looked for a large building with large amounts of open space that could be easily altered to handle a rapidly expanding staff. Although several options for existing office-style space existed, the Organizing Committee opted to occupy an old warehouse in Culver City, California, located just north of the Los Angeles International Airport and about ten miles southwest of the UCLA campus where the previous LAOOC office had been. In all, the "Marina Center," as it came to be called, included four buildings with open interior space of approximately 180,000 square feet. Prior to its use by the LAOOC, it had been a helicopter engineering and design center.

The main building obviously was not suited for office use, but was redesigned for the LAOOC's needs. With the knowledge that it was to be used for only one year, the Administration Department oversaw the installation of a large number of temporary partitions and walls to divide the space into suitable work space for the various departments which required enough room for not only their current staffs, but also for peak staffing just prior to the Games. The furniture which was used in Westwood was left there and new, light, movable desk and return units were brought in. With only a few exceptions in the executive offices, everyone used the same furnishings in varying arrangements.

The strength of the Marina Center design was its lack of permanent dividers and walling. The open working spaces forced interaction among employees from different departments, who worked within touching distance of their neighbors. Further, the central pathways through the building encouraged interaction between departments and helped to forge bonds among the Organizing Committee staff as a company with a single purpose, rather than as a group of unrelated departments working on a common timetable. It was often noted that as much was accomplished while walking toward the cafeteria for lunch as during an entire day at one's desk. This interplay between responsible managers and their staffs helped to reinforce the urgency of the work at hand and assisted the progress of the LAOOC in an intangible way that could not have taken place in a more typical office environment.

The main office complex was basically a one-floor building with 25,000 square feet of warehouse space on one side. Second floor spaces were available on each end of the building. A remarkable structure of steel pipe painted in aqua formed a two-story office area for the Architecture and Construction Department. Additional electrical wiring was done beneath a false floor to add outlets for individual use. The ceiling and walkways were decorated with festively colored shapes and lines and sonotubes were placed at the entrance to major pathways across the building, much as they would be placed at entry points at the venue for the Games.

Almost 20 conference rooms were available in various areas throughout the building. The main conference area on the main floor had a capacity of almost 200 persons and was specially carpeted and a sound system was installed. Conference room scheduling was instituted as in Westwood and a room schedule summary was circulated for some time before ending for lack of interest. The Electronic Messaging System (EMS) was later used to request conference facilities and verify reservations. The executive office wing on the second floor had its own conference room for roughly 20 persons. Even these facilities became overburdened close to the Games, especially since many departments were holding classes and training seminars for their Games staff. An agreement with the

property owner allowed use of an additional building adjacent to the Marina Center and on the same lot. Large, open areas became available for conference use on a booking basis and suited the need for additional meeting space for groups of up to 500 people. Meeting equipment and furniture was provided by the LAOOC.

Courier services for deliveries outside of Los Angeles were heavily used at the Marina Center. A full-time representative of DHL Corporation, the LAOOC's official supplier of courier services, was present to assist with large shipments. The presence of a professional courier service was especially important when large packages were sent to the National Olympic Committees or other large groups within the Olympic family. Time-sensitive documents such as accreditation forms or shipping instructions were arranged well in advance and special arrangements often had to be made for countries which did not have efficient mail service and to which there was no other effective method of delivery. In all, the LAOOC compiled a courier service bill of \$323,217.17 with DHL, most of which was covered by DHL's in-kind commitment as part of its suppliership.

Food and beverage services were carefully planned. Since there were many fewer restaurants in the area than in Westwood and because the interaction between department managers in the executive dining room in Westwood had proved effective, food service plans for the Marina Center included a cafeteria. A building which had been previously used for that purpose by prior tenants was refurbished and opened in late August. The cafeteria included one large room for all staff and three smaller, private rooms which could be used for meetings or private luncheons. Owing to the favorable year-round weather in Southern California, however, the preferred seating areas were outside in a patio setting, using lattice-styled chairs and shaded tables.

ARA Services, the LAOOC's sponsor for food service and athlete transportation management, operated the cafeteria and brought in the necessary equipment. A breakfast menu was served from 0700 to 0830 and a full lunch menu was available for 1130 to 1400 from Monday through Friday. A variety of complimentary beverages were available, including coffee, hot chocolate, juices, mineral water, non-carbonated fruit drinks, soft drinks and tea from opening through lunchtime. Beverage counters were installed throughout the main building with coffee, tea and soft drinks available. The cafeteria was formally named the Cafe de Coubertin in honor of the founder of the International Olympic Committee and leader of the modern Olympic movement, Baron Pierre de Coubertin.

All permanent staff and volunteers who worked at the Marina Center were entitled to a once-daily subsidy of \$2 on their lunch food purchases. The Cafe de Coubertin was not open to visitors unless accompanied by a permanent staff member. Additional food service areas were available in the main building, including vending machines for prepared sandwiches and other snacks. A microwave oven was present to warm foods and a cooler was provided for employee lunches brought to the office.

The cafeteria concept was a tremendous success. It encouraged camaraderie within departments, provided a natural forum for discussions between members of different departments and was a quick and easy way to eat a mid-day meal at a discounted rate in a short period of time. Crowding became common late in the pre-Games period as the size of the staff overwhelmed the Cafe de Coubertin, but this did not cause any major problems.

Mail delivery and postal services increased as the Games approached. Deliveries were made to all departments twice per day. Individual pieces of metered mail (using standard envelopes) from the Marina Center followed the following pattern:

Month	Mail pieces
September 1983	36,319
October 1983	33,715
November 1983	49,387
December 1983	65,298
January 1984	57,434
February 1984	66,002
March 1984	77,746
April 1984	105,066
May 1984	207,153
June 1984	122,860
July 1984	112,089
August 1984	65,041
Total	998,110

The expenditure total for mail delivery during this 12-month period was \$381,759.41. However, special deliveries, odd-sized packages and large shipments (both national and international) totaling \$1,346,893 were also sent from the Marina Center as well as from all other satellite offices. Local messenger deliveries totaling \$239,656.33 were sent from September 1983-August 1984. The heaviest activity for the local messenger services came in April-August 1984, with April, May and August about equal and June-July double that. National shipping services outside of DHL were light, averaging 400-500 pieces monthly, but 1,097 pieces in August 1984.

Office furnishings consisted of standardized units of lightweight desks without drawers, shorter typewriter stands on rollers and two-drawer units on rollers. These three-piece sets were issued to almost all staff, along with extra individual units where available. A limited number of bookshelves, cabinets and wardrobes were also available. These units were well received because of their flexibility and clean appearance. Special, adjustable

chairs were ordered and proved workable. These furnishings were not ordered after the beginning of May 1984, however, and staff which joined the LAOOC after that time were issued folding chairs and tables to work on.

The movement of LAOOC staff from the Westwood building to the Marina Center took almost five weeks and was orchestrated in stages. A "file reduction contest" was staged at the Westwood office prior to the move and was won by the Youth Services Department, based on the amount of trash generated by each department, divided by the number of employees in that department. This was an effective method of encouraging a review of files so that unnecessary paper would not continue to accumulate.

Photocopying needs increased dramatically as the staff grew. A total of 24 machines for staff use were installed throughout the building, including 15 smaller-sized copiers with enlargement and reduction capabilities, four convenience copiers and five large volume copiers with automatic feeders, sorters and staplers. In all, some 23,308,151 copies were made between August 1983 and the end of August 1984 by the LAOOC staff. This includes work processed at the Copying Center, a separate photocopying shop set up at the Marina Center for handling very large projects. It was equipped with two of Xerox's largest photocopying systems, a smaller, automated copier and a stitcher for stapling needs. In addition to regular photocopying, the Copy Center could reproduce overhead transparencies in various background colors, generate mailing labels, copy onto parchment award certificates and reduce oversized originals to standard-sized copies. Typical Copy Center projects included reproductions totaling 500 or more pages. Smaller applications were often run by staff at night, using one of the five large volume copiers located around the building. A Xerox model 2080 copier was also installed in the Architecture and Construction Department. This machine was able to handle the oversized copying requirements for blueprints and other construction planning documents. The 2080 saved not only money for reprints of plans and blueprints, but more importantly saved immense amounts of time for those who needed the reproductions.

Parking at the Marina Center became crowded relatively quickly. The lot was re-striped to accommodate more cars and additional spaces were acquired in early 1984. Finally, in April, there was not enough room for staff and volunteer parking and an additional lot approximately seven miles away was obtained. Parking passes were distributed to staff and a shuttle bus from the off-site lot was established. Although usually efficient, the off-site parking plan was not accepted by some employees, who parked on the side streets in surrounding areas

around the Marina Center. The park-and-ride shuttle system continued through June, at which time enough staff had left for their Games site offices that parking at the Marina could continue without special controls. A special lot was set up for visitors, near the front entrance on Walnut Avenue. A helipad was available between the main building and the adjacent conference center building and was used heavily by President Peter Ueberroth.

Reception services were increased to include two receptionists on duty full-time during the day, along with security personnel to authorize entry and issue visitor's badges. Bags and parcels brought into the Marina Center were searched and X-rayed for security reasons and in the months just prior to the Games, all visitors were required to walk through a magnetometer, similar to those which would be used at the villages. Switchboard duties were taken over by the Communications Center.

Visitor access procedures became standardized in September 1983. Lists of visitors had to be supplied by each department at least one day in advance of arrival in order to have badges issued to them. Calls to the appropriate department were made to announce the arrival of any visitor and an LAOOC volunteer escort would then walk the visitor to the department concerned. The volunteer escorts worked in shifts and were extraordinarily helpful; 150-200 were used on a daily basis. Visitors who came unannounced or for whom a previous instruction regarding arrival had not been made were asked to wait while a call was placed to verify the appointment. In addition to the security precautions taken at the front entrance, special care was taken to guard the employee entrance at the rear of the facility. The LAOOC contracted with a security firm to provide guard services at the Marina Center in the same manner as at Westwood. All employees at the Marina Center had to wear identity badges which were handed out and recaptured on a daily basis. Security personnel patrolled the main building, asking the identity of those who were not wearing a badge in plain sight. A property release system using signed forms allowed the movement of equipment and files outside of the Marina Center and briefcases and handbags were routinely searched after the end of the Games to guard against theft.

Shipping and receiving became more important at the Marina Center than it had been at Westwood, since there was warehouse space of about 25,000 square feet on one side of the main building. Shipping and receiving was coordinated through a special interior gate which was controlled by security personnel. Additional warehousing space became available in an adjacent building which was not used for offices and could therefore be fully secured at all times. Department uses of the warehouse area were coordinated by the Administration Department and even included the assemblage of 12,000 sets of press gifts into two 12 by 60-foot trailers.

4

4 Access to LAOOC facilities for staff and visitors is controlled by a badge system.

Administration

Communications services including telephone, telecopier and telex services were handled in a centralized Communications Center in cooperation with the Technology Department. A 2000-line switchboard was provided by AT&T, an official sponsor for telecommunications, but only 1,400 lines were planned for. As the number of staff, consultants, third-party contractors and volunteers exceeded the number of available lines, telephones were shared and second and third lines were deleted from management lines. Two high-speed (CCITT Group III-compatible) telecopiers were installed by Xerox and telex requirements grew from a single machine to three machines with four-line capabilities each. While telecopier requirements were relatively modest and were mostly for intra-LAOOC communications between remote offices and the Marina Center, telex communications became the lifeblood of the Organizing Committee. Its immediacy and written format were its principal advantages and it was used heavily by the LAOOC. Sensitive communications with the IOC, International Federations, National Olympic Committees, foreign news media and sponsors/suppliers were sent by telex.

All telex messages had to be approved by a vice president or higher level executive before transmission and all messages received were distributed not only to the designated addressee, but also to the executive offices and the person to which the addressee reported. After some unfortunate errors, all telex messages were input by one operator and proofread by a second before transmission. The greatest logistical difficulties for operating departments and the Communications Center regarding outgoing telexes was the time-consuming nature of sending telex messages to all 159 National Olympic Committees. Future organizers are strongly urged to find an early, automated solution to the task of communicating a similar message with individual alterations to all of the NOCs. Examples of typical all NOC telex messages include announcement of ticket allocations, information on deadlines for athlete registration, village reservations, press accreditation and completion of Olympic Family Lists and identity cards.

The volume of incoming telex traffic became so great that a special task force was formed in late April to review all incoming telex messages, assign log numbers and route the messages to the proper people. This group consisted of approximately six persons and met each morning at 0730 to distribute the messages received overnight. Task force members on a rotating basis usually checked for new messages about every four hours. By late May, upwards of 400-500 telex messages were being received daily. The departments receiving the greatest number of messages were NOC Services, Olympic Family Services/ Protocol and Press Operations.

Electronic Messaging System (EMS) terminals were installed throughout the main building in late December of 1983. Since each employee was identified in the system from their Games staff application, telex messages were sent to the persons concerned via EMS, rather than through hard copy. This practice continued throughout the Games and speeded the transmission of information dramatically.

The Communications Center was also responsible for the operation of the LAOOC's paging and radio systems, in coordination with Technology. Paging was initiated exclusively through calls to the Communications Center until the paging interface programming with EMS was completed; both methods were then available. Radio communications to the Marina from vehicles with installed radios were opened at 0700 each morning and continued through at least 1900 and, close to the Games, 2100 hours.

Word processing expanded at the Marina to include seven IBM Display-writers and two special printers. At peak, the word processing staff included a manager, supervisor, five operators and a proofreader. Typical output for individual weeks averaged 2,500 pages plus hundreds of additional labels and envelopes for already prepared mailing lists. Operating and procedures manuals were processed for 12 departments.

A special feature of the Marina Center was the Company Store. This area was initiated so that employees would have the opportunity to buy LAOOC-licensed goods at a centralized point, at a discount. A wide variety of products were offered and this service was well-received by the staff and volunteers.

The Marina Center, while well-known as the home of the LAOOC, was not identified as such on the building. In fact, a large sign showing the street address, 2560 Walnut Avenue, was the only exterior identification of the facility. This precaution was taken to ensure that the building would not become a target for groups who did not have legitimate business with the LAOOC or otherwise wished to disturb the work in progress there.

6.05 Role of the Administration Department during the Games period

During the time of the Games, very little activity took place at the Marina Center. With the equipment and staff in place at the sites, little was required of the Administration Department other than the dissemination of items to the proper sites from the Marina Center, which continued to receive deliveries, mail, telexes and other items. Checks for vendors who required collection upon delivery of goods also had to be transported quickly.

Key personnel were dispatched to other areas. The manager of the Administration Department was assigned to the Olympic village at USC to assist there. The assistant manager of the department had previously been assigned to the Community Relations office at Exposition Park. Small

pockets of activity in the Marina Center included the centralized functions and executive offices and the Operations Center, which was formed out of an existing area.

The major task was the delivery of mail and other physical items received at the Marina Center and the pick-up of mail from the sites for posting at the Marina Center's central mail processing facility. A fleet of four automobiles and four motorcycles were used to visit each operating site daily. Venue, villages and major support sites such as the Main Press Center were visited twice daily. Multiple stops were made at the village sites: nine stops at USC and seven at UCLA. This system worked very well and no major problems were encountered. The system ran daily from 6 July-1 2 August.

6.06 Office environment: Post-Games period

The move-back to the Marina Center was expectedly chaotic after the end of the Games on 12 August 1984. AS many of the chairs, desks, drawer sets and returns had been taken to the sites for use during the Games, they were not available for the use of returning staff and in fact were shipped to the LAOOC's Materiel Distribution Center (MDC). Instead, folding tables and chairs were substituted with the realization that most of the employees would be terminated within one month following the end of the Games.

A major portion of the administrative effort in the immediate period after the Games was moving equipment and furniture out of the Marina Center and back to the MDC. It was not uncommon for trucks to arrive by mistake at the Marina Center rather than the MDC, unload equipment which had been picked up at the venues and leave it there. A coordinated effort managed to remove these items to the MDC where they belonged.

As hundreds of employees were terminated each week after the Games (17, 24 August and 7 September), the major efforts were on wrapping up the departments, writing final reports, sending out letters of appreciation and certificates of recognition and removing personal effects. Briefcases and handbags were checked by security personnel at the staff exit gate of the Marina Center to prevent theft. Departments were asked to pack their remaining archive materials in preparation for the move out of the Marina Center and back to the Westwood building which had served as a staffing center and the headquarters of the Ceremonies Department. The last day for staff at the Marina Center was 7 September and the facility was cleared out and returned to the landlord at the end of the lease term on 14 September 1984.

The move to Westwood was made on 10 September with approximately 300 people, with mass departures at the end of September, October and November. After 1 January 1985, only 65 employees were left and the LAOOC occupied only the third floor of the Westwood building, with the rest given over to UCLA for its occupancy. After 1 April 1985, the LAOOC contracted again to approximately 30 employees, mostly in the Finance Department, and required only half of the third floor. The offices were scheduled to close at the end of June 1985.

After the move to Westwood, departments took care of their own requirements for purchasing and supplies along procedural lines which had been in effect during the Games. This decentralized approach reduced the need for an administrative staff, other than for mailroom and parking activities personnel, and by the beginning of December, the Administration Department staff consisted of two receptionists, two mail clerks, two management staff and an administrative assistant. Office supplies were collected from defunct departments and re-issued as needed to remaining staff.

In October 1984, the Board of Regents of the University of California approved the permanent naming of the Westwood office facility on the UCLA campus as the "Peter V. Ueberroth Olympic Office Building."

6.07 Satellite offices and operations

Although the Administration Department faced a large challenge in the provision of services for the growing LAOOC staff at Westwood, then at the Marina Center and finally back at Westwood again, it also had to service the needs of a number of satellite facilities.

Each of the additional facilities had the same courier, food, mail, office furniture, photocopying, security and communications needs as the central headquarters for the LAOOC staff, although to a much lesser degree. The Administration Department assured the operation of these offices by arranging for appropriate facilities for each.

In all, a total of 18 facilities were served and were tied together by messengers, regular mail/package pick-up and delivery routes and telecopiers for the quick transmission of documents:

- Design Center
- Look warehouse for decorative items
- Materiel Distribution Center
- Staffing centers; Crenshaw, East Los Angeles, Long Beach and Westwood
- Remote Ticket Centers; ARCO Plaza, Beverly Center, Del Amo Fashion Square, Newport Center Fashion Island, Oxnard Esplanade, Plaza Pasadena, Sherman Oaks Galleria, Vermont and Slauson Shopping Center, West Covina Fashion Plaza
- Ticketing Data Center
- Uniform Distribution Center

5 An old helicopter facility in Culver City, California meets the needs of a rapidly expanding staff and becomes the LAOOC's administrative headquarters during the year before the Games.

5

6.08 Travel service

6.08.1 Formation and responsibilities

Travel services for the LAOOC staff were not under the specific supervision of the Administration Department, but did form part of the overall program of general administrative services. The Travel Department functioned under the overall jurisdiction of the LAOOC's Finance Department.

The responsibility and staff of the Travel Department grew as the needs of the Organizing Committee expanded. The initial need for large-scale arrangements was in late 1980, when a multi-city tour for the LAOOC mascot, *Sam the Olympic Eagle*, was organized. At the end of 1980, a sponsorship agreement with United Airlines provided for more than \$2 million in airline transport, including charter and cargo flights. By mid-1982, a professional travel agent had been hired to coordinate the growing travel needs. A second professional travel agent was hired in mid-1983 along with a part-time travel coordinator. An administrative assistant was hired in early 1984 and a part-time data entry clerk was added in May.

6.08.2 Air travel policies and procedures

The LAOOC travel policy required use of the United Airlines in-kind commitment wherever possible. Travel had to be approved by the vice president of the department concerned and the vice president of finance. All international travel was approved by the executive vice president/general manager. Travel agencies, including many minority-owned and operated agen-

cies, were asked to book flights and deliver the tickets to the LAOOC. Until mid-1983 when a direct-booking agreement was concluded with United, agents were asked to book those portions of the trips which included travel on United on a non-commissionable basis. Agents were selected based on their location, office staff, size, references and their ability to service the LAOOC's needs. Agents selected had to be willing to book the lowest fares available for domestic travel. Approximately 90 percent of all trips had at least one itinerary or fare change from the originally submitted plan; 65 percent of those trips which did change itinerary or flights required re-issuance of tickets.

LAOOC policy dictated that all staff air travel except international flights be coach class. International flights were usually scheduled in business class sections. First-class air travel was available only for the LAOOC president and executive vice president/general manager, at their discretion. VIP-type services were usually provided for the latter individuals and airlines and hotels became more accommodating as the Games drew closer. Charter flights were also arranged when necessary, including the travel of LAOOC officials to the XIVth Olympic Winter Games in Sarajevo, Yugoslavia.

Special services were also extended to visiting dignitaries and delegations who visited the LAOOC. The Travel Department reconfirmed their return reservations, obtained seat assignments, made requested itinerary changes and made special arrangements for their departures.

Personal travel for staff was allowed on the staff member's own time in conjunction with business travel. The cost of the personal portions of such trips was invoiced directly to the staff member.

Special requirements were placed on the travel staff in 1983, when, in addition to the many visits by International Federation technical delegates who came to Los Angeles, the LAOOC staged eight sporting events. The Travel Department also provided significant assistance to visiting NOC officials from 141 nations during the January 1983 meetings of the IOC Executive Board with the NOC. After the completion of most of the LA83 events, a meeting with Los Angeles-based airline executives was organized in September 1983 to better acquaint them with the relevant LAOOC departments including Government Relations, Material Logistics, Olympic Arts Festival, Olympic Family Services and Public Information. The meeting proved beneficial to all parties and assisted in establishing a protocol for more contact with the participants.

6.08.3 Hotel and ground transport

The Travel Department was also responsible for hotel accommodations for staff and ground transportation reservations for staff.

Corporate rate relationships were established with a number of large hotel chains, including Hilton, Holiday Inn, Hyatt, Marriott and Sheraton. Local hotels close to the LAOOC offices were also identified and offered guests two different levels of services and rates. A direct-billing arrangement for guests was also established. LAOOC guests and functions were always accommodated at one of the LAOOC's Official Olympic Hotels, which were located throughout the Southern California area.

6

6 Favorable weather permits LAOOC administrators to plan a cafeteria with patio seating for employee lunches at the "Marina Center."

Rental cars were arranged through the LAOOC's official supplier, Budget Rent-A-Car, wherever possible. Budget's suppliership agreement included an in-kind commitment for LAOOC staff travel use which was used wherever Budget had offices

6.08.4 Operations during the Games

Travel Department assistance was heavily in demand during the Games period, especially with regard to the movement of football teams between the preliminary sites. A total of 25 charter flights were arranged with the airlines for the teams and the appropriate LAOOC directors for football, security and transportation. The coordination of these flights required one full-time staff member during the Games.

A coordinated effort between United Airlines, the American Express Company and the LAOOC Travel Department produced a service plan for all phases of travel assistance for the Games. United agreed to install its computer booking and reservation system and staff to handle all air travel (domestic and international), while American Express provided financial services and made arrangements for ground transport. The LAOOC Travel Department provided an individual to respond to all LAOOC-related matters and handle any other travel-related areas which were not otherwise being serviced. Typically, these "travel liaisons" responded to problems of

lost luggage, departure operations and VIP services where appropriate. A total of 24 volunteers with professional experience in the travel industry were recruited and were trained during a multi-session program, which included a handbook for their use. These liaisons were stationed at the three villages, the Biltmore Hotel (headquarters for the IOC and representatives of the IFS and NOCs) and the Main Press Center from 14 July to 14 August. The liaison officers were on duty seven days per week and 12 hours per day and were well received by those who asked for assistance.

6.08.5 Reflections on the performance of the Travel Department

Despite thin staffing, the Travel Department provided excellent service in all aspects of travel for the LAOOC. Over \$3 million in airline travel was expended, much of it on international travel which did not deplete the United Airlines credit. In all, some 4,500 persons and groups had their travel arranged by the Travel Department. Massive arrangements had to be made for some of the LA83 sporting events to bring athletes to the competitions.

The affirmative action policy regarding the use of minority owned and operated travel agencies proved beneficial for many agencies. Tremendous goodwill was generated in addition to thousands of dollars in commissions. Very few complaints were voiced and the level of service was consistently high.

The travel liaisons selected for Games duty also performed very well. Although they were all professionals in the field, they were aided by a disciplined program of orientation and training, including a written handbook regarding policies and procedures. The Travel Department's meetings with officials of the local travel industry and careful planning with both United and American Express produced a coordinated effort which served all potential users without failure. This type of pre-planning between sponsors and the LAOOC staff should be a model for future cooperative efforts with the travel industry, but is equally applicable to any department which desires consistent quality and superior coverage in a service area.

6.09 Reflections on the LAOOC's administrative services program

The Administration Department fulfilled its responsibilities well and provided a high level of service to the LAOOC's various departments. The problems caused by continuous movement of the LAOOC's offices from Century City to two different UCLA locations, to the Marina Center and finally back to UCLA were handled as well as possible, considering the ever-increasing number of staff to be moved.

Whether by lack of planning or sheer accident, the LAOOC's Westwood office complex on the UCLA campus did not come close to holding the entire staff and serve as a headquarters for the operation of the Games. The use of office facilities and space planning needs to be far-sighted enough to anticipate the actual needs and plan for them accordingly.

Conversely, the Marina Center provided a better venue for office operations than could have been imagined. The spartan nature of the office areas combined with the lightweight furniture and festive-color decor produced a unique environment so contrary to ordinary offices that it focused attention on the work at hand rather than the individual comforts (or lack of them) provided in more traditional settings. The concept that the entire LAOOC organization could function as a whole, rather than as a sum of unconnected parts, required an incubating period that would bring the staff together with a common mind and purpose. The Marina Center provided the framework for this process, including the all-staff Cafe de Coubertin and the \$2 daily subsidy which provided a direct incentive to eat "on campus."

The services provided by the Administration Department were consistently responsive to the needs of the LAOOC staff. The Administration Department staff recognized their role as providers of services required, rather than dictators of the level of comfort and service which would be provided. It is this attitude which was perhaps the most important ingredient in meeting the administrative and general service needs of an evolving organization which did not even understand its requirements until faced with them.

Future organizers will do well to adopt a similarly flexible philosophy regarding general services. The overriding concern, sight of which was not lost in Los Angeles, was to provide the employees with a workable environment, including all required tools to perform their tasks in a responsible and timely manner. Since the accommodations were the same for all levels of staff, there was little grouching about unfair treatment and the generally speedy delivery of important individual services such as parking credentials, identification badges and telephones provided the proper frame work for immediate immersion in the business of organizing the Games.

7.01 Introduction and overview

The Architecture and Construction Department was created in the latter part of 1981. The LAOOC's efforts were then concentrated on securing the sports facilities and venue sites that would be required to host the Games of the XXIIIrd Olympiad. Subsequent site visitations and negotiations with facility owners allowed the architects an opportunity to develop the site-specific requirements for permanent and temporary construction. Outside architectural firms were solicited and began planning the construction of permanent facilities and the overall master plans of venue and village sites. In 1982, efforts were focused on planning the Look and physical layouts of the facilities and venues used during the LAOOC-hosted sports competitions in 1983.

During the venue development process in 1983, designs were finalized, departmental requirements for physical space were refined and the Look was determined for all Olympic sites. Basic spatial requirements were modified to specific site conditions, volume and duration of use. Space programs and construction budgets were finalized and approved.

A typical site construction schedule included the following steps:

- Preliminary site plans completed, December 1983
- Site plans finalized, January 1984
- Electrical design, February 1984
- Plans checked by governmental building and safety agencies, March 1984
- Issuance of permits, April 1984
- Plans forwarded to utility and telephone company(ies), May 1984
- Plans forwarded to the venue owner, June 1984
- Construction contract bid, June 1984
- Awarding of the bid, June 1984
- Architectural construction commences, June-July 1984
- Utility construction commences, June-July 1984
- Electrical construction commences, July 1984
- Electrical inspection, July 1984
- Look installation commences, July 1984
- Work completed, July 1984
- Tear down, August 1984

The construction phase began with the hiring of third party consultants as construction managers. The construction managers worked with the architects to develop the construction schedule and procurement and warehousing of the required materials.

Construction managers and architects worked with suppliers, vendors and contractors to construct temporary facilities. Much of the temporary construction at the venues and villages was done by contractors who provided labor and leased materials to the

LAOOC. The scaffolding and bleacher seating used at the various Olympic sites was leased from a supplier. Concession stands were covered with Look elements, menu boards and fabric shelving, while food storage areas were constructed by the LAOOC. The concession stand frames were leased from a supplier. Many of the tents and all of the fencing and temporary toilet facilities were rented.

A warehousing system was utilized for the inventory of construction and Look items used at the various Olympic sites. Items were relocated from various warehouses to mobile truck trailers where they were loaded sequentially. The 115 trailers (40-foot) were sent to the various locations and kept on-site for use as storage containers.

The construction managers worked with the Look coordinators to develop fabrication and installation procedures. The Look elements were one-of-a-kind items designed to create a unified visual environment throughout the Games' sites. The design process began with the development of a color palette and the creation of a kit of parts of the various Look elements used in conjunction with each other. Conceptual sketches evolved into three-dimensional scale models, then individual, experimental pieces and ultimately into the more than 110,000 requested Look elements. These individual elements were then attached, hung, set up or otherwise installed over the permanent facilities and temporary construction at each site.

The Look fabrication process was delayed due to design changes and difficulty in obtaining agreements with the number of manufacturers needed to produce the required work within the given time frame. Contracts were written based upon a fixed-price quote and many included installation work in addition to manufacture.

The installation of Look elements occurred almost simultaneously at the various Olympic sites. Due to the length of production time and the volume of items required, the installation period was delayed, and then accelerated once underway.

Additional expense was incurred through the use of additional manpower and increased overtime costs of the existing labor pool. Installation contracts were rewritten to provide compensation for additional work required to keep on schedule. Although work was completed on time, Look installation costs were more than the projected estimate.

A major responsibility of the construction managers was determining the infrastructure requirements of the various Olympic sites. The construction of all electrical facilities for the Games was, for the most part, temporary in nature. All equipment was installed in a way to allow for easy removal.

In some instances, venues received electricity through more than one supply source. Electricity was supplied by the following methods:

- The Southern California Edison Company (SCE) supplied power to the El Dorado Park, The Forum, Lake Casitas, the velodrome at California State University (CSU) at Dominguez Hills, Fairbanks Ranch, California State University at Fullerton, Coto de Caza, Prado Recreational Area, Pepperdine University and the Long Beach Marina.
- The Los Angeles Department of Water and Power supplied power to the Coliseum, USC Swim Stadium and the University of Southern California.
- Campus distribution systems were in place at the UC Santa Barbara, East Los Angeles College, California State University at Los Angeles, Loyola Marymount University, CSU Dominguez Hills and CSU Fullerton.
- In-house power was available at the Coliseum, the Forum, Santa Anita Park, CSU Fullerton, the Rose Bowl, Long Beach Sports Arena, Los Angeles Memorial Sports Arena,

Dodger Stadium, Pepperdine University, East Los Angeles College, CSU Los Angeles, Loyola Marymount University, UCLA and the Anaheim Convention Center.

- Generators were used at the Coliseum and at the USC Village for emergency electrical systems, at USC and UCLA for the transportation towers and at the Artesia Freeway cycling road race site.

Games electrical load requirements

Venue*	Power panels (ampere)	Voltage (volts)
Archery	1-800	120/208
Athletics	4-800	480
	6-800	120/208

	600	120/208

*All venues required three-phase power for the panels specified above.

Local electrical engineering firms were contracted to prepare drawings for the electrical design at each venue. Most of the firms chosen had previously worked at the particular venue and this method of selection proved to be effective. The LAOOC electrical staff then met with local governmental agencies for construction approval. The chief distinction between temporary electrical work and permanent work was the type of materials used. For example, soft cable was used for temporary work instead of conduit and wire; panels were set on the floor instead of being bolted to a wall; and junction boxes were used rather than small panels.

A wide range of electrical equipment was used, including:

- 192 power poles from 30 feet to 35 feet in height
- 1,200 GE P150 floodlights
- 1,000 150 watt floodlights
- 20,000 circuit breakers
- 12,000 duplex receptacles
- 38 panel boards (800-ampere)
- 8 panel boards (600-ampere)
- 400 panel boards (200-ampere)
- 600 panel boards (100-ampere)
- 4 main meter boards (200-ampere)
- 4 main meter boards (400-ampere)
- 2,000 tube fluorescents (8-foot)
- 6,000 feet of rubber ramping
- 10,000 cube taps
- 25,000 extension cords
- More than 1,000,000 feet of cable

Up to 184 electricians worked simultaneously at almost all venues to provide the necessary power.

Traditionally, the costs of one-time events are high due to the short length of time available to complete tasks of a monumental nature and to the inapplicability of the prior experiences of the staff on a project as unique as the Games of the XXIIIrd Olympiad. In retrospect, a few facility leases were negotiated before the LAOOC had a clear understanding of how the facilities would be utilized and the time required to modify certain venues was underestimated. Spatial requirements should have been completed prior to enlisting the work of outside architectural, environmental and graphic design firms. The cost of the Look fabrication and installation could have been minimized with sufficient time to complete the work on schedule without the use of additional manpower. Power requirements were undersized at some locations and should have been over-designed to accommodate additional last-minute power requirements.

The construction process was successful, however, from both an economical and functional standpoint. The challenge of managing simultaneous construction efforts at all the various sites was mastered. The design integrity and efficiency of the temporary and permanent construction at the Games provided a unique architectural statement to the world and set a new standard for architecture at future Olympic Games.

1

2

1 Temporary scaffolding is used to construct the warm-up area for weightlifting at Loyola Marymount University.

2 Workers prepare the scaffold bridge between the warm-up area and competition site for gymnastics.

3 Massive scaffolding is used for decorated entryways for spectators at most sites.

3

7.02 Construction of facilities for permanent use and their modification for the Olympic Games

7.02.7 Exposition Park

Exposition Park was the historic heart of the 1932 Olympic Games and became the central focus of the Games of the XXIIIrd Olympiad. It contained two major facilities, the Los Angeles Memorial Coliseum and the Sports Arena, and the area served as host for three competition venues and the Opening and Closing Ceremonies. The 133-acre Exposition Park area was bordered by Exposition Boulevard and the University of Southern California to the north, Figueroa Street to the east, Vermont Avenue to the west and Martin Luther King, Jr. Boulevard to the south. Converting the area into a hub of Olympic activity, designed to accommodate peak crowds of more than 100,000 people, created unique architectural challenges.

Recognizing both the historic past of the park and its importance in the 1984 Olympic Games, the LAOOC agreed to provide \$1.8 million of permanent improvements. The permanent improvements included renovation of the irrigation system, the provision of new street lighting, tree prunings and turf renovation. The scope and quality of this work was negotiated with the California Museum of Science and Industry and the California state architect, and was performed in spring 1984. Additional seeding was required after the close of the Games.

Permanent park improvement also included the realignment and repaving of the roadway circle off Figueroa Street to accommodate a new 20-bus transit station. The LAOOC then renovated the plaza area directly in front of the Coliseum peristyle, which faces the roadway circle. The renovation was completed with funding from the Southern Pacific Company. The LAOOC commissioned artist Robert Graham to create a gateway statue commemorating the 1984 Games. The statue was installed in the plaza and unveiled on 1 June 1984 and created a magnetic effect for Opening Ceremonies spectators.

Signs and directional graphics helped direct pedestrian traffic to park entrances. The entrances were further delineated by decorated scaffold towers erected at four public entry points: one by Martin Luther King, Jr. Boulevard at the Sports Arena, one by Figueroa Street between the Aerospace and Afro-American Museum, one by Exposition Boulevard east of the Rose Garden and the largest, 135-feet tall, by the intersection of Menlo Avenue and 39th Street, northwest of the Coliseum. A fifth scaffold entry tower was erected at the Olympic Family entry south of the Coliseum on Hoover Boulevard. Signs and fence graphics directed pedestrians through the scaffold towers to enter the park.

Even so, crowds were mostly unfamiliar with the park layout and the overcrowding of the plaza from spectators arriving from east of the park created traffic flow problems for buses entering the east transit station. During the five-day hiatus between Opening Ceremonies and the start of the athletics competition, overhead signs were installed along the Figueroa Street entrance. Staff were positioned with bullhorns to greet people disembarking from buses, and directed them to the appropriate venues and entry points.

Thousands of people entered the Exposition Park area from the opposite side, through the west transit lot off Menlo Avenue, close to the athlete control center for athletics. Sliding gates were installed on the west side of Menlo and chains were installed on the east side of the avenue. Guards developed a system of whistle communication to coordinate the opening and closing of the gates, thus regulating the temporary blocking of pedestrian flows to allow unimpeded progress of the athlete shuttle buses to the control center. Additional signs were installed after Opening Ceremonies to direct spectators to the appropriate venues. Asphalt was added to fill in cracks and wide joints in the roadways used by pedestrians during the Games. Power lines were moved and curb cuts were expanded for bus traffic.

The LAOOC worked with the Los Angeles Department of Transportation, the Southern California Rapid Transit District (RTD), California Department of Transportation (Caltrans), the California Highway Patrol (CHP), the Los Angeles Police Department (LAPD) and other agencies to develop a regional transportation master plan for the area surrounding Exposition Park. Private automobile parking for the Games in and around the Exposition Park/USC area was virtually nonexistent. Therefore, the plan was based upon the assumption that a majority of spectators would arrive by bus. Parking was made available for charter buses and regular and special Olympic line buses from the RTD. Two RTD bus terminals were

4

developed, one with 27 bus-docking areas between Vermont Avenue and Menlo Avenue below 39th Street (west terminal) and one east of the Coliseum off Figueroa Street with 20 docking areas (east terminal). The terminals accommodated the movement of 35,000 people in a two-hour period. Figueroa Street was made a one-way southbound street toward Exposition Park. Flower, from its junction with Figueroa Street, was made one-way for northbound traffic toward downtown Los Angeles.

Exposition Park was heavily decorated with Look elements which created the atmosphere of an outdoor festival. Facilities were additionally installed to provide services to spectators. A total of 108 specialty tents (10-foot by 10-foot) were used as food and novelty concession stands and were distributed in groups of one to five throughout the park with the greatest concentration of tents located along Coliseum Drive. Nine information kiosks with public telephones were located throughout the park near bus terminals and pedestrian entry points. Two first aid stations, a lost and found area, two entertainment stages and five areas (partitioned by fabric) for more than 400 portable toilets were also located in the park.

4 Scale models are used to plan the architectural and operational flow of each venue, as shown here for Exposition Park.

5

The LAOOC construction staff worked with five LAOOC sponsors or vendors who requested facilities in Exposition Park. The U.S. Postal Service constructed three 24-foot by 26-foot modules and an outdoor stamp cancellation area. American Telephone and Telegraph erected a prefabricated public calling center. American Express located a redecorated drive-in bank and currency exchange service along Coliseum Drive. The U.S. Treasury built a specially designed kiosk with steel bank vaults from which to sell Olympic coins. An area was constructed for the Anheuser-Busch Clydesdale horses northeast of the Rose Garden. The LAOOC had final approval of all designs and provided electrical power to the sponsors' facilities as well as to all concession tents.

In addition to the uniquely designed concession and sponsor facilities, the LAOOC decorated Exposition Park with more than 100 Look banners and nearly as many painted sonotubes which were used as markers and in colonnades. More than 70 trees on Coliseum Drive were decorated with wind socks. Banners were hung across the main vehicular entrance off Figueroa Street. More than 20,000 feet of fence fabric was installed in and around the park on eight-foot high chain link fence. Fences were also installed along both sides of Menlo Avenue to provide a secure transportation corridor for athletes arriving in shuttle buses from the villages. Fences and fabric along the perimeter on Martin Luther King, Jr. Boulevard and Vermont Avenue screened parking areas and the venue management and construction compounds.

Five murals, each 50 feet in length, were designed by artist Jon Van Hammersfeld and placed on the backs of the Coliseum concession stands, facing the park. An elevated serpentine fence was installed in an open area west of the California Museum of Science and Industry. The fence, more than 400 feet in length, depicted scenes from various host cities of the modern Olympic Games. Four hundred concrete benches were placed throughout the park and 100,000 quarts of annual flowers were planted in patterns resembling the *Star in Motion* and the Olympic rings. Patterns were painted in Festive Federalism colors on the pavement of both Coliseum State drives.

In addition to the tented food concession stands located throughout the park, a full-service food facility was constructed in Exposition Park. The "Food Bazaar" was located in the parking lot north of the Figueroa Street entrance and south of the Museum of Science and Industry. The food service facility consisted of three 40-foot by 40-foot tents supported by a 110-foot aqua tower, a service yard of five 60-foot refrigerated storage trailers and 46 tents (20-foot by 20-foot) decorated with sonotubes and valances clustered to provide shaded picnic table seating for nearly 2,000 persons. Construction of the scaffold

structure included trenching for 10-foot deep caissons necessary to avoid cable lines in pedestrian paths,

The LAOOC monitored the installation of phone and cable runs. Pacific Telephone was asked not to run cable and poles across the new plaza area and the conduit was redirected and installed underground. Temporary power cables were placed just below ground surface from temporary panel locations. Water lines for the food concessions were run concurrent with the irrigation system installation.

Ceremonies production requirements included the installation of fireworks staging areas. A 60-foot by 80-foot fenced area was constructed north of the peristyle plaza and a 60-foot by 120-foot area was constructed in the grassy area in the middle of the vehicular access route off Figueroa. The fenced areas were constructed to protect pedestrians from potentially harmful fallout from the fireworks display. A 120-foot by 150-foot fabric-covered fenced area was required in front of the Sports Arena to conceal the spaceship used in the Closing Ceremonies. Per U.S. Federal Aviation Administration regulations, fences were installed on both sides of the flight path to prohibit spectators from walking beneath the airborne craft. Additional fencing was installed from the Sports Arena to the Coliseum to allow participating athletes to march undisturbed from the Sports Arena along the concourse level to the Coliseum's main entry tunnel during Opening Ceremonies.

5 The result of the extensive planning is shown here just prior to beginning of the Opening Ceremonies on 28 July 1984.

Site plan of Exposition Park

Exposition Park

Introduction Exposition Park facilities were established to provide services to sightseers and spectators between, during and after sessions of athletics, boxing and swimming. Structures existing in the park included 4 museums, a rose garden and large open grassy areas. In this open space, the LAOOC erected food and novelty sales points, temporary restrooms, entertainment and first aid facilities. The park is a 133-acre facility and the site of Olympic boxing and athletics competition as well as Opening and Closing Ceremonies. The park operated daily from 0700 to 2200 hours from 28 July to 12 August.

Department/ Function	Space Use (in feet unless noted)	Notes
Temporary Facilities and Spectator Services		
1 Commerical Exhibits	20 x 20	American Express sales and service.
2	(3)24 x 26	U.S. Postal Service.
3	90 x 130	Anheuser Busch Clydesdale horses exhibit.
4	60 x 260	Anheuser Busch beer garden.
5	1,265 square feet	U.S. Treasury corn sales.
6	785 square feet	AT&T international telephone calling center.
7 Food Service	(46) 20 x 20 tents	Outdoor seating for 2,000.
7	(3) 40 x 40 tents	Food bazaar. Food preparation area.
7	(5)12 x 60	Food storage trailers.
8	(17)10 x 10 tents	Food and beverage tents.
9 Novelty Stands	(43)10 x 10 tents	Novelty sales points.
10 Entertainment	32 x 40	Sound and light stage for public entertainment.
10	28 x 40	Stage for public entertainment. Dressing area for entertainers (see Medical).
11 Lost and Found	12 x 60 trailer	Operated by the Los Angeles Police Department.
12 Medical	40 x 40 tent	Spectator first aid.
13	10 x 40 tent	Spectator first aid.
13	12 x 60 trailer	Supply storage. Private doctors' office.
14 Public Facilities		400 temporary toilets. 60 pay telephones. 400 concrete 6-foot benches.
15 Public Information	(9)10 x 10 tents	General information booths.

Existing Facilities

16 Coliseum		Track and field competition site.
17 Museums		Museums open to the public. Extra museum space was rented by sponsors for use as hosting facilities.
18 Rose Garden		LAOOC hosting and spectator rest area.
19 Sports Arena		Boxing competition site.
Transportation		
20 Athlete Bus Route		Transportation route for buses arriving from USC village.
21 Limousine Drop-Off Zone		Drop-off and pick-up zone for spectators arriving by limousine or taxi.
22 Olympic VIP Parking		Parking for Olympic Family vehicles and special guests.
23 Press/Staff Shuttle		Shuttle drop-off and pick-up point from auxiliary parking facilities.
24 Spectator Charter Bus Parking	600 spaces	Passenger buses. Stack parking with each space 50 x 12.5 feet.
25 Transportation Headquarters	13,200 square feet	Headquarters for Exposition Park transportation administration and operations.
26 Transportation Terminal		30 bus bays in west terminal, 20 bays in east terminal. Served 35,000 spectators in 2-hour period.
Storage		
27 Ceremonies	60 x 80	Fireworks firing zone.
27	60 x 190	Fireworks firing zone.
27	120 x 150	Closing Ceremonies spacecraft storage.
28 Concessions storage	180 x 340	50 trailers, storage facility for Coliseum.
28	110 x 160	Storage facility for Sports Arena.
28	120 x 180	Storage facility for Exposition Park.
Other		
29 Graham Statue		
30 Theme Towers		Park entry structures.
31 Tunnel access to Coliseum		Access to field level.
32 Tunnel access to Sports Arena		Access to arena level.
33 Venue management		Coliseum compounds (see athletics for further detail).
34		Exposition Park compound with 14) 12 x 60 trailers.
35		Sports Arena compounds (see boxing for further details).
36 VIP Hosting	100 x 180 tent	Olympic Family hosting facility for 540.
37 Water Polo Training Site		50-meter pool, 1932 Olympic Swim Stadium; adjacent wading pool and Coliseum staff lounge.
38 Athlete Warm-up		Warm-up and athlete preparation areas with synthetic 60-meter surface.

6

7

6 The LAOOC decorates a newly formed bus turnaround in Exposition Park with multiple flags and banners.

7 The largest gateway of all is mounted at the corner of Menlo Avenue and 39th Street and rises over 130-feet tall.

7.02.2

Special projects at the Los Angeles Memorial Coliseum

The site of athletics for the 1932 Olympic Games, the Los Angeles Memorial Coliseum, was again host to athletics in 1984. Seating 92,516, it remains one of the world's greatest stadia. The rental agreement between the LAOOC and the Los Angeles Coliseum Commission was signed on 9 November 1980.

Ground breaking for the Coliseum took place on 21 December 1921 and the original stadium was finished on 1 May 1923, with a seating capacity of 75,000. The cost of construction was \$954,872.98. Enlargement to 101,574 seats took place between 24 February 1930 and 1 May 1931 and cost \$950,293.88. Conversion to theater-type seating reduced capacity to 92,516. There are 73,929 permanent chairs now in place plus 18,587 covered bench seats, and there are 90 entrances and 74 turnstiles. An Olympic torch sits 150 feet (45.72 meters) above ground level on the peristyle (east) end.

Over the years travertine was added to the peristyle, a 230-foot-long press box was constructed on the Coliseum's south rim, three escalators, 54 lavatories and over 20 concession stands were constructed, and in 1933 a scoreboard was erected on top of the peristyle entrance. The Coliseum is surrounded by a 10-foot-high chain-link fence topped with barbed wire.

The LAOOC was determined to refurbish the Coliseum in as many areas as possible, recognizing its place at the very center of the 1984 Games. The LAOOC worked with the Coliseum Commission to determine the nature and scope of the projects undertaken. The most obvious tasks included renovation of the infield and track on the Coliseum floor. High on the Coliseum Commission's improvement list for the stadium was a new football field utilizing state-of-the-art growing medium and drainage systems. The Coliseum management investigated the various systems available and showed a definite preference for a Hi-play system. This consisted essentially of six inches of patented growing medium over six inches of sand over six inches of gravel, all over a graded native base contoured into French drains placed in the field at 10 feet on center.

A unique construction problem arose in the drainage system on the new field. Because of the time constraints and drainage problem, sod was purchased and then the roots were thoroughly cleansed of any clay. The bare root Santa Ana Bermuda grass was then planted in the growing medium. At the same time, the curbs and base for the new track were installed.

IAAF regulations required the radius of the track curves to be 36.5 meters. The existing Coliseum track had a smaller radius and the required track would not fit in the existing space on the floor of the Coliseum. To conform to the new standard, the first row of seats on the north side of the Coliseum was removed to accommodate the new configuration.

The existing track was of Tartan material installed in 1972 and laid over an asphalt base and crushed gravel sub-base. Below that layer was brick dust from the track installed during the initial construction of the stadium. Since there was considerable debate over whether or not the Coliseum would retain the track after the Games, it was decided to put in a redwood curb on the outside of the track instead of a concrete curb. In the spring of 1983, when construction on the track was resumed, the redwood header was replaced with a concrete curb at the request of the Coliseum management. The field and track were both installed in time for a pre-Olympic athletics competition in June 1983.

Much additional work was directed to upgrading the support facilities surrounding the field of play.

The original design of the Coliseum athletic field utility conduit system did not foresee the need for a field telephone system, the requirements of television, nor the potential problems of electromagnetic interference from power lines onto telephone transmission or data lines. Consequently, an extensive redesign was initiated. Advice was received from the telephone utilities, the host broadcaster, Coliseum staff and the LAOOC Ceremonies Department staff in order to make sure that all needs were met. As a result, three eight-inch diameter plastic pipes were placed from manhole to manhole on the Coliseum floor. Basically, the system looked like a four-sided diamond with a manhole at each apex. In addition, lines went north to south to connect the two apexes directly and four-inch conduits were installed under the track at the finish line. Conduit was also installed at the northwest corner of the track at approximately the 200 meter point. These installations were used primarily by Swiss Timing and the host broadcaster.

8

In addition to a drainage system for the field of play, the LAOOC also installed a drainage system to pick up runoff water from the stadium seating areas and direct it into the pumping station in the southwest tunnel.

In agreement with the Coliseum Commission, the LAOOC provided for over \$5 million of permanent rehabilitation work on the Coliseum. General facility improvements included:

- Air-conditioning of the existing dressing rooms
- Reopening and extension of Tunnel 6
- Installation of new electric services at field level
- Installation of a new emergency electrical system
- Installation of increased electrical capacity for the new scoreboards
- Upgrading of field lighting
- Installation of a new public address system
- Repair and painting of the concourse floor
- Renovation of the concourse-level first aid room
- Upgrading of the concourse restrooms
- Replacement of 1,500 seats
- Replacement of the peristyle area fence
- Opening of a new gas line to the torch
- Press box elevator repair
- Enlargement of the existing sewer line
- Paving of the perimeter area
- Contribution to and monitoring of construction of 11 new perimeter concession stands
- Construction of a 6,000 square-foot storage building
- Other miscellaneous painting and minor repairs

8 Construction crews convert the pre-existing infield and track of the Coliseum for Olympic use.

The projects requiring the most immediate attention were the air-conditioning of the existing team dressing rooms, the upgrading of the electrical and lighting levels and the repair of the Coliseum sewer system.

Air-conditioning in the athlete locker rooms did not exist at all in the Coliseum before 1983. Although it was located below grade, the locker room complex still became quite warm on hot summer days. A water-cooled 47-ton air-conditioning system was installed in early 1983 and was immediately used by teams competing in events held at the stadium.

While the LAOOC did not choose the manufacturers of the new video and matrix scoreboards installed in early 1983 (the scoreboards were arranged for by the Coliseum Commission), the LAOOC was responsible for providing electrical power. A system was designed and installed in the peristyle end of the Coliseum. Switchboards were placed inside the large but hollow concrete columns of the peristyle while the transformers were placed underneath the peristyle arches. As the power supply was being installed, it became apparent that the existing stadium structure would not support the new, massive scoreboards. Two large 12-inch square I beam supports were placed within the peristyle arch complex to support the additional load. In addition, a new control room was built on top of the existing press box to house the additional equipment needed to operate the boards.

Existing light levels at various points on the Coliseum floor were measured in July 1982 to determine the suitability of the existing lighting for spectators and television. It became apparent that additional lighting would be needed to obtain a 200-footcandle level at all points on the track and on the infield. Initial calculations indicated that replacing each of the existing 348 lamps with 1500-watt metal halide lamps would solve the problem. These lamps were installed in February 1984 but because of the location of the existing light towers, there was insufficient light intensity at the east and west ends of the track. Additional light towers were installed at the southeast (48 lamps), northeast (36 lamps) and southwest (30 lamps) corners of the Coliseum. These poles were constructed using two wooden power poles over 110 feet in total height and supported by guy wires. When the Games were completed, the temporary lamps and poles were removed.

One of the first LAOOC projects was to increase the capacity of the Coliseum sewers. The LAOOC hired its own consultant to make an independent investigation of the situation. The consultant determined that the trunk sewer line in the Coliseum extending out into the public sewer system could be totally replaced and increased from six to eight inches although the existing six-inch sewer was barely adequate in size. Differential settlement had built up in the pipe over the years and led to stoppages in the plumbing. Since the sewer had to be reworked to correct the misalignments, it was decided to increase the pipe size as adequate reserve for future additions at the Coliseum.

In addition to the agreed-on scope of the rehabilitation project at the Coliseum, the LAOOC also:

- Installed a grade level conduit chase across the perimeter area for use mainly by host broadcaster television crews
- Painted the peristyle seats
- Replaced the concrete at the peristyle between the seats and the perimeter fence
- Painted the peristyle ceiling
- Replaced the fence on top of the Coliseum rim
- Provided air-conditioning to the Coliseum office building located north of the peristyle

The LAOOC's extensive refurbishment program not only assisted in the preparation for the 1984 Olympic Games, but left the Coliseum much improved for years to come as the showplace of spectator sports in Los Angeles.

7.02.3

Athletics: Coliseum

The Los Angeles Memorial Coliseum was the location for Opening and Closing Ceremonies and all athletics competition, including the finish for both marathons.

An eight-lane, 400-meter track equipped with turns that had a 36.5-meter radius was installed and some seating had to be modified to accommodate the width of the track. The synthetic surface was made of Rekortan Sports Corporation/C. Voigt Sohne GmbH's "Rekortan," the same material installed at Munich's Olympiastadion for the 1972 Olympic Games.

The stadium infield was equipped with two runways for the long jump and the triple jump on the south side, two pole vault runways on the north side, three high jump areas on the east end, two shot put circles on the west side, a discus and hammer circle in the northeast corner and a javelin runway east of the infield. The placement of field event areas was determined by the effects of sun and wind, scheduling and crowd control. Tunnel 6 leading from the field level to the outer concourse was reopened and extended.

Three new scoreboards were installed in 1983, including a 36-foot by 48-foot wide (11 meters by 14.6 meters) full color video system board and a full lamp matrix black-and-white board measuring 30-by-48 feet (9.1 meters by 14.6 meters). Additionally, a 165-foot (50.3-meter) high, freestanding full lamp matrix display was erected facing the Harbor Freeway. The \$12.5 million project was arranged through private sponsorship. A 10-line alphanumeric board was installed over the west end tunnel by Swiss Timing.

In order to facilitate results production, a finish line stand on the field was erected for use by Swiss Timing. A two-story photo print booth was assembled and placed on the rim of the Coliseum directly overlooking the finish line. The booth was constructed with steel to avoid any movement of the finish line camera. A special results area was set up in an adjacent office area to print and distribute results. Four trailers with reinforced frames and auxiliary air-conditioning were constructed to accommodate the environment-sensitive Xerox photocopying machines. Additional platform covers were installed over specified tunnels for use by the host television broadcaster and official film crews.

The athlete facilities were concentrated in the Los Angeles Swim Stadium. The Swim Stadium, adjacent to the Coliseum, was built for the swimming and diving competitions of the 1932 Games. During the 1984 Games the Swim Stadium was used to house the support operations for the athletics events. The lower level was used as an athlete rest area and the upper floor was used for the offices of the athletics commissioner and the ceremonies production staff. The main pool was used as a swimming and water polo training site. The grassy area fronting the swim stadium was outfitted as a final warm-up area for competing athletes. A six-lane, synthetic, 60-meter warm-up track and shot put and discus circles were constructed and a refreshment and shaded rest area were added.

Athletes arrived at the athletics venue by shuttle bus from the USC Village. They disembarked in the secured, final warm-up area and proceeded to the field-of-play through the southwest tunnel. After competing, athletes exited the Coliseum through the reopened Tunnel 6. The LAOOC extended the tunnel to the south adding conduit space and refinishing the interior with paint, carpet and lighting. The athletes passed through the press mixed zone (formed by a four-foot high fence) and formal interview tents on their way to the shuttle bus pick up area. Additional asphalt was installed to allow the buses to complete the circle without leaving the secured area.

The Olympic Family entered the athletics venue at the scaffold structure spanning Hoover Street. They were directed to the Olympic Family lounge area which was an enclosed, fenced area of 20 tents (20-foot square). A festive atmosphere was created by decorating tent supports, carpeting and plants. Four of the tents were used for the preparation of food. Holes in the tent tops provided ventilation. Upon exiting the hosting area, Olympic Family members were within 100 feet of their seats in the Coliseum and the Sports Arena.

Media and LAOOC staff arrived at the athletics venue by shuttle bus at an area off Martin Luther King Jr. Boulevard. Media gained access to the site through the VIP entrance. A special media concession and rest area was located between the Coliseum and the Sports Arena. More than 2,000 seats were removed from the Coliseum and benches and tables installed to accommodate the seating and working needs of both the written and broadcast media.

LAOOC staff entered the Coliseum through the perimeter fence at a designated gate. Ten tents were set up at the entrance for staff access control. Office areas for LAOOC staff were created in seven double-wide (24-foot) and eight single-wide (12-foot) trailers. The staff lounge and eating area was located in the east pool area of the Swim Stadium. Nineteen 20-foot square tents were installed.

Four emergency generators were housed in 40-foot trailers installed outside the Coliseum perimeter fence, camouflaged by fencing and decorative fabric. All back-of-the-house areas were supplied with temporary power and tents were equipped with fluorescent lighting. The television compound had its own generator.

Architecture and Construction

Athletics

Introduction Competition in athletics took place at the Los Angeles Memorial Coliseum. Existing athlete and officials' facilities in the stadium were augmented by use of trailers and the Swim Stadium offices and lockers utilized in the 1932 Olympic Games. All venue operation facilities were housed in trailers. Because the Coliseum was in close proximity to the Sports Arena (boxing), facilities for parking, Olympic Family lounge and press working facilities were shared. Space use programs given here reflect use during the athletics competition and not variations for Opening or Closing Ceremonies. Spectator facilities located outside the Coliseum perimeter are listed under Exposition Park.

Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Administration	12 x 60 trailer	Badge storage and inventory. Office for accreditation manager and 6 staff.
1 Staff Entry	10 x 50 tent	Staff entry and badge distribution.
2 Guest Entry	10 x 50 tent	All Olympic Family members gained access to venue via separate gate; shared with boxing.
2	10 x 20 tent	VIP accreditation and information area.
Food Service		
3 Eating Area/Lounge	(20)20 x 20 tents	Lounge and eating area for 450 and food distribution area.
4 Storage	(5)10 x 40 trailers	Refrigerated storage.
Finance		
5 Audit, Cash Control	12 x 60 trailer	Office for 12. Responsible for cash control, purchasing, inventory.
Health Service & Medical Control		
6 Doping Control	12 x 60 trailer	Waiting area for 30, television, refrigerator; processing or work area for 12, refrigerator, testing area with toilets and handwash facilities.
Spectator First Aid	(5)400 square feet	First aid stations with toilet and handwash room facilities, 2 cots, examination table, 10 chairs, refrigerator.
7 Hospital	12 x 60 trailer	Waiting area for 10; examination and treatment area with 2 cots, 1 examination table; refrigerator, storage room. Office for 6.
8 Sports Medicine	16 x 72	Waiting area for 8; 10 private treatment rooms each 6 x 8.
	8 x 16	Storage.
Material Acquisition & Distribution		
Administration		Office for 5 (see Venue Operations).
9 Storage	(3)10 x 40 trailer	
Olympic Family Services		
10 Administration	25 x 60 trailer	Private office for co-commissioners, 2 private for senior management, 3 secretary/support; office for 2 Language Services coordinators, waiting area for 15 linguists. Language service staff/serviced Olympic Family Lounge.
11 Hosting	100 x 180 tent	Lounge for 540 with beverage and snack service. Shared with boxing VIP.
VIP Hosting	18 x 128	Two-tiered seating for approximately 200 VIP guests. Full meal and beverage service in Coliseum press box.
Personnel		
12 Administration	12 x 60 trailer	Responsible for payroll, timekeeping and staff scheduling. Office area for 8.
Press Operations		
13 Interview Room	(2)20 x 30 tents	Each tent: seating for 75, elevated platform, sound system, television lighting.
13	30 x 60 tent	Seating for 150. elevated platform, sound and light system.
Press Seating	1658	879 positions with desks, 779 without desks.
14 Press Lounge	20 x 60 tent	Eating area and lounge in private compound with food and beverage sales.
Staff Offices	(5)10 x 14	Located in Sports Arena (see boxing plan).

Sub-Center	68 x 132 and 36 x 80	276 working places in sub-center located in Sports Arena (see boxing plan).
	32 x 50	Back up facility with 40 working places. Located in Sports Arena (see boxing plan).
Security		
15 Command Center	(2)25 x 60 trailers	Each with 2 private offices, briefing area/lounge for 24.
15	25 x 60 trailer	Los Angeles Police Department.
	(2)6 x 8	Private rooms in press box for observation posts.
Sports Administration		
Federation Services		
16 IAAF Offices	15 x 16	Office for IAAF president and 2 guests, television.
16	12 x 16	Office for IAAF secretary-general.
16	10 x 16	Office for IAAF secretariat, television.
16	18 x 24	Video viewing room for 9, projector, VCR.
16	16 x 18	Office for 3 technical delegates.
17 NGB Office	8 x 16	Office for 2 of the U.S. national governing bodies.
18 Conference Room	16 x 40	Jury and IAAF council meeting room for 18.
19 Hosting	32 x 50	IAAF hosting and reception area for 30.
20 Field Officials' Lounge	32 x 36	Lounge for 32, television, beverage service.
21 Officials' Dressing Room	(10)6 x 8	Private dressing rooms with adjoining locker and shower facilities.
22 Drawing and Seeding Room	14 x 16	Office for 1, television.
Athlete Services		
23 Equipment Storage	5600 square feet	Equipment control and storage room.
24 Rest Area	40 x 50	Rest area with 12 cots, refrigerator, television, 4 rub-down tables, 12 chairs; primarily for athletes in multiple events.
24	20 x 20 tent and 10 x 20 tent	Athlete rub-down, 8 tables.
24	20 x 20 tent	Refreshment kiosk.
25 Check-In Information	20 x 20 tent	Check-in at entry to warm-up area.
25	(2)20 x 20 tents	Final check-in point prior to competition, 4 staff.
25 Warm-Up Track	60 meters	6 lane synthetic track; shotput and discus ring; same surface as competition surface.
Competition Management		
26 Commissioners' Office	18 x 18	Office for co-commissioner, athletics.
26	10 x 18	Operations review and meeting room.
	16 x 18	Observation post in press box for commissioners.
27 Conference Room	15 x 45	Meeting room for 22.
27	54 x 60	Meeting room for 50.
28 Competition Staff	11 x 14	Office manager and secretariat.
28	10 x 10	Office for verification coordinator.
28	18 x 18	Office for start list supervisor.
28	10 x 12	Staff message center, 250 individual mail boxes.
28	20 x 26	Office for 2.
28 Competition Directorate	18 x 60	Double-tiered seating in press box with overview of field. Seating for 20, closed circuit television for competition director and staff.
29 Stewards Room	30 x 40	Waiting area for 40, television.
Field of Play		
		400 meter 8-lane synthetic track with 36.5 meter turn radius. Competition facilities included: 2 long jump/triple jump runways 2 pole vault runways 3 high jump areas 3 shot put circles (1 circle in the center of the stadium) 2 discus and 1 hammer circles 2 javelin runways

Technology		
30 Message Center	12 x 60 trailer	Communications and message receiving center for staff and officials; radio and pager distribution.
Results	(4)6 x 12	Results input tables located on the field of play.
	8 x 24	Results input area in existing press box.
31	10 x 40 trailer	Results input, pager storage, system administration area.
31	25 x 80 trailer	Results output photocopy and distribution center.
32 Staff Offices	25 x 60 trailer	Sponsor/vendor work area for 30, staff offices for 8.
33 Swiss Timing	(2)10 x 40 trailers	Storage
	20 x 48	Timing control room. 31 operators in existing press box.
	6 x 8	Photo-finish cabin located at finish line.
	8 x 32	Scoreboard control room in press box.
34 Storage	(4)12 x 60 trailers	One trailer for spare radio parts, 3 trailers for storage of Xerox supplies.
Television		
35 Trailer Compound	240 x 340	Television and telephone production and transmission vehicles.
36 ABC Parking	120 x 200	Vehicle parking for ABC staff.
Ticketing		
37 Administration	15 x 30	Office for 2. Ticket counting space.
Information	(4)4 x 6	Existing ticket windows for general information and will call. No on-site ticket sales.
Transportation		
38 Athlete Bus Turnaround/Route		Shared by athletes in boxing and athletics.
39 VIP Parking		Spaces for VIP parking.
40 Drivers Lounge	20 x 20 tent	Lounge for 50.
41 Staff/Press Shuttle		Drop-off zone from satellite parking facility.
42 Transportation Headquarters	13,200 square feet	Administration and dispatch office for Exposition Park transportation operations.
Venue Operations		
43 Construction	12 x 60 trailer	Office for construction coordinator, work area for 8 staff, conference room for 10.
43	12 x 60 trailer	Office for graphics coordinator, storage space, work area for 8.
44	120 x 120	Construction equipment storage compound.
45 Maintenance	(2)10 x 40 trailer	Supply and storage.
46 Venue Staff Offices	25 x 60 trailer	3 private offices for venue manager and 2 assistants. Work area for 3 secretary/support, conference room for 16.
46	25 x 60 trailer	Private office for ceremonies coordinator, 15 x 25 office for 5 from material supply, office for 3 maintenance staff; open area with table space for coordinators of custodial, food service, concessions, press.
47	(3)8 x 30 trailers	Staff rest area with cots.
Spectator Services		
48 Food Service	(14)10 x 50	Food service stands with 8 service lines each.
Novelty Stands	(20)10 x 10 tents	Novelty sales to public.
	(3)8 x 40 trailers	Novelty storage.
Program Stands	(25)3 x 4	Portable program sales points.
Public Seating	92,516	
Other Site Facilities		
49 Water Polo Training Site		50-meter pool.
50 Wading/Recreation Pool		For use by athletics staff.
51 Boxing Venue support Compound	110 x 160	Concessions storage and materiel supply compound.
52 Boxing Compound	140 x 160	ABC television compound.
53 Graham Statue		
54 Tunnel Access to Sports Arena		
55 Tunnel Access to Sports Arena

7.02.4

Ceremonies: Coliseum

Although a vast majority of the construction that took place on the Los Angeles Memorial Coliseum was done to provide a backdrop for the athletic competition and services for the spectators, the construction of the Olympic Look most dramatically affected the Opening Ceremonies. In particular, the peristyle structure at the east end of the Coliseum proved to be the focal point for most of the activities that took place during the Opening Ceremonies.

The Coliseum Commission felt that the existing Look of the Coliseum should not be altered, although some changes had to be made to cover the existing advertising on the scoreboards as required in the Olympic Charter and to accommodate thematic elements for the Games. Eventually a design was worked out that included a horizontal fascia hung over the top of the peristyle and an extension to the central arch. The fascia carried lettering spelling out "Games of the XXIIIrd Olympiad" on one side of the arch and "Los Angeles, California 1984" on the other. The main arch false-front carried a 35-foot set of rings that were alighted as part of the lighting of the torch during the Opening Ceremonies.

Since nothing could be hung from the scoreboard structures above the peristyle itself, structural columns were added to that section of the fascia crossing in front of the scoreboards. Twelve columns were added, although only four were needed structurally. Thin steel piping was installed to support the painted, 3-foot-high sonotubes that were set on 4-foot by 6-foot-high bases in front of the existing columns.

The two scoreboards added to the top of the peristyle in 1983 were not integrated into the original Look plan for the Coliseum. The LAOOC design plan then called for a three-dimensional graphic with vertical fins attached to the back of each scoreboard (one was placed on each side of the torch) with the Olympic rings on one and the *Star In Motion* on the other. In June 1984, the Coliseum Commission requested that the company holding the maintenance contract on the scoreboards be allowed to approve all details because of the sensitivity of the electronic equipment inside. After discussions with the scoreboard company, the design was modified and hung from existing outriggers to avoid penetrating the scoreboard skin. At this time, construction details for the fascia on the interior of the Peristyle were being changed for similar reasons, and it was decided to just paint the backs of the scoreboards with the rings and *Star In Motion* graphics and not install the fins at all.

Twelve IOC flags were raised on existing flagpoles and four-foot gold-colored stars on copper bases were added to each end of the peristyle. These were redesigned in size to cut costs and then constructed on the ground and hoisted into place by crane.

A major visual element eliminated from the original peristyle design was a disk below the torch. Recent Games have all had a large disk holding the flame. However, the Coliseum had an existing torch that was used for the 1932 Olympic Games and the Commission felt that it (combined with the peristyle itself) was the recognized symbol of the Coliseum and should not be altered for the Games.

The final determination of how to light the Olympic flame was not made until only shortly before the Games. A number of different ideas were tried before the slip-stair rising with the torch runner was approved. Ceremonies contractors installed the slip-stairs and the main stage over the peristyle without any problems. Ceremonies requirements also affected the design of Exposition Park and the areas surrounding the Coliseum. Final locations for the fireworks areas were decided very late in the construction schedule. For Opening Ceremonies, a 60-foot by 60-foot fenced area north of the peristyle plaza was required as well as a 60-foot by 60-foot plot in the grass area between the Coliseum and Figueroa Street.

The Coliseum press box used as the hosting area for the President of the United States, the IAAF and other dignitaries underwent additional construction as a security measure. Steel plate was added to the floor and bullet-resistant windows and air-conditioning were installed. The president's advance group worked with the LAOOC to pinpoint the access/exit routes required. As a result, security fencing was taken down and relocated. Additional fencing was requested by the advance staff prior to Opening Ceremonies and was installed in the perimeter access area, near the press box elevator.

An additional fence was installed from the Sports Arena to the Coliseum fence to allow participating athletes to leave the Sports Arena on the concourse level during Opening Ceremonies and march undisturbed toward the entry tunnel to the Coliseum. Even so, large crowds formed in this area during the Opening Ceremonies hoping to catch a glimpse of the athletes.

After the Opening Ceremonies there was a five-day break before the beginning of the athletics events during which the slip-stairs were removed from the stage and the necessary equipment was installed for the athletics events.

The role of Architecture/Construction in the construction of temporary facilities for the Closing Ceremonies was primarily supervisory. Members of the Ceremonies staff designed the

12

12 A giant stage is installed in a matter of hours following the end of the athletics competition for use in Closing Ceremonies.

stage sets in conjunction with a production company experienced in major events stage construction. Other elements of the production that required construction were done by other experienced outside contractors. These elements included the construction of a 180-foot-wide multi-level stage with special effects water fountains and pyrotechnics, the construction of an elaborate "spaceship" lighting truss manipulated by remote control and carried by a helicopter, facilities for a 20-minute pyrotechnic display above the Coliseum and four specially designed lighting towers to illuminate the stage. Approximately 140 volunteers were used to lay a plywood road over the top of the track surface in the Coliseum for protection against damage that might have occurred during the setup period.

The immensity of the Closing Ceremonies construction project cannot be overstated, however. The move of the Closing Ceremonies' sets from Aviation High School to the Coliseum required 60 trucks, and the entire Coliseum floor reconstruction was completed in less than 18 hours.

Closing Ceremonies production requirements included a 60-foot by 80-foot fenced area constructed north of the peristyle plaza and use of a 60-foot by 120-foot area in the grassy area in the middle of the vehicular access route off Figueroa Street for fireworks. A 120-foot by 150-foot fabric-covered, fenced area was required in front of the Sports Arena to conceal the spaceship.

It was the responsibility of the Construction Department to make sure that the physical facility remained intact and undamaged even as this massive project moved ahead. Even though the Games ended with the Closing Ceremonies, it was vital that the improvements made to the Coliseum remained for athletes and spectators of the future to enjoy.

13

14

13 The velodrome is one of only three permanent facilities built specially for the Games by the LAOOC.

14 The velodrome is ready for Olympic competition with the addition of temporary stands for spectators and team cabin areas for the competitors.

7.02.5

Cycling: Velodrome

Ground was broken on 9 July 1981 for the first world-class cycling track in the western United States. Construction took place on the 6.5-acre site located at California State University at Dominguez Hills. The university was the recipient of the velodrome as a permanent gift from the LAOOC and the Southland Corporation, which funded the construction of the facility as a part of its Games sponsorship agreement.

The oval concrete track measured 333.33 meters long and seven meters wide. Turns were banked at 33 degrees, allowing cyclists to attain speeds of up to 75 kilometers per hour (47 mph). Temporary stands to accommodate 6,400 spectators were erected for the Games to supplement 2,000 permanent seats. Permanent lighting was installed to meet television standards.

In early 1982 when the velodrome was nearly completed, it was tested by riders from the United States Cycling Federation and the Federation Internationale de Cyclisme Amateur (FIAC). The test results were favorable. Riders noted that the velodrome has an excellent shape, allowing for spectacular racing speeds. The transitions were judged extremely smooth and the surface material (Chem-Comp) was described as outstanding. The FIAC certified the track on 10 May 1982.

The facility was dedicated on 8 July 1982, with U.S. Olympians Eric Heiden and Sheila Young Ochowicz pedaling the first official lap. The first competition event, the 7-Eleven/Bicycling Magazine Grand Prix, followed on 9–10 July and drew overflow crowds. In 1983, the LAOOC hosted the Murray/7-Eleven International Cycling Invitational on 8–9 July 1983.

Concern was raised shortly after the 1983 event over the surface integrity of the velodrome because approximately 30 hairline cracks had

formed. Most were vertical and extended the full width of the track. It was determined at that time that the cracks were no detriment to the cyclists, but it was necessary to determine their long-term effects.

The general contractor was consulted and arranged for three concrete analyses. All agreed that the structural integrity of the velodrome was not in jeopardy. Additional research indicated the situation was normal for chemically-compensated concrete velodromes.

The outcome was to maximize use of state-of-the-art concrete technology by filling and sealing the cracks. By injecting a slightly elastic epoxy substance into the cracks, the surface was bonded without risking the creation of stress points and promoting further cracking. A grinding system eliminated some of the bumps common to concrete banked velodromes.

After five weeks of grinding, patching and crack injection, the track surface was significantly improved. Once these procedures had been completed, the entire racing surface was coated with polyurethane to seal the concrete and afford the cyclists the fastest riding surface available on a concrete track. Feedback received from the Olympic competitors was positive. The general feeling was that the track was "fast yet sticky" implying that the surface was smooth, fast and safe for competitors. The results were near world-record times for low altitude sites.

Additional permanent improvements were made to the velodrome stadium for the benefit of California State University at Dominguez Hills which managed the facility. The work included lowering the eastern half of the infield four feet and constructing a shade cover three feet above ground level to provide a comfortable holding area between races for athletes and team personnel, while allowing unobstructed viewing across the entire track from the spectator area. Work included grading, paving, drainage system modification and the addition of stairways and retaining walls.

An 80,000-square-foot area directly east of the facility was graded and paved and was used as the management and athletes' compound. It subsequently was left to the university as a parking area. Facilities were established in trailers and tent structures and included space for a rest area, medical services and a bicycle repair and maintenance area. Landscaping, including new sod and trees on the infield and ground cover on the entrance road, was installed by the LAOOC.

The velodrome was constructed with adequate but minimal permanent external support facilities. An emergency exit stairway was constructed in the southwest corner of

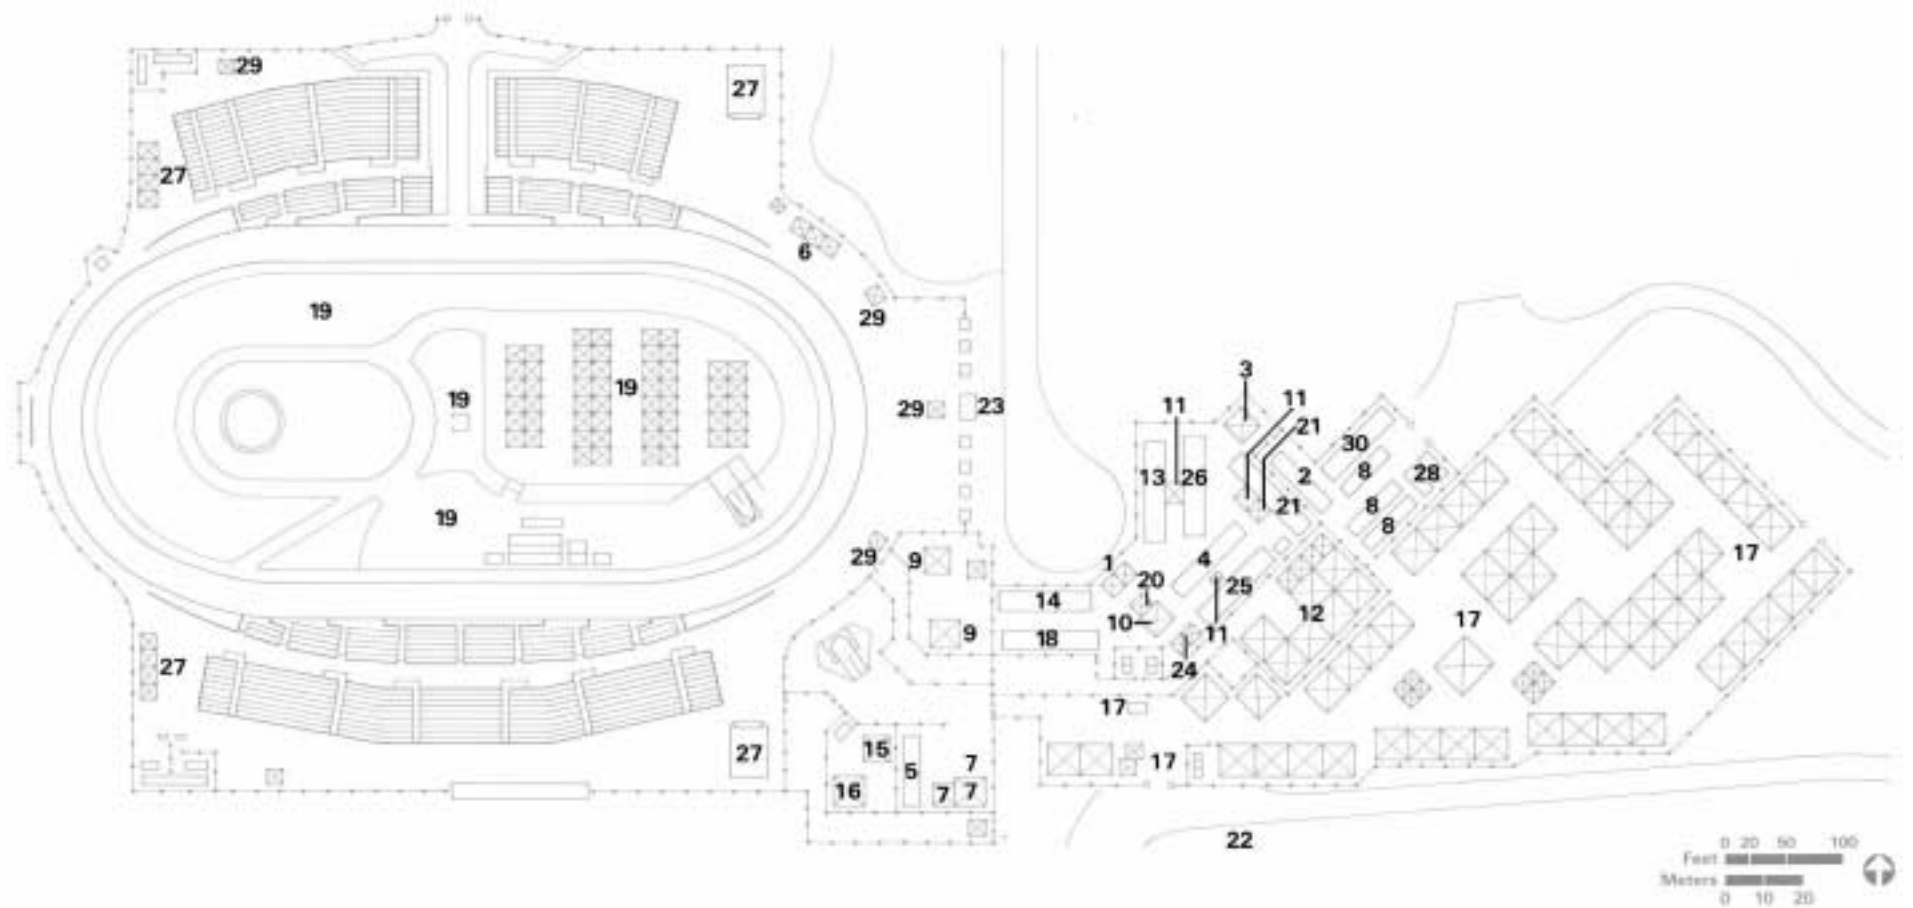

the facility as required by the local fire marshal. Stainless steel windows with fiberglass screens were installed in the permanent concession stands as required by the Los Angeles County Health Department.

The balance of work performed at the velodrome was temporary improvements required to stage the Olympic competition. The original scope of work for temporary construction included the addition of 4,000 square feet of chain link fence; portable toilets; trailers; miscellaneous tents and shade structures of varying sizes; temporary bleacher seating for 6,400 people; infield platforms for judges, commissaires, announcers, results personnel, jury members, photo-finish and television cameras; a scoreboard, including structure and Swiss Timing electronic panels; and an air compressor (175 psi) with 700 feet of hose and two fillers with pressure gauges and relief valves.

Construction of temporary facilities was affected only slightly by the boycott of the Eastern Bloc countries. The 54 team tents and equipment storage facilities originally planned were reduced to 45. Other changes, unrelated to the boycott, dealt primarily with increases in the number of shade structures used by athletes and officials.

In general, the construction of items included in the original scope of work proceeded smoothly and without incident. Coordination with contractors and technology sponsors was good. All contracts were adhered to and all facilities were constructed on or ahead of schedule.

Plan of cycling velodrome and adjacent support areas at California State University at Dominguez Hills

Enlarged section through velodrome looking north

Architecture and Construction

Cycling: Velodrome

Introduction	The cycling velodrome is an open-air facility with a concrete track and limited permanent facilities. All athlete and staff facilities were installed on a temporary basis utilizing tents and trailers. Spectator facilities were augmented utilizing tent structures.	
Department/function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff Entry	10 x 20 tent	Staff entry, badge issue, storage and distribution point. Work area for 9.
Food Service		
Administration		Office area for 3 food service staff (see Finance).
2 Storage	10 x 44 trailer	Refrigerated storage.
3 Distribution	15 x 15 tent	Adjacent to refrigerated trailer.
Finance		
4 Audit, Cash Control	12 x 60 trailer	Office for 6, trailer shared with food service and transportation.
Health Service & Medical Control		
5 Doping Control	10 x 44 trailer	Waiting area for 13, refrigerator, television; processing area for 5, refrigerator; testing area with toilets, handwash facilities.
6 Spectator First Aid	10 x 30 tent	Waiting area for 10, treatment table, 2 cots, television, handwash facility.
7 Sports Medicine	20 x 20 tent	Tent with waiting area for 6, 5 cots, portable handwash facility, refrigerator, television. Additional station on infield (see Sports Administration).
7	15 x 15 tent	Massage therapy area.
Material Acquisition & Distribution		
Administration		12 x 10 office within trailer, shared with Construction and Maintenance (see Venue Operations).
8 Storage	(3)8 x 40 trailers	
Olympic Family Services		
9 Hosting	20 x 20 tent and 15 x 15 tent	27 chairs, 3 serving tables, refrigerator, tables, closed circuit television, snack and beverage service; administrative area for 2.
10 Language Services	15 x 15 tent	Waiting area for 14, 1 work station.
Personnel		
Administration		Responsible for payroll, timekeeping and staff scheduling. Office area for 2 (see Venue Operations).
11 Lounge	(3)10 x 10 tents	Tent lounges for 10 each.
Press Operations		
12 Interview Room	20 x 40 tent	40 chairs, elevated platform for 6.
Mixed Zone	20 x 20 tent	Located at tunnel entry to infield.
Photo Positions		7 in infield.
Press Seating	214	110 seats with desk, 104 without.
12 Press Lounge	20 x 20 tent	Tables and chairs for 16; beverage service.
12 Staff Offices	(3)10 x 10 tents	Office areas each for 4 staff.
12 Sub-Center	40 x 50 tent	40 working places.
Security		
13 Command Center	12 x 60 trailer	Office area for 26; 11 extra chairs, refrigerator, television.
Sports Administration		
Federation Services		
14 FIAC Offices	12 x 60 trailer	Air-conditioned trailer with 12 x 14 private office for FIAC president and 2 guests, television and refrigerator, 11 x 12 office for 2 technical delegates and 2 guests; 18 x 12 area for the national governing body staff.
15 Jury/Draw-room	15 x 15 tent	Conference room for 12.
16 Judges/Officials' Lounge	20 x 20 tent	Lounge for 19. television, telephone, refrigerator.
Athlete Services		
17 Athlete Compound		Definition: fenced area outside the velodrome with athlete rest, feeding and competition preparation facilities.
17 Equipment Storage	8 x 12	Lockable container in athlete compound.
17 Equipment Repair	30 x 30 tent	Facility with 7 x 12 lockable storage, (3)8-foot work benches, 6-foot bench, 2 bike racks, air compressor.
17 Toilet Facilities	(2)10 x 20	Each with 8 portable units, 2 handwash facilities.
17 Team Room	(45)20 x 20 tents	Individual team tents with 7 x 12 lockable storage bin, massage table, 3 folding cots, work bench, water dispenser, (2)6-foot benches, bike stand, bike rack, 3 chairs, clothes hooks.
17 Lounge (Athlete)	(2)20 x 20 tents	Lounge area for 26, television, refrigerator.
	30 x 30 tent	Lounge area for 36, television, refrigerator.
17 Athlete Information	10 x 20 tent	Information board, 60 message holders, work area for 4.
Competition Management		
18 Commissioner's Office	12 x 60 trailer	Private 10 x 12 office for the commissioner and 2 guests; 8 x 12 office for secretary/support; balance of space had meeting room for 4, photocopier, refrigerator, television.
Field of Play		
19 InField		
19 Awards Platform	3 x 15	Stored in infield.
19 Commissioner's Stand	15 x 30	Elevated platform in infield.
	6 x 8	Results input table.
	6 x 20	Shade structure located immediately behind stand.
19 Equipment Repair	10 x 10 tent	7 x 10 lockable storage, (3)8-foot workbenches, 8-foot bench, 2 bike racks.
19 Judges' Platform	6 x 10	Elevated seating for 5 on infield at finish line.
19 Jury Platform	6 x 8	Elevated seating for 2 on infield at finish line, directly behind judges' platform.
19 Public Address Announcer	8 x 10	Elevated platform for 3 at finish line.
19 Pursuit Platform	10 x 10	Elevated platform located in center of infield.
19 Sports Medicine	10 x 10 tent	3 treatment tables, 3 chairs, mobile emergency cart at infield tunnel entry point. Physician and athletic trainer at 2 other points in track infield.
19 Team Box	(52)10 x 10 tents	Each box with 5-foot bench, bike rack.
Technology		
20 Message Center	10 x 10 tent	Communications and message receiving center for staff and officials, radio base station, work area for 6.
21 Results	12 x 60 trailer	Results output, photocopy and distribution area; sponsor/vendor work area for 10.
	10 x 10 tent	Staff work area for 3.
	6 x 18	Results input on commissioner's platform (see Field of Play). Photo-finish tower elevated 7 feet.
Swiss Timing	6 x 10	Timing and scoreboard control table for 3.
Television		
22 Trailer Compound	68 x 340	Telephone and television production and transmission vehicles.
Ticketing		
Administration		Office area for 2 (see Venue Operations).
23 Information	8 x 12	Information and will-call points. No ticket sales on site.
Transportation		
Administration		9 x 12 office for 3 within trailer (see Finance).
24 Driver Lounge	10 x 20 tent	25 chairs, television, beverage dispensers.
Parking	3,700	35 spaces for handicapped spectators.
Venue Operations		
25 Construction	12 x 60 trailer	Office space for 9, shared with Maintenance and Material Supply.
26 Venue Staff Offices	12 x 60 trailer	Office area for venue manager, secretary/support and staff coordinators of television, concessions, ticketing, personnel, materiel.
Spectator Services		
27 Food Service	(2)8 x 32	Stands with 6 service lines each.
	(2)10 x 40 tents	Temporary service stands with 8 lines each. Public eating area with 120 chairs.
28 Food Storage	(2)8 x 20 trailers	Refrigerated trailer.
29 Novelty Stands	(4)10 x 10 tents	Novelty sales point for public.
30 Novelty Storage	12 x 60 trailer	
Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service.
Program Stands	(4)4 x 4	Portable program sales points.
Public Information	10 x 10 tent	General information point for spectators.
Public Seating	8,400	

7.02.6

Hockey: Weingart Stadium

Announcement of East Los Angeles College (ELAC) as the site of the hockey venue was made 14 April 1982. The hockey competition was held in ELAC's 22,000-seat stadium and adjacent facilities included the ELAC gymnasium, volleyball courts and intramural fields. Ample spectator parking was located on the campus and in close proximity to the venue.

The Weingart Foundation, a non-profit philanthropic California corporation, pledged \$3.2 million to help refurbish the ELAC stadium, including installation of a SuperTurf field and an all-weather synthetic track made of Regupol. Work, including permanent and temporary construction, was begun in late 1982. The stadium was re-named Weingart Stadium in honor of the gift.

The stadium cost \$3 million to build in 1951. It was built on a hillside in an east-west direction. The walkway at the top of the north grandstands is at street level and the grandstand itself is below ground; the south grandstands rest on a fill area.

Inasmuch as construction of the infield could not start until the end of the American football season in early December, there was concern about the potential damages and delays caused by the Southern California winter rainy season that runs from January through April.

Drainage of the rain water was a major design and construction consideration. In addition to the sheet flow of water on the driveway and the stadium seats, water that would normally seep into the grass field and dirt track had to be removed via an underground drainage system. The field was at least 10 feet below the elevation of the outside walkway and the nearest storm drain line was a 48-inch diameter pipe located about 80 feet away from the south east corner of the field. Thus, a new 12-inch-diameter storm pipe running parallel to the track straightaway was installed. The path of the new connecting drain line cut across existing retaining walls and a corner of the stadium and was bored underground.

Even after the drain was installed and connected, weather problems continued to plague construction. There was no effective way to drain rain-water off the field since during construction it was below the elevation of the drainage catch basin. Pumps and plastic covers were used, but rain-water continually accumulated in the field and eventually saturated the adobe soil. This made it difficult to reach the level of soil compaction and moisture content required to support the asphalt paving. After the rains abated in late April, the correct soil compaction was obtained and paving commenced. Using conventional construction techniques, the track and infield were paved with three inches of closed grade asphalt.

A synthetic playing surface, "Super Turf84" was installed over the existing 60,000 square feet of the American football field. A one-half inch foam pad laid on top of asphalt was covered with tightly-packed three-eighths-inch-high artificial grass resulting in a fast, springy playing surface. The fused seams minimized maintenance. A temporary SuperTurf half-field was laid over an outdoor volleyball court and used as a warm-up area. SuperTurf International of Garland, Texas was an official supplier for the 1984 Games.

Since the track was surrounded by an 8-foot-high retaining wall and the width of the hockey field prohibited an inside curb around the 400-meter track, plans to install an eight-lane, 48-inch-wide-per-lane track were set aside. Instead, an eight-lane, 42-inch-wide-per-lane track was built. A 4-inch waterline with five couplers was installed around the inner perimeter of the stadium wall to allow for watering (cooling) of the synthetic track.

Permanent improvements to Weingart Stadium included:

- Repainting the facility
- Replacing stadium seats and building handicapped seating
- Increasing electrical capacity at the field level
- Refurbishing the press box and scoreboard
- Installation of permanent telephone lines and a public address system
- The provision of air-conditioning for the stadium office and athletes' lockers
- Building of a first aid facility
- The refurbishing of stadium offices, locker rooms and plumbing

As part of an agreement with the Weingart Foundation, the LAOOC committed to the refurbishment of the Ingells Auditorium on the ELAC campus. Built in the early 1950s, the 40-foot structure was scarred by vertical cracks in the plaster. Superficial examination indicated that the cracks may have been caused by structural fractures in the concrete walls. The LAOOC committed to the repair of any structural damage and the improvement of the appearance of the building.

15

16

15 Weingart Stadium changes character through the use of Festive Federalism for the Games.

16 Weingart Stadium during the Games with its resurfaced SuperTurf field and Festive Federal color treatment.

Architecture and Construction

The plaster was removed and the concrete walls sandblasted. Inspections by state officials revealed that there was no structural weakness in the building. Cracks in the plaster were caused by water that had overflowed from clogged gutters and had been contained between the plaster and the concrete. Gutters which were redesigned to overflow away from the structure were installed. An adhesive was applied to the concrete walls to enhance bonding to the plaster and a sealant was applied to the surface of the final coat of plaster to keep water from penetrating.

Refurbishing the interior of Ingells Auditorium was limited to repair of water damage, removal of asbestos acoustic tiles, installation of air-conditioning for the auditorium and dressing room areas, laying new carpet, reupholstering the seats and the installation of an acoustic shell.

Other permanent improvements to East Los Angeles College included the lighting of campus tennis courts and the auditorium. The LAOOC designed and built a student park on campus.

The scope of temporary work at this venue was significant. In addition to the construction of temporary hardwall partitions to subdivide office space and locker rooms, there was significant use of shade structures, tents and fencing. Construction projects unique to the hockey venue were:

- A 150-foot square synthetic turf warm-up field which was built on an existing volleyball court, affording athletes an opportunity to practice on a surface identical to that of the field of play.
- The Technology Department offices were provided with temporary hardwall construction and air-conditioning to keep photocopying equipment in a temperature-controlled and soundproof environment.
- The ELAC gymnasium floor was covered with protective indoor/outdoor carpeting.
- A scaffold bridge was constructed, allowing athletes private access from their lounge to the field of play.
- Three awards flagpoles, three 35-foot ceremonial flagpoles displaying IOC, LAOOC and IF flags and twelve flagpoles displaying flags of participating nations were constructed.

Temporary modifications transforming Weingart Stadium into an Olympic venue were completed in four weeks. The Look of the hockey venue was created as part of a master program visually uniting all Olympic sites. The Look pieces used on the hockey venue were fabricated by several suppliers and then shipped to an installer's warehouse. The installer then applied the materials to the venue as shown on the site design drawings. Look items were left at the ELAC stadium and have remained in place.

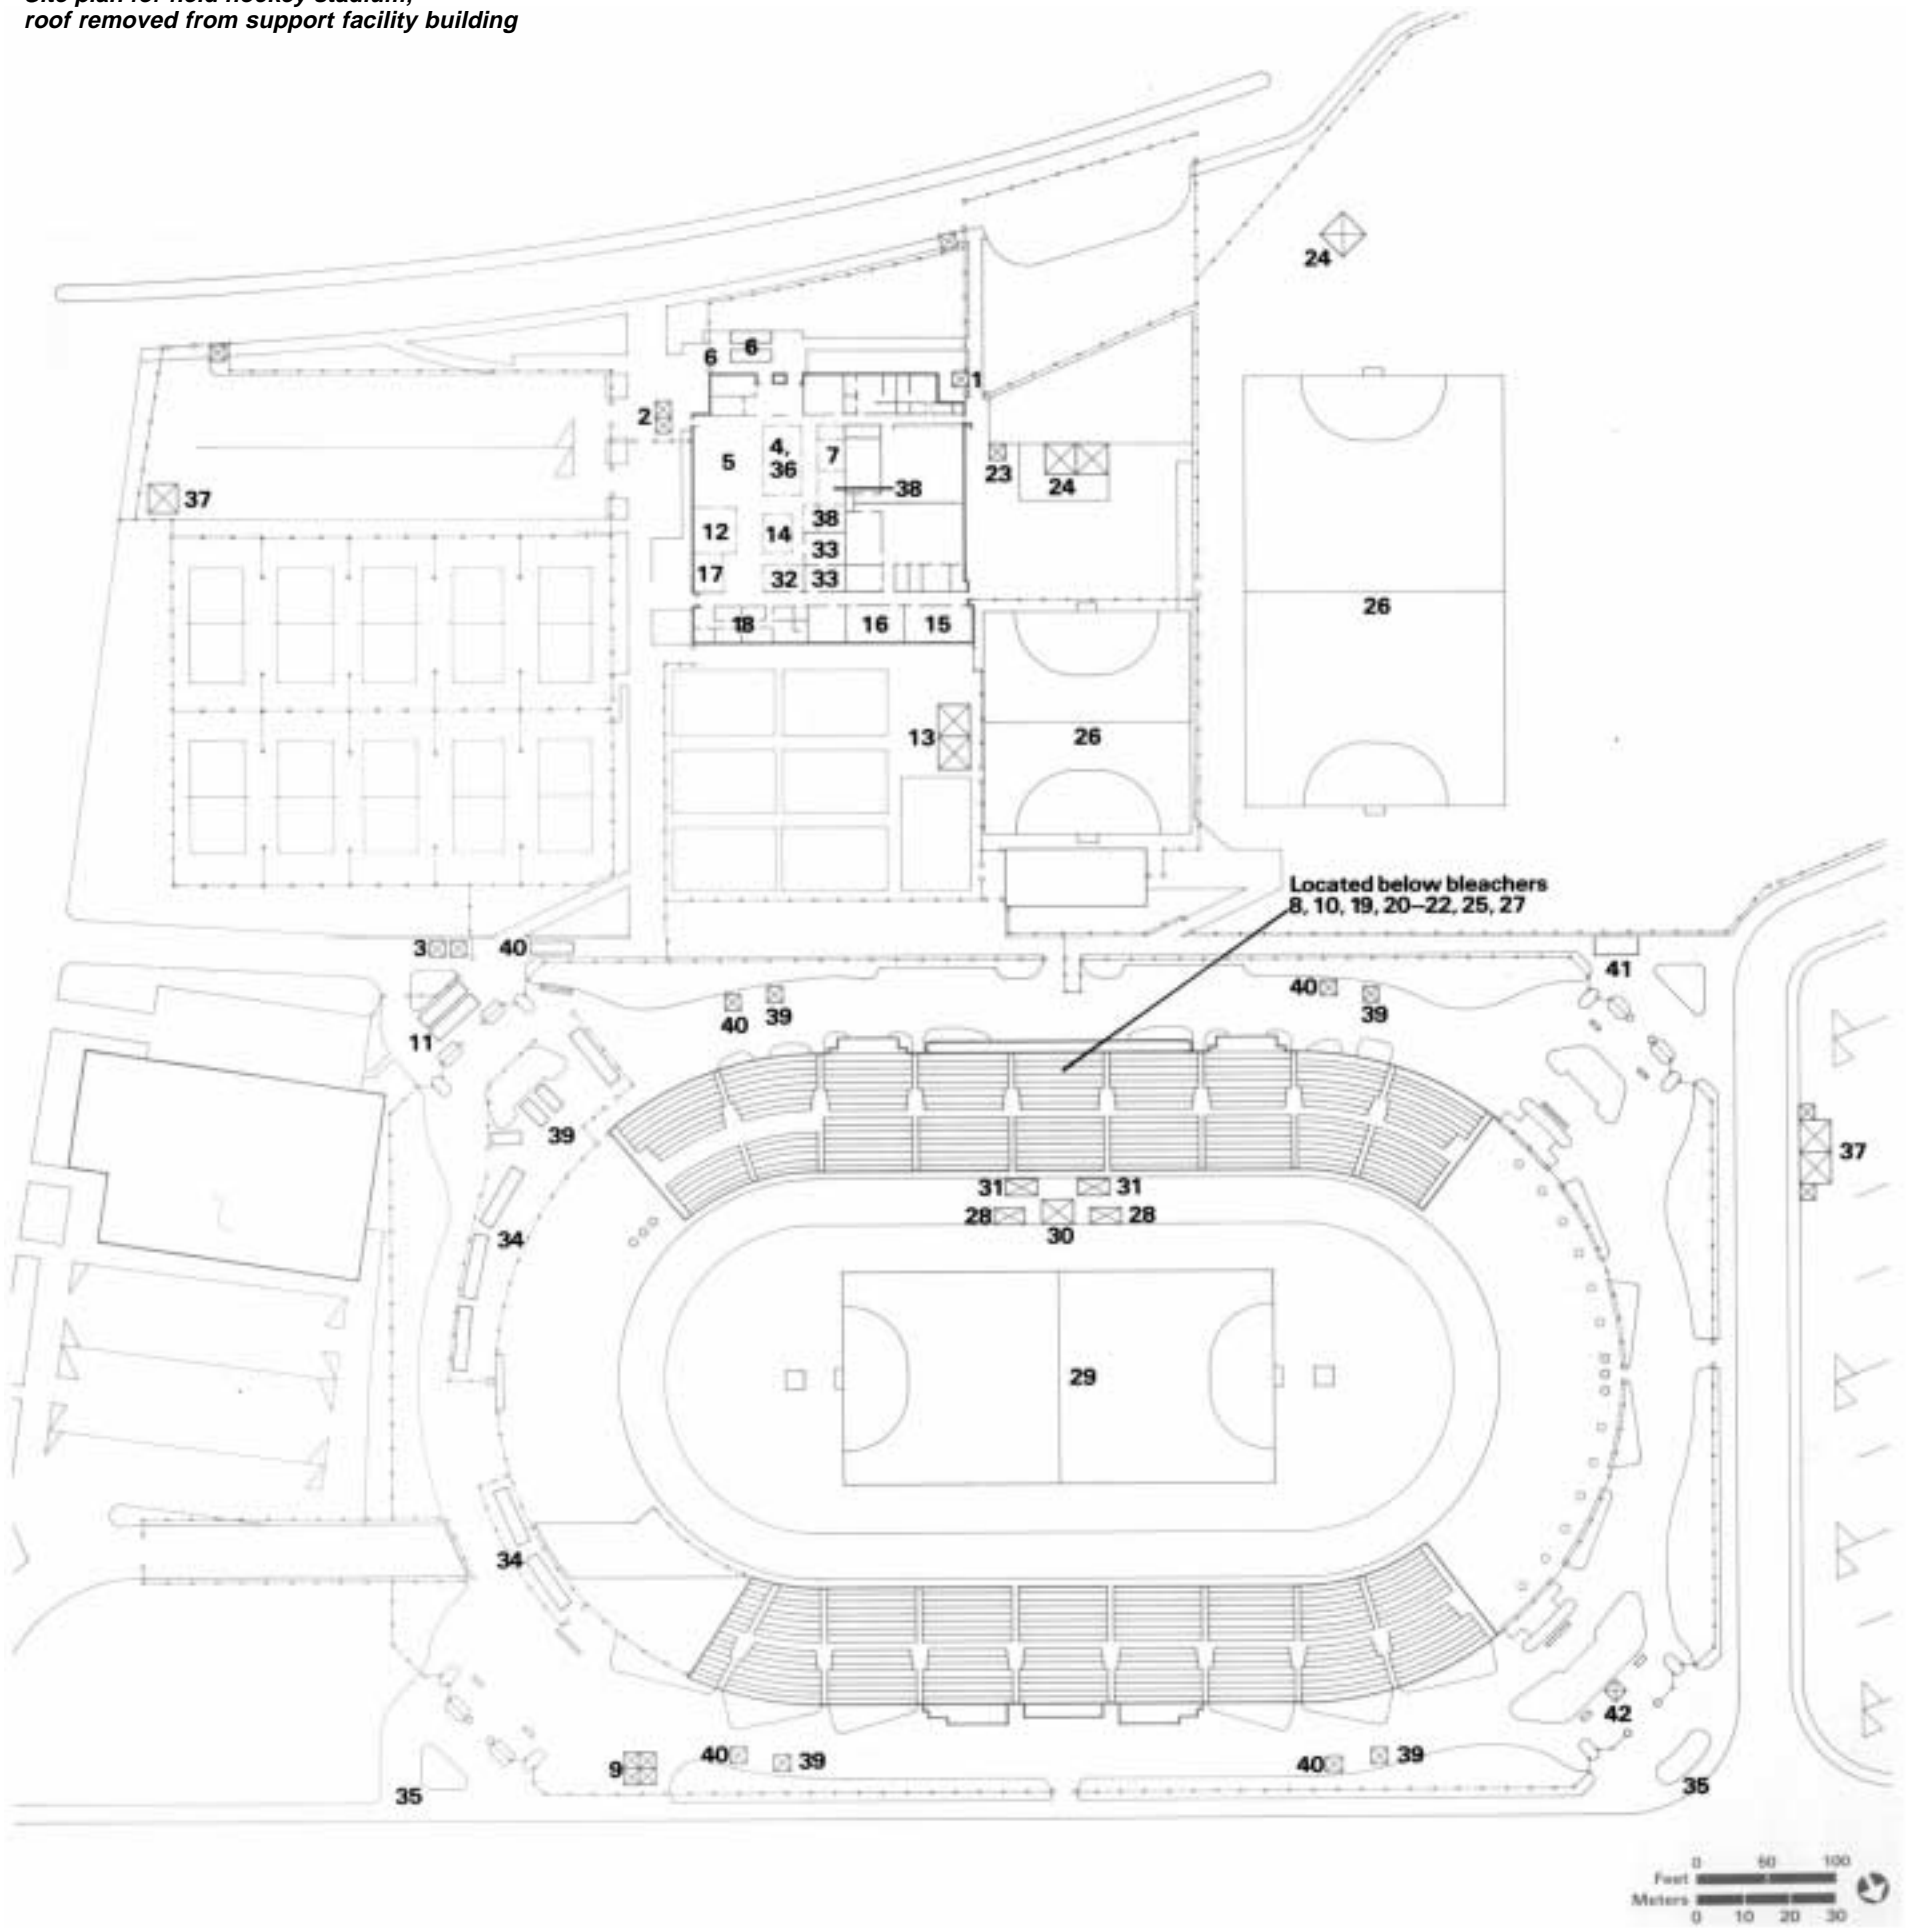

Restoration of the site after the Games was completed in one week. The layout of the hockey venue reflected few physical changes from original concepts formulated during the venue development process. The final design developed in working drawings remained essentially unchanged.

17

17 East Los Angeles College is a perfect site for the hockey competition with 22,000 seats and a near-by gymnasium for support facilities.

Site plan for field hockey stadium;
roof removed from support facility building

Architecture and Construction

Hockey								
Introduction	Competition in field hockey took place at East Los Angeles College, an existing outdoor stadium seating 22,000. Staff and athlete facilities were placed in an adjoining gymnasium.							
Department/Function	Space Use (in feet unless noted)	Notes						
Accreditation								
1 Athlete Entry	10 x 10 tent							
2 Guest Entry	10 x 20 tent	Olympic Family entry point.						
3 Staff Entry	10 x 20 tent	Staff entry, badge issue, storage and distribution point. Work area for 6.						
Food Service								
4 Administration	33 x 52	Office area for 10 shared with transportation and construction staff.						
5 Eating Area/Lounge	38 x 60	Carpeted lounge for 100, snack and beverage service, television.						
6 Storage	(2)8 x 40 trailers	Refrigerated food storage.						
6 Distribution	14 x 20	Food distribution area.						
Finance								
7 Audit, Cash Control	16 x 26	Office area for 12, shared with 3 ticketing staff.						
Health Service & Medical Control								
8 Doping Control	14 x 14	Processing/work area for 3, refrigerator; 16 x 18 Waiting area for 15, television, refrigerator; 8 x 16 Testing area with existing toilets and handwash facilities.						
9 Spectator First Aid	20 x 20 tent	Waiting area for 4, 2 treatment tables, 2 cots, ice container.						
10 Sports Medicine	16 x 18	Waiting area for 6, 2 treatment tables, staff of 6, water cooler, refrigerator, ice maker. (4) 18 x 20 Private work area for team trainers, 2 treatment tables and 6 chairs in each.						
Material Acquisition & Distribution								
11 Storage	(2)8 x 40 trailers							
Olympic Family Services								
12 Administration/Language Services	23 x 28	Office area for 9 and lounge for 7 interpreters.						
13 Hosting	20 x 40 tent	Outdoor hosting area for 30, television, beverage and snack service; area covered with artificial turf.						
			Personnel					
			14 Administration	24 x 26	Responsible for payroll timekeeping and staff scheduling. Work area for 2, lounge/waiting area for 26.			
			Press Operations					
			15 Interview Room	30 x 45	Seating for 40, elevated platform for 6. Staff offices for 6 within partitioned area in interview room.			
			Press Seating	140	40 positions with tables, 100 without tables.			
			16 Sub-Center	30 x 45	30 working places.			
			Security					
			17 Command Center	20 x 26	Office area for 8, conference table for 8.			
			Sports Administration Federation Services					
			18 FIH Offices	12 x 22	Office for FIH president.			
			18	10 x 12	Office for FIH secretary-general.			
			18	12 x 20	Office for 2 technical delegates.			
			18	14 x 16	Office for 2 secretary/support and lounge.			
			18	18 x 24	Conference room for 10.			
			19 Judges' Coordinator	12 x 18	Office for judges' coordinator and meeting area for 8.			
			20 Judges/Officials' Dressing Room	16 x 22	Dressing room, shower and locker for female officials. Dressing room, shower and locker for male officials.			
			21 Lounge	10 x 16	Lounge with tables and chairs for 8, television.			
			22 Umpire Coordinator	12 x 18	Office for umpire coordinator and meeting area for 8.			
			Athlete Services					
			23 Information/Check In	10 x 10 tent	Information board, table and chairs for 3 at entrance to warm-up area.			
			24 Lounge	20 x 40 tent and 20 x 20 tent	Lounge and eating areas for 60 athletes and 20 x 20 tent officials.			
			25 Team Meeting/Dressing Rooms	(4)20 x 28 and (2)36 x 38	Existing stadium locker/shower facilities (2) 36 x 38 subdivided to form 6 rooms for competing teams. 20 individual lockers in each. Separate gymnasium locker/shower facility used for athletes' training.			
			26 Warm-up	180 x 300	Grass field for warm-up and training.			
			26	150 x 150	Artificial surface half-field for training and warm-up.			
			Competition Management					
			27 Commissioner's Office	(2)9 x 11	Office for commissioner, deputy commissioner.			
			27	10 x 12	Office area for secretary/support.			
			27 Competition Staff	13 x 18	Work area for 8.			
			27 Conference Room	12 x 16	Conference room for 10, television.			
			Field of Play					
			28 Athlete Sidelines	(2)10 x 20 tents	Area dedicated to each team at sidelines, included bench seating for each team plus stick rack.			
			29 Field	180 x 300	Artificial surface field with nets and stakes surrounding.			
			30 Judges' Seating	20 x 20 tent	Elevated platform for 6 on side line, results input immediately behind judges.			
			31 Pre-Game Staging	(2)10 x 20 tents	Shade structure, standing room only at sidelines exit from locker facilities, one for each upcoming team.			
			Technology					
			32 Message Center	8 x 18	Communications and message receiving center for staff and officials.			
			Results	10 x 20	Results input, staff of 6, computers at sidelines in tent immediately behind judges.			
			33	18 x 26	Results-output photocopy and distribution area, waiting area for 6.			
			33 Staff Offices	22 x 25	Office for 10 sponsor/vendors and 3 LAOOC staff; radio distribution and recharging.			
			SwissTiming	2 x 6	Scoreboard, timing control table for 2 in existing press box.			
			Television					
			34 Trailer Compound	40 x 200	Telephone and television transmission and production vehicles.			
			Ticketing					
			35 Information	(2)10 x 10	Will-call and information points. No on-site ticket sales.			
			Transportation					
			36 Administration		Office area for 4, area shared with food service and construction (see Food Service).			
			37 Driver Lounge	20 x 20 tent	Waiting area for 40, beverage dispenser, television at athlete pick-up point.			
			37	20 x 40 tent and (2)10 x 10 tents	Rest area for 60, beverage dispenser, television.			
			Venue Operations					
			Conference Room		2 conference areas for 8 in area shared with Food Service, Construction and Transportation (see Food Service).			
			Construction/Maintenance	14 x 25	Office area for 5, area shared with Food Service and Transportation (see Food Service).			
			38 Venue Staff Offices	16 x 32	Office area for venue manager, 2 assistants, 4 guests.			
			Spectator Services					
			39 Food Service	(3)6 x 12 (4)10 x 10 tents	Food sales point. Temporary food service stands.			
			39	(2)8 x 30 trailers	Storage.			
			40 Novelty Stands	(4)10 x 10 tents	Novelty sales points to public.			
			40	8 x 30 trailer	Storage.			
			41 Post Office	12 x 44 trailer	Sales and service point for U.S. Postal Service.			
			Program Stands	(6)2x4	Portable program sales points.			
			42 Public Information	10 x 10 tent	General information point for spectators.			
			Public Seating	20,000				

7.02.7

Shooting: Prado Recreational Area

After an extensive search by the LAOOC, Prado Recreation Area in San Bernardino County was selected on 21 June 1983 as the shooting site for the Games. More than 75 locations had been considered, including Caesar's Palace in Las Vegas and Seal Beach Naval Weapons Station in Orange County. An agreement that would have put shooting events at a new, privately financed facility at Coal Canyon in Orange County was terminated by the LAOOC when continued construction and permit delays jeopardized the timely completion of the project. The 65-acre site near Chino was chosen because of its location, about a one-hour drive east of Los Angeles.

Although temporary construction permits and approvals were received, an essentially permanent shooting facility was constructed. Ground-breaking ceremonies for the only Olympic-class shooting site in the United States were held on 16 August 1983. The facility plan included: 80 shooting points at the 50-meter range for small bore rifle and free pistol, 70 points at the 10-meter range, eight points at the 25-meter rapid fire pistol range, three international skeet fields and three international trap bunkers.

The facility area in Prado Basin was raised three feet to an elevation of 515 feet above mean sea level, thus raising the facility above the level of the seasonal water storage pool with sufficient freeboard. Fill material was taken from the site itself and from a 35-acre borrow area nearby.

The 30-acre site was surrounded by chain link fencing and lighted at night for security reasons.

The buildings for the various shooting events, except trap and skeet, were constructed on concrete footings with steel frames and metal siding and roofing. The floors were built of dirt, gravel and grass. Laminated wood baffle walls were constructed as needed to adequately contain the 22-caliber rounds used in the various events. The air rifle/pistol range consisted of 70 positions in a building covering about 27,000 square feet; the pistol range consisted of 10 positions in a building covering about 22,500 square feet; the rifle range consisted of 80 positions in a building covering about 89,000 square feet; and the running boar competition (2 positions) was held in a building covering about 27,300 square feet. Skeet and trap facilities, consisting of three ranges, covered an area of approximately 99,000 square feet.

The skeet and trap facilities consisted of three Olympic trenches and three skeet fields, 90 meters by 300 meters each. The trap shooting-range systems contained a number of machines capable of automatic casting, allowing vertical and horizontal adjustment as needed. Each of the ranges had concrete bunkers. Beyond the firing radius area there was a 200-meter buffer area or "gunshot free zone."

Construction was completed in time to hold an Inaugural Championship at the Olympic shooting ranges from 9-16 April 1984 with shooters firing under Olympic rules. The venue was staffed and operated by the LAOOC as a dress rehearsal for the Games.

All ranges and buildings, range equipment and security fencing was donated to the County of San Bernardino at the conclusion of the shooting events.

Two sets of 750-seat temporary bleachers were erected for the Games at the clay target range and ceremonies area and occupied 26,250 square feet. A limited amount of asphalt paving was added, principally as walkways between the temporary buildings and for the handicapped parking area. Standing-room-only space was available for spectators at the indoor ranges.

A two-acre parking area was provided on-site to handle the 40 buses per day that transported participants and officials to the site. Temporary concession stands and displays occupied a portion of the shale-surfaced parking area. A second parking area, covering seven acres outside the security fence, was located east of Pomona Rincon Road and approximately 3,200 feet northwest of the shooting facility. A parking area with a compact dirt surface was designated for spectators and accommodated about 1,100 vehicles.

At the conclusion of the Games, the off-site parking area was returned to its former appearance and original contours as much as was practical. Bare cut surfaces were seeded in late fall of 1984 in order to control soil erosion.

Portable sanitary facilities were used, so no sewage connections were required. Permanent connections were made to existing electric lines located along Pomona Rincon Road. Potable water was obtained from an adjacent, existing well and brought to the site in portable containers.

The facility worked well for the Games. As a permanent legacy of the Games of the XXIIIrd Olympiad, the ranges are now available to be used for competition and training for future national and international shooting events.

18

18 Prado Recreational Area in Chino hosts Olympic competition on five ranges, including facilities for skeet/trap, pistols and rifle.

Plan of shooting venue

Shooting

Introduction	Competition in Olympic shooting took place at the Prado Recreational Area. The 50-acre site was complete with five separate ranges: air gun, free pistol and rifle (standard, prone and free), rapid fire pistol, running target and clay target (trap and skeet). The site was utilized for all competition and training in the sport. Facilities for athletes, spectators and venue management were all provided on a temporary basis and primarily through installation of tents and trailers.	
Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff/Guest Entry	10 x 10 tent	Staff entry, badge issue storage and distribution point. Work area for 12.
Food Service		
2 Eating Area/Lounge	20 x 60 tent	Lounge for 150, message receiving center.
3 Storage	(2)10 x 44 trailers	Food storage, athlete and staff lunches.
Finance		
Audit, Cash Control		Office area for 3 (see Security).
Health Service & Medical Control		
4 Doping Control/Sports Medicine	12 x 60 trailer	Doping: Waiting area for 15, television, refreshments; collection area with toilet and handwash facilities; registration and work area for 2. Sports Medicine: waiting area for 8; 4 treatment tables, ice maker; toilet and handwash facility.
5 Spectator First Aid	20 x 20	Waiting area for 10; 2 treatment tables, toilet and handwash facilities; water cooler, refrigerator.
Material Acquisition & Distribution		
Administration		Work area for 2 (see Venue Operations).
6 Storage	(3)12 x 60 trailers	
Olympic Family Services		
7 Hosting	12 x 60 trailer	Lounge and rest area for 32.
7	40 x 40 tent	Lounge for 28, waiting area for 14 interpreters.
Personnel		
Administration		Responsible for payroll timekeeping and staff scheduling (see Venue Operations).
Press Operations		
8 Interview Room	12 x 60 trailer	Seating for 20, staff work area for 8.
9 Press Lounge	40 x 40 tent	Table and chairs for 40, food and drink dispensers, bulletin board, water cooler.
9 Sub-Center	12 x 60 trailer	20 working places.

Security		
10 Command Center	12 x 60 trailer	Private office for 7, work area for 8, conference table for 12, table space for 4 finance staff and 2 ticketing staff.
Sports Administration Federation Services		
11 UIT Offices	12 x 60 trailer	Private office for UIT president and 4 guests, private office for secretary-general; jury room/officials lounge with table and chairs for 18. work space for 6.
12 Judges' Sunshade Athlete Services	(2)20 x 20 tents	Clay target range.
13 Equipment	10 x 45 trailer	Work space for gunsmith with 7 work benches (8-foot), 4 drill presses, 3 vises. Ammunition sales area.
13 Equipment Verification	40 x 40 tent	
14 Armory	30 x 120 tent	650 lockers, 5 dressing rooms.
15 Rest Area	60 x 60 and 40 x 40	Shade structure for athletes.
15	80 x 160	Shade structure with coolers, refreshments, lighting, cots, table and chairs. Private areas allocated to each NOC by team size. Typical area had 2-3 cots and desk with 2 chairs.
16 Information/Check In Competition Management	10 x 10 tent	Individual message boxes.
17 Commissioner's Office	12 x 60 trailer	Private 8 x 12 office for commissioner, office for competition director and assistant, work area for UIT technical delegates, 7 staff.
Field of Play		
18 Rifle and Free Pistol Range	25 meter	80 targets for competition in free pistol, prone, free and standard rifle.
19 Rapid Fire Pistol Range	25 meter	8 units of 5 silhouette targets.
20 Running Game Range	50 meter	2 running game targets
21 Clay Target Range		3 Olympic trenches and 3 skeet fields combined.
22 Air Gun Range	10 meter	Enclosed range with climate control, 70 positions.

Technology		
23 Results	60 x 80 tent	Results input and classification area, tables and chairs for 64, 12 x 12 protest room for 14, private jury room for 10, target storage area.
24 Staff Offices	12 x 60 trailer	Work area for 8; results output and photocopy center: radio recharging and distribution center, sponsor work area.
Swiss Timing	6 x 6	Timing control table for 2 at each range (see Venue Operations: Construction).
25 Telecommunications	10 x 45 trailer	Venue switchboard and telephone operations center.
26	8 x 25 trailer	Emergency generator.
Television		
27 Trailer Compound	60 x 90	Telephone and television production and transmission vehicles.
Ticketing		
Administration		Office area for 2 (see Security).
28 Information	8 x 8 tent	General spectator information and will call.
Transportation Administration		
29 Driver Lounge	20 x 20 tent	Waiting area for 14
Venue Operations		
30 Construction	12 x 60 trailer	Office area for 5 maintenance and construction staff. Work area for 2 material supply, Swiss Timing and Speith (target supply) staff.
31 Venue Staff Offices	12 x 60 trailer	Office for venue manager and assistant. Staff work area and table space for 10, 2 personnel staff.
32 Food Service	(2)10 x 30 tents	Food sales points for general public.
32	100 x 120	Spectator shade and tables and eating area for 600.
33 Novelty Stands	10 x 10 tents	Novelty sales point.
33	12 x 60 trailers	Storage.
33	(4)10 x 10 tents	Shooting and range equipment sales. Staffed by manufacturers.
34 Post Office	14 x 32	Sales and service point for U.S. Postal Service.
Program Stands	(2)2 x 4	Portable sales points for programs.
35 Public Information	8 x 8 tent	General spectator information point.
Public Seating	1,500 3,500	Bleachers. Standing room.

Swimming: Swim Stadium

The swimming, synchronized swimming and diving events of the Games of the XXIIIrd Olympiad were held at the new Swim Stadium located on the campus of the University of Southern California. Announced on 7 August 1980, construction commenced on 30 December 1980 with facilities dedicated on 7 July 1983. The swimming and diving pools, funded by a grant from the McDonald's Olympic Trust, were built especially for the 1984 Games but were designed as a permanent facility.

The swimming pool is 52.59 meters in length and 22.885 meters wide. It is divided into eight swimming lanes of 2.4892 meters with perforated stainless-steel bulkheads at each end. The bulkheads are moveable to adjust the length of the pool to the 50 meters for swimming competition and to greater or lesser lengths, as needed, for various other uses. The bulkheads are installed with timing-touch plates, and their perforated design provides wave control for maximum pool efficiency. Water depth varies from 2 meters to 3.96 meters.

The first use of the swimming facilities was in 1983 when swimming and diving competition was held 14-17 July. Synchronized swimming events took place 5-7 August 1983. Accuracy of the design and engineering was proven during this first meet in the newly constructed pool when a world record was set in the men's 800-meter freestyle. Eleven world records in swimming were set during the Games.

The diving pool is 22.885 meters square. Water depth varies from 2 meters to 5.18 meters and a diving tower was installed with platforms at 5 meters, 7.5 meters and 10 meters. The surface of each platform was covered with Sportflex material from Mondo Rubber. Two permanent 3-meter diving boards were installed, along with two temporary 3-meter boards which were replaced by 1-meter boards at the conclusion of the Olympic Games. A compressed-air bubbling machine provides 200 pounds per square inch of air pressure with a work volume of 60 cubic feet per second to sparging units in the pool to facilitate surface visibility for the divers.

Underwater windows and viewing rooms were constructed for both the swimming and diving pools for use by television crews. Access was provided through manhole entrances on the deck. Underwater sound amplification was provided in both pools. A results scoreboard was permanently installed at the site and augmented by a second electronic results board during the Games. All timing devices and scoreboards were the responsibility of Swiss Timing. 17,105 bleacher-type temporary seats were erected for use during the Games.

The swim venue was located immediately adjacent to the Olympic village at USC. Parking was limited to the 2,000 spaces provided by the university in a parking structure located next to the swimming stadium, so spectators were encouraged to use public transportation whenever possible. All staff were transported by bus from a central parking location approximately five miles away.

The transformation of the swim stadium to the swim venue for Olympic competition was done in conjunction with work done throughout the Exposition Park/University of Southern California area. Actual completion of all of the Look design and the extensive temporary construction required for television coverage was completed one day prior to competition.

The spectator entry to the venue was through an arch constructed on Vermont Boulevard just south of Jefferson Boulevard. The distance from the entrance of the venue to the seating areas was made to appear shorter than it actually was through the placement of concession stands, tented shaded areas and a long reflecting pool. Since the venue was actually a temporary facility from the standpoint of spectator amenities, 128 portable toilets were placed behind the stands on both sides of the pools. Twelve of these were designed for the handicapped.

Over 36,000 square feet of tented area was provided for the operation of the venue including Olympic Family, FINA, LAOOC and athlete warm-up and rest areas. One hundred eighteen tents of various sizes were used.

The facility proved fully satisfactory for Olympic use and will be well used by area residents and USC students for years to come. During the Games, the simply arranged support facilities were sufficient to allow the work of the competition and venue staffs to be carried out in a pleasant, colorful atmosphere.

19

20

19 University of Southern California is the site of swimming/diving and a village during the Games. Support facilities for the competition are provided through the use of temporary tenting.

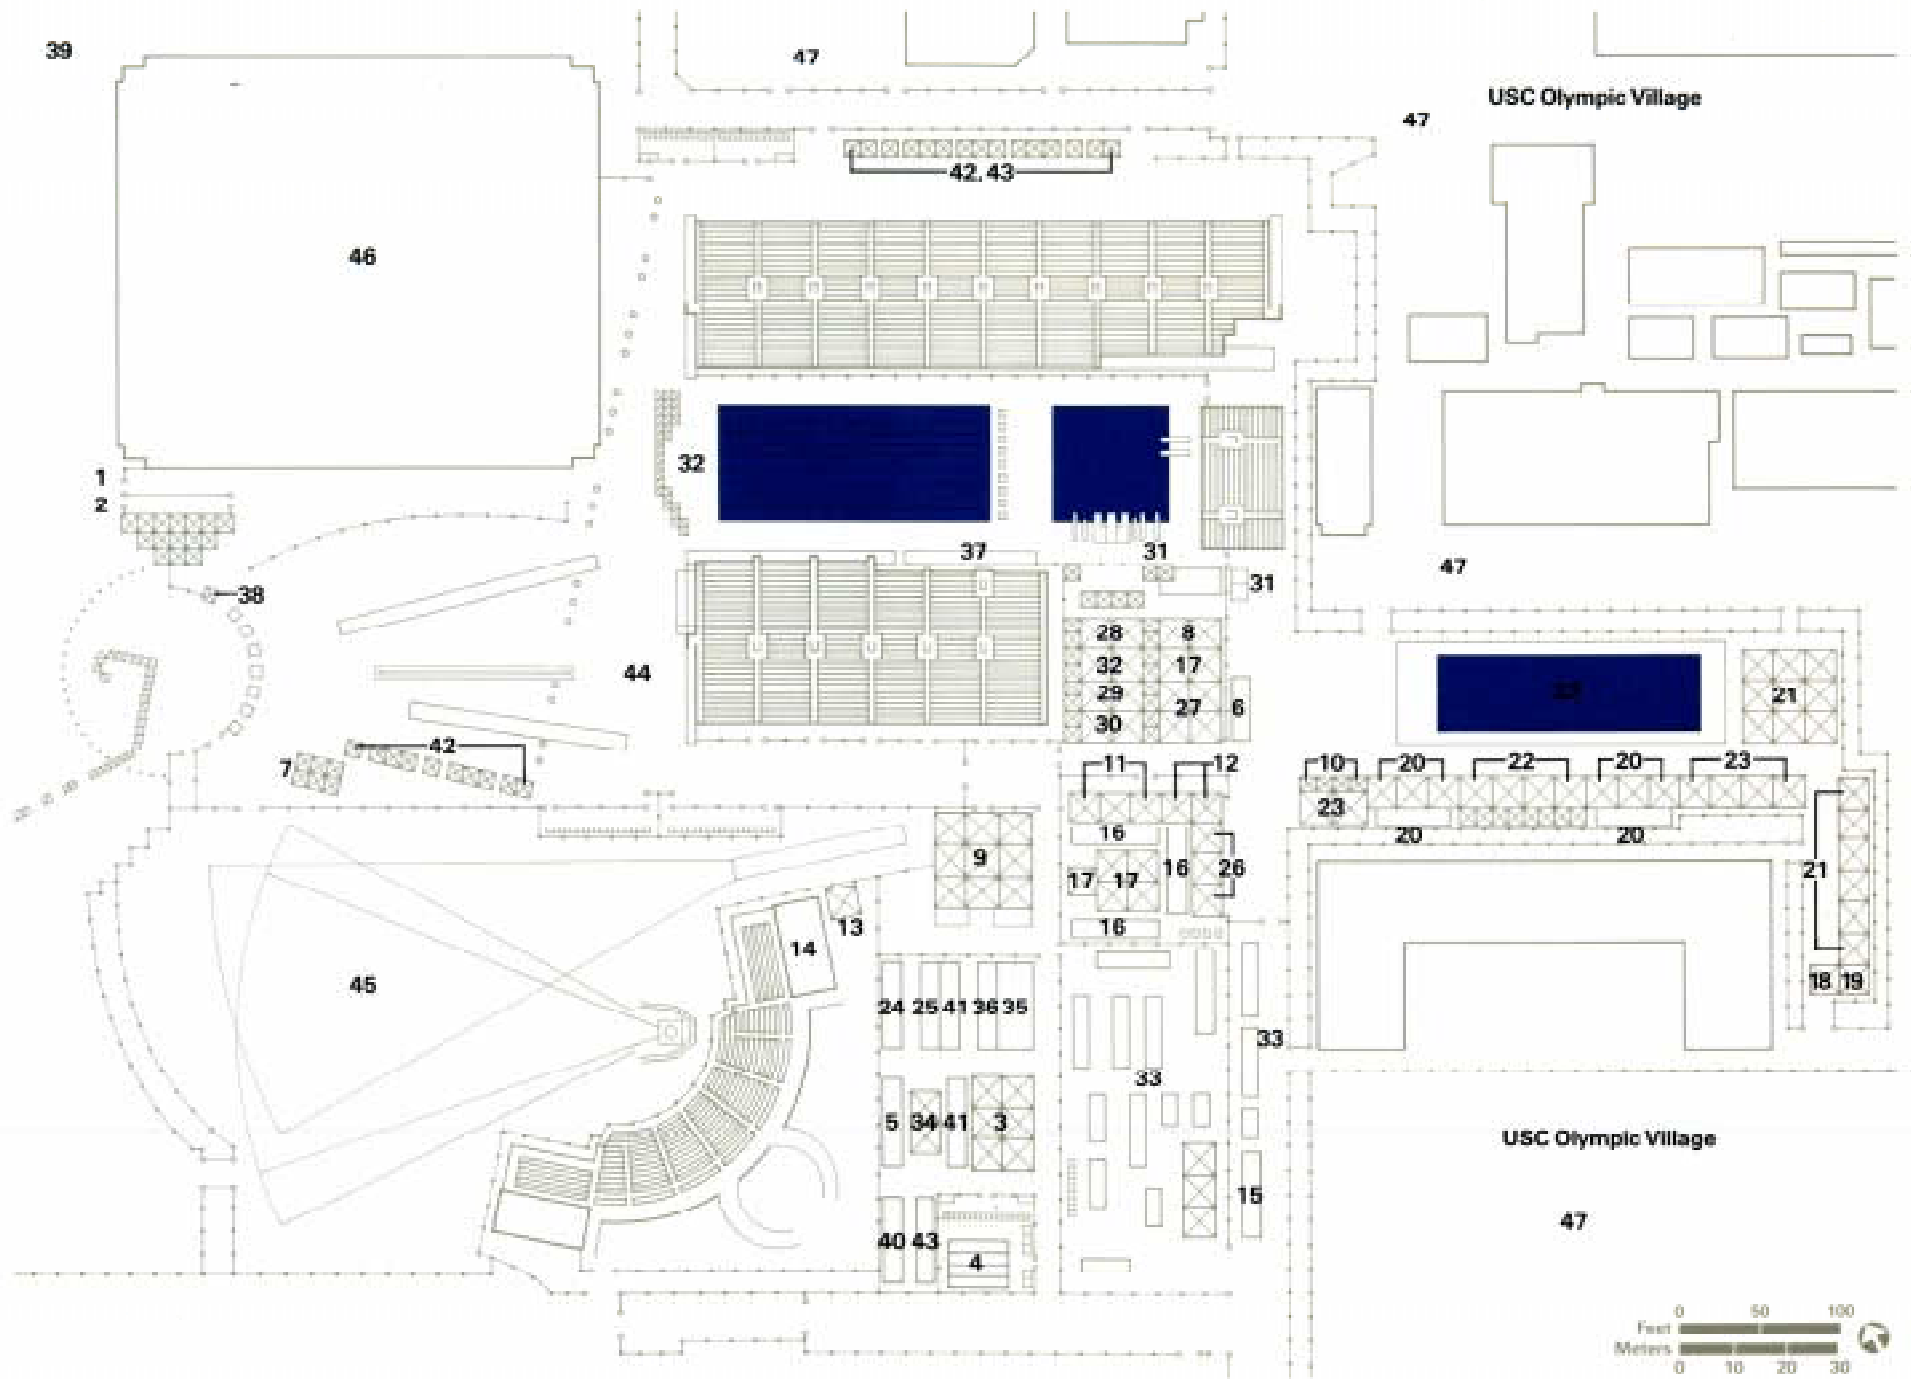

20 The specially-constructed pool at USC provided a perfect summer setting for the swimming competition and provides the university with a lasting legacy for the community.

21 Use of the Look colors dresses up the diving area, including the boiler exhaust located behind the diving tower.

Site plan of swimming and diving venue

Architecture and Construction

Swimming

Department/ Function	Space Use (in feet unless noted)	Notes
Introduction		
The Olympic Swim stadium, an outdoor facility seating 16,000, was located adjacent to the Olympic village at USC. All athlete, official, staff and spectator facilities were installed on a temporary basis utilizing tents and trailers. Parking and press facilities were shared with the village. Because the village bounded the swimming venue on three sides, spectator entry was limited to only one side of the venue.		
Accreditation		
1 Guest Entry	10 x 20 tent	Olympic Family members entry point.
2 Staff Entry	10 x 20 tent	Staff entry, badge issue, storage and distribution point. Work area for 8.
Food Service		
Administration		
3 Eating Area/ Lounge	40 x 60 tent	Table and chairs for 190, television, 250 individual lockers.
4 Storage and Distribution	(4)8 x 40 trailers	Refrigerated and dry storage.
Finance		
5 Audit, Cash Control	12 x 60 trailer	Private office for 3, work area for 7. Work area for staff in: Ticketing, venue staff (3), Personnel (3).
Health Service		
6 Doping Control	12 x 60 trailer	Waiting area for 10, refrigerator, television; processing area for 2; testing area with toilet and handwash facilities.
7 Spectator First Aid	20 x 60 tent	Observation area for 5; treatment area with 2 tables; storage area, work area for 4, handwash facilities.
8 Sports Medicine	20 x 40 tent	Waiting area for 10; refrigerator, area with 3 treatment tables, 4 massage tables, television and ice machine.
Material Acquisition & Distribution		
Administration Storage	(3)8 x 40 trailers	Office for 1 (see Venue Operations: Construction).
Olympic Family Services		
Administration		
9 Hosting	60 x 60 tent	Table and chairs for 80; television, snack and beverage service, lounge for 60.
10 Language Services	10 x 40 tent	Working and waiting area for 20, near athlete warm-up area.
Personnel		
Administration		
Responsible for payroll, timekeeping and staff scheduling. Private office for 3 (see Finance).		
Press Operations		
11 Interview Room	20 x 60 tent	80 seats for press. Podium, microphones, lighting for television.
12 Mixed Zone	20 x 40 tent	Informal meeting area for press and athletes; 4-foot-high fence.
Press Seating	489	225 seats with table, 264 without.
13 Staff Offices	20 x 20 tent	Work area for 8.
14 Sub-Center		100 working spaces in Brooks Pavilion, an adjacent baseball stadium, 35 telephones plus telex and telecopier facilities.
Security		
15 Command Center	12 x 60 trailer	2 private offices for 7 each, open work area for 8.
Sports Administration		
16 FINA Offices	12 x 60 trailer	FINA secretariat offices; 2 private offices, work space for 5.
16	12 x 60 trailer	2 separate conference areas for 16 for FINA Technical Diving Committee and FINA Technical Swimming Committee.
16	12 x 60 trailer	FINA medical and synchronized swimming share conference room for 12; FINA Bureau assigned conference room for 24.
17 FINA Lounge	40 x 40 tent	Table and chairs for 40, television, food and beverage service.
Athlete Services-Warm-Up Area		
18 Check-In	10 x 20 tent	Athlete check-in prior to competition and training schedule.
19 Information	10 x 10 tent	65 individual message boxes, bulletin board, staff of 3.
20 Locker/ Showers	(2)20 x 60 tents	One each for men and women, with 150 individual lockers.
	(2)12 x 60 trailers	One each for men and women, portable facility with 10 showers.
21 Lounge	60 x 60 tent 20 x 120 tent	Rest area with 60 cots. Rest area with 60 cots.
22 Toilet Facilities	1,000 square feet	30 temporary toilets in warm-up and storage area.
23 Warm-up Area	50m	Warm-up pool with 6 lanes.
23	20 x 60 tent	Stretching and massage area with 28 tables.
23	20 x 40 tent	30 tables, 60 chairs, make-up mirrors for synchronized swimmers.
Competition Management		
24 Competition Staff	12 x 60 trailer	Offices for competition director in each discipline: diving, swimming, synchronized.
25 Conference Room	12 x 60 trailer	Conference room for 20; competition support facilities, copier, work area for training facilities manager, 4 support staff.
Field of Play/Pool Deck and Staging Area		
26 Athlete Lounge	20 x 60	Waiting area with table and chairs for 60, lounge for 40, television.
27 Equipment Control	40 x 40 tent	Swimming equipment storage, start blocks, video cameras, diving equipment storage. Chairs, umbrellas and synchronized swimming platform.
28 Holding Area	20 x 20 tent	Pre-event holding area for 40, refreshments, radio, clothes baskets; adjacent to pool deck.
29	20 x 40 tent	Post-event holding area for 10.
30	20 x 40 tent	ABC interview area, 67 chairs.
Judges' Seating	(2)12 x 12	Platforms for each of 7 diving judges.
31 Stretching Area	5 x 10	Showers primarily for divers behind diving tower; 2 rinse-off showers and spa in staging area.
32 Ceremonies	20 x 40	Awards ceremony staging area.
Television		
33 Trailer compound	120 x 220	Telephone and television transmission and production vehicles.
Technology		
34 Message Center	20 x 40 tent	Communications and message receiving center for staff and officials.
35 Results	24 x 60 trailer	Results output, photocopy and distribution center. Waiting area for 10; 36-foot sorting tables, technicians' work area for 3, 11 photocopiers.
	6 x 18	Results input table on pool deck.
36 Staff offices	12 x 60 trailer	Office area for 11 sponsor/vendors; 12 x 24 storage area; 12 x 24 office for 3 LAOOC staff, radio recharging and distribution center.
37 Swiss Timing	8 x 29	Enclosed timing and scoreboard control room on pool deck, 11 staff.
37	8 x 10	Video control room, 4
	15 x 15	Storage areas.
Ticketing		
Administration		
38 Information	8 x 8 tent	Office area for 1 (see Finance). Public information and will-call point. Noon-site ticket sales
Transportation		
39 Administration	(2)12 60 trailer	Private office for transportation manager and 2 protocol staff. Work area for 6 food service staff.
39 Driver Lounge	20 x 20 tent	Lounge for 120.
Venue Operations		
40 Construction	12 x 60 trailer	Private offices for construction manager and materiel supply coordinator, work area for 6.
41 Venue staff offices	(2)12 x 60 trailer	Office for venue director, 2 assistants; office for commissioner, television. Office area for support staff.
Spectator Services		
42 Food service	(5)10 x 30 tents	Food and beverage sales points for public.
43 Novelty stands	(3)10 x 20 tents	Novelty sales point for public.
Post office	24 x 26 trailer	Sales and service point for U.S. Postal Service.
Program stands	(6)2 x 4	Portable sales points for programs.
44 Public information	10 x 10 tent	General public information point.
Public seating	16,500	84 temporary toilets, 70 handicapped.
Other		
45 Athletics training		Training facility for athletes competing in athletics. Not related to or part of the swimming facility.
46 Parking		Parking structure for USC Village residents, staff, motorpool.
47 Village		Interior perimeter of USC Olympic Village.

7.02.9

UCLA: Administration building

The LAOOC, in conjunction with the University of California, Los Angeles, constructed an on-campus, three-story, 44-foot-high office building in the Westwood area of Los Angeles, California. The LAOOC contributed approximately \$3.3 million dollars for construction on existing university-owned land. The LAOOC had use of the facility from its opening on 9 August 1982 through mid-1985 when it was turned over to the university for its use as administrative offices.

The office building was ideally suited to the ever-changing needs of the LAOOC. It had a well-planned interior that featured modular office units flexible enough to be reshaped in alternative office configurations. From its opening until the LAOOC moved to larger facilities in July 1983, this building served as the primary operations area for the LAOOC. After the move, the Westwood building served as a staffing center and Ceremonies staff offices.

Construction began on the facility in April 1981 and was completed 16 months later. By contract, the university was given design control over the structure.

In October 1984, in honor of the accomplishments of the president of the LAOOC, the Board of Regents of the University of California named the building as the Peter V. Ueberroth Olympic Office Building.

7.02.10

USC: Dining hall (King Olympic Hall)

A permanent dining hall facility was constructed by the LAOOC at the University of Southern California. The facility was constructed and equipped to accommodate Olympic food service operations and for use thereafter by the university on a permanent basis. The dining facility was the only concrete and steel construction built by the LAOOC at the University of Southern California.

The dining facility itself was a separate two-story brick building located in the USC Village, adjacent to the swim venue. The facility was designed for separate food service operations on both floors. Hot and cold lines, beverage service and seating areas for the athletes were located on both levels. The facility planning and construction were completed prior to the boycott and in practice, the second-level food service amenities were not utilized by athletes and was converted to a staff lounge. After the Games, the second floor of the dining facility was converted to a pizza parlor for use by USC students and faculty.

The dining facility was constructed to service 900 people simultaneously and during the Games, primarily buffet-style service was offered. Storage containers placed outside the kitchen held food and service goods. The dining facility serviced three athlete housing pods, although athletes were free to dine in the location of their choice.

The dining facility has been renamed the Frank L. King Olympic Hall, commemorating a deceased chairman of the board of First Interstate Bank. The \$3 million dining facility was paid for by the LAOOC, \$1 million of which was credited to the LAOOC as partial payment for rental of the USC campus. The facility was left for the university as a gift following the Games.

7.02.11

Youth sports facilities

Permanent sport facilities built by the LAOOC in association with their youth sports program focused primarily on two underdeveloped sports in the Southern California area.

Two archery ranges were constructed in association with the Easton Aluminum Company for youth participation at Cheviot Hills Recreation Center in West Los Angeles and at Woodley Park in the San Fernando Valley section of Los Angeles.

In association with the Maruchan Company, the LAOOC constructed eight individual judo floors at various Boys' Clubs, recreation centers and private judo clubs in the Los Angeles area. These judo floors were heavily utilized for the LAOOC/Maruchan Olympic Judo Youth program which took place in 1983 and 1984.

The other permanent facility constructed by the LAOOC for youth sports/participation was a gymnasium floor and scoreboard at a Boys' Club in South Central Los Angeles. Heavy commitments to youth sports by the LAOOC took the form of training programs and sports equipment, in addition to the construction of some new facilities.

22

22 The Peter V. Ueberroth Olympic Office Building provides three stories of space for LAOOC use and later for use by the University of California, Los Angeles.

7.03 Construction of temporary facilities at existing sites

7.03.1 Archery

Both the XXXIInd World Archery Championships and the archery competition of the Games of the XXIIIrd Olympiad were hosted by the LAOOC and held at El Dorado Park, an existing range built in 1972 by the city of Long Beach Recreation Department. Transforming the existing park into an Olympic venue for more than 100 archers and 4,000 spectators required the design and construction of both permanent and temporary facilities.

In January 1982, a landscape architecture firm was retained by the LAOOC to develop the master plan for the site in preparation for the XXXIInd World Archery Championships to be held in October 1983. A month later, meetings were held with Federation Internationale de Tir a l'Arc (FITA) President Francesco Gnecci-Ruscione and Canadian architect Don M. Lovo to receive input for the design and planning of the venue. In the proposed master plan of the park, the elements of the site were all contained within one area, except for a parking lot and the practice range which were adjacent to the competition range. All other facilities were south of the competition shooting line. The major challenge of the planning process was to adapt the entrances to accommodate Olympic-generated traffic. Site ingress and egress for spectators required special identification and directional signs. The city of Long Beach assisted the LAOOC by controlling spectator traffic and parking. LAOOC traffic was separated from spectator traffic by physical location and the timing of arrivals and departures.

The overall master plan used for the 1983 World Championships was efficient. On-site traffic flow was simple. It had direct delivery routes and ample parking adjacent to the venue. The archers were able to concentrate without distraction, because the venue was situated in a park, secluded from urban noises.

During the latter part of 1983, the venue plan was modified to accommodate a larger number of spectators and to provide additional office and support operations space for venue staff, federation officials and the media. Space planning and programming and a construction budget were completed and the construction manager, signage manager and Look designer developed acquisition, fabrication and construction schedules. The construction manager was ultimately responsible for on-site construction supervision.

The existing practice range and the two scoreboard structures on the east and west edges of the competition range required refurbishing prior to the Games. Changes were made in the perimeter security fence to create a ceremonial gateway to the venue. A colonnade was created as part of the Look to connect spectator parking area to spectator entry, making the walking distance from the remote parking lot appear shorter than it actually was.

Temporary facilities were used for the field of play and athlete and venue support areas. The platform for the director of shooting was an elevated 12-foot-square modular unit built off-site and set in place. An 18-inch valance was attached to the roof of the sunshade to better protect the director of shooting and the technicians from the sun. Competing athletes sat under canopy-type sun shelters that were 8 feet square and 7 feet high. Forty-eight individual sections (27 on the men's range and 21 on the women's range) were utilized to adequately provide shelter for the athletes. The shade structures were designed to move with the sun throughout competition, but not to block spectator view. Separate shade tents for the scorers were placed at 20 meters and 40 meters from the shooting line and 20 meters from the field.

The field of play consisted of 22 men's targets and 16 women's targets, accurately laid out (plus or minus one centimeter at 90 meters and less at the closer distances) and well suited to international competition. Each lane was six meters wide with up to two targets per lane. Each lane was painted with a lane-stripping device. The semi-permanent floor-stripping paint was applied three days before the event and lasted through the competition. The shooting line and television lines needed a second painting. Great care was taken to see that the field was watered properly and sprinklers adjusted correctly to adequately cover the entire field of play. Each day the field crew set traps and covered the dirt mounds made by gophers during the night and early morning.

Minimal support facilities were required for the archers on site. Tents were erected for use as locker and storage facilities and as lounge and rest areas. Equipment repair and storage were provided in a 30-foot trailer. Athlete food services were provided in a large tented area shaded by existing trees. Sports medicine and doping control facilities were located in separate 44-foot trailers and accessible to the handicapped by electric lifts.

23

Eight trailers were arranged in one area for use by the Venue Management (2), Technology, Construction and Security departments as well as FITA, judges/officials and the commissioner. Trailer configurations included the use of adjoining tents for meetings and receptions. A wooden floor was built in each tent to cover tree roots and uneven ground.

The press occupied a tent located next to the operations area in a separate and secured area. A compound used by the host broadcaster and General Telephone (GTE) was screened from the range by landscaping. A shade structure was installed to cover the GTE advertising on a trailer located inside the compound.

Temporary bleacher seating for 4,000 spectators was provided behind the shooting line. A "main street" was created behind the bleachers offering spectators an opportunity to purchase food and novelty concessions. All concessions were housed in two 10-foot by 30-foot modular tents with subflooring that provided six service lines each. Public restrooms utilizing portable toilets were located in an area among existing trees. The fencing around the restrooms was covered with Look fabric. First aid and public information tents were readily visible and conveniently placed at the site entry corridor.

Included as part of construction was installation of Look items, which incorporated the Festive Federalism design and color scheme into the venue through the use of decorative tents, sonotubes, flowers, signs and banners. An archway scaffold which was painted magenta and contained spheres, banners, stars, glitter boards and an archery pictogram provided a landmark entry to the venue. Fences were covered with decorative and sport-specific fabric and the bleachers were wrapped in fabric and highlighted with banners and pennants.

The construction contract terms required that the general contractor furnish all labor, material, equipment, supervision and other items necessary for the general construction of the venue. Work commenced 28 May 1984 and the construction phase was completed 7 August 1984.

During the course of construction, the original scope of work was expanded to include flooring for the Olympic Family lounge tent and the construction of a camera blind to house television cameras. The work was completed by the general contractor at the request of venue management and the LAOOC construction manager. The contractor remained available throughout the event.

Following competition, the general contractor returned to the site to begin restoration of the venue and to assist in tear-down. Flagpoles were removed, although the foundations remained per an agreement with the city. Ballards were reinstalled, the shooting director's stand was removed and irrigation systems restored. In certain areas, the parking lot was resurfaced and the lawn reseeded.

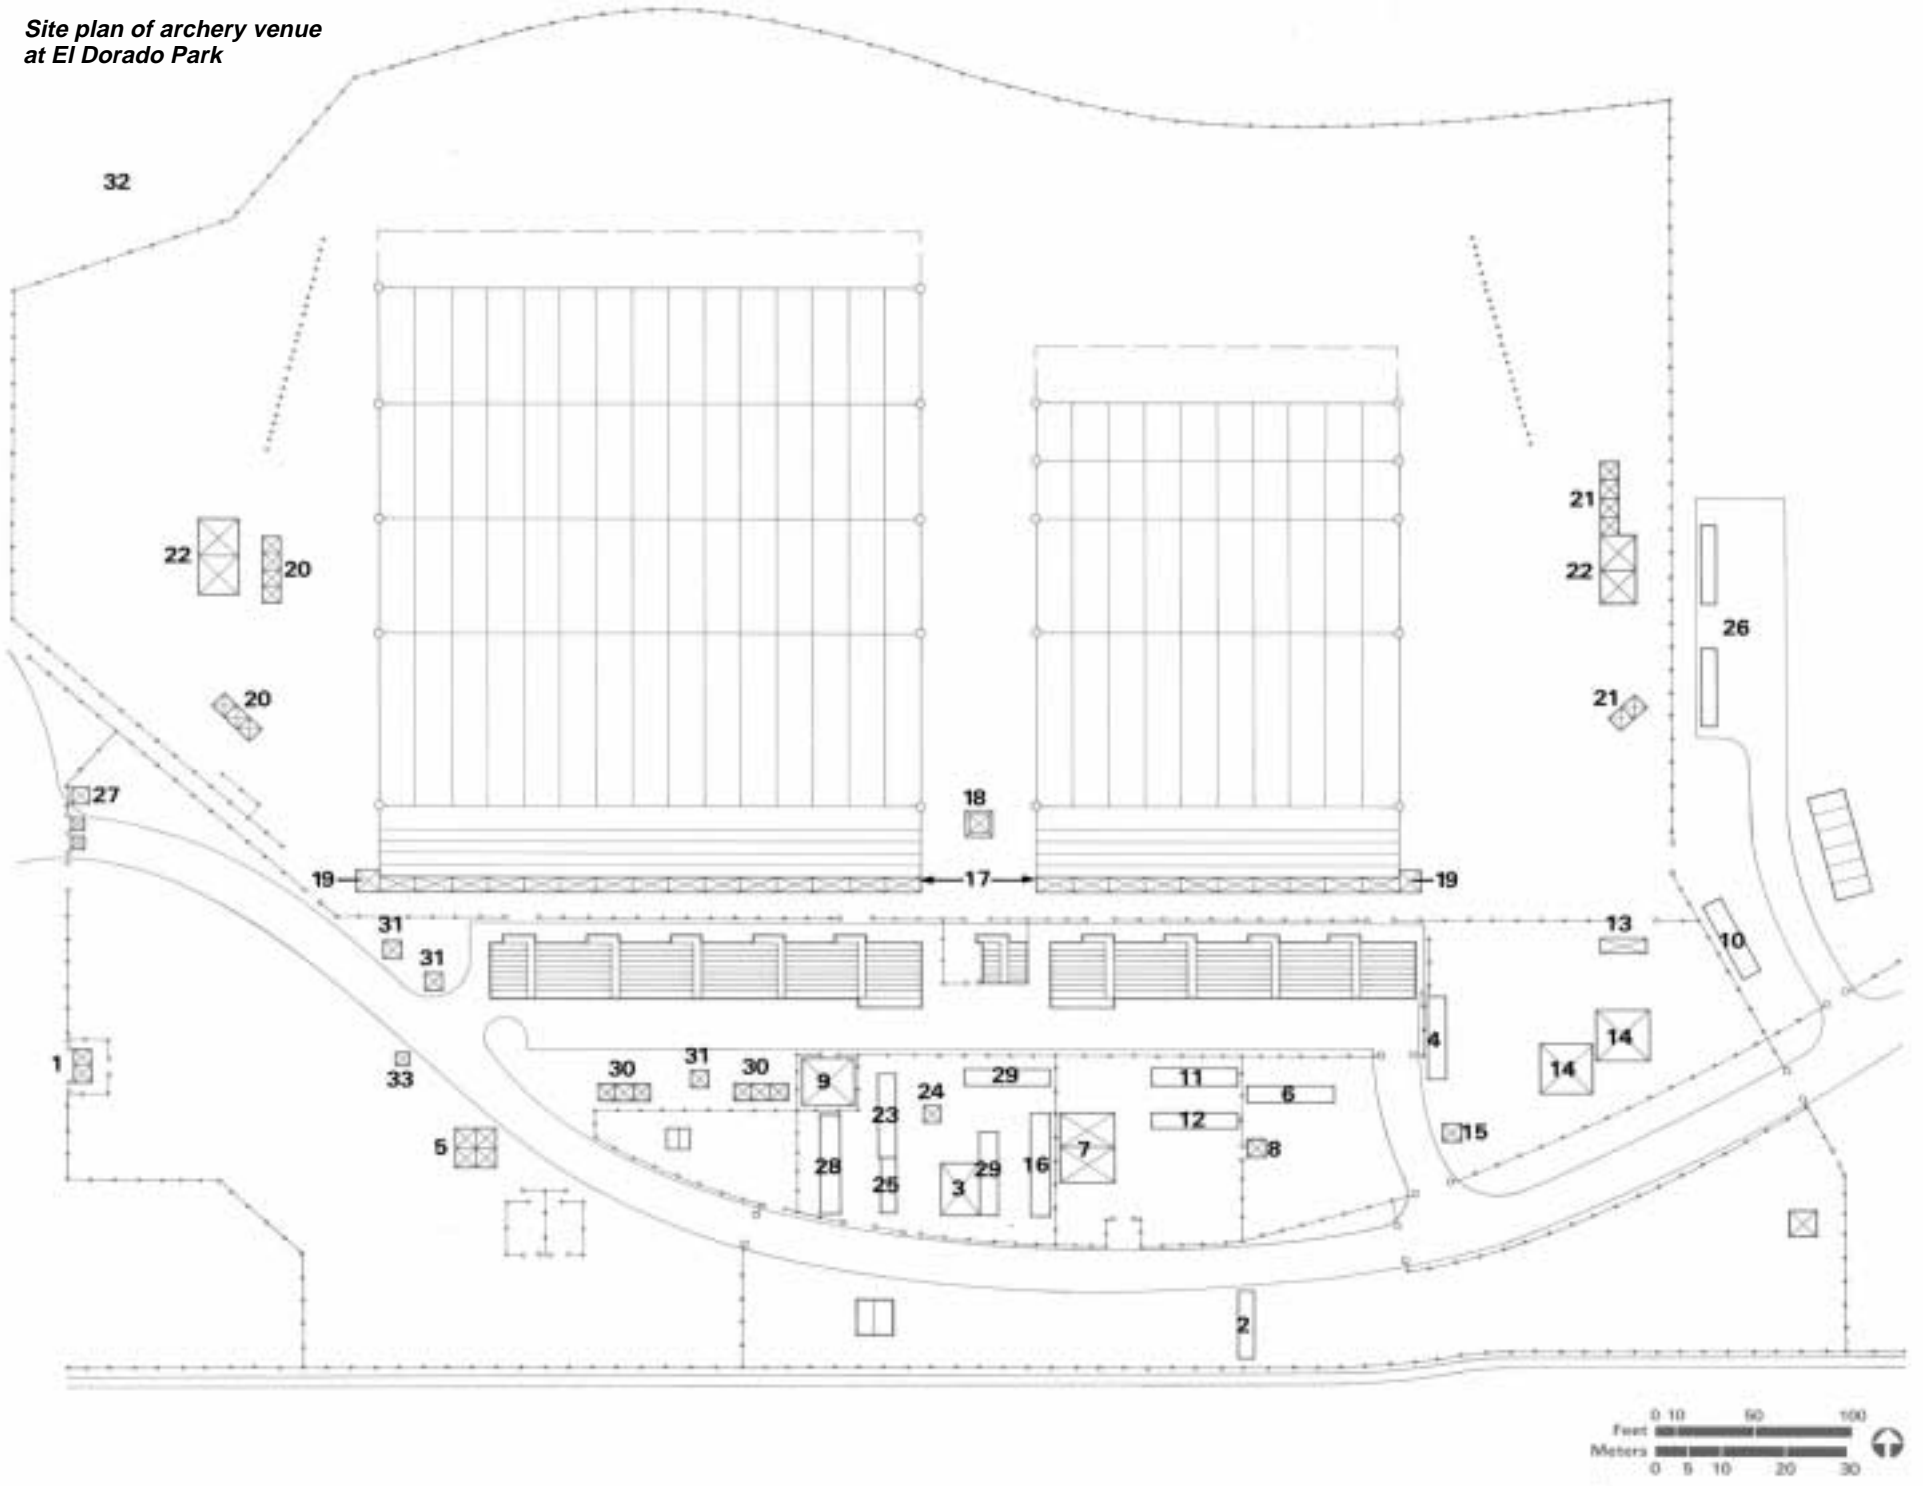

The archery competition of the Games of the XXIIIrd Olympiad was an overwhelming success. The archery range at El Dorado Park was converted from a large, grassy field with trees to a showplace of competition. Judges called the competition field the most accurately laid-out field they had ever examined. From the athletes' standpoint, the competition was excellent, with Olympic records posted in both the men's and women's competitions.

23 El Dorado Park combines competition requirements with an uncluttered view for spectators of the Olympic archery competition.

Enlarged section through archery field of play looking west

at El Dorado Park

Architecture and Construction

Archery			Security			Technology		
Introduction	Archery competition took place at El Dorado Park on an existing but primitive range. Range improvements were undertaken and all athlete, spectator and officials' facilities were of a temporary nature utilizing tents.		10 Command Center	10 x 45 trailer	Working area for 12. 10 x 12 space for materiel supply staff and 8 x 10 storage area.	23 Office & Storage	10 x 45 trailer	Work space for staff and 10 vendors; radio issue and recharging; 8 x 10 storage area.
Department/Function	Space Use (in feet unless noted)	Notes	Sports Administration Federation Services			24 Message Center	10 x 10 tent	Work area for 6; receiving and posting of messages for staff, officials and athletes.
Accreditation			11 FITA Offices	10 x 45 trailer	Private 10 x 12 office for FITA president, 10 x 12 lounge, 10 x 20 area for secretary-general, reception area.	Results Display Board	(4)4 x 8	2 for athletes on field of play; 2 for spectator viewing. (2)4 x 8 Manual results boards for public.
1 Staff Entry	10 x 20 tent	Staff check-in; temporary badge issue; badge storage.	12 Judges/Officials	10 x 45 trailer	10 x 20 meeting room for 14; 10 x 12 lounge, 10 x 12 office for technical delegates.	25 Results Output/Photocopy	8 x 32 trailer	Mobile unit provided results photocopying and distribution.
Food Service			Athlete Services			Television		
2 Food Storage	8 x 40 trailer	Staff box meals storage and distribution point.	13 Equipment Repair	8 x 28 trailer	Repair and storage for bows, arrows. Spare parts and work benches for 2.	26 Trailer Compound	75 x 85	Telephone and television transmission and production vehicles.
3 Lounge/Eating Area	20 x 40 tent	Lounge for 60.	14 Lounge	30 x 30 tent	Rest and eating area for 250 athletes and team officials; beverage service, 6 temporary toilets.	Ticketing		
Health Services & Medical Control			Practice Field	90m x 138m	46 targets in close proximity to the competition range, snack and beverage service. 10 x 10 tent for information and transportation desk.	27 Information	8 x 8 tent	At public entry for ticket questions and will-call. No on-site ticket sales
4 Doping Control	10 x 45 trailer	Waiting area for 16; testing area with toilet and handwash facility; processing or work area for 6.	15 Storage/Towel Issue	10 x 10 tent	Storage area for bags/personal effects, athlete message center and towel distribution.	Venue Operations & Administration		
5 Spectator First Aid	20 x 20 tent	Treatment area for 2, waiting area for 10.	Competition Management			28 Construction Staff	12 x 60 trailer	Work area for construction project manager and materiel supply staff.
6 Sports Medicine	10 x 45 trailer	Waiting area for 10, 6 treatment tables, ice maker and handwash facilities.	16 Commissioner & Staff	12 x 60 trailer	Private offices, each 10 x 12 for commissioner and sport manager; protocol desk for 2; conference area for 6; 2 secretarial stations.	Maintenance	8 x 20	Supply storage.
Materiel Acquisition & Distribution			17 Athlete Seating	(48) 8 x 8 x 7	48 connected, individual shelters—27 on men's field and 21 on women's field.	29 Venue Staff Offices	10 x 45 trailer	Work area for department staff from: Ticketing and Transportation (3) plus access control manager and usher supervisor.
Olympic Family Services			Field of Play			29	10 x 60 trailer	10 x 20 office for venue manager; work area for Personnel and Finance departments, assistant venue managers, secretary.
7 Hosting	30 x 40 tent	Furnished carpeted lounge with snack and beverage service; working area for 6.	18 Director of Shooting	12 x 12	Elevated platform; public address announcer and sound technician immediately behind.	Spectator Services		
6 Language Service	10 x 10 tent	Work area for 5.	19 Judges' Shelter	(2)10 x 10 tents	Located behind shooting line.	30 Food Service	(2)10 x 30 tents	Public and beverage sales points.
Personnel Administration			Range-Men	90m x 90m	15 lanes each 6 meters wide with 2 targets per lane maximum; total of 22 targets.		(2)8 x 12	Storage containers.
Press Operations			Range-Women	60m x 70m	10 lanes each 6 meters wide with 2 targets per lane maximum; total of 16 targets.	31 Novelty Stands	(3)10 x 10 tents	Public sales points on 3 sides of each tent; one stand for binocular rental.
Mixed Zone	15 x 40	For media contact with athletes, adjacent to field of play.	20 Scorers Seating-Men	10 x 40 tent	At 40m line 20m from field; 35 chairs.	32 Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service.
Press Seating	70	30 work positions with desks, 40 positions without desks.		10 x 30 tent	At 20m line 20m from field.	Program Stands	(2)2 x 4 carts	Portable stands for public sales.
9 Sub-Center	30 x 30 tent	Includes 15 x 18 interview room and 10 working places with telex, telephone, typewriters, results services.	21 Scorers Seating-Women	10 x 30 tent	At 40m line 20m from field; 25 chairs.	33 Public Information	8 x 8 tent	Kiosk for 2 persons to provide general spectator assistance.
				10 x 20 tent	At 20m line 20m from field.	Public Seating	4,000	40 seating locations for handicapped spectators
			22 Scoring/Results	(2)20 x 40 tent	At 40m line of each range.			

24

7.03.2 Athletics: Marathons and race walks

The men's and women's marathons started at Corsair Stadium on the campus of Santa Monica College (SMC) in the city of Santa Monica and ended at the Los Angeles Memorial Coliseum.

The men's marathon was the final sporting event of the Games and its finish was an integral part of Closing Ceremonies. The marathon course ran through the city of Santa Monica and continued into West Los Angeles, turning west past Brentwood Country Club to Ocean Boulevard where it turned south along the Pacific Ocean and reentered the city of Santa Monica. The athletes ran through Marina del Rey and headed east on the Marina Freeway to Slauson Avenue before turning north again on Overland Avenue and Jefferson Boulevard. The course route turned east on Rodeo Road in the city of Los Angeles, continuing east on Exposition Boulevard to Menlo Avenue where it turned south to the tunnel entrance on the west end of the Coliseum. The route of the marathon passed through five separate municipal jurisdictions.

The minor amount of construction required at Santa Monica College was done by the college maintenance staff. Minimum design changes were made to the Santa Monica College campus in order to accommodate this event. Since SMC was already a training site for athletics events and team handball, security fences and athlete amenities were already in place. Alterations specifically required for the marathon included the addition of temporary toilet facilities for spectator use, the placement of some protective padding on walls and fences at the athlete exit from the track, installing the Look elements, the building of platforms on the existing bleachers for television cameras, the removal of existing goal-posts and approximately 65 feet of fence and gates.

Spectator parking was provided on the campus at the corner of Pico and 17th Street. Ticketed spectators were allowed in the stadium in the east and west bleachers to view the marathon start.

Television cameras and press were positioned in the west bleachers, along with the Olympic Family, the International Federation representatives and other Olympic officials. A band provided pre-race entertainment for both the women's and men's marathon. Athletes entered the stadium from the gymnasium on the east side of the field. They arrived from the villages by bus and immediately upon disembarking entered the gymnasium facility.

Three locations were used to marshal the volunteer forces prior to the races. A total of 3,000 course marshals gathered for a two-hour orientation prior to being transported to their respective work stations. Each of the three locations had eight portable toilets for use by the volunteers.

Tables were used along the route of the marathon as refreshment stations and for 13 spray and sponge stations. Eight refreshment stations were spaced every five kilometers along the marathon course, beginning with the five-kilometer mark. Each station consisted of nine tables spaced approximately 20 meters apart. The first seven tables were numbered and labeled by country code for competitor-specified drinks. The eighth table was supplied with an electrolyte drink and the ninth held cups of water.

A medical-aid tent and a portable toilet were placed at the beginning of each refreshment station for use by the athletes. Spray and sponge stations alternated with the refreshment stations for the first half of the course, then doubled in number for the last half. These stations consisted of a shower-spray device on the right side of the course under which athletes could run and three tables spaced approximately 20 meters apart on each side of the course. The first two tables held wet sponges and the last, water.

25

A truck dropped nylon rope along the course prior to the race while thousands of course marshals affixed the rope to trees, posts or LAOOC-provided barriers. This was done to assist in controlling crowds along the race course.

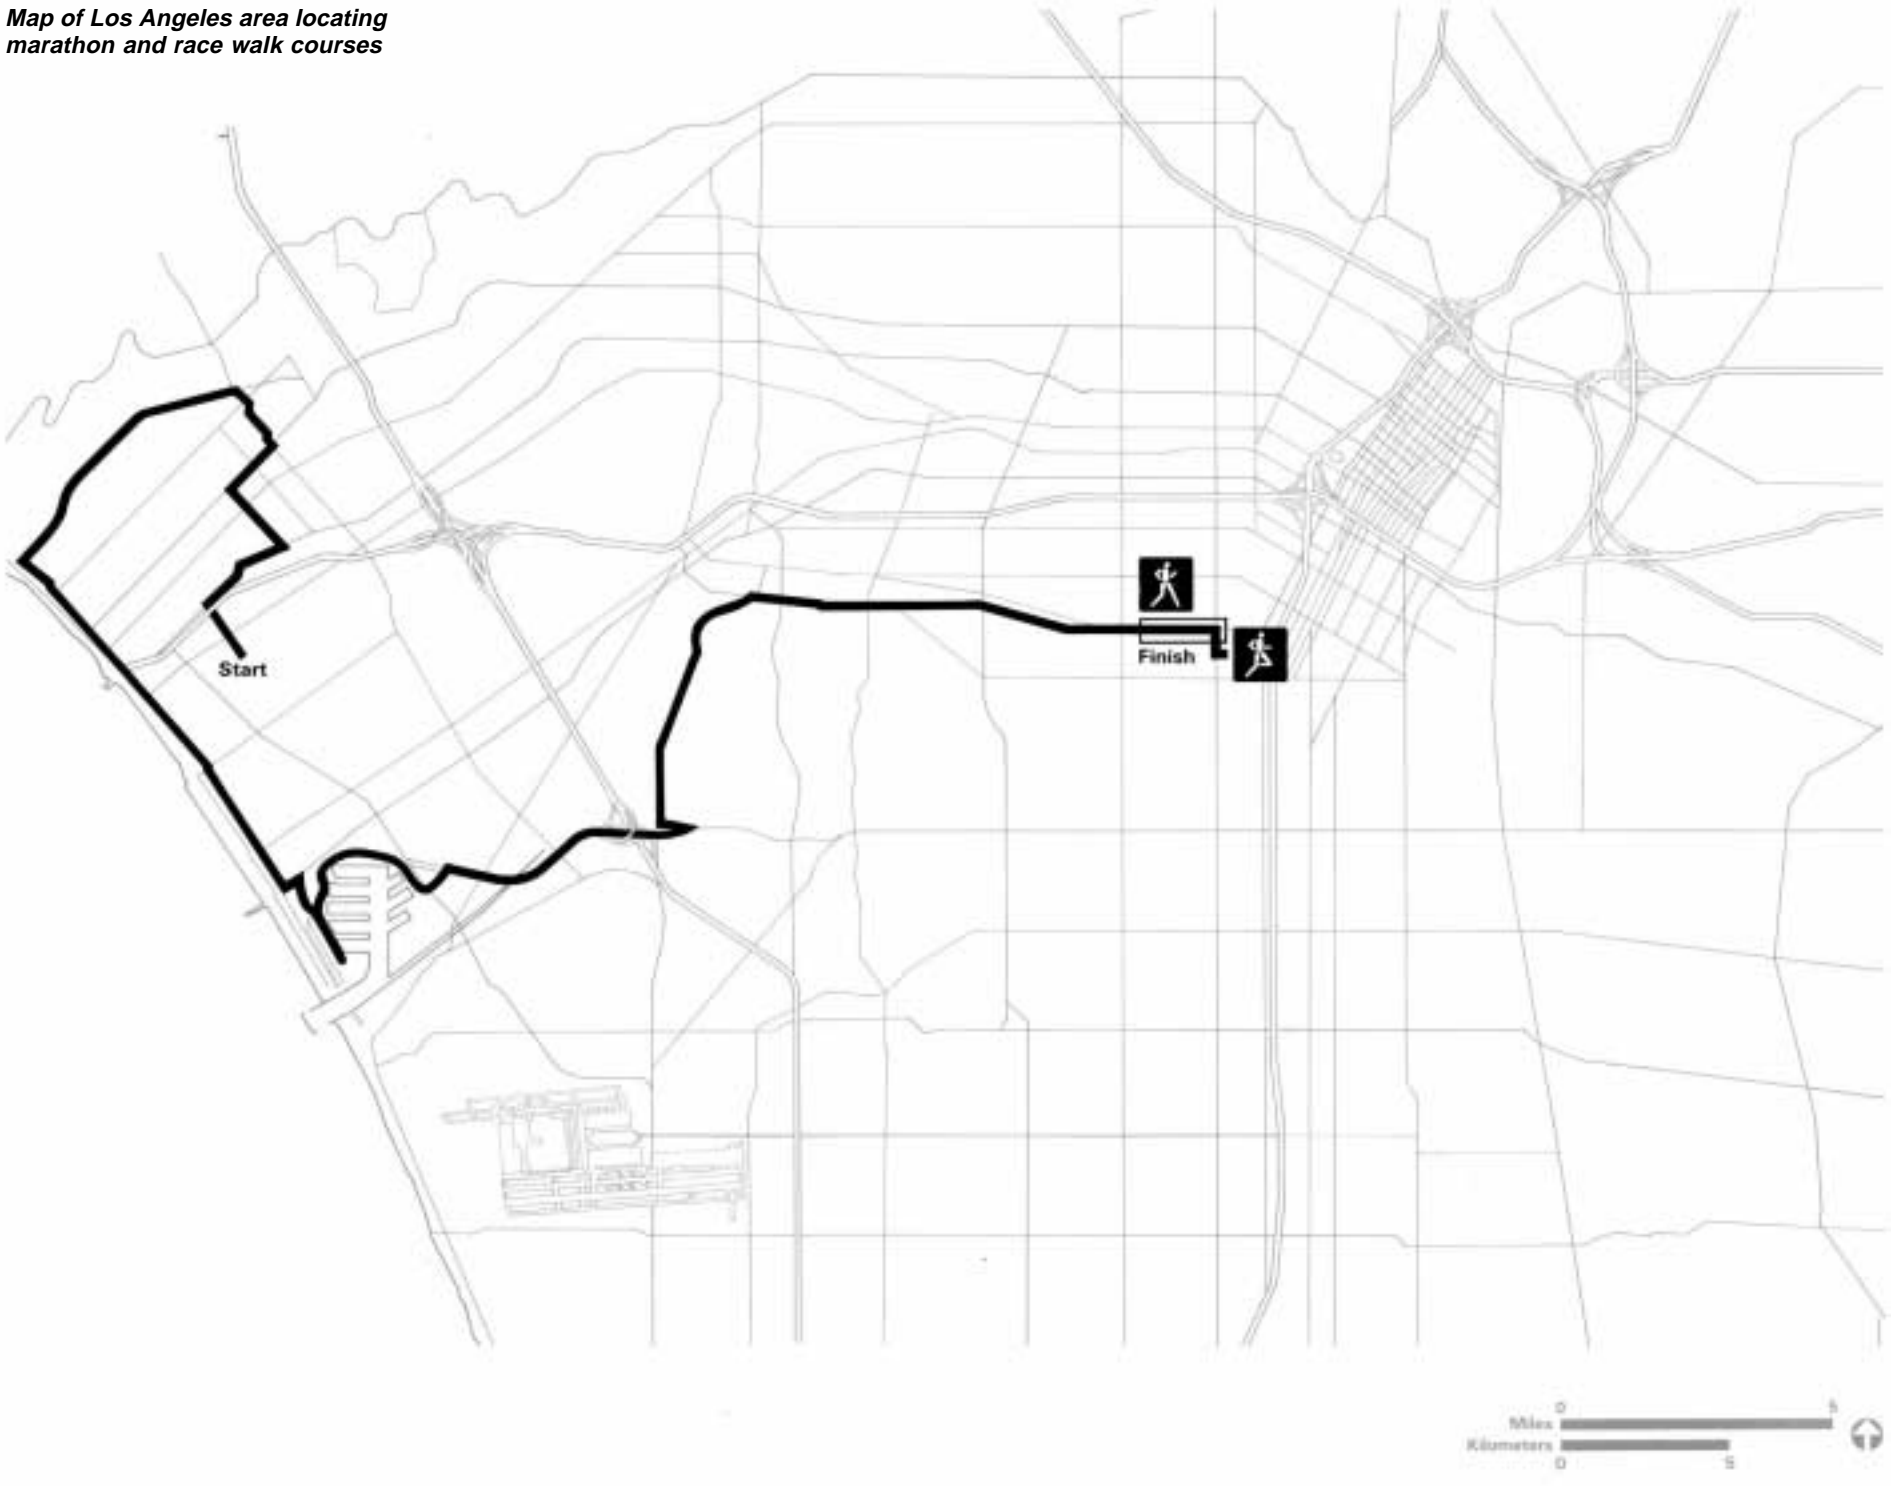

The race walk events started and finished at the Coliseum. The events exited through the tunnel and up Menlo Avenue to Exposition Boulevard. Walkers repeated the 2.5-km loop course on Exposition and then re-entered the Coliseum through the tunnel off Menlo Avenue. The course was roped off and marked by traffic cones at the turns. A refreshment, sponge, water and personal beverage station was provided on the course and was marked by signs posted 100 meters in advance. Toilets were also provided at this station.

24 Spectators applaud competitors from many nations as they pass along the marathon route.

25 Thousands of spectators greet Olympic marathon competitors as they wind through the streets of Los Angeles.

7.03.3

Baseball

Dodger Stadium was the venue for baseball. It was built for the Los Angeles Dodgers professional baseball team and has been their home for 22 years. The facilities were designed expressly for use as a baseball site and minimal modifications to the existing structure and layout were required for use as the Olympic baseball venue. Modifications included adapting the site for spectator and protocol functions. Existing locker room space was available for two teams and was modified to accommodate four teams at one time.

Major time constraints were placed on the construction and move-in schedule as the Dodger team utilized the facilities for professional baseball games from 2—8 July and from 24—29 July. This left the LAOOC two weeks in the middle to complete the bulk of the temporary modifications, and one day, 30 July, to complete the remaining modifications before the first Olympic baseball game took place on 31 July.

Two compounds, one for LAOOC operations and the other for host broadcaster television operations, were established in parking lots Nos. 2 and 3 outside the stadium. Existing fencing was extended to secure the areas. During the week of 9-15 July, telephone company trailers were installed in the television compound and trailers were installed in the LAOOC compound. During this same time period, tents were added to the LAOOC compound for the Access Control, Transportation and Language Services Departments and for the message center. Portable toilets and lavatories were placed in the compound for use by LAOOC staff.

Concurrent with these construction projects, temporary interior modifications were made to the stadium layout. Areas were subdivided to create additional team rooms and medical areas. Hardwall partitions were placed in the stadium offices on

the club box/press box level for use as the results output center. A press sub-center was also established on this level in an existing press dining area. On the team entrance level of the stadium, three offices were converted for use as lost-and-found, security and public first aid offices. Team locker and meeting rooms on the field level of the stadium received minor modifications. Three temporary flagpoles were placed behind home plate on the playing field for the medal ceremonies. Temporary power was generated for the LAOOC facilities. The telephone cabling process began on 9 July and phone service to the compound was established on 14 July. All cabling systems used by the technology crews were placed in temporary holding areas until final hook-ups were made to avoid problems with the Dodgers operations from 24—29 July.

Beginning on 10 July, furniture and supplies were brought into the venue for each of the LAOOC stadium offices. A United States Postal Service kiosk was placed on-site in a parking lot on 30 July.

Look installation could not take place at the baseball venue until the day before competition began. With so little time available the scope of the Look was severely limited. Festive Federal color schemes were used on outfield fence coverings and standard Olympic sign designs were used to denote concessionaire and novelty areas. Flags of the countries participating in the baseball competition were flown over the scoreboard behind the stadium pavilions. Olympic *Star in Motion* and LA84 signs were placed above the scoreboard. The Olympic rings design was drawn in chalk in the grass area behind home plate.

All construction and facility modifications were completed on time and the baseball competition was a complete success. This success was due in large part to the assistance of the Los Angeles Dodgers organization and its lengthy experience with producing quality baseball games at Dodger Stadium.

Take-down procedures were implemented at the stadium after the last Olympic baseball game was completed on 7 August. The Dodger baseball team played in the stadium on 13 August, six days after Olympic competition ended.

Baseball		
Introduction	Olympic baseball was held at Dodger Stadium, an existing stadium for professional baseball.	
Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
Administration		Work space for 1 (see Venue Operations).
1 Guest/Staff Entry	10 x 20 tent	Main entry, badge issue, storage and distribution point. Work area for 2.
Food Service		
2 Eating Area/Lounge	24 x 80	Staff eating area for 120. Food distribution and storage point.
2	8 x 25	Storage trailer.
Finance		
Audit, Cash Control		Shared office for 3 (see Venue Operations).
Health Service & Medical Control		
3 Doping Control	12 x 12	Waiting area for 8; testing area with toilet and hand-washing facilities; processing area for 2.
4 Spectator First Aid	16 x 30	First aid station with 8 beds.
5 Sports Medicine	40 x 40	Training room with 6 treatment tables.
Materiel Acquisition & Distribution		
Administration		Work space for 2 (see Venue Operations).
6 Storage	15 x 25 truck	

Olympic Family Services		
7 Hosting	24 x 100	Hosting room for 250. meal and beverage service.
8 Language Services	20 x 20 tent	Seating for 8 interpreters. Work area for 1.
Personnel		
Administration		Responsible for payroll, timekeeping and staff scheduling. Office for (see Venue Operations).
Press Operations		
9 Interview Room	12 x 50	Seating for 60.
9 Press Seating	131	All positions with desk in existing press box.
10 Sub-Center	12 x 26	23 work positions; telephones, telex, telecopier.
Security		
11 Command Center	25 x 30	Existing venue security office. Office for 3 (see Venue Operations).
Sports Administration Federation Services		
12 AINBA Offices	12 x 60 trailer	Trailer with 12 x 12 office for LADOC commissioner and sport manager, 12 x 32 room, seating 12, for AINBA jury meetings, private 12 x 12 office for AINBA president and technical delegates.
13 Judges' Officials' Dressing Room Athlete Services	10 x 24	Existing locker room, field level for officials.
14 Team Meeting Room	(4)7 x 31	2 existing clubhouses subdivided to form 4 facilities.
Television		
15 Trailer Compound	70 x 130	Telephone and television production and transmission vehicles. Xerox storage trailer was also in this compound.

Technology		
16 Message Center	10 x 10 tent	Communications and message receiving center for staff officials.
Results	6 x 12	Input area located in press box.
17	24 x 70	Results output, photocopy and distribution center, staff offices for 6 and 10 sponsor work stations, radio distribution and recharging, waiting area for 4.
Ticketing		
18 Information	(3)3 x 4	Existing ticket windows for will call and information. No on-site sales.
Transportation		
Administration		Office for 3 (see Venue Operations).
19 Driver Lounge	20 x 20 tent	Rest area for 30.
Venue Operations		
20 Venue Staff Offices	12 x 60 trailer	12 x 12 Office for venue manager and finance manager; 12 x 12 office for 2 security staff; 12 x 32 area for staff; accreditation, 2 materiel supply, construction, maintenance, 4 personnel coordinators, 2 finance, secretary/support.
Spectator Services		
Food Service	(32)12x12	Existing stands with 2-4 lines in each, all levels.
Novelty Stands	(8)14 x 40	Interior concourse sales points, all levels.
	12 x 60 trailer	Storage.
Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service.
Program Stands	(15)4 x 4 carts	Portable sales points for programs.
Public Seating	56,000	

7.03.4

Basketball

The competition venue for Olympic basketball was The Forum in Inglewood, California. Long considered one of the world's most beautiful basketball arenas, The Forum was a logical choice for the Olympic competition and required few modifications. Those made were primarily cosmetic. In addition to basketball, the finals of the team handball competition were held there on 11 August, and even though less than 24 hours had transpired since the completion of the basketball competition, the facility was converted without major, time-consuming modifications.

Construction for the basketball venue was well-organized. Electrical work began on 6 May 1984 at which time the telephone utility brought their trailers on site.

Two trailers designated for basketball federation use during the Games arrived at The Forum on 5 July and were used by construction, security, transportation and venue management for office space until 16 July. The LAOOC was given complete use of The Forum on that date and held a complete dress rehearsal four days later.

The two trailers placed in The Forum parking lots were used by FIBA after its arrival in Los Angeles. Eight-foot high fencing screened the area from the public parking lot. Portable toilets, which were used by early arriving spectators, were located outside the fencing. Tents, placed in the parking lot, were used for staff check-in and a transportation drivers' lounge. A portion of the parking lot was fenced for The Forum's existing food concessionaire, the host broadcaster and an athlete bus drop-off point. An additional area was later added for food storage.

Three food concession tents outside The Forum were installed, each measuring 10 feet by 20 feet. Coin-operated telephones were added at the north, east and west entrances for the benefit of spectators.

The stair landings in both the west (Forum Club) and north (Forum office entrance during the Games) entries were carpeted.

Rather than construct an elaborate tunnel protection device in the tunnel entrance to preclude unauthorized vehicles from entering the building, a police truck was parked in the middle of the tunnel, saving both construction time and expense. It allowed free (but controlled) access for the host broadcaster and other supply vehicles.

As part of the Look, 4,000 potted flowers were installed around the outside of The Forum. The flowers were used for landscape purposes and were not arranged to form any specific design.

Within The Forum, modifications were made on almost all levels. Stanchion and chain were added at the end of the basketball court to keep spectators away from the field of play. An additional Swiss Timing countdown clock was installed on the floor in front of a radio commentator's table. This clock was 2 feet high by 5 feet wide and 1 foot deep. Curtains were added at all four ground level entrances.

Several days prior to the start of competition, the scoreboard was inadvertently lowered too far and crashed onto the basketball court, destroying the advertising base, which subsequently was removed. The hole in the floor itself was filled, painted and finished overnight. This patch repair was made without incident and did not effect the competition.

Four locker rooms were needed for the basketball competition, rather than the two normally needed for single professional games. Owing to its use by professional basketball, ice hockey and indoor football (soccer) teams, The Forum had four separate locker rooms and all were available for the Olympic competition.

Originally, The Forum staff intended to move their offices to a new office building across the street, but this move did not occur. As a result, the LAOOC had only a minimal amount of office space available. In order to alleviate this space crunch, The Forum warehouse was emptied, its stock transported to a remote warehouse and The Forum warehouse converted. The Construction Department built a press interview area, venue management area, copier room, technology staff room, security staff room and a message center. These areas were separated by hardwood dividers and carpeted. Electrical and communication lines were placed in all of these areas before they were operational. The Forum staff lounge was converted into the LAOOC commissioner's office.

The Forum built toilet facilities on the exterior concourse just prior to the Games even though the LAOOC had planned to do so upon move-in. Curtains were hung on entrances and Protocol and staff lounge areas were located on the same level. The only modifications to the rooms were temporary decorations.

Interior Look materials were late in arriving and some had to be fabricated on site by the installers. Country flags originally were to be hung in a circle around the central, overhead scoreboard. This particular design obstructed sight lines so the design was changed to display them in a radial manner.

27

28

For the finals of team handball, 8-foot-square broadcasters' platforms were installed at both the north and south ends of The Forum across the concourse level.

The change over from basketball to handball took place following the final basketball competition on 10 August. The change was made easily and was completed by noon on 11 August. The handball final was over by 1800 hours and removal of all LAOOC decorations and sports equipment and facilities began. The LAOOC was out of The Forum by 14 August, with only minor repairs remaining to be made.

27 A newly-manufactured floor is installed for Olympic use at The Forum.

28 The existing beauty of The Forum combines with the LAOOC's decorative elements during the Olympic basketball competition.

Architecture and Construction

Basketball

Introduction	Basketball competitions were held at The Forum, an existing multipurpose sports facility. Interior rooms and facilities were modified to provide administration and athlete areas. Only federation services were augmented through addition of trailer units. No warm-up court was provided for athletes. The Forum is a multi-level facility. Athlete and staff facilities were located primarily on the lowest level.	
Department Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Guest Entry		Accredited Olympic Family members (B,C,D,E,F) and guest entry.
2 Staff Entry	20 x 40 tent	Primary entry point on south side for accredited LAOOC staff, temporary badge issue. Athlete team entry point. Badge storage and work area for 10. The Forum staff, all ushers and maintenance staff enter north and east sides only.
Food Service		
3 Eating Area/Lounge	32 x 32	Existing lounge and food service area for 100.
4 Storage	8 x 40 trailer	Box lunch storage and distribution area.
Finance		
5 Audit, Cash Control	8 x 30	Office area for 5
Health Service & Medical Control		
6 Doping Control	20 x 30	Waiting area for 10; testing area with toilets and wash facilities; processing or work area for 2, refrigerator and lockable cabinet.
7 Spectator First Aid	17 x 19	Existing public first aid station with toilet and sink; waiting area for 10, 2 treatment tables and refrigerator.
8 Sports Medicine	12 x 14	Training room with 2 treatment tables; waiting area for 7, private doctor's office, scale and sauna room, 20 x 38 existing weight training room (also used for storage).
Material Acquisition & Distribution		
Administration		Work area for 1 (see Venue Operations).
9 Storage	(2)8 x 40 trailers	
Olympic Family Services		
10 Administration	8 x 10	Office for 1 at VIP entry.
11 Hosting	5,500 square feet	Existing hosting area with 30 x 40 bar and 2 food service areas, closed circuit television, information desk at entry.
Personnel		
Administration		Work area for 3, responsible for timekeeping and staff scheduling; 100 individual lockers at staff entry (see Venue Operations).
Press Operations		
12 Interview Area	36 x 58	Press seating for 150, chairs for 8, elevated platform.
13 Mixed Zone	10 x 12	Zone for media contact with athletes, a corridor leading to athlete locker area.
Photo Positions	48	32 seats in stands plus 16 courtside positions.
Press Seating	404	214 positions with desks, 190 without desks.
14 Staff Offices	14 x 32	Staff office area for 8.
15 Sub-Center	2,500 square feet	96 working spaces with typewriters, telex, photocopy equipment, EMS terminals. A sub-center located in modified storage areas under bleachers.

Security		
16 Command Center	17 x 24	Office area for 10.
Sports Administration		
Federation Services		
17 FIBA	12 x 60 trailer	Private 12 x 16 office for FIBA president, VIP lounge for 9. conference room for 8 and 12 x 12 NGB office for 2.
	10 x 44 trailer	10 x 16 office for FIBA secretary-general; 2 office spaces for technical delegates and 1 office for administrative secretary.
17 Judges/Officials' Dressing Room	8 x 20	Existing locker/shower room for 4.
Athlete Services		
18 Equipment Storage	10 x 10	
19 Locker Room		Competing teams assigned to 1 of 4 existing Meeting Room locker/shower rooms. Each room equipped with Massage/taping table, benches, lockers.
	Room 1—24 x 32	Assigned to teams in sessions 1 and 3.
	Room 2—32 x 32	Assigned to teams in session 2.
	Room 3—20 x 36	Assigned to teams in sessions 1 and 3.
	Room 4—18 x 20	Assigned to teams in session 2.
Refreshments	10 x 10	Stand placed at athlete/staff entry.
Competition Management		
20 Commissioners' Office	10 x 20	Office for 2.
20 Asst. Commissioner	10 x 10	Office space for 1, adjacent to existing 8 x 10 office for secretary.
Conference Room	8 x 24	Meeting room for 14; telecopier, telephone, closed circuit television.
Field of Play		
21 Competition Court	49 x 91	Court and surface lined to meet FIBA specifications. Actual floor surface 60 x 112.
Competition Staff	6 x 20	Courtside table and 10 chairs for competition management.
Jury of Appeal	6 x 10	FIBA jury, seating for 5 clear view of court.
Statisticians	6 x 16	Table and chairs for 8 statisticians at courtside.
Team Seating	(2)28-foot benches	17 chairs for team and 2 chairs for security at courtside.
Technical Committee	6 x 10	FIBA technical committee courtside seating for 5.
Technology		
Public Address Announcer	4 x 6	Table and 2 chairs at scorers' table courtside for public address announcer.
Results	6 x 12	Courtside results input area with 3 chairs, results terminal and printer.
22 Staff Offices	6 x 10	Radio recharging and storage room.
	12 x 37	Office for 4 staff and 10 sponsor/vendors.
Swiss Timing	6 x 6	Courtside table and 3 chairs for scoreboard control.
23	24 x 24	Results output, photocopy and distribution room. Contained computers, 1 copier, tables, 11 chairs and 10 x 10 paper storage area.
24 Message Center	12 x 24	Communications and message receiving center for staff and officials; included radio base station, copier, tables, 6 chairs, message board and 12 x 12 switchboard room.

Television		
25 Trailer Compound	120 x 150	Telephone and television transmission and production vehicles.
Ticketing		
26 Information	10 x 10 tent	Work area for 2. General information and will call. No on-site sales.
Transportation		
Administration		Office area for 3 for vehicle dispatch (See Venue Operations).
27 Drivers Lounge	10 x 30 tent	Waiting area for 100.
Venue Operations & Administration		
28 Construction Staff	12 x 12	Office for 3.
29 Maintenance Storage	12 x 17	Storage and maintenance area.
	900 square feet	Outside storage area.
30 Venue Staff Offices	28 x 80	Office area established in converted warehouse/storage area. 25 work stations each with desk, telephone, side chair and work chair. Included here by department: venue manager, 2 assistant venue managers, language service coordinator, television coordinator, 3 personnel coordinators, 3 transportation coordinators, concession coordinator, 4 secretary stations, competition supervisor, competition director and secretariat, 4 work stations for coordinators; officials, umpires, statistics, training, operations meeting room for 8, meeting room for 4, open lounge and seating for 12 with television, Look/Graphics coordinator.
Spectator Services		
Food Service	32 lines	4 interior concession stands with 8 lines each. 1 line dedicated to press near press seating.
	(6)10 x 10 tents	6 exterior stands in parking lot.
	(4)8 x 40 trailers	Refrigerated food storage trailers in trailer compound.
Novelty Stands	(8)8 x 8	8 novelty stands on interior concourse
	(3)10 x 10 tents	3 exterior stands.
	8 x 40 trailer	Novelty storage.
Program Stands	(8)2 x 4	Portable sales points.
31 Post Office	22 x 26	Sales and service point for U.S. Postal Service.
31 Public Information	8 x 8 tent	Outdoor kiosk for 3 persons to provide spectator assistance.
Public Seating	17,505	
32 Venue Owner's Office	(28)8 x 10	Offices; the Forum staff operated and managed the facility on an on-going basis and continued to occupy their regular offices.

7.03.5 Boxing

The Olympic boxing venue was the Los Angeles Memorial Sports Arena, located in Exposition Park. The Sports Arena was also used as a staging area for athletes and entertainers during Opening and Closing Ceremonies. The proximity of the boxing venue to Expo Park and the Coliseum meant that numerous services were integrated for the three venues.

Boxing spectators arrived via the Exposition Park shuttle bus system or as pedestrians. Spectators entered the Sports Arena through the east, south and north entrances. The west entrance was used exclusively by LAOOC staff. Members of the Olympic Family entered the venue and the Olympic Family hospitality lounge through the athlete compound.

Athletes arrived by shuttle bus and entered the Sports Arena via the ramp to the lower level. A considerable amount of temporary wall partitioning created the required competition support areas. The partitioning was prefabricated off site. Exclusive access to the facility by LAOOC staff did not begin until 9 July. By 23 July construction was completed. The Sports Arena was then utilized as a staging area for the ceremonies dress rehearsal on 26 July and during Opening and Closing Ceremonies. An all-night clean-up effort was required after Opening Ceremonies to prepare the Sports Arena for competition the following day.

A press sub-center for the boxing and athletics venues was located in the lower level of the Sports Arena. Auxiliary air-conditioning was added to a storage area and temporary power and furniture were installed. Boxing was a popular sport dominated by athletes from the United States and commanded much attention from the press. Because press interview facilities at the boxing venue were strained during the preliminary rounds, an auxiliary press interview area was constructed outside the Sports Arena for the semifinals and finals. The interior interview area accommodated 77 people. The newly constructed outdoor interview area—a 40-foot by 60-foot tent adjacent to the facility—accommodated 200. The addition of the new interview area gave the LAOOC's Press Operations staff an opportunity to run two interviews simultaneously if necessary in the late rounds.

Permanent construction to the venue included a complete rehabilitation of the facility air-conditioning system. The exterior of the Sports Arena was water-blasted and individual sections repainted.

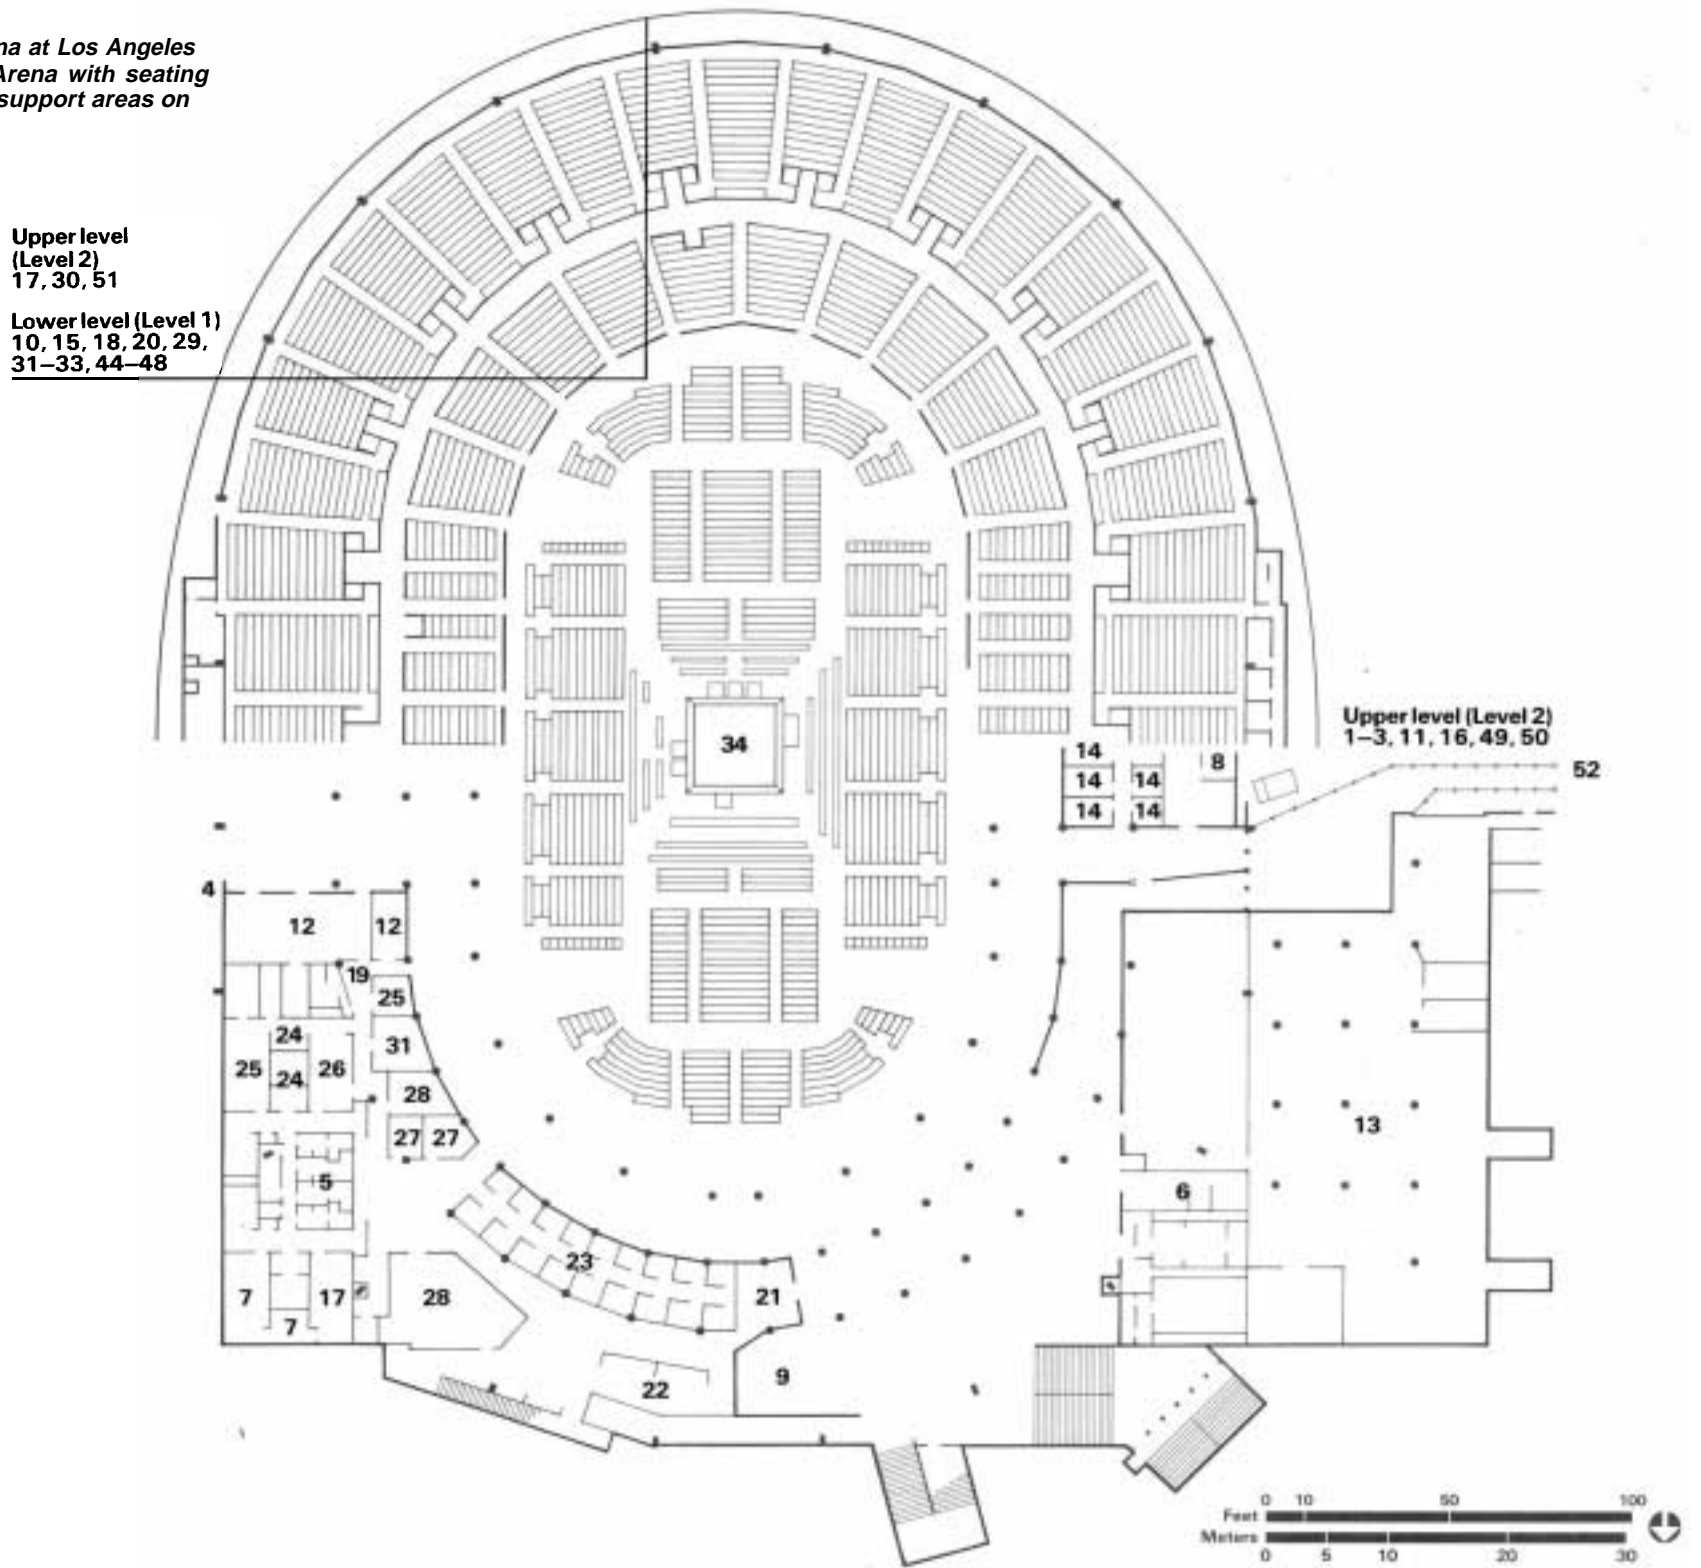

29

29 The Los Angeles Memorial Sports Arena provides complete information for spectators through the new scoreboard. Seating for journalists is provided in the background.

Architecture and Construction

15	10 x 10	Office for sub-center chief.	41 Scorers	3 x 40	Table and chairs, 10-feet from ringside, for: 2 results staff, Swiss Timing staff, 3 announcers, 2 competition staff, 5 jury members, 1 television crew.			
			42 Technicians	28 seats	Chairs behind executive committee.			
			43 Delegations	56 seats	Seating for delegation members.			

7.03.6 Canoeing and Rowing

Lake Casitas in Ventura County was the site for the canoeing and rowing competitions. The lake surface is 2,669 acres and is located within a 6,128-acre park. It serves as a domestic water supply and a fishing and recreation area. All construction at Lake Casitas for the Olympic Games was temporary and completely removed after the Games.

Because the lake is not normally used for rowing and canoeing activities, great concern was expressed by the owners (Casitas Municipal Water District), the local and state health officials and the State Fish and Game Commission regarding maintenance of the lake's water quality. All construction methods and materials were reviewed by these parties.

Much of the preparation for the canoeing and rowing events was completed during the summer of 1983 for the Foster Farms International Regatta. The elements, built in 1983, included: grading, irrigation and landscaping, and construction of some portions of the finish tower, ramps and course. Changes were later made because of erosion created by heavy rain following the 1983 Regatta and to accommodate the large number of athletes and spectators expected for the Games.

The Lake Casitas venue was divided into three areas: the race course, the athletes' area and the area for venue management and spectators.

The course itself was installed in 1983. Setting the course required lengthy surveying and diving time. Pneumatic hammers were used to drive more than 100 arrowhead anchors into the lake bottom to hold 35 miles of underwater steel cable in place. The six lane lines were designated by a cable and buoy system using both vertical and horizontal cables. The system was easily interchangeable between canoeing and rowing. Two starting bridges accommodated the two start positions.

The anchors were left in place after the 1983 event, but the starting bridges, underwater cables, lane buoys and most of the platforms were removed and stored locally until the Games.

The judges' tower (finish tower) was also used for all timing and results. The tower was set on steel piles 60 feet off shore in line with the finish line. A modular steel scaffold structure with plywood decks was used to create a four-story, 48-foot structure. Steel angle braces and beams stabilized the tower to keep it from swaying. Chairs for the judges were anchored to prevent movement. Look graphics covered the tower and two vertical strips representing stars ran perpendicular to the tower. The vertical strips had a tendency to pull away from the structure in high winds. Host broadcaster and Swiss Timing cables were installed along with the course cables. Forty-foot telephone poles were connected and anchored for use as log booms. Barriers of log booms were used to keep fishermen away from the course cables and to protect the course from wake. The booms were marked but fishermen had a tendency to hit the buoys because they rode low in the water and were difficult to see. There was also a problem caused by the use of telephone poles in domestic water, because of the chemical treatment of the poles. As a result, untreated poles were specially ordered. Chemicals used for lake maintenance caused damage to cables used for the 1983 Regatta and had to be replaced for the Games.

Aligner's huts, broadcaster camera rafts, Swiss Timing rafts and other rafts measured 10 feet by 30 feet and were on pontoons. They were located at the 1,000 and 2,000-meter starting points and intermediate points along the race course. Jet Float was added under the top deck to stabilize the rafts.

Jet Float is a modular (19% inches by 19% inches) floating unit system made of high density polyethylene. A pin was used to join units together when desired. Jet Float was used for all athletes' docks, the floating bridge connecting the athletes' area to the operations area, broadcaster dock, support craft dock and the awards platform. The volume of Jet Float was enormous but very flexible, easily moved and very sturdy. The units were made in a special gray color to eliminate the heat on the surface and were specially dyed and embossed with the LAOOC logo.

A Jet Float bridge was the major addition for 1984. It connected the athlete area to the operations area. The fully secured athlete day village was located across the lake from other venue operations. The bridge served as a unifying link between the otherwise separate facilities. The athlete day village was designed to be aesthetically appealing as well as to function smoothly for the athletes and included:

- Forty-seven 20-foot square tents which were used as private rest and meeting areas for the athletes. Based on total size of an NOC's canoeing and rowing delegation, each NOC was assigned to one or more tents. Each tent had an Astroturf floor, cots, storage trunks, tables and chairs. These tents were well used during both training and competition. Four of the tents were used for language services, competition support and food services.
- Two 40-foot square tents were used for athlete food service. Lunch and snacks were served from portable tables and a refrigerated chest. One refrigerated storage trailer (40 feet) and one dry food storage (20 feet) were parked permanently and stocked daily.
- Four 20-foot by 20-foot recreation tents housed television, EMS terminals and various games.
- A small pool 20 feet in diameter by 4 feet deep was popular with the athletes. As no swimming was allowed in the lake, a temporary swimming pool offered great relief from the warm temperatures and arid conditions.
- There were 37 portable toilets in five locations in the athletes' area. This proved to be a suitable quantity.
- Sports medicine and doping control were housed in two 12-foot by 60-foot trailers.
- A 30-foot by 30-foot coaches' tent which was used for meetings. During the rowing and canoeing competition, it also became a press interview area.
- A team information kiosk was used for distributing written information, announcements and messages to the teams through the use of message boards and mail boxes assigned to each NOC.
- Showers were located in four 8-foot by 30-foot trailers, each containing 10 showers. An adjacent area had eight 15-foot by 15-foot tents for dressing. The facility was separated into men's and women's sections. Both temperature and flow rates were preset. Water was heated by propane tanks and service was occasionally interrupted due to breakage in the water main. Each time the water main broke, the propane had to be relighted.

Water for all purposes was stored or collected in 4,000 gallon and 15,000 gallon Baker Tanks. This water was used to fight fires, to supply the showers and run-off and to wash off

boats. The tanks were painted with Look graphics to make them more visually appealing.

A course control tower was located at the highest point of the athletes' day village. The entire water area and athlete area could be observed from this point.

Boats were stored in eight 20-foot by 20-foot tents located near the five launch docks in the athletes' day village. Five tents housed rowing shells and three housed canoes and kayaks. These tents had a total of 17 bays, each 20 feet by 40 feet. There were problems with uplift from wind on the site and guying was not feasible in some areas due to boat layouts and circulation. Tents were guyed on the interior with cross cables and on the outside with diagonal cables. The cables did not interfere with circulation.

Boat racks were tabular cast iron frames that had foam covers on the arms. Some of the racks required welding and were staked to the ground. This worked but the racks were heavy and burdensome to move.

Oar racks were constructed so that the top was supported by the tent frame. Because of this, the tents were not high enough to accommodate all the oars and it was difficult getting to the oars when the racks were full. Special racks were built to house the longest oars.

Boat repairs were done in a cluster of seven 20-foot by 20-foot tents. Two vendors also provided repair services in two 20-foot square tents directly adjacent to the boat houses. Because dust was a problem in the repair facilities, Astroturf was added to the floor of the main repair facility.

The ramps and wood docks were located for easy access from each boathouse-three docks were used for rowing and two for canoeing. Three docks were in place for the 1983 event and two were added in 1984. The dock ramps were eight-feet by eight-feet and had varying degrees of flotation. The first unit on land was set on steel Piles while the remaining units were easily removed from the water and stored on land until needed. Jet Float was attached to the last unit.

The following venue operations groups were housed in twelve trailers:

- 12 by 60 feet, access control/staff check-in
- 10 by 45 feet, construction
- 12 by 60 feet, doping control
- 12 by 60 feet, canoeing federation/commissioner
- 12 by 60 feet, rowing federation/commissioner
- 10 by 45 feet, materiel and supply
- 10 by 45 feet, press photo lab
- 12 by 60 feet, results
- 12 by 60 feet, security
- 12 by 60 feet, sports medicine
- 12 by 60 feet, technology
- 12 by 60 feet, venue management

30 A natural lake is converted by the LAOOC for use as the site of canoeing and rowing. Note especially the unique temporary bridge for athletes between their area (foreground) and the spectator area (above right).

30

Trailer interiors were modified at the venue. Trailers became very dusty due to conditions of the site and were maintained by a cleaning service. Technical equipment was kept covered to keep out the dust.

Other venue operations were housed in tent structures. The tents had eight-foot sides on a ten-foot frame to allow air to circulate through the top of the tent. Those that had air movement on four sides remained cool, while those located between trailers were unbearably hot. All tents had Astroturf flooring to keep dust down.

- Support staff were fed in two 20-foot by 20-foot tents. Due to the heat the tents were well used. Food was served from a refrigerated unit stocked from a refrigerated truck close by.
- Eight 20-foot by 20-foot tents were used for meetings. These tents bridged the space between two trailers in three places.
- Olympic Family hosting was held in a 30-foot by 30-foot tent.

All restroom facilities were portable. They were cleaned and pumped on a daily basis.

All lighting at the site was temporary. Lighting was installed for the 1983 event, removed and installed again in 1984. Power requirements were underestimated.

The spectator service area was decorated with colorful banners, kiosks and tents as were the bleachers, toilets, refreshment stands and first aid areas.

Spectators were seated in bleachers (capacity 4,680) and on picnic grounds. Stanchions and chains were used to separate press, VIP and athlete seating from the public. Although the stanchion and chain was easily removed, a more solid permanent barrier would have blocked the view.

Television monitors were provided throughout the spectator area along the picnic grounds. Cabinets had overhangs because of the glare from the sun and the water onto the screens. Even so, the overhangs did not prove completely satisfactory.

Initially, 10 turnstiles contained at five entrances were used. One entrance (two turnstiles) became a pass gate.

Construction and maintenance was ongoing and difficult at Lake Casitas because of the expanse and the remote location of the site and the continued heat. Examples follow:

- The water level dropped considerably during the year following the 1983 event. Modifications had to be made to extend existing ramps.

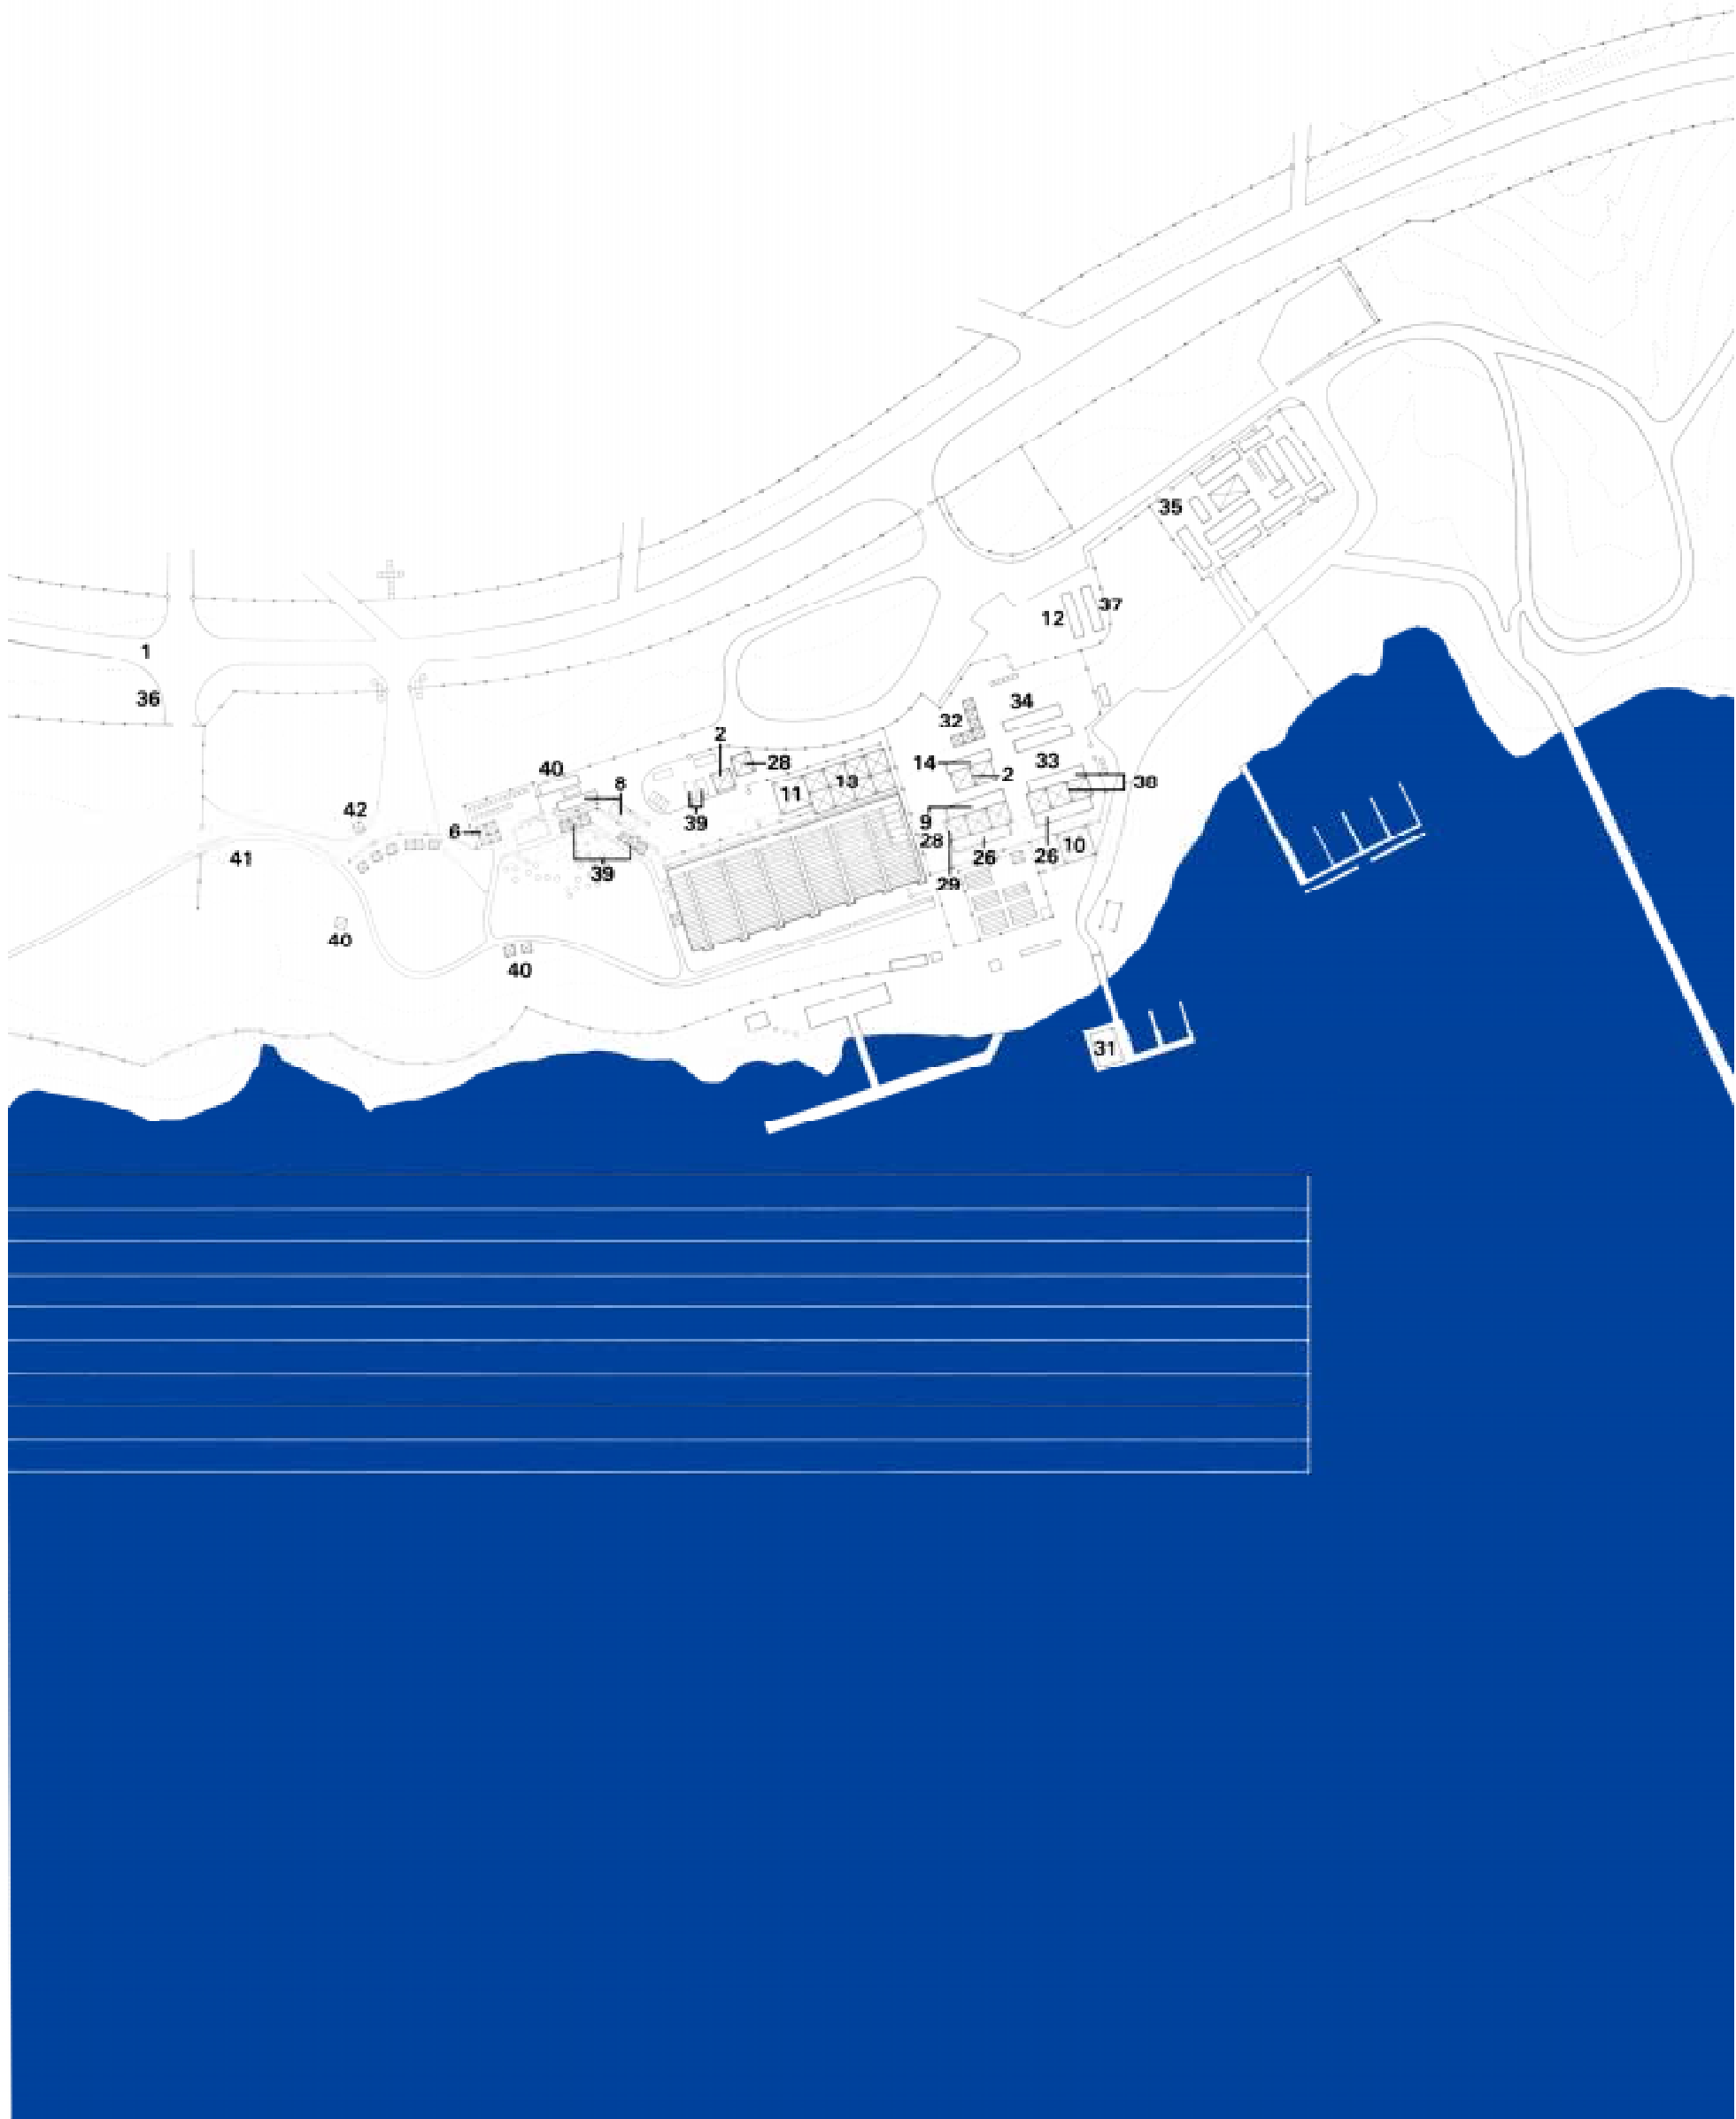

- Ongoing water main problems and high winds during the late afternoon necessitated 24-hour-a-day crews on site.
- Construction/signage modifications continued until one day before the end of competition. A signage shop, or even materials, on site was needed and would have saved time and money.

Overall, however, the LAOOC succeeded in staging remarkable competitions in both sports using only temporary facilities. The ability to fully test the basic architectural and construction assumptions one year prior in a relaxed pre-Olympic setting proved very worthwhile.

Following the competition, all facilities were removed from the site and conditions were returned to as close to original condition as possible. A small portion of the spectator entry landscaping was left as a memorial.

Architecture and Construction

Canoeing/Rowing

Introduction	Competition in canoeing and rowing took place at Lake Casitas. Competition in these sports did not overlap so all athlete and spectator services were shared. Modification of the course was required for canoeing. Elaborate temporary athlete and official support facilities were constructed in an area of the venue called the "Athlete Knoll." All facilities at the lake were of a temporary nature. At the conclusion of the Games the facility was returned to its original state as a recreation facility for boating, fishing and camping.	
Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff Entry	12 x 60 trailer	Staff entry, badge issue, storage and distribution point. Work area for 5.
Food Service		
Administration		Office area for 2 (see Venue Operations). Individual lockers for 50.
2 Eating Area/Lounge	20 x 40 tent	Lounge for 25, primarily for venue staff.
	20 x 20 tent	Lounge for 25.
3 Athlete Food Production	40 x 40 tent	Feeding area for 300 athletes and officials.
	40 x 40 tent	Adjacent to athlete feeding area for hot food preparation.
4 Storage and Distribution	(2)8 x 20 trailers	Refrigerated storage trailer.
4	(2)10 x 10 tents	Dry food storage at athlete feeding area.
Finance		
Audit, Cash Control		Office for 6 (see Venue Operations).
Health Service & Medical Control		
5 Doping Control	12 x 36 trailer	Waiting area for 26, television, beverage service; processing/work area for 9, refrigerator; Testing area with 2 toilets and handwash facilities.
6 Spectator First Aid	20 x 20 tent	Waiting area for 10, 2 cots, treatment tables, fans, television, refrigerator, handwash facilities, water cooler. One helicopter on site for emergency evacuation.
7 Sports Medicine	12 x 60 trailer	Waiting area for 4, television, 6 examination/taping tables, ice maker, refrigerator, television, desk for chief medical officer.
Material Acquisition & Distribution		
Administration		Office area for 1 (see Venue Operations).
8 Storage	(2)10 x 45 trailers	
Olympic Family Services		
9 Administration	12 x 12	Office area for 3, waiting area for 4 language service staff in trailer with competition staff.
10 Hosting	30 x 30 tent	Lounge with tables and chairs for 30, television, food and beverage service.
Personnel		
Administration		Responsible for payroll, timekeeping and staff scheduling. Office area for 1 (see Venue Operations).
Press Operations		
11 Interview Room	30 x 30 tent	50 seats, elevated platform.
Photo Positions		Positions available on 'chase' boat and on first level of finish tower.
12 PhotoService	10 x 45 trailer	3 self-service dark rooms, enlarging stations.
Press Seating	165	65 seats with table. 100 without.
13 Sub-Center	40 x 80	50 working places; program and results distribution, venue staff offices for 8, photocopying service, television viewing area.

Security		
14 Command Center	10 x 45 trailer	Office area for 13, waiting area for 6.
Sports Administration Federation Services		
FISA and FIC Offices		The presidents and secretaries-general of the FISA and FIC each had a private 12 x 12 office (see Competition Management: Commissioner's Office).
15 Coaches' Meeting Area	30 x 30 tent	50 chairs, public address system.
Judges Dressing Area		50 individual storage lockers for officials; enclosed, private changing area.
16 Weigh In	10 x 10	Official weigh in for cox. swains, 2 scales.
Athlete Services		
17 Boat House Canoe/kayak	40 x 260 tent	Boats stored on 12 racks, each rack with 4 tiers. Rack Type Total Boats 1-K4 12-K4 2-K2 24-K2 2-K1 24-K1 1-C1 & 1-C2 12-C1
17	40 x 80	Boats stored on 8 racks, each rack with 4 tiers. Rack Type Total Boats 1-K4 8-K4 2-K2 16-K2 2-K1 16-K1 1-C1 & 1-C2 8-C1 8-C2
18 Rowing Shells	(8)20 x 20 tents	15 racks with 4 tiers stored 60 pairs.
18	40 x 120 tent	9 racks with 4 tiers stored 36 pairs.
16	40 x 120 tent	10 racks with 4 tiers stored 40 pairs.
18	40 x 120 tent	7 racks with 3 tiers stored 21-8s.
18	60 x 60 tent	10 racks with 4 tiers stored 40 singles.
18	(4)10 x 10 tents	2 racks with 4 tiers stored 8 pairs. Storage area for oars. 3 sweep oar racks, scull oar rack.
19 Boat Repair	(9)10 x 10 tents	
20 Boat Wash Down	50 x 120	Hose and cleaning materials available.
21 Boat Weigh-In-Canoe	12 x 60	2 separate screened and fenced areas with spring scale in each, 8-foot bench.
21 Boat Weigh-In-Shells	12 x 30	One scale with 18 lockers, individual storage cradle.
22 Entertainment	20 x 80 tent 10 x 35	Area for bands, lounge. Portable swimming pool with deck.
23 Information/Check In	10 x 20 tent	2 bulletin boards, television monitor, mail box for each team, 2 staff.
24 Shower/Locker	(4)8 x 30 trailers (8)15 x 15 tents	10 showers each adjacent to dressing area. Dressing area.
25 Team Rest Area	(47)20 x 20 tents	Individual team rest areas with cots, chairs, individual lockers.
Competition Management		
26 Commissioners' Offices	(2)12 x 60 trailers	One trailer for canoeing, one for rowing; each with 12 x 17 office for commissioner, private office for president and secretary-general of the federation and 12 x 13 area for secretary/support.
27 Competition Administration	(2)10 x 10 tents	Office area for 8 near boat launching docks.
28 Competition Staff	20 x 20 tent	Lounge for 15, drink dispenser, television.
28	(2)10 x 12	Office for competition directors, office for 2 sports managers in trailer shared with Olympic Family Services.
29 Conference Room	20 x 60 tent	Shaded, carpeted area for 50.

Field of Play			
30 Course Control Tower	8 x 8 x 20		Tower for 2 with view of entire course and launching facility.
31 Finish Tower	24 x 32 x 50		4-story structure at the finish line. The upper level contained Swiss Timing.
31 Judges and Timekeepers Seating	10 x 16		Television monitor, food and beverage service, 12 chairs in tower.
31 Jury Room/Lounge	10 x 16		Television monitor, table and chairs for 8 in tower.
Technology			
32 Message Center	(2)10 x 30 tents		Communications and message receiving center for staff and officials.
33 Results	12 x 60 trailer		Results output, photocopy and distribution center. Waiting area for 8.
34 Staff Offices	12 x 60 trailer		Office for 3 staff, radio recharging and distribution center, 12 x 12 storage area, sponsor/vendor work area for 10.
Swiss Timing	24 x 24		Results input table, photo finish cameras, storage and photo lab located on roof of finish tower, 6 chairs.
	6 x 6		Timing control area at 1,000-meter point on course.
	13 x 13		Storage area.
	8 x 4 and 8 x 13		Scoreboard control, 4 staff on timing boat on course.
Television			
35 Trailer Compound	92 x 150		Telephone and television production and transmission vehicles.
Ticketing			
Administration	10 x 10 tent		Office area for 3.
Information	7 x 7 tent		Ticket information and problem handling. No on-site ticket sales.
Transportation			
Administration	10 x 12		Office for 4 (located in trailer with Olympic Family Services).
36 Driver Lounge	30 x 30 tent		Lounge for 40, toilet facilities, beverage dispenser.
Parking	3,400 spaces		50 spaces for handicapped.
Venue Operations			
37 Construction	10 x 45 trailer		Office for 6; materials and maintenance storage area; conference area for 8.
38 Venue Staff Offices	12 x 60 trailer		2 private 12 x 12 offices for venue manager and assistant and finance staff of 6. Work area for staff of personnel, 2 food services and material supply staff, 3 support staff.
36	20 x 60 tent		Chairs for 16. Staff support area with desk.
Spectator Services			
39 Food Service	(4)10 x 30 tents		Food and beverage sales points.
	(2)8 x 30 trailers		Refrigerator food storage.
	500 square feet		Public eating area with 150 chairs and tables.
Maintenance	10 x 30 and 10 x 15		Storage area for waste bins.
40 Novelty Stands	(5)10 x 10 tents		Novelty sales points for general public; one tent for binocular rental.
	8 x 30 trailer		Novelty storage.
41 Post Office	20 x 40 trailer		Sales and service point for U.S. Postal Service.
Program Stands	(3)4 x 4		Portable program sales points.
42 Public Information	8 x 8 tent		General information service for public.
Public Seating	4,680		Temporary grandstand seating.
Water Supply	(4)8 x 20 x 12		Portable tanks with fresh water.

7.03.7

Cycling: Mission Viejo and Artesia Freeway

Men's and women's individual road races were held on the opening day of cycling competition at Mission Viejo as an estimated 275,000 spectators lined the 10-mile circuit.

The course was lined with 10,000 delineators, 4,000 traffic cones and 20 miles of yellow barrier tape. The start/finish area, as well as key intersections and team cabin eating areas, were lined with plastic fence held in place by stakes. Dangerous corners were padded with two tons of foam rubber stuffed into plastic bags. Forty-nine specific pedestrian crossings were controlled by course marshals. A 12-foot emergency lane ran adjacent to the entire course. The course marshals blew whistles to announce the approach of riders or vehicles. Forty supervisors used bullhorns to communicate with the spectators.

All spectator, athlete and venue management facilities were constructed on a temporary basis. Athlete services included an equipment storage area, a 10-foot by 30-foot equipment tent and 60 tents (10-foot by 10-foot) used for team meeting rooms. Showers and toilets were in an 8-foot by 30-foot trailer. Venue management facilities included venue staff offices in a 20-foot by 40-foot tent, an 8-foot by 30-foot trailer and two 10-foot by 10-foot food service stands.

Two motorcycles specially prepared to carry camera equipment and cameramen was used by the host broadcaster for its coverage. There were 12 commentator booths, each measuring 5% feet by 6% feet, installed near the finish line.

Immediately following the conclusion of the women's race, the installation of the awards ceremonies area was completed. Some set-up for the awards ceremonies was completed during the gaps between finishing athletes. However, maintaining control over the start/finish area was difficult, as was completing the ceremonies in order to stage and start the men's road race.

A set of plans which broke the course into 50 detailed segments proved to be the single most useful resource for competition management. It was used by competition management to design the course details, train staff and illustrate to the Architecture/Construction Department exactly what was needed to build an Olympic bicycle racing circuit.

31

The 100-kilometer team time trial drew an estimated 75,000 spectators to the Artesia Freeway on the final day of cycling competition on 5 August.

The 27 teams of four were staged on an on-ramp to the freeway. The start line in the merge lane was the same as and adjacent to the turn-around and finish line.

Twenty-five kilometers of freeway were closed in both directions although only the four eastbound lanes were utilized. Raised reflector/warning dots were removed from the turn-around areas to permit the smoothest possible conditions.

At the conclusion of the event, motorcycles were used to lead the cyclists safely through the corridor extending past the start/finish line.

The team time trial was the single most difficult event to plan and conduct. Because it was important to keep freeway closure time to a minimum, the entire venue was constructed on the day of the race between the hours of 0530 and 0800. Equally fast was the scheduled tear down at the venue from 1210 to 1315. The last piece of equipment was removed from the freeway at 1259; 49 minutes after commencing tear down and 16 minutes before the contractually agreed deadline for clearing of the site and re-opening to public traffic.

32

31 An entire community turns out to cheer on competitors during the individual road races at Mission Viejo.

32 Temporary plastic fencing is used along with miles of yellow barrier tape to restrain spectators from the road racing course.

16 Message Center	15 x 15 tent	Communications and message receiving center for staff and officials.
Results	6 x 10	Results input area.
17	8 x 32 trailer	Results output, photocopy and distribution from mobile results unit.
16 Staff Offices	20 x 20 tent	Office area for 3 staff, 6 sponsors/vendors, radio charging and distribution.
19 Swiss Timing	6 x 8 6 x 10	Photo finish tower 7-feet-high at finish line. Timing and scoreboard control table for 3.
Television		
20 Trailer Compound	32 x 36	Telephone and television transmission and production vehicles.
Venue Operations		
21 Venue Staff Offices	20 x 40 tent	Office area for food service, finance, materiel supply, personnel, venue manager and staff.
21	8 x 30 trailer	Supplemental vehicle for lounge for venue management.
Spectator Services		
Food Service	(2)10 x 10	Temporary stand for Olympic Family only.
22 Public Announcer Seating	13 x 11 455	Platform for 8, elevated 10 feet. Seating for Olympic Family; no public stands provided; 250 portable toilets, placed every half-mile on course.

7.03.8

Equestrian

All competition in the equestrian events was held at Santa Anita Park except the speed and endurance portions of the three-day equestrian event which took place at Fairbanks Ranch in San Diego County.

The Santa Anita Park facilities were built in 1934 for the racing of thoroughbred horse races around a 6-furlong dirt track and a turf course set within the dirt track. The Olympic jumping and dressage events required a dirt floored arena setting and did not utilize the existing track or turf course. Thus, the major construction elements at this venue were the creation of a 62-meter by 174-meter arena over the existing tile apron and race tracks and the installation of approximately 23,000 temporary bleacher seats.

The original plans called for the construction of the arena by 12-inch sand fill layers which were edged by rolling the sand in engineering fabric. This detail proved unsatisfactory and the edge detail was altered by the insertion of 2-inch by 12-inch boards which created a vertical wall once the 12-inch layer of sand fill was superimposed on the previous layer. The height of the perimeter wall varied from 12 inches at the south side (over the tile apron in front of the permanent stands) to approximately 5% feet on the north wall (over the turf track).

Temporary bleachers were built to the north, east and west of the arena with space in the west bleachers allocated to competition officials, results, timing control and public address announcers.

A jumping holding ring was built directly adjacent to the west bleachers with tunnel access to the competition arena. Dressage holding rings were built directly adjacent to the east bleachers. It, too, had access to the competition arena through a tunnel in the bleacher structure.

Ten schooling areas for dressage were created by fencing specific parts of the dirt track and grass infield. An area for demonstration horses was set up on the northeast corner of the infield. It had a schooling area for jumping on the northwest corner.

Thirty 10-foot by 10-foot tents were built for training and holding areas, primarily in the schooling areas around the venue. Two athlete compound areas were created using three 10-foot by 10-foot tents placed next to the reserve stable facilities in the northwest corner of the venue. One tent was built in the south corner of the competition arena for the competition results staff. A 20-foot by 20-foot tented drivers' lounge was created in the horse trailer parking area.

33

Immediately prior to the opening of competition at the venue, three shade structures were built for first aid in the north and east bleacher areas. Venue management, competition management and concessions were all placed in existing buildings. No modifications were done to the facilities for these operations.

Look items were limited to the temporary seating facilities and the permanent grandstand overhang so as to not conflict with the existing appearance of Santa Anita Park.

The take-down period for the venue was short. The temporary grandstands were removed, followed by the sand and edging of competition arena. The area of the turf track which had been under the arena was resodded, though only minimal damage was sustained.

At Fairbanks Ranch, the construction of the cross country course on an existing golf course was substantial and time consuming. The major construction was done by four highly skilled course builders. These course builders constructed 35 jumping obstacles and grading necessary for the event.

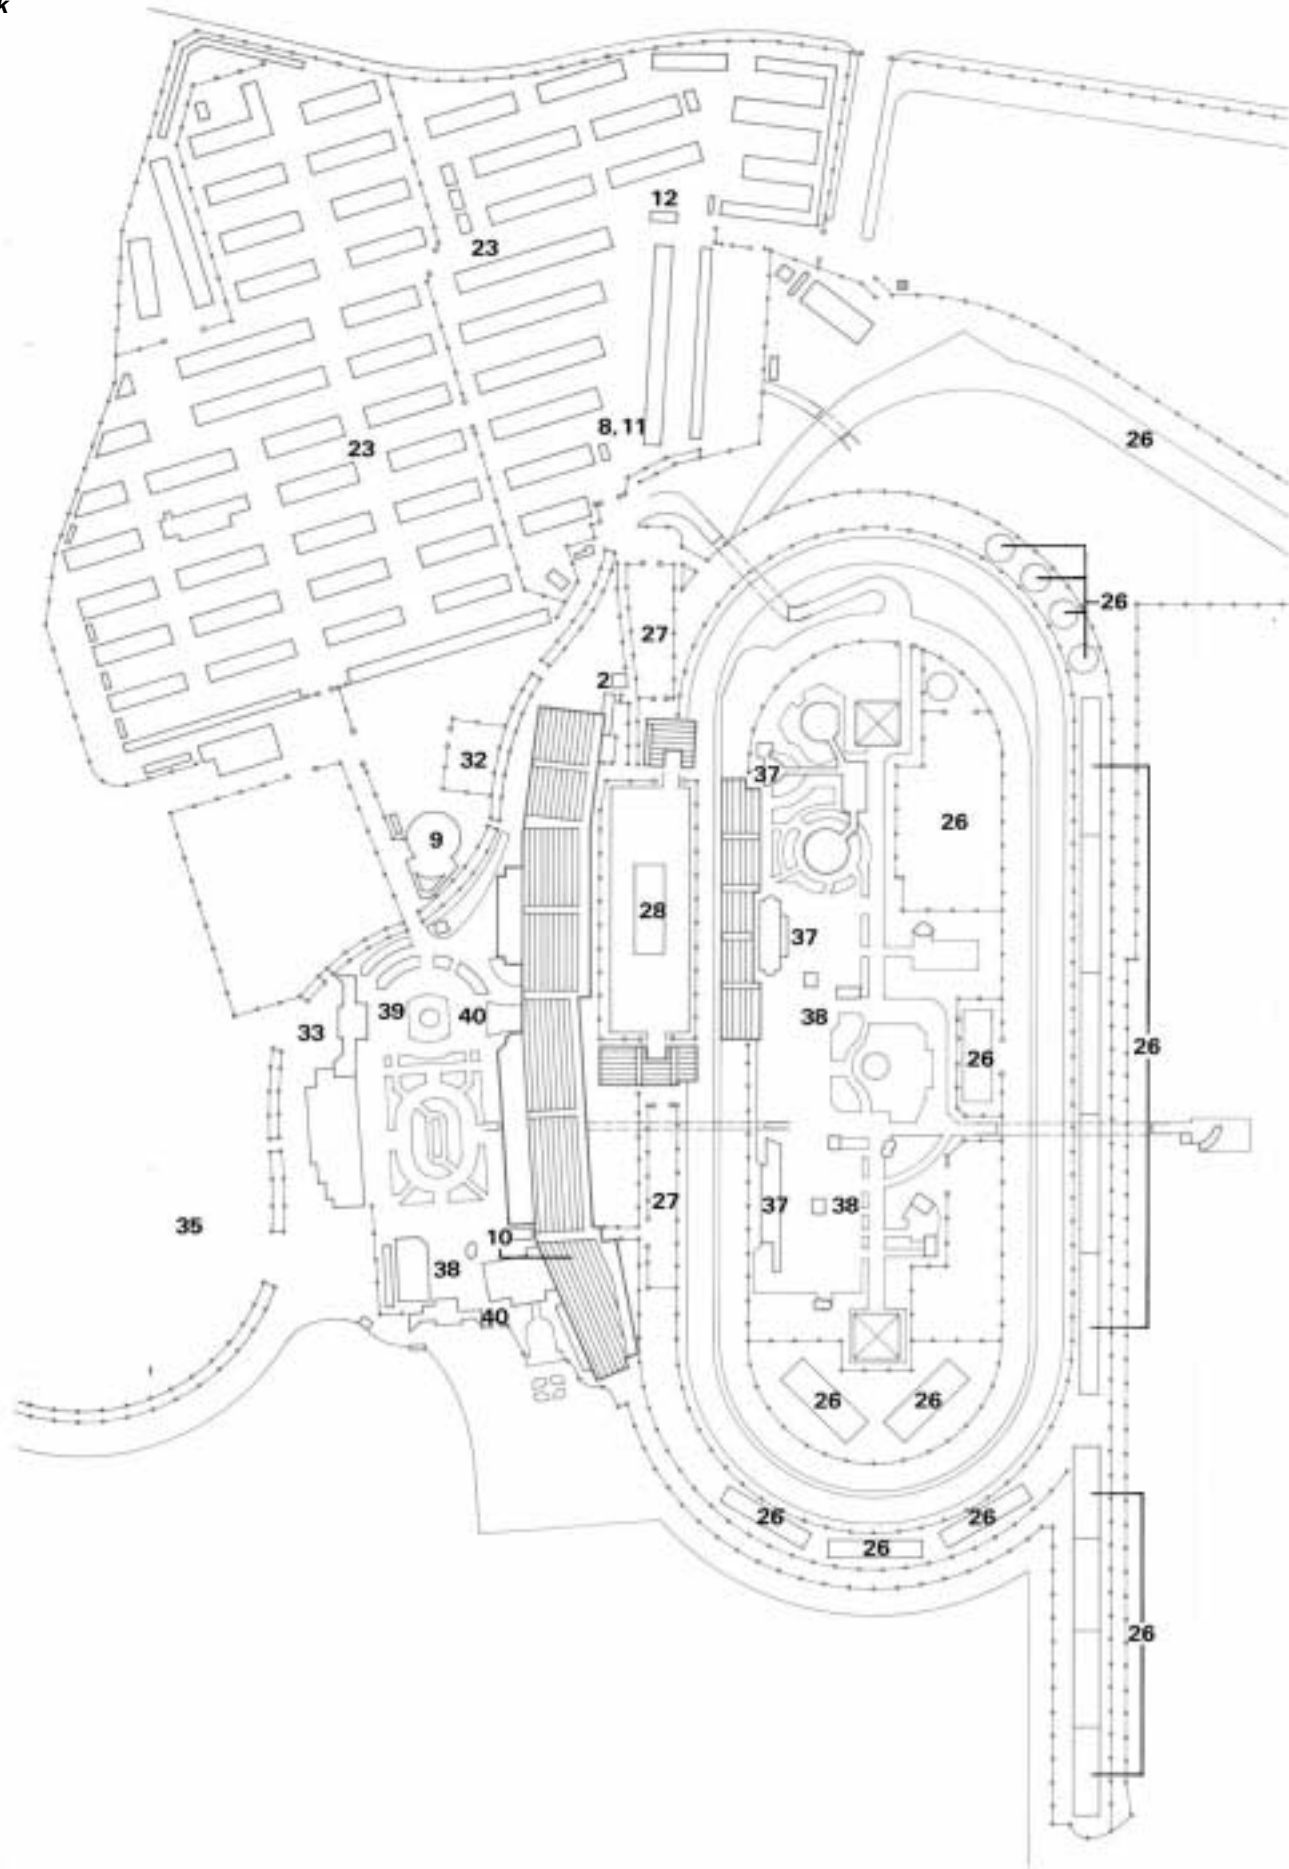

The preparation of the roads and tracks portion of the speed and endurance course, as well as the parking lots, took a considerable amount of time and money, but were structurally fairly simple.

The stable area consisted of a completely fenced-in area with 100 horse stalls. Additional venue and competition management areas were established using fencing and tent structures. Due to the brevity of the event, efforts were made to limit the scope of the temporary facilities built. The clubhouse of the golf course on which the competition took place was used to house the commissioner and federation offices, in addition to a VIP hosting area. Groom and athlete shower rooms were available in the existing tennis clubhouse facilities.

33 Santa Anita Park provides an excellent setting for the equestrian competitions, including temporary grandstands, excellent spectator facilities and a complete equine hospital

Equestrian: Santa Anita Park

Department/ Function	Space Use (in feet unless noted)	Notes
Introduction		
Equestrian competition in dressage and jumping was conducted at Santa Anita Park, with existing facilities for horse racing and stabling. The jumping and dressage portions of the three-day event were also conducted at Santa Anita. Per contract with the LAOOC the event and the site were supervised by the Los Angeles Turf Club (LATC) the existing management group.		
Accreditation		
1 Administration	(2)14 x 16	Offices for 1 each.
2 Staff Entry	10 x 10	Staff entry and check-in point. Work area for 1.
Food Service		
3 Administration	10 x 12	Office for 1.
4 Athlete Dining	60 x 78	Seating for 200.
5 Eating Area/ Lounge	42 x 52	35 lounge chairs, tables and chairs for 52.
6 FEI Officials Dining	32 x 48	Dining room for 48.
Finance		
7 Audit, Cash Control	18 x 22	Office for 2.
	(3)14 x 16	Office for finance, accountants.
	(2)14 x 16	Payroll office.
Health Service & Medical Control		
8 Doping Control- Athletes	10 x 45	Waiting area for 16; testing area with toilet and handwash facilities; work area for 6.
9 Doping Control- Veterinary	4000 square feet	Existing doping facility for equine testing with 25 stalls and a laboratory.
10 Spectator First Aid	18 x 28	First aid room with 6 beds.
10	16 x 18	Waiting room for 10.
10	12 x 12	Private doctor's office.
10	(3)20 x 20 tents	Observation area for 15 each.
11 Sports Medicine	12 x 60 trailer	Waiting area for 8; treatment area for 4; 100 square foot storage.
12 Veterinary Hospital	50 x 100	Complete equine hospital with animal hoist, operating room, laboratory and treatment room.
Material Acquisition & Distribution		
13 Administration	12 x 14	Office for 2.
Olympic Family Services		
Administration		Office for 1(see Technology).
14 Hosting	15,000 square feet	Existing clubhouse for hundreds of guests. Complete food and beverage service.
15 Language Services	18 x 18	Waiting area for 20.

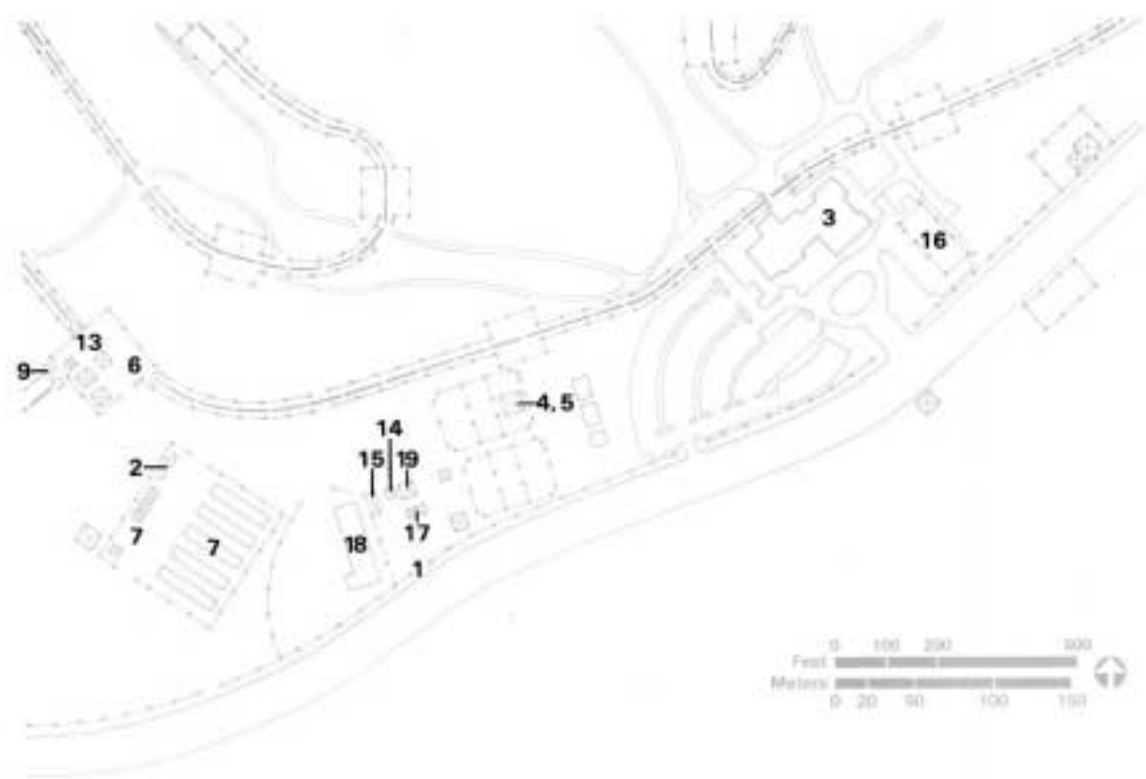

Personnel		
16 Administration	17 x 23	Responsible for time-keeping and staff scheduling.
Press Operations		
17 Interview Room	36 x 37	Seating for 50.
Press Seating	234	156 positions with desk, 78 without desk.
18 Staff Offices	10 x 17 8 x 10	Office for press chief. Office for assistant press chief.
19 Sub-Center	40 x 90	50 working places.
Security		
20 Command Center	16 x 32	Work space for 20.
Sports Administration		
Federation Services		
21 FEI Offices	20 x 22	Office for FEI President and Secretary-General.
21	14 x 17	Office for 5 of jumping jury.
21	14 x 17	Office for 6 of three day event jury.
21	14 x 34	Office for 3 of dressage jury.
21	19 x 20	Office for Veterinary Commission.
21	12 x 24	Office for 19 of appeals jury.
22 Judges'/Offi- cials' Lounge	18 x 30	Lounge for 22.
Athlete Services		
23 Athlete Compound	1800 x 2400	Area with 781 stalls, 109 tack rooms, 50 feed sheds, fenced quarantine area with 126 stalls, 125 grooms' rooms each 12 x 12 (sleeping quarters), and athlete message receiving center. Each room for the grooms had: 2 beds, 2 chairs, dresser, closet, table, lamp, fan, rug.
23 Equipment Storage	(40)12 x 12	1 tack room for each team.
23 Farriers	20 x 20 tent	Work facilities.
23 Information/ Check-In	15 x 15 tent	Information board, 40 individual team mail boxes, work area for 4.
23 Lounge	44 x 54	Comfortable seating for 117.
23 Meeting Room	32 x 72	Seating for 108.
23 Weigh-in	12 x 12	One official scale.
Competition Management		
24 Commission- er's Office	18 x 24	Office for commissioner and sports manager.
25 Competition Staff	12 x 16	Office for competition director.
25	10 x 10	Office for assistant competition director.
26 Training Areas	(7)70 x 200	Sand arena for schooling in dressage.
26	500 x 1000	Area for cross country training.
26	225 x 425	Grass arena for lungeing.
26	60 x 300	Sand area for lungeing.
26	(5)50 x 300	Sand base arena for schooling in jumping.
26	(3)70 x 200	Grass arena for schooling in dressage.

Field of Play		
27 Holding Rings	100 x 300	Holding area for jumping
27	64 x 400	Dressage holding ring.
28 Jumping Arena	205 x 570	64 x 200 dressage arena contained within jumping arena. Awards platform and flags placed here for ceremonies.
Technology		
29 Message Center	18 x 18	Communications and message receiving center for staff and officials.
30 Results	13 x 18	Results output area, staff offices for 3.
30	14 x 52	Results photocopy and distribution. Radio charging and distribution. Waiting area for 8.
31 Staff Offices	16 x 17	Office for 2 staff; shared with protocol manager.
31	11 x 12	Sponsor/vendor work area for 6.
Television		
32 Trailer Compound	80 x 140	Telephone and television production and transmission vehicles.
Ticketing		
33 Administration	8 x 17	Office for 1.
33 Information	10 x 20	Existing ticket information.
Transportation

39 Post Office	22 x 26 trailer	Sales and service point for U.S. Postal Service.
Program Stands	(10)2 x 4	Portable sales points for programs.
40 Public Information	(2)10 x 10 tents	General and public information.
Public Seating	33,500	

Site plan of equestrian courses of the endurance portion of the three-day event at Fairbanks Ranch

Detail plan of support facilities at Fairbanks Ranch

35

35 Innovative jump designs are present throughout the endurance course at Fairbanks Ranch.

Architecture and Construction

Equestrian-Fairbanks Ranch

Introduction Fairbanks Ranch was the site of the equestrian endurance test for the three-day event. The cross-country portion was laid out over 4.5 miles of a newly constructed golf course with a total of 33 jumps. The steeplechase portion was laid out over 2.5 miles of the same golf course while 13 miles of two portions of the roads and tracks were laid out over areas around the course and in the immediate vicinity. Venue and competition management facilities for the one day of competition were established in tents. The athletes' compound and animal facilities were also constructed on a temporary basis utilizing tents.

Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff Entry	20 x 30 tent	Staff entry, badge issue, storage and distribution point. Work area for 15.
1	15 x 15 tent	Supplementary staff check-in and entry. Work area for 15.

Food Service
Staff members were issued a coupon to acquire food at spectator food service stands.

Finance
Audit, Cash Control Office for 4 (see Venue Management).

Health Service & Medical Control
Doping Control 8 x 28 trailer Waiting area for 6 outside, processing area for 2 and testing area for 2 with toilet and handwash facilities.

Equine Medicine
5 veterinary services vehicles located around course with complete treatment equipment. 3 vehicles and 2 equine ambulances in stable area. The five vet stations were in same location with athlete and spectator first aid facilities.

Spectator First Aid (5)20 x 20 tents 10 chairs, refrigerator, television, examination table, 2 folding cots.

2 Sports Medicine 12 x 60 trailer Waiting area for 10, television, treatment area with 2 tables, refrigerator, handwash facilities.

(5)20 x 20 tents Medical stations located around the course each with 5 chairs, 2 cots, 2 stretchers, ice chest.

Materiel Acquisition & Distribution
Administration Operations and administration area for 17 staff (see Venue Operations).

Storage (2)8 x 40 trailers

Olympic Family Services
3 Hosting 1,000 square feet Administration hosting area for 50, television, refrigerator in existing clubhouse.

Personnel
Administration Responsible for payroll timekeeping and staff scheduling (see Venue Management).

Press Operations
4 Interview Room 20 x 20 tent Seating for 20.
5 Sub-Center 40 x 40 tent 20 working places, staff offices for 4.

Security
Command 8 x 32 trailer Administration area for 5. Outdoor briefing area for 100 staff.

Sports Administration
Federation Services

6 Judges'/Officials' Lounge 20 x 20 Lounge for 15. Served also as jury room.

6 Scorers' Area 10 x 10 tent Table and chairs for 6.

Athlete Services

7 Farriers 10 x 10 tent
7 Grooms/Vets (20)12 x 12 Lodging area in stables with 75 beds, 150 chairs. 1 groom per horse.

7 Information/Check-In 20 x 20 tent Athlete information and message receiving. 60 individual mail boxes.

7 Lounge (4)20 x 20 tents Chairs for 20, soft drink dispensers in athlete compound.

7 Stables (80)12 x 12 Included 40 washing mats, 80 hay nets, 60 water dispensers.

7 For stable manager.

7 Living quarters for stable manager.

7 Storage (20)15 x 15 tents Feed and equipment storage each with lockable storage cabinet.

7 Team Meeting Room 20 x 20 tent Tables and chairs for 36.

7 Weigh-In 10 x 10 tent 3 scales.

Competition Management

Commissioner's Office Office for 1 (see Venue Management).

Competition Staff Office area for 5 (see Venue Management).

Field of Play

8 Exercise/Warm-up Area 500 x 700 Obstacles and Jumps/Course 33 jumps on and obstacles over 4.5 mile cross-country course, 8 chairs at each jump for judges. 60 water coolers for staff.

9 Start of Course Course A.

10 Start of Course Course B.

11 Start of Course Course C.

12 Start of Course Course D.

13 Vet Box 1,000 square feet Officials' box at race start point includes: farrier, 3 veterinarians, oxygen, ice, restrooms, timers, shade, first aid, beverages, scales.

Technology
4 Message Center 10 x 10 tent Communications and message receiving center for staff and officials.

Results 3 x 18 Result input table for 6.

5 8 x 32 trailer Result output, photocopying and distribution.

Scoreboard (2)10 x 30 Manual boards.

Television
16 Trailer Compound 60 x 200 Television and telephone transmission and production vehicles.

Ticketing
Information 10 x 10 tent Ticket sales and will call area.

Transportation
Administration Office for 3 (see Venue Management).

17 Driver's Lounge 30 x 30 tent Lounge for 100, television, refreshments.

Venue Operations
18 Construction 60 x 75 Office for 3 for course builders and obstacle repair crew.

8 x 40 trailer Storage.

19 Venue Staff Offices 40 x 40 tent Office area for all competition and venue operation functions.

2,200 square feet Office for 10 during course set up and after event dismantling.

Spectator Services

Food Service (24)10 x 10 Food sales point for spectators.

(8)8-foot 60 picnic tables for spectators.

(3)8 x 40 trailers Storage.

Novelty Stands (8)10 x 10 tents Novelty sales point.

8 x 40 trailer Storage.

Program Stands (12)2 x 4 Portable sales points for programs.

Public Information (2)10 x 10 tents General spectator information.

Public Seating 50,000 Standing room only, no bleachers.

**7.03.9
Fencing and Volleyball**

The Long Beach Convention and Entertainment Center hosted the Olympic competitions of fencing and volleyball. This complex consists of three facilities: the Arena, the Exhibition Hall and the Terrace Theater. The Arena, built in 1962, was used for the volleyball competition while the Exhibition Hall, built in 1977, and the theater were used for fencing. In addition, there were two volleyball warm-up and training courts in the Exhibition Hall and the lower portion of the theater was used for venue management and press support facilities. All three of the facilities were fully utilized with the exception of the existing facilities' management offices.

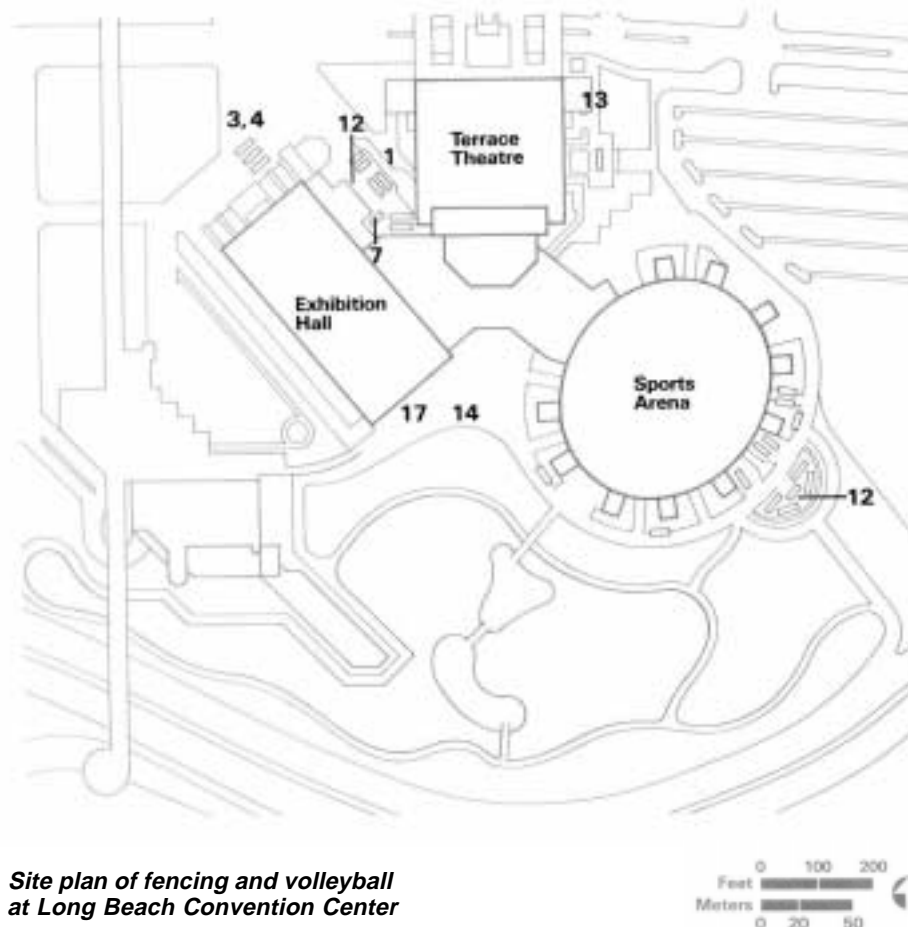

This venue was unique in that two sports, requiring quite different support facilities, shared almost everything except the field of play and athlete support areas. This created a delicate balancing act for construction and venue management when they received requests from one sport that affected the facilities of the other sport.

Construction and modification at the Arena was simple because it was used as a volleyball arena on a regular basis prior to the Games. The synthetic flooring was laid over the existing concrete flooring. Steel supports in the flooring were installed to support the high tension standards. Spectator seats, restrooms and concessions all existed and required no changes although temporary novelty tents were added around the concourse level. Facility modifications entailed temporary modifications by subdividing the existing athlete locker rooms, other support areas and the competition staff's work area. There was no need to modify lighting or the scoreboard since both had recently been installed by the venue's owner.

The volleyball warm-up court was a more difficult issue to resolve. There was no existing court adjacent to the one used for competition, so two temporary courts were created. The original plan called for the placement of the warm-up court in a tent outside the Arena, which would have required the installation of a concrete slab, air-conditioning and a large clear-span tent structure. The estimated cost of this construction was enormous.

36

36 The Long Beach Convention and Exhibition Center facility provides three venues for Olympic use, including two for fencing and one for volleyball.

**Site plan of fencing and volleyball
at Long Beach Convention Center**

Architecture and Construction

Additional security problems would have been created and needed car parking spaces would have been lost. The revised plan placed the two warm-up courts in a corner of the Exhibition Hall. Although the fencing competition staff disagreed with this placement, the plan was approved and construction proceeded smoothly. The warm-up area required the construction of a wall, 100 feet long and 25 feet high. The wall was erected as a sound barrier so as to minimize interference with fencers either training or competing in adjoining parts of the Exhibition Hall. It was quite effective but not totally soundproof; this generated some complaints from the FIE. The ceiling was protected with light and sprinkler guards. Overall, minimal problems arose from the court placement during the fencing competition.

Construction for competition staff and athlete areas (locker and training rooms) entailed the subdivision of existing areas. Competition staffs were placed in existing storage areas with lighting and ventilation added to make four separate, private rooms.

Fencing preliminaries were held in the Exhibition Hall and the finals in the Terrace Theater. Neither of these facilities were designed or used for sports prior to the Games. As a result of this, support facilities for the athletes were non-existent in the Exhibition Hall and were adapted from performer dressing facilities in the theater building. Compounding this problem was the fact that fencing is both an individual and a team sport which brought in a great many athletes who needed to be on-site for several bouts a day over an 8—10 hour period.

With the preliminary elimination rounds to be held in the Exhibition Hall, temporary bleachers for 2,500 spectators were put at opposite sides of the 16 competition pistes. An adjacent storage corridor was partitioned to provide technical services, equipment repair, sports medicine and athlete lounges. Lockers and showers were provided in two 32-foot self-contained trailers. These trailers were plumbed into a fire line adjacent to a nearby hotel. Existing concessionaires served the spectators.

Adjacent to the field of play, but behind the temporary bleachers, were 15 practice pistes. These pistes were separated from the volleyball warm-up court by an existing wall and a temporary partition.

Support and federation offices were housed in existing offices on the mezzanine level overlooking the floor of the Exhibition Hall.

37

38

The finals of the fencing competition were held each evening in the Terrace Theater—an unlikely setting since the theater was used for hosting operatic, symphonic and dramatic performances. One piste was situated on the performance stage highlighted against a black backdrop. An elevated competition platform for 50 technical officials was built on the stage behind the piste running across the stage. This platform was built from modular scaffolding, rather than wood. Original lighting in both the Exhibition Hall and the Terrace Theater was supplemented to meet the fencing federation and television standards.

Since the venues shared parking, scheduling of the events was critical. Entrance to both venues was through a common lobby area but once inside this area the spectators entered the appropriate venue through turnstiles. Each venue had concession stands within its own defined area, but shared concession service in the common area. A public restaurant was also open in this area during competition hours.

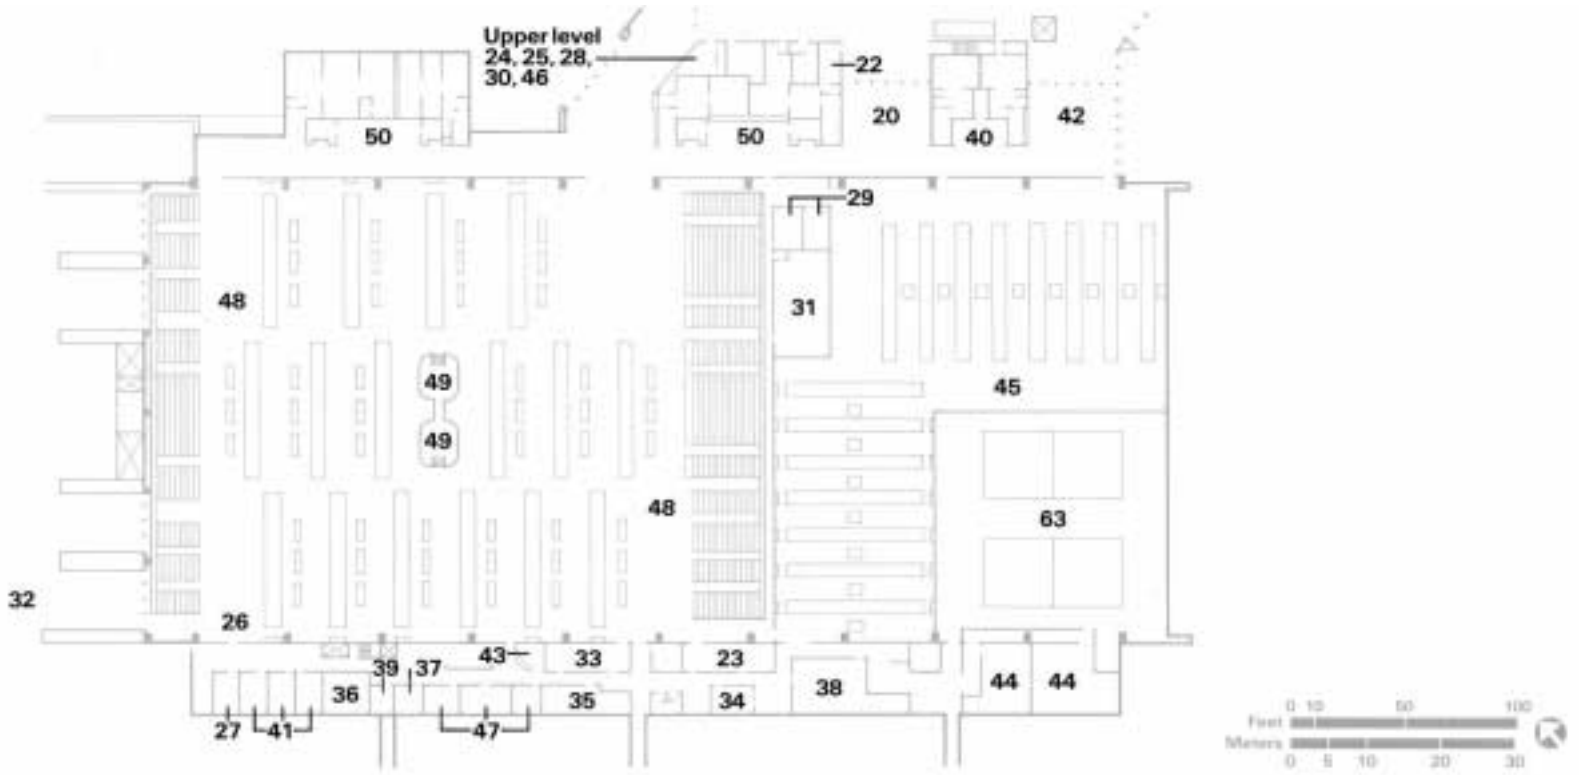

Most support operations were shared by the two venues and housed in the existing meeting rooms under the Terrace Theater. Although this consolidated people and space, circulation became a problem at times.

All construction at both venues was temporary and installed in a five-day period. Tear down was also carried out in an expedient manner. The end result demonstrated the success of a multi-sport effort within a single complex through close coordination and cooperation. Both sports ran smoothly and spectators were treated to excellent competition in venues that were as well-equipped as any other which hosted only a single sport.

37 The Long Beach Arena is dressed in Look colors for the volleyball competition. Tables for press seating are arranged at the left.

38 The Long Beach Convention Center's exhibition hall provides the venue for preliminary fencing competitions, with 16 pistes available to competitors.

Fencing and Volleyball (shared services and facilities)

Introduction/shared services Competition in volleyball and fencing were held in the Long Beach Convention Center which included an exhibition hall for fencing preliminaries and volleyball warm up, a sports arena for volleyball competition, a theatre for fencing finals, and meeting rooms and convention areas under the theatre for venue staff and volleyball federation offices. All facilities were indoor. Venue operations and venue staff were shared by the two sports. Three charts are presented to describe the activities at the Long Beach Convention Center. The following chart describes the facilities and services that were shared by volleyball and fencing.

Facility Location Code (see site map)
 EH = Exhibit Hall—Fencing Preliminaries
 SA = Sports Arena—Volleyball
 TH = Terrace Theatre—Fencing Finals
 PA = Public Areas—Common to both sport facilities
 CA = Convention Area—Lower level of TH for offices and press meeting rooms

Department/Function	Space Use (in feet unless noted)	Notes
---------------------	----------------------------------	-------

39 The Rose Bowl is dressed for Olympic competition as one of the four sites for preliminary pool play.

7.03.10 Football

The Rose Bowl in Pasadena, California was the main venue for the Olympic football competition. However, preliminary round matches also took place at Harvard Stadium, Navy-Marine Corps Memorial Stadium and Stanford Stadium. The Rose Bowl, dedicated in 1922, has a current seating capacity of 104,696. Harvard Stadium in Boston, Massachusetts was built in 1903 and was completely renovated in 1982. Navy-Marine Corps Memorial Stadium, located in Annapolis, Maryland, was dedicated in 1959. Stanford Stadium, in Stanford, California, was built in 1922. All of these facilities have played host to numerous American football games.

The Architecture and Construction Department hired a football project manager in June 1983. The planning, design and venue development process was fully engaged in November 1983. In January 1984, outside consultants were engaged to handle the Look design and construction management.

The Rose Bowl presented very few problems from a construction standpoint since it had presented many American football competitions to large crowds and from a functional standpoint, the Olympic football competition differed only in the size of the field of play. Olympic construction began in the Rose Bowl in July 1984 following a motocross competition. Damage to the facility's field was extensive and required the LAOOC to completely grade and re-sod the field of play. Three trailers were brought in to support construction and venue management efforts and were stationed just off Rose Bowl Drive, southeast of the stadium.

Existing office space in the southeast corner of the facility housed the Rose Bowl administration and the city of Pasadena police. Locker rooms, warm-up areas, sports medicine and doping control offices were located underneath the south end of the stadium.

Concessions facilities, amounting to 45 permanent and temporary stands, were already in place and required only cosmetic additions. Approximately 2,500 linear feet of fencing were used to supplement the existing fences. More than 40,000 square feet of fence fabric were used to decorate both the fencing and seat areas. National and ceremonial flags were flown around the outside rim of the stadium. In addition, 48 large banners were acquired and 12 were placed at each of the quarter points of the stadium rim.

As few modifications were required to the physical plant, a strong emphasis was placed on the Look. Three master Look structures were built and placed at Gates A, Band C. Three hundred signs of various types were added for spectator control.

Although Harvard Stadium was constructed for football competition, the sophisticated technology and size of the Olympic production required modifications to the facility.

Construction installed the following items from Harvard Stadium and removed them after the Games:

- Security fence and gates around the Dillon Field House
- Security fence and gates at the ITT building
- Security fence and vinyl wrap around the lighting rectifier
- Torch platform
- Propane system for Olympic Torch
- Installation of a torch
- Backdrop wall
- Cover propane system with plywood and 12,000 pounds of sand
- Podium and two rail system
- Extension on the podium
- Paint, install, repair and remove expanded polystyrene panels around the field of play
- Photographer's barriers
- Fabricate two types of corner flag systems
- Roof over the players
- Install ceremonies banners and glue country placards
- Flags of the nations at the bowl end of the stadium
- Banners throughout the stadium
- Look wrap columns in the stadium
- Wrap speaker towers
- Decorate VIP, press and athlete areas
- Plywood panels around the concession stands
- Wiring for photocopying machines and computers
- Temporary staff check-in booth
- Two ceremonies control shacks
- Guard shack at the Olympic village
- Eleven tents
- Performed numerous other small tasks for ceremonies, security, competition, food service, protocol, press and technology

Although Stanford Stadium was constructed for American football competition, the sophisticated technology and size of the Olympic production required modifications to the stadium facility and Branner Hall, the Olympic athlete housing facility. Site preparation included the following:

- Contracting and supervising the fencing project around Branner Hall, concession areas, management staff areas, law enforcement areas and areas within the field of play
- Contracting and supervising the temporary electrical work for the stadium as well as Branner Hall
- Contracting and supervising the painting of concession areas, doping control facilities, locker facilities and ticket booths
- Contracting for and installation of the venue management trailers
- Contracting and supervising the tent installation at Branner Hall, VIP hosting area, sponsor area and the press interview area
- Contracting and supervising the concourse lighting project
- Installation of furniture within the venue management area

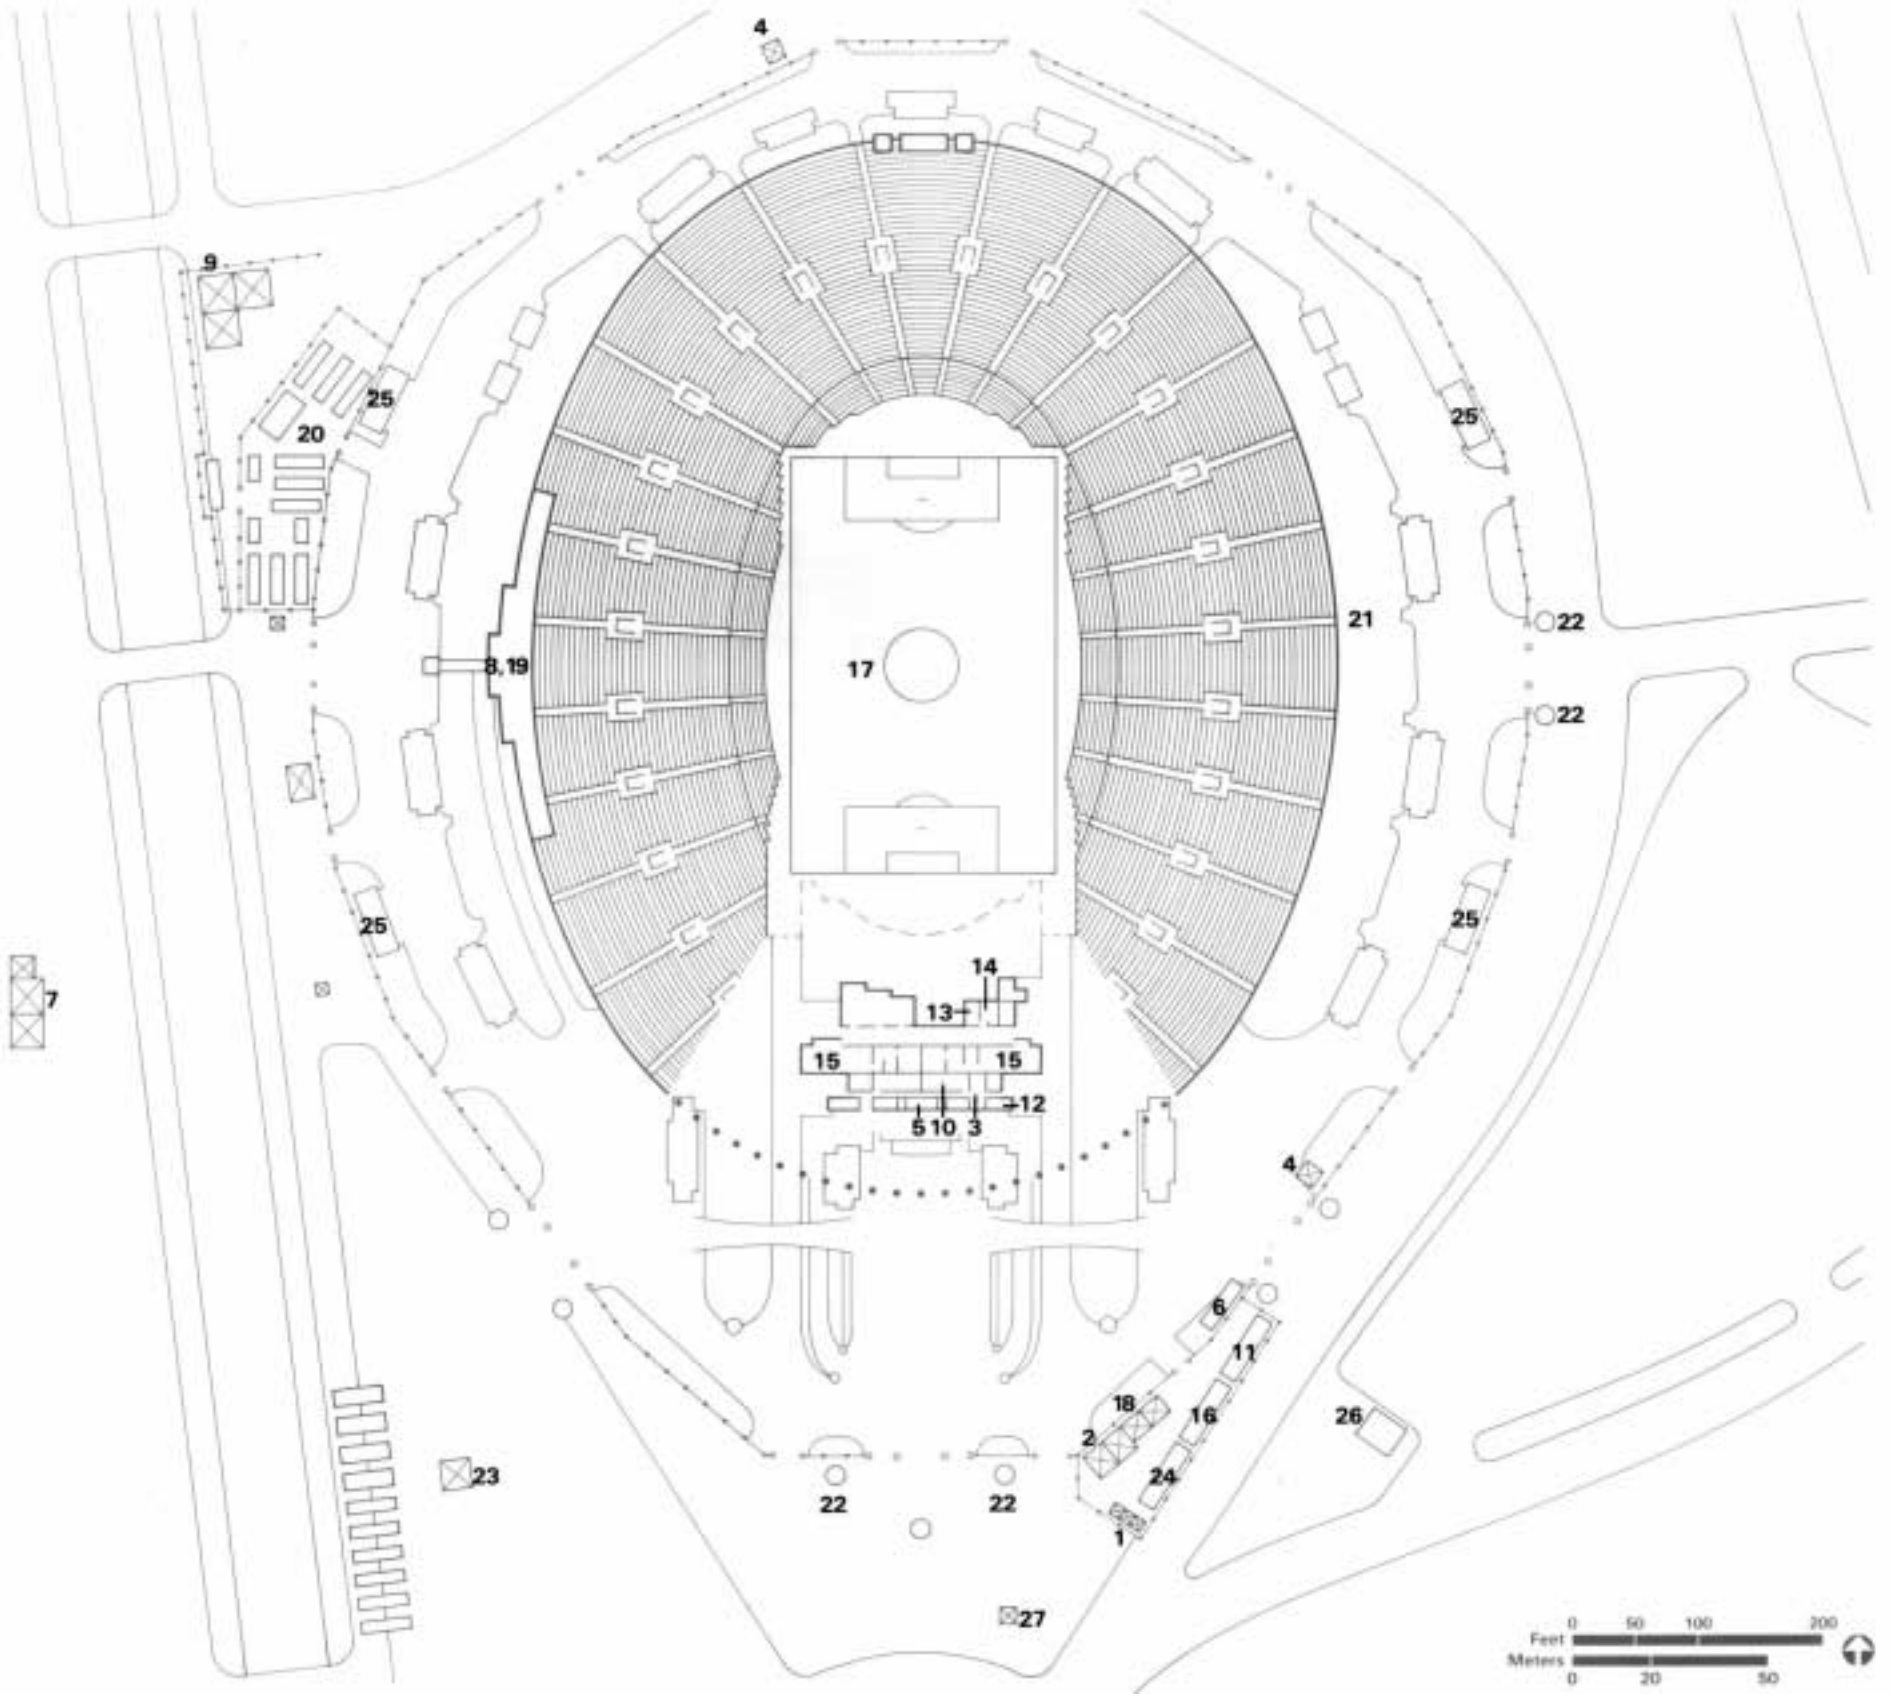

Look coordination for the facility included the contracting for and supervision of flag pole installation, field of play runner, scoreboard signage and all signage in and around the stadium.

Construction responsibilities at Navy-Marine Corps Stadium in Annapolis were similar to those at Harvard Stadium. Trailers were brought in to house the venue management and competition officials, fencing was constructed to develop the proper circulation within the controlled areas and considerable attention was paid to the Look decorations. The centerpiece to these decorations was the construction of an Olympic torch structure at the west end of the field of play.

Several goals of the Olympic design program were realized at the remote football venues. With the Look celebrating the festive qualities and international spirit traditionally associated with the Games, the vivid colors created an exciting backdrop for the drama of the opening ceremonies and football competition at each venue. Most importantly, the Look visually linked the geographically diverse soccer sites.

Football		
Introduction	Football competition took place at three sites in addition to the Rose Bowl. Eight preliminary matches and all final rounds were held at the Rose Bowl. The Rose Bowl is an existing outdoor multipurpose stadium with seating for more than 103,000 spectators and existing concession and spectator support facilities.	
Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff Entry	10 x 30 tent	Staff entry, badge issue, storage and distribution point. Work area for 8.
Food Service		
Administration		Office for 3 (see Venue Operations).
2 Eating Area/Lounge	20 x 40 tent	Lounge for 100, tables and chairs.
Storage and Distribution	(2) 3x7x10	Refrigeration units for box lunch storage.
Finance		
Audit, Cash Control		Work area for 7 (see Venue Operations).
Health Service & Medical Control		
3 Doping Control	16 x 26	Waiting area for 10; testing area with toilet and handwash facilities; processing or work area for 4; television, storage cabinet, refrigerator.
4 Spectator First Aid	(2) 20 x 20 tents	Treatment area for 2, refrigerator, television, handwash facilities, toilet, waiting area for 15.
5 Sports Medicine	16x28	Waiting area for 8, 6 treatment tables, ice maker, refrigerator, handwash facilities.
Material Acquisition & Distribution		
Administration		Office for 3 (see Venue Operations).
6 Storage	10 x 45 trailer	
Olympic Family Services		
Administration		Office for 1 (see Venue Operations).
7 Hosting	20 x 60 tent	Lounge for 100; food and beverage services.
8	10x50	Hosting area in press box for 100.

Personnel		
Administration		Responsible for payroll, timekeeping and staff scheduling. Office for 2 (see Competition Management).
Press Operations		
9 Sub-Center	(3) 30 x 40 tents	40 working places, staff offices for 3. Adjacent athlete interview room.
Press Seating	358 positions	50 positions without a desk, 308 positions with a desk.
10 Interview Room	22 x 50	Overflow area established for semi-final and final matches only.
Security		
11 Command Center	12 x 60 trailer	Office for 12.
Sports Administration		
Federation Services		
FIFA Offices		No offices on site.
12 Draw Room	9 x 16	Seating for 12.
13 Officials' Dressing Room	8 x 20	Shower, dressing area for 4.
14 Lounge	12x12	Seating for 6.
Athlete Services		
15 Team Locker Room	(2) 25 x 60	Existing dressing rooms with lockers for 20, shower, toilet and dressing area.
Competition Management		
16 Competition Staff	12 x 60 trailer	Offices for commissioner and venue manager, work area for 20 staff including competition staff and personnel staff.
Field of Play		
17 Field	68m x 105m	Natural grass turf field. Team seating for 20 each. Goal lines and mid field points marked with flags and chalk.

Technology		
18 Message Center	10x20	Message receiving center for staff and officials. also served as food service overflow area.
19 Results	6 x 18	Results input table for 6 in press box.
19	8 x 20	Results photocopying and distribution area.
19	10 x 10	Storage.
19 Swiss Timing	6 x 6	Scoreboard control desk for 2 in press box.
Television		
20 Trailer Compound	40x100	Telephone and television transmission and production vehicles.
Ticketing		
21 Administration	10 x 15	Work area for 10.
22 Information	(4) 6x6	Information, ticket purchase and will call points. Tickets sold on site.
Transportation		
Administration		Office for 5 (see Venue Operations).
23 Drivers' Lounge	20 x 20 tent	Waiting area for 15.
Venue Operations		
24 Venue Staff Offices	12 x 60 trailer	Office area for 20 staff from Food Service, Language Services, Protocol, Transportation, Finance, Construction and Material Supply departments.
Spectator services		
25 Food Service	(6) 8x15	Existing food service stands with 120 service lines on outside concourse.
	(25) 10 x 10 tents	Portable food and beverage sales points.
Novelty Stands	(25) 10 x 10	Novelty sales points.
26 Post Office	26x32	Sales and service point for U.S. Postal Service.
Program Stands	(21) 2x4	Portable sales points for programs.
27 Public Information	8 x 8 tent	General information point for spectators.
Public Seating	103,300	

**7.03.11
Gymnastics**

The building of a unique 20-foot high bridge and the set up of the field of play were among the most notable of the construction projects at the gymnastics venue at UCLA's Pauley Pavilion.

The bridge was constructed between Pauley Pavilion and the training gymnasium used by gymnasts at Wooden Center in the UCLA Village. The gymnasts required a direct route between the training site and the competition floor to isolate them from the public and the bridge allowed athletes to re-enter the UCLA Village without accessing the main walkway. Moreover, the layout of the gymnastics venue directly adjacent to the UCLA Village required the construction of the elevated walkway as a security measure. The bridge spanned the village security fence from Wooden Center to the Pauley Pavilion athlete entry tunnel and access was limited to athletes, coaches, FIG officials and medical and competition personnel.

Construction inside Pauley Pavilion included the erecting of the gymnastics podium, a one-meter-high platform on which all the gymnastic apparatus was placed. The podium had a large surface area shaped to accommodate the equipment and was used in the 1976 Games in Montreal, then purchased by the LAOOC. After the Games, it was sent to the United States Gymnastics Federation in Indianapolis. During the summer of 1983, the podium was set up in the LAOOC warehouse by the Canadian firm which manufactured it as a demonstration for the LAOOC staff. The podium was set up in 1983 at Pauley Pavilion for the McDonald's International Gymnastics Championships.

The podium was unique as several sections were constructed to withstand the high pressure of the gymnasts' performance. Guy wires were used to anchor the apparatus with weights securing them beneath the podium. The podium required three days to set up and 12 hours to tear down. Additional pieces were constructed to enlarge the podium at the high bar and uneven bar, and spare parts were constructed for broken or damaged units. During artistic competition, the men's and women's apparatus was changed on the podium every night as men and women competed on consecutive days. A perimeter fence was placed around the podium and created a walkway for photographers. Elevated platforms were located inside the perimeter barrier for FIG officials, judges and members of the national federations.

A number of complex wiring systems were installed. Wiring for telephone, electronic messaging system terminals, Swiss Timing, sound systems, television and electrical systems were located under a light gray carpet covering the podium and surrounding floor area. Wiring was routed to prevent electrical interference between systems.

Artistic gymnastics competition was completed at 1930 hours on 5 August 1984 with rhythmic training scheduled to begin at 0800 hours on 7 August. Crews began the work required to change-over the venue immediately after artistic gymnastics competition was completed. The crews removed the gymnastics apparatus and the podium. The judges' tables and platforms were moved. Technology items, including the wiring, and television cameras were relocated. Additional floor level bleachers were set up. Platforms, scaffolding and the carpet were reworked where necessary and the rhythmic competition floors were installed. The job was completed by 2000 hours on 6 August 1984.

The last event at Pauley Pavilion ended at 2200 hours on Saturday, 11 August 1984. The venue was secured and technology sponsors began the removal of equipment. The field of play was cleared and restoration work began on Sunday, 12 August 1984 including painting, refinishing the floor, re-sodding Spaulding Field where the television compound had been, and re-installing seating that had been removed for the press.

41 A giant scaffold bridge provides a walk way for gymnasts to move between the warm-up area and the competition arena in Pauley Pavilion.

42 Colorful banners bring a festive atmosphere to the gymnastic competitions inside UCLA's Pauley Pavilion.

Architecture and Construction

Gymnastics			Security			Judges		
Introduction	Gymnastics competition and training utilized 3 separate buildings; Pauley Pavilion (PP)-competition facility; Wooden Center (WC)-training and warm up facility and Morgan Center (MC)-administration. The Wooden Center was located inside the Olympic village at UCLA. Pauley Pavilion was accessed by athletes from Wooden via a bridge. Pauley Pavilion and Morgan Center are adjacent to each other and to the Olympic tennis stadium and therefore shared certain facilities or resources such as parking and staff feeding areas.		15 Command Center	28 x 32	PP: Office area for 6; reception area. interview/holding area, meeting room for 6. MC: Office for 1 (see Venue Operations). Daily briefings took place in press interview room (see Press Operations).	23 Jury Room	11 x 18	PP: At each apparatus, a table and chair provided for superior judge, judge, judges' assistants; positioned by FIG rules: Total: Artistic—Men 42, Artistic—women 24, Rhythmic—33
Department/Function	Space Use (in feet unless noted)	Notes	Sports Administration			24 Scorekeepers	3 x 36	Table and chairs for 12 manual scorers and results input.
Accreditation			Federation Services			25 Storage	12 x 42	PP: For spare artistic gymnastic mats and storage of unused apparatus (men's apparatus during women's competition). PP: For rhythmic gymnastics implements.
1 Staff Entry	20 x 40 tent	Outdoor work area for 8 adjacent to the Morgan Center (see Venue Operations).	16 Conference Room	(2) 15 x 20	MC: Rooms assigned to women's technical committee and men's technical committee each with conference table seating for 8.		10 x 10	
Food Service			Athlete Services			Technology		
2 Distribution/Eating	20 x 300	Service and seating area for 2,000 in shaded bleachers for gymnastics and tennis staff and village transportation staff.	17 FIG Offices	(2) 8 x 10	MC: Office areas for FIG president and secretary-general.	26 Administration	14 x 20	PP: Office area for 11 staff and vendors. Additional 8 x 10 work area for vendors.
3 Lounge	10 x 20 tent	MC: Seating for 65, snack and beverage service.	17	(3) 8 x 10	MC: Office area for each FIG technical director (men, women and rhythmic technical committee).	27 Message Center	8 x 31	MC: Office area for 3, radio base station.
4 Storage	(2) 10 x 45 trailers	Trailers located on Spaulding Field. Refrigerated storage of box lunches and distribution point.	18 Locker Room/Showers	(5) 400 square feet	WC: 10 individual rooms, 5 men's, 5 women's, each with seating for 6 with full length mirrors. Adjacent to toilet and shower area.	28 Results Output/Photocopy Distribution	47 x 107	PP: Waiting area for 6 runners, desk and chairs for 6 results staff, 8 results photocopiers. Temporary additional air-conditioner installed.
Finance			18 Lounge/Staging Area	20 x 35	WC: Rest area for 100, television, beverage service. Staging area prior to call to begin competition. Wired to public address system in Pauley Pavilion.	29 Results Input		PP: Table for 6 at field of play.
5 Audit, Cash Control	200 square feet	PP: Office for 5.	18 Warm-Up/Training	40,800 square feet	WC: 3 gymnasiums subdivided to establish 8 separate training areas with a total of 4 complete sets of apparatus for men and 4 for women; 1 area for men and 1 area for women utilized for training and competition warm-up. Areas converted for rhythmic gymnastics at the conclusion of the artistic competition. Desk for training coordinator located at entry.	Swiss Timing	12 x 45	PP: Timing center, desks and chairs for 5 in storage area behind results input desk.
Health Services			Competition Management			Television		
6 Doping Control	450 square feet	PP: Waiting area, 250 square feet with maximum capacity for 40; processing area for 10; refrigerator and lockable storage cabinet; testing area with 2 toilets and handwash facilities.	19 Commissioner's Office	16 x 20	MC: Private office for 2. At entry is 10 x 15 reception and waiting area.	30 Trailer Compound	75 x 350	Telephone and television transmission and production vehicles; utilized for tennis coverage as well.
7 Spectator First Aid	240 square feet	PP: Existing public first aid station with waiting area for 6; treatment area and tables, refrigerator, toilets; observation area and work area for 7 staff.	19 Competition Staff	11 x 26	MC: Office for competition director and assistant director.	Ticketing		
8 Sports Medicine	290 square feet	WC Athlete warm-up area with 8 treatment tables, 6 chairs, storage cabinet. One taping table placed in each of 7 training halls in Wooden Center.	19	(7) 7 x 10	MC: Office area for 7 competition staff.	31 Information	7 x 7 tent	Work area for 3 for spectator information and will-call.
8	400 square feet	PP: Treatment area adjacent to podium for taping, massage or treatment of competition injury. Waiting area for 16, 6 treatment tables, water-cooler, ice maker, oxygen tanks.	19	600 square feet	PP: Office for 11 competition staff in immediate proximity to podium. Also, athlete information area.	Venue Operations & Administration		
Material Acquisition & Distribution			19 Conference Room	20 x 20	MC: Meeting room for 2.	Maintenance	20 x 24	PP: For storage and equipment issue.
9 Administration Storage	16 x 24 (5) 10 x 44 trailers	PP: Work area for 9. Trailers 1,000 feet from venue, accessible only by truck and cart.	Field of Play			Storage	28 x 32	
Olympic Family Services			Athlete Seating		10 chairs for each team at each apparatus; 60 men, 40 women.	32 Venue Staff Office	32 x 40	MC: Office for venue manager.
10 Hosting	2.5 x 5.0	PP: Existing lounge for 50.	20 National Delegate Seating		25 chairs on platform.	32	22 x 22	MC: Office for assistant venue manager.
Personnel			21 Competition Floor	116 x 194	Interior dimensions of podium perimeter.	32	(11) 8 x 10	MC: Staff assigned to work area with desk and 2 chairs; Construction, Protocol, Food Service, Personnel, Accommodations, Ceremonies, Accreditation, Security, Transportation, Language Services.
Press Operations				99 x 178	Interior dimension of floor in rhythmic configuration.	Spectator Services		
11 Interview Room	32 x 40	MC: Seating for 84. Platform for 9. Room used in morning for security briefings and FIG judges meetings.	22 FIG Officials		Elevated platform for medical commission, jury, LAOOC commissioners, seating for 26 at center podium.	33 Food Service	(3) 10 x 30	PP: Interior stands with 8 service lines each.
12 Mixed Zone	12 x 45	PP: In storage room adjacent to podium at athlete entry/exit point to Pauley Pavilion.				33	(9) 10 x 10 tents	PP: Stands on exterior concourse.
13 Photographer Positions	160	Positions in stands and podium perimeter.				33	15x60	Storage compound.
Press Seating	405	PP: 211 without desks, 194 with desks.				34 Novelty Stands	(6) 10 x 10 tents	PP: Stands on exterior concourse.
14 Sub Center		Combined sub-center for UCLA Village, gymnastics and tennis established in Ackerman Union, a separate facility located approximately 200 yards from Pauley Pavilion. Gymnastics press staff utilized 15 work spaces plus 1 desk available in Morgan Center (see Venue Operations).				34	15 x 50	Storage compound.
						Post Office	24 x 26 trailer	Sales and service point for U.S. Postal Service.
						Program Stands	(8) 2 x 4 cans	Mobile sales points for program sales.
						35 Public Information	8 x 8 tent	Kiosk for general spectator assistance. 10 x 20 Lost and found storage.
						Public Seating	10,800	50 seats for handicapped spectators.
						36 Venue Owner's Office	20 x 24	Facility is operated on-going basis by UCLA staff who assisted in Olympic operations. Their offices were not available to LAOOC.

**7.03.12
Handball**

The site selected for the handball venue was California State University, Fullerton. The gymnasium at the university included offices, dressing rooms and warm-up areas and was easily adapted for the staging of this competition.

The major problem faced by the LAOOC in utilizing this facility was the difference between the size of a basketball court which the gymnasium was designed to accommodate and that of a handball court. Inasmuch as a handball court is both longer and wider, adjustments were made in the seating area. The existing bleachers required full outward extension in order to lock into place and meet safety standards. Due to the required width of the handball court, seating for 4,000 spectators was provided by augmenting existing bleachers with temporary ones. The existing permanent bleachers could be only partially extended. Temporary bleachers were erected in front of existing ones along the sides and around both ends of the court to maximize seating.

The existing hardwood floor was covered with Taraflex Sport M Green 5 12T from Bat Taraflex. This was a synthetic flooring with a single color playing surface and a contrasting color for boundaries.

In anticipation of the warm summer weather, 350 tons of temporary additional air-conditioning was installed. This proved adequate to meet the needs of spectators, competitors and staff.

Preliminary move-in was started on 10 May with the installation of the air-conditioning coils. Telephone company trailers were moved on site 14 May and fencing commenced 1 June. The official access date was 1 July when the balance of the construction modifications were started. Move-out began on 10 August and was complete by 14 August. The cooperation of the university in allowing some early construction activity was instrumental in completing the necessary modifications.

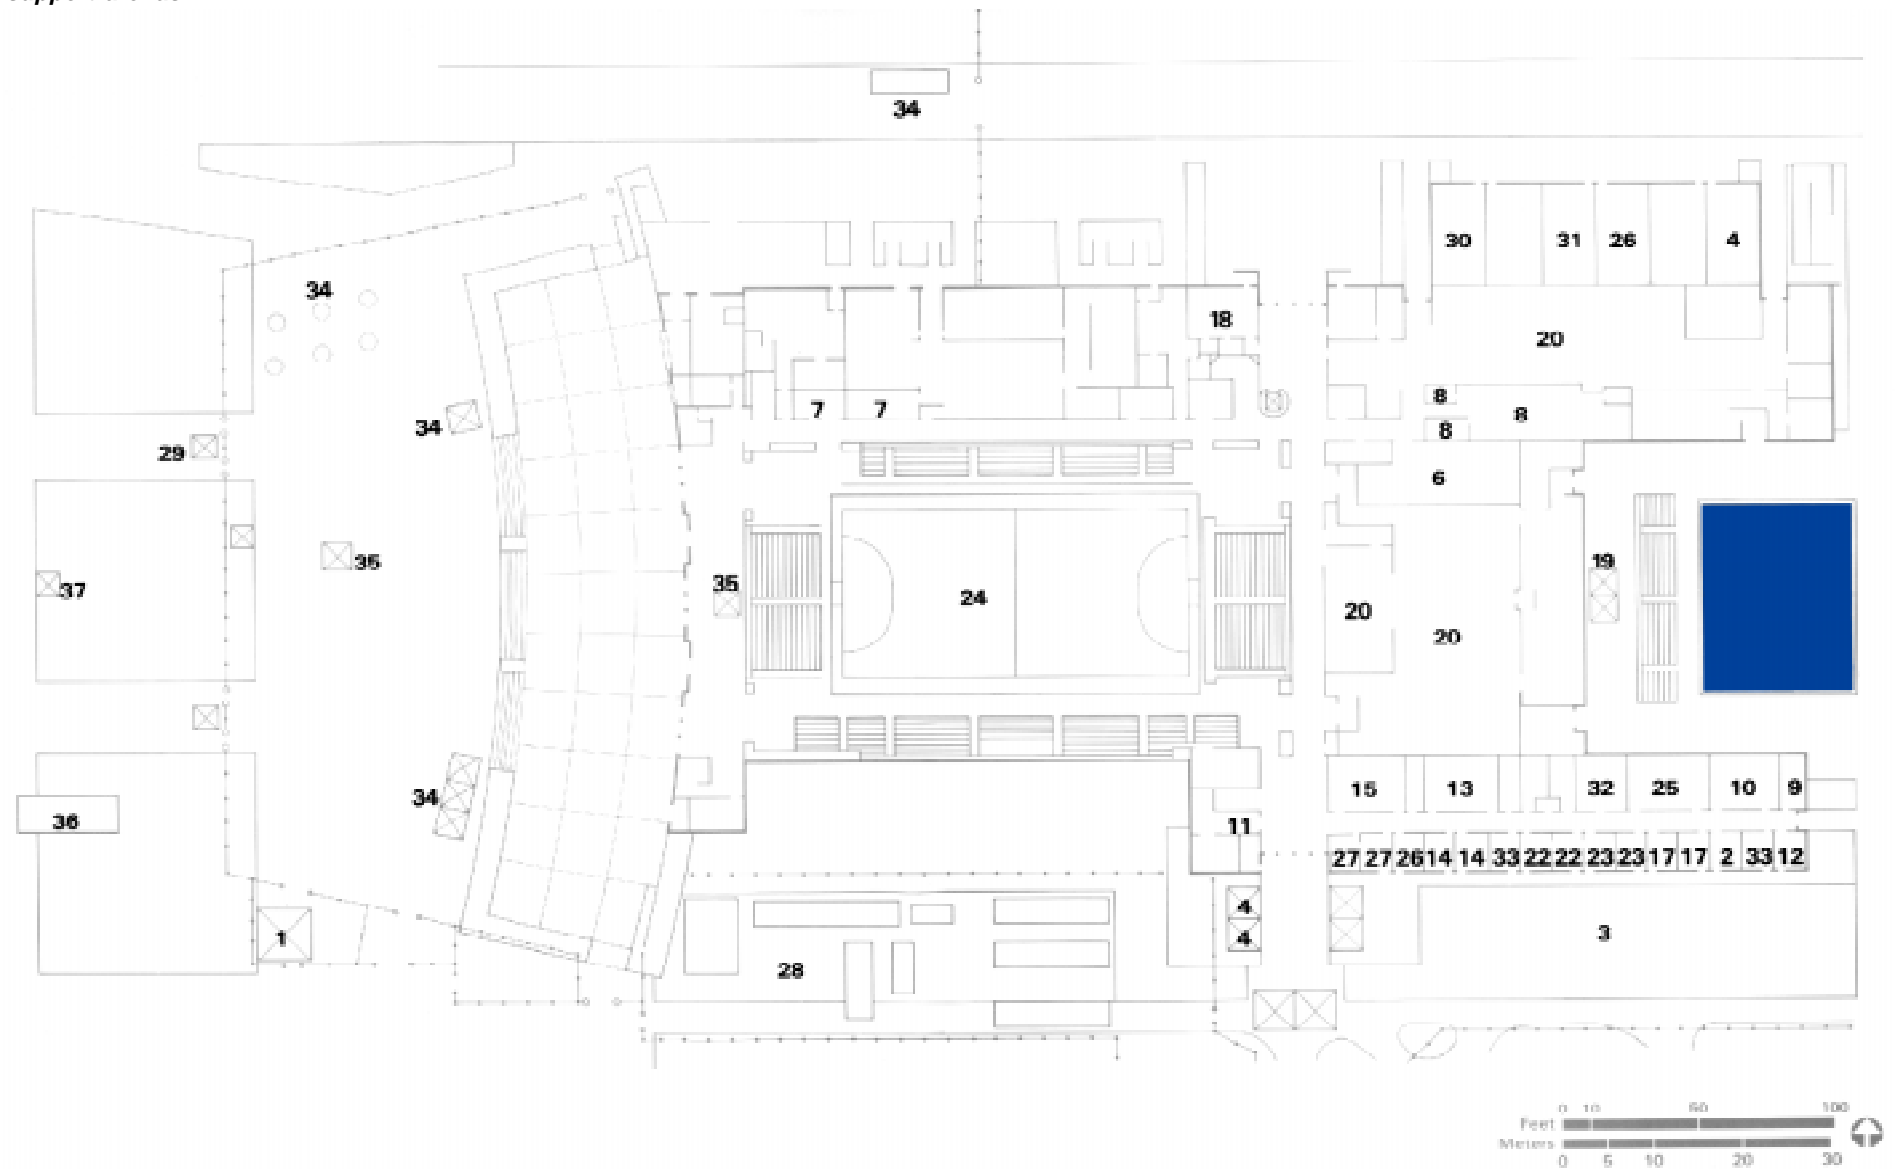

The finals of the competition were played at the Forum. A separate synthetic surface was installed there on an overnight basis following the completion of the basketball tournament.

7.03.13 Judo

The selection of California State University, Los Angeles as the site of judo competition for the Games of the XXIIIrd Olympiad was announced on 7 January 1981. It was selected because existing facilities required little modification and the university was in close proximity to the central Los Angeles area. The facility could also serve as the training facility for judo competitors.

The LAOOC acquired the use of limited office space at the university in January 1984. Venue construction began in early May when air-conditioning coils were installed. Trenching for power and telephone lines was completed in June. All other venue modifications were made between 1-7 July, and the removal of all Olympic equipment and site restoration was completed by 21 August.

The university's three-level physical education building was ideal for the sport. The field of play was located on the second level of the building, known as Eagles' Nest Arena. International Federation rules specify that the competition area must be between 14 and 16 meters square and the LAOOC decided to use a 16-meter-square area for competition. This competition area was placed on a raised, resilient platform which was 18.3 square meters. The competition tatami covered the platform except for a one-meter zone around the perimeter. The tatami was held in place with three-quarter-inch round molding nailed around the perimeter of the platform. The 75-centimeter-high platform raised the tatami off the gymnasium floor to provide optimal viewing for officials and spectators. Athletes and officials accessed the platform by two sets of stairs.

Spectator seating was provided on existing bleachers located on the second and third levels of the gymnasium. Dignitaries and other officials were seated in 80 padded folding chairs which were located at the base of the bleachers. The chairs were arranged in two rows with the second row elevated by eight inches. Three overstuffed chairs were situated in the front of VIP seating and were used by the president of the International Judo Federation and other special guests. A total of 4,200 seats were provided.

Two scoreboards 3.5 feet high by 5.5 feet wide were located on opposite sides of the platform. The scoreboards were provided and operated by Swiss Timing.

44

A training room and press center were located on the west side of the building. The venue training facilities were equipped with 14 mats and located in the areas occupied by the bleachers when not extended for the competition period. The location of these facilities within the venue proved unfortunate as the air-conditioning was not sufficient to keep the areas comfortable during concentrated periods of use. The warm-up area, weigh-in room and saunas were located on the north side of the physical education building-on the second level-and locker rooms were located on the facility's first level.

More than 350 tons of air-conditioning was provided in the main competition hall by air-conditioning units housed in portable trailers. The trailers were enclosed by a 12-foot-high fence decorated with Look fabric.

Space in the main competition hall was limited. Concessions and novelties were located in tents and trailers outside the competition facility. Venue operations and International Federation offices were located in existing offices within the physical education building. Parking for VIPs, staff and spectators was provided in existing parking structures on the university campus.

Standard Look elements decorated the judo venue and were enhanced by the addition of a permanent ceramic tile mural which was placed on the west wall of the Physical Education building. Created by the internationally known outdoor muralist Guillermo Granizo, the mural, funded in part by the LAOOC, was a permanent addition to the university.

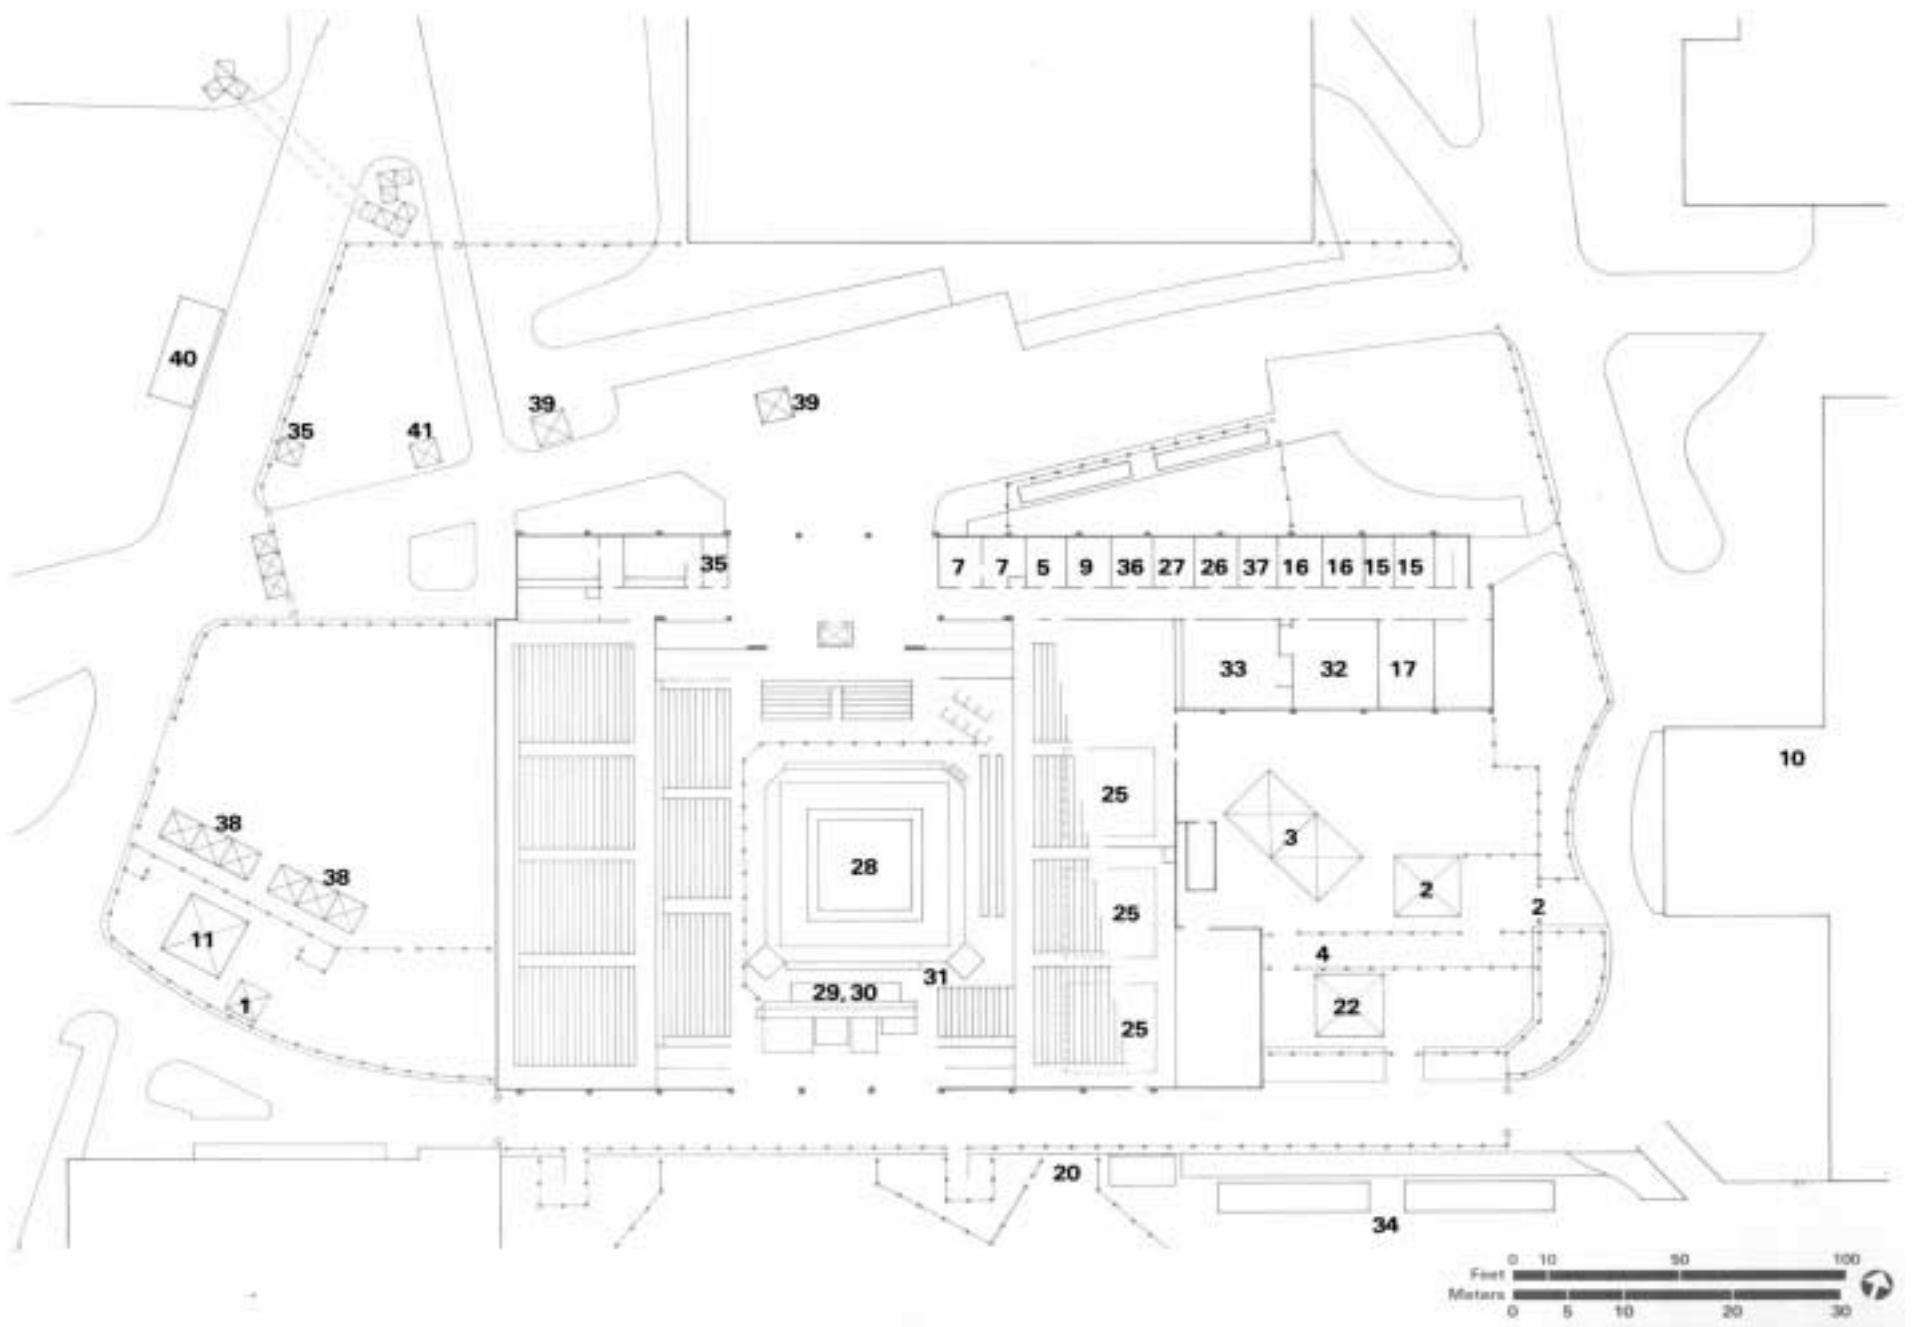

45

44 The interior of Eagles' Nest Arena at CSU Los Angeles stands converted from a general-purpose athletic facility to the home of Olympic judo.

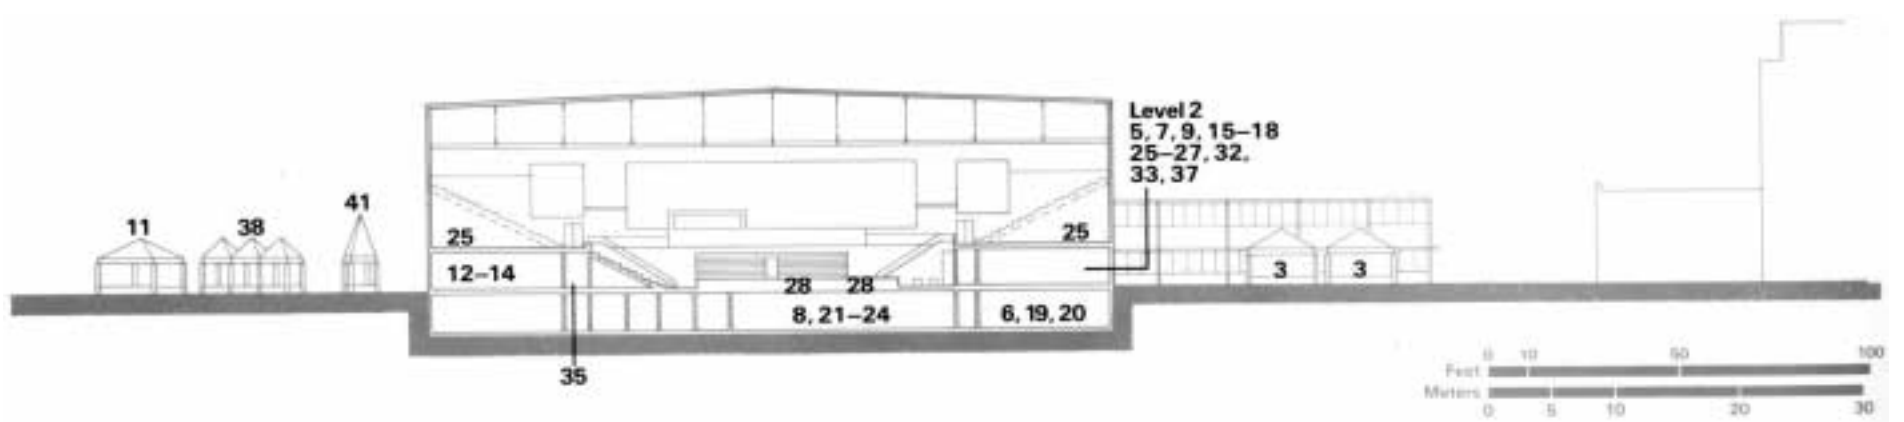

45 California State University at Los Angeles is fully prepared for Olympic judo competition after the installation of temporary modifications by the LAOOC.

Federation Services		
16 IJF Offices	13 x 14	Office for 3; IJF president, secretary-general and secretary/support
16	14 x 14	Office for 2 technical delegates and NGB representative. Check-in area for 35 officials.
17 Hosting	16 x 26	Lounge for 15, television.
18 Officials' Meeting Room		Chairs for 35 with lecture/display board; utilized athlete training area.
19 Officials' Dressing Room	32 x 70	Existing locker/shower facility.
Athlete Services		
20 Check-in	6 x 24	Table at athlete entry for locker assignment.
21 Locker/Shower	(2) 62 x 100	36 showers and 220 lockers Existing locker area divided into 50 separate team rooms for 8 athletes each.
22 Lounge	20 x 20 tent	Outdoor seating area with television, 20 chairs, food and beverage service. Additional indoor resting area with 10 cots.
23 Scales	8 x 16	4 scales; 2 official, 2 unofficial, located near sauna and showers; in draped area.
24 Sauna	17 x 27	Dry heat sauna for 10.
25 Training Facility	39 x 106	Total of 15 tatamis for training and warm-up each 3 m x 8 m, located on upper and lower levels of gymnasium.
Competition Management		
26 Commissioner's Office	12 x 14	Private office for 1.
27 Competition Director	12 x 14	Office for competition director, assistant director, secretary/support.
Field of Play Competition		
28 Platform	60 x 60	Competition tatami placed on 75-cm-high platform. 5-foot perimeter between platform and public.
29 Scoring	2 x 32	Scoring table with 10 chairs, adjacent to and with clear view of tatami.
30 IJF Seating	3 x 32	20 chairs and table, adjacent to tatamis.
30	3 x 37	24 chairs and table, adjacent to tatamis. 3 additional chairs for medical personnel near athlete seating area.
31 Athlete Waiting Area	10 x 10	10 chairs for athletes.

Technology		
32 Results Output/Distribution	25 x 32	5 results photocopiers, results output, distribution area, chairs for runners.
33 Staff Offices	26 x 32	Table and chairs for 21 staff. Radio distribution and recharging area.
Swiss Timing	6 x 15 6 x 6 9 x 10	Scoreboard control room with view of tatami. Timing control. Storage room.
Telecommunications	12 x 45 trailer	Venue switchboard facilities.
Television		
34 Trailer Compound	50 x 320	Telephone and television transmission and production trailers.
Ticketing		
35 Administration	10 x 10	Office area for 2.
35	8x8 tent	Will call and general information.
Transportation		
Administration		Work area for 1 (see Venue Operations).
Driver Lounge	20 x 20 tent	Lounge for 50, beverages, television.
Venue Operations		
36 Maintenance	12 x 14	Office for 4 and supply storage.
37 Venue Staff Offices	12 x 14 25 x 32	Office for venue manager, 2 assistant managers, secretary/support. Staff work areas each with desk and chair for: Transportation, Olympic Family Services, Ceremonies, Personnel, television coordinator, youth coordinator, usher coordinator, message center.
Spectator Services		
38 Food Service	(2) 10 x 30 tents (2) 8 x 20 trailers	Exterior food sales points Food storage. Public eating area with 10 tables and umbrellas. 40 chairs.
39 Novelty Stands	(2) 10 x 10 tents	Novelty sales points located at main public entry.
40 Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service.
Program Stands	4 x 4 cart	Mobile program sales point.
41 Public Information	8 x 8 tent	Outdoor kiosk for 2 persons to provide general information to public.
Public Seating	4,300	19 seats for handicapped spectators and 19 assistants.

7.03.14

Modern Pentathlon

All but one of the events of the Modern Pentathlon competition were held at a single venue, Coto de Caza, located in the Saddleback Mountains in Orange County. Swimming, the only event not held on that site, was conducted at the Heritage Park Aquatic Center in the city of Irvine.

Coto de Caza was easily transformed into an Olympic Modern Pentathlon venue. An existing equestrian center was utilized for the jumping portion of the competition. Fencing took place in a converted 27,000-square-foot covered riding ring. Coto de Caza's 24-target pistol range was built to LAOOC specifications by Coto and the running event took place on Coto de Caza's rolling hills surrounding the Equestrian Center.

Only two of the construction modification projects remained following the Games: a hillside spectator seating section in the equestrian area and a covered pistol range with berms. Both of these projects were financed by Coto de Caza, per its contract with the LAOOC.

All remaining construction was geared toward renovating and adapting the existing facilities to fit the needs of the competition and installing temporary structures to stage the events.

Primary construction tasks were as follows:

Riding competition

Coto de Caza's main riding arena (300-foot by 150-foot) was center stage for the 600-meter jumping course and the final day's cross-country run and medal ceremony. Existing hillside seating was renovated to accommodate 3,500 spectators, with temporary bleachers added to bring the total capacity to 8,000. The LAOOC converted temporary stable facilities to house the 70 horses acquired from private donors for the three weeks of athlete training and competition preparation. Additional practice space was allocated for training and warm-up purposes. Additional construction included the renovation of jumping obstacles, water and bank obstacles inside the main ring, water and bank obstacles for practice outside the venue, the judges stand, horse wash areas, shade structures and chain-link fencing around the stable area.

Bleachers were installed on the western hill and at the north end of the ride. A television platform was placed between two separate bleacher sections. Two additional television platforms were located on the ridge, one at the top of the spectator hill south of the bleachers and the other at the south end of the jumping arena at ground level. The Coto de Caza arena was 142 feet by 285 feet. A 3.5-foot high metal fence around the arena provided a photographers' alley. The judges' tower was modified by adding an inside platform to raise the judges above ground level. A portable toilet was added for the athletes at the entrance to the riding arena.

46

47

Temporary stable facilities were required for 70 horses. Both the training and competition horses were stabled at the venue. The venue was subject to extreme afternoon heat and ventilated shade structures were built for the stalls and the area around the stalls.

Running competition

The 4,000-meter course crossed numerous privately owned properties at Coto de Caza. The course was staked and taped on both sides to produce a four-meter lane for the athletes. Preparing the course involved manicuring 2.5 miles of the running course and filling four road crossings with dirt. Swiss Timing provided the necessary electronic timing system, and the federation provided an unofficial points timer for early results and unofficial standings. A scoreboard kept the leading competitor's running time. For the handicapped start, a concentric clock, provided by the U.S. Modern Pentathlon Association, was used to plot the starting times.

Fencing competition

Coto de Caza's existing riding arena was converted into a 27,000-square-foot air-conditioned fencing hall: Gray carpeting was installed over the compacted and leveled dirt floor, new light and temporary air-conditioning were installed and fabric walls totally enclosed the structure. Temporary bleachers accommodating up to 2,000 spectators overlooked the 12 pistes of epee fencing, which provided the only head-to-head confrontations of the modern pentathlon. A raised judges' platform was constructed on the east side of the arena. A manual competition scoreboard, shade structures and fans were in place for the spectators. The armorers' tent was surrounded by security fencing and a fencing equipment storage container was located near the armorers' tent. The athlete rest area was also fenced, separating it from the horse areas.

46 Coto de Caza is well equipped for Olympic modern pentathlon competition, with space for all disciplines within a close-by area.

47 The existing riding ring at Coto de Caza provides the initial challenge for competitors in the modern pentathlon.

The fencing hall was air-conditioned by a cooling coil truck parked in the service yard south of the hall. The air handlers were placed just outside the railing of the east wall of the fencing arena. Two hundred tons of cooling was supplied to the competition area.

Shooting competition

Coto de Caza allocated funds to modify the practice range and to build the new range used for competition. The LAOC constructed the facilities to Olympic specifications.

Coto de Caza increased its skeet-trap-pistol area with a 24-point, 25-meter International Rapid Fire pistol range. An asphalt chute with a 3.5-foot-high metal fence on both sides was installed at the east side of the building for use by the coaches. Spectators were

allowed to stand behind the coaches. A shaded, standing area for 500 spectators was created and a closed circuit television system was installed to transmit target faces from down-range into the spectator area. The rest rooms were located against a fence for ease of servicing. A 20-foot by 20-foot staff tent was located at the shooting site and another tent, utilized by venue management, was located by the pistol storage room.

Shade structures were provided for the athletes at both the competition and practice ranges. The practice range targets were stationary and were used for target warm-up on the competition day.

Additional construction involved competitor booths and tables, range berms, target backing frames and artificial carpet installation.

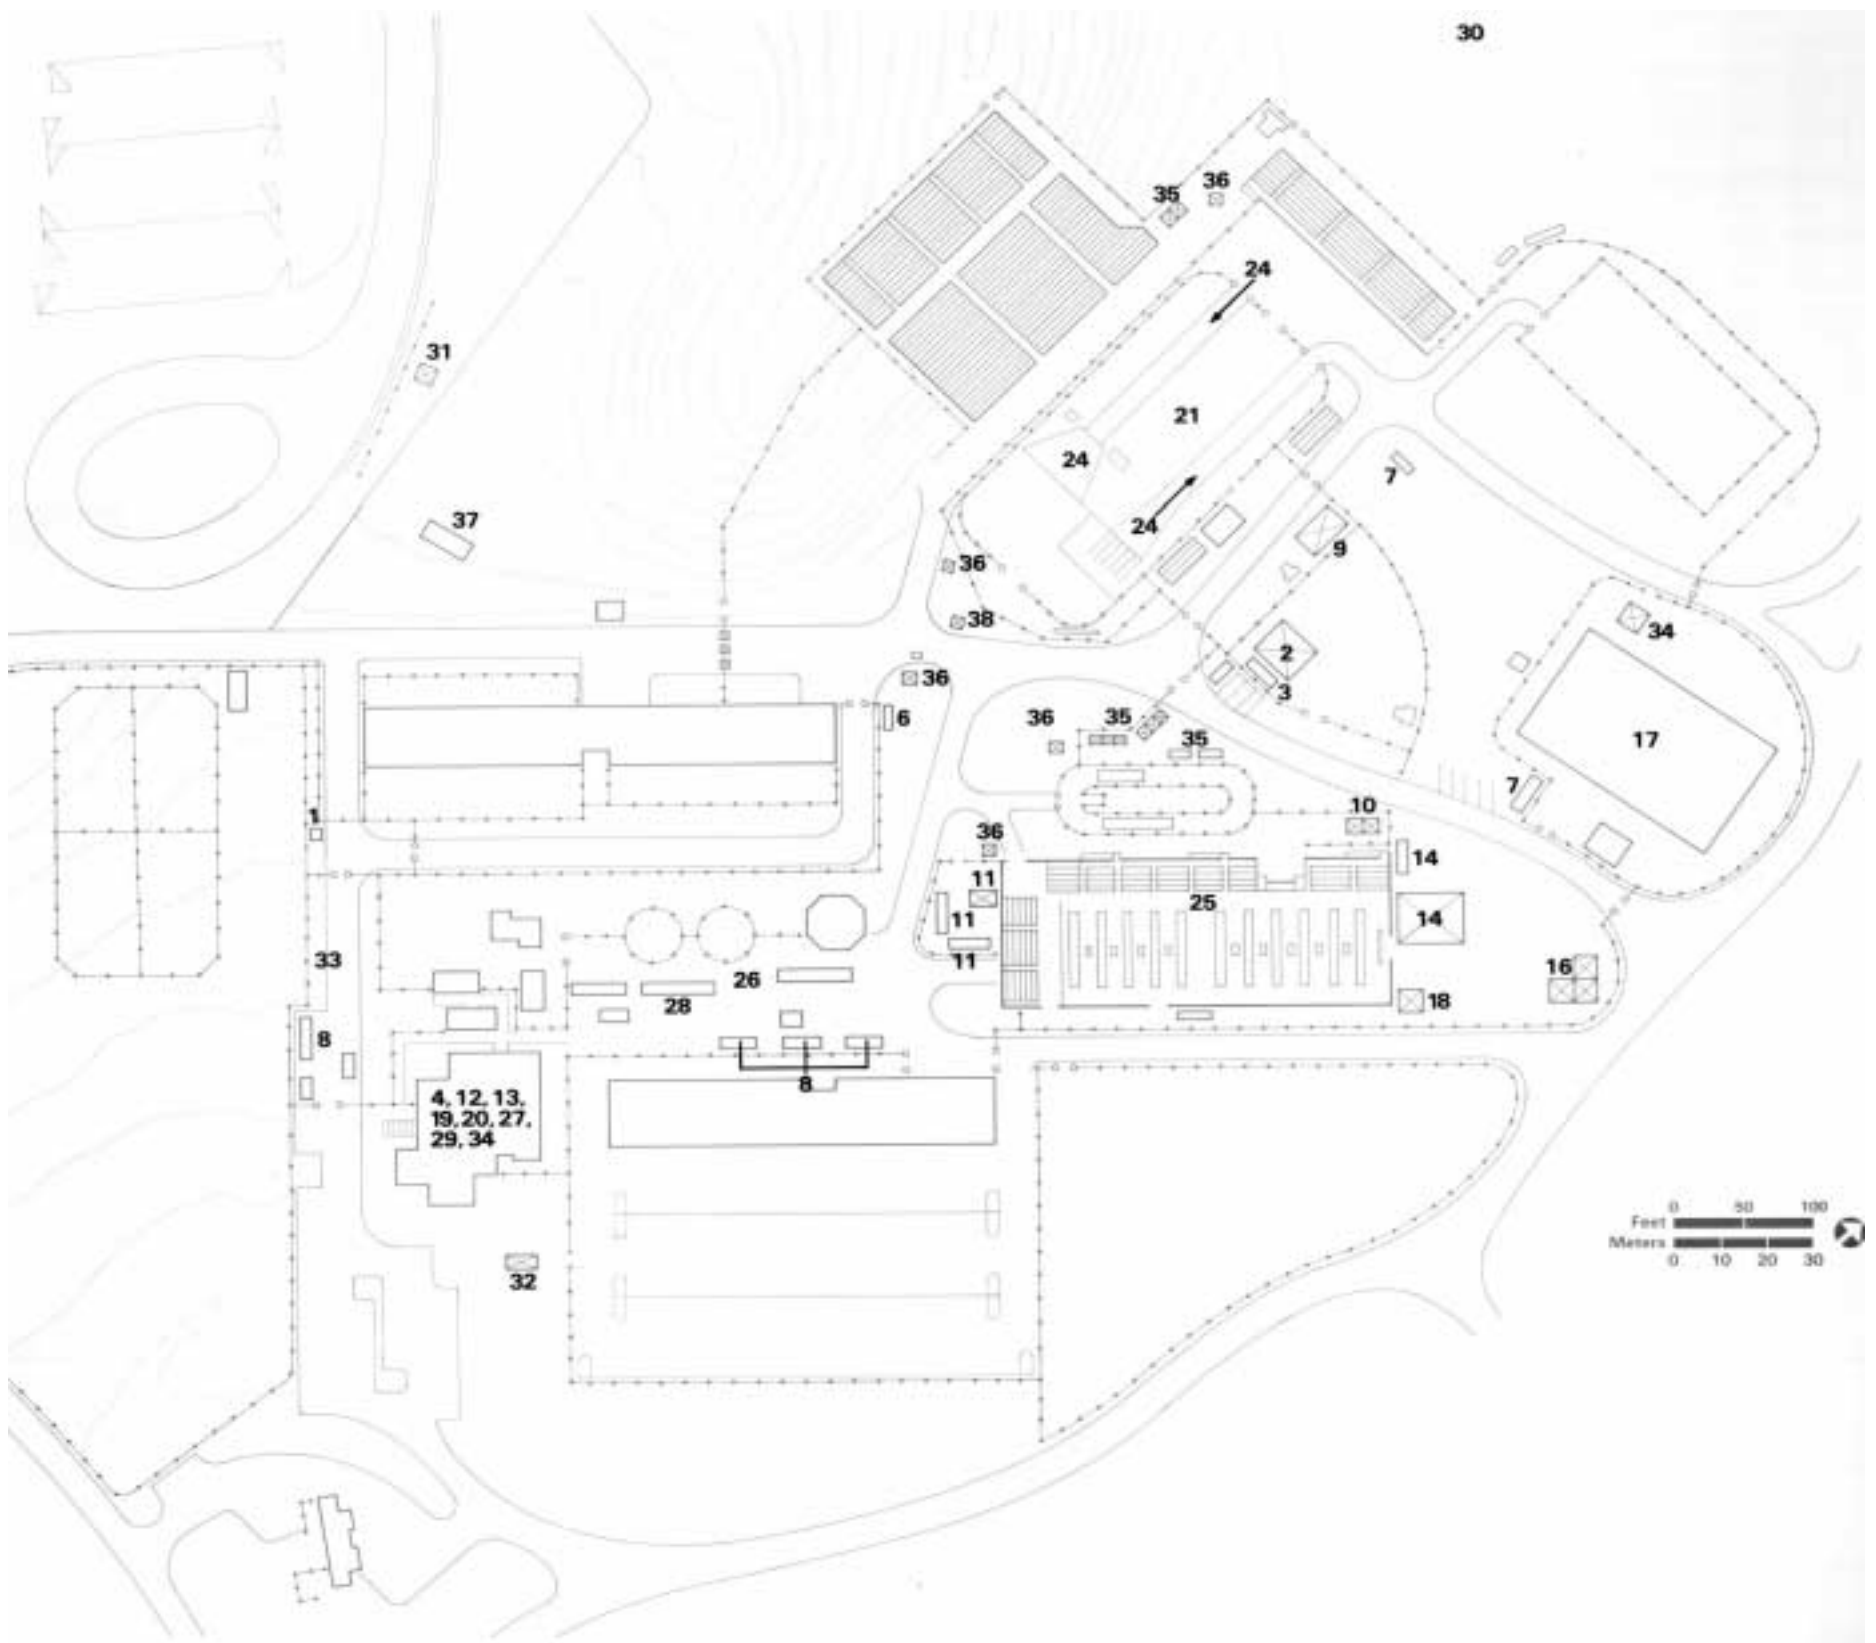

Swimming competition

The swimming event was held at the Heritage Park Aquatic Complex in Irvine. Two 10-foot-square tents were erected in the southeast corner of the pool deck to shade the results area. Temporary bleachers were added to increase existing spectator seating to 4,500 and Swiss Timing equipment was installed, featuring a touch-pad system and a results scoreboard.

Overall transport planning for the Modern Pentathlon events was almost as important as the planning for the competitions themselves. When the LAOC estimated the spectator capacity of the Coto de Caza site, it was found that the single, two-lane entry road to Coto de Caza was a

limiting factor. It was decided that the most efficient way of getting the large spectator population to the venue was to arrange a large, easily accessible parking lot outside the entry road to Coto and shuttle spectators from the parking lot to the events. The shuttle system reduced inconvenience to Coto residents and moved more people in and out of the venue than would have been otherwise possible. A fleet of 18 buses shuttled spectators and staff which was more than adequate for the venue's needs.

Site plan for run, fence, and ride events of modern pentathlon; roof removed from fencing building

Architecture and Construction

On the final day of competition, 4,000 spectators arrived to watch the shoot, an event that could accommodate only 1,000 spectators. Because the shuttle buses were the only means by which the people could get to the event, a reduction in the shuttle service controlled the crowd.

The LAOOC, through a financial agreement with Coto, built a new road through an area slated for subdivision by Coto. This road was built in part so the shuttle system could bring spectators up the hill to watch the ride and run. Decorative scaffolding and a mural were erected in the center of the shuttle bus drop-off loop to herald arriving spectators. A drivers' tent was situated near the bus drop-off for the ride and run events and five barrel tents were used to shade spectators waiting for the shuttle.

Spectator, staff and Olympic Family parking lots were graded and landscaped.

A helicopter landing pad was located a quarter-mile south of the conference center on the baseball field. This was available in case of a medical emergency and for use by VIPs or other dignitaries.

To secure the competition area, 15,000 linear feet of chain-link fencing was erected around the entire venue at Coto de Caza. Fencing was also constructed at the swimming site. The fence fabric contractor and the Look installer worked together to complete fence fabric installation. An on-site building was used as a Look warehouse and storage space there was also used by the host broadcaster.

A spectator picnic area was located south of the conference center. The area was fenced, mowed and watered. A hospitality tent, barbeque and a country and western band entertained spectators during the breaks between the two sessions of the ride, shoot and run.

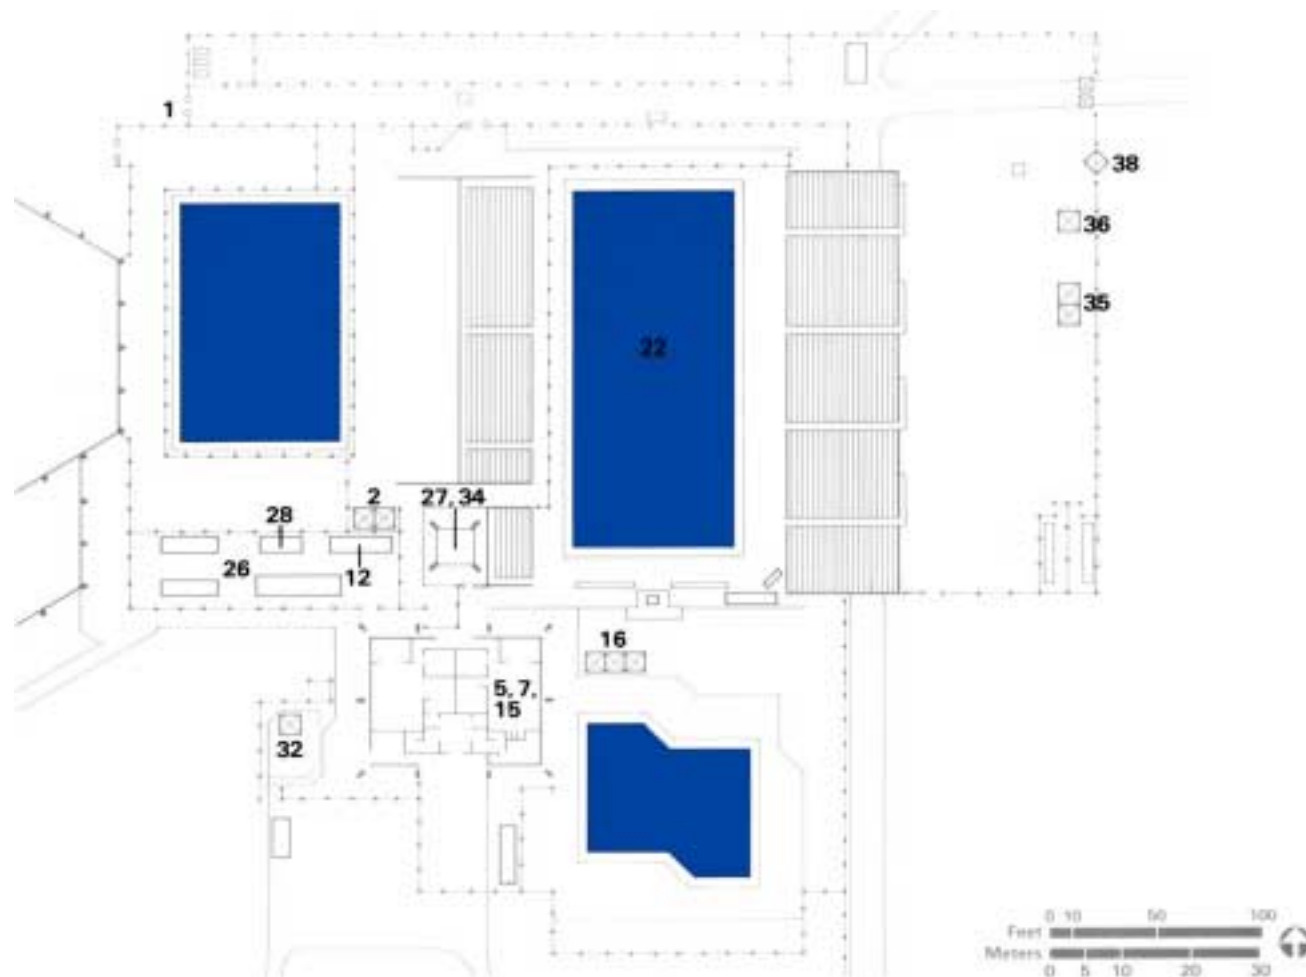

Other construction projects at Coto included installation of the following: complete electrical systems at all sites, complete water service at all sites, concession stands, water fountains, approximately 100 coin-operated telephones and 100 portable toilets.

The Look of the venue included rented trees which lined the Astroturf walk

from the entrance to the event. Also, flower masses welcomed spectators at the entrance. At the shooting area, Astroturf covered the ground in front of the shooters and the earth berms were sprayed with a green mulch.

The staff entry was adjacent to the horse barn. Horse owners and LAOOC staff mingled in this area. LAOOC security staff shared space with other law enforcement agencies and a dispatch center in a 60-foot trailer which was located north of the conference center. The conference center was utilized by the sports management and finance staff.

Site plan for swimming event of modern pentathlon; roof removed from support facility building

Site plan for shooting event of modern pentathlon

Modern Pentathlon

Introduction Competition in Modern Pentathlon took place at Coto de Caza, a resort community with existing facilities for shooting and riding competition. Other on-site facilities were adapted to create fencing and running facilities. The swimming portion of the Pentathlon took place at Heritage Park which had a 50 m pool. Described here are the 5 separate facilities, by discipline, for the pentathlon competition. At Coto de Caza, the riding, fencing and running facilities were adjacent to one another; the shooting facility, also at Coto, was located 3 miles away and certain temporary facilities were established exclusively for shooting. The swimming facility was approximately 20 miles from Coto de Caza. Fencing, riding and running had temporary facilities dedicated to them for the day. Each discipline had its own competition staff, but shared support staff.

Department/Function	Space Use (in feet unless noted)	Notes
Accreditation		
1 Staff Entry	20 x 20 tent	Staff entry, badge issue, storage and distribution point: Work area for 12. Staff entry for all disciplines except swimming
1	10 x 20 tent	Office for 2 (see Venue Operations). Staff entry, badge issue, separate entry gate, distribution point for the swimming event.

Food Service		
Administration		
2 Eating Area/Lounge	30 x 40 tent	Lounge for 80 venue staff at running, riding and fencing with television, beverage service.

		Responsible for payroll, timekeeping and staff scheduling. Office area for 3 (see Venue Operations).

Press Operations		
10 Interview Room	20 x 20 tent	20 seats, elevated interview platform. No facilities at swimming or shooting sites.
Press Seating		
		Riding: 75 without tables. Running: 75 without tables. Fencing: 75 without tables. Swimming: 75 without tables. Shooting: 20 standing.
11 Sub-Center	(2) 10 x 45 trailers	20 working places, staff offices for 3. No working area at swimming or shooting sites.
11	20 x 20 tent	Press lounge for 20, beverage and snack service.

Security		
12 Command Center	9 x 18 trailer	Mobile unit for 6; moved daily to facility in competition.
12	15 x 19	Dispatch room, office, conference room, television, storage closet.

Sports Administration		
Federation Services		
13 UIPMB Offices	22 x 30	Conference table for 16.
14 Conference Room/Jury Room	34 x 38	Conference table, VCR equipment.
Athlete Services		

14 Equipment Storage	8 x 27	Containers for storage.
	40 x 50	Fencing armory and equipment repair tent.
15 Locker/Shower	40 x 40	Existing locker/shower facility at swimming site only.

16 Lounge	(3) 20 x 20 tents	Table and chairs for 40, message center, with beverage service for riding, running and fencing site.
16	20 x 60 tent	Lounge for 40, beverage service, swimming site.
17 Stables	(80) 10 x 10	Temporary stables.
	15 x 20	Horse wash-down area.
18 Toilets	20 x 20 tent	3 portable toilets, handwash facilities.
19 Information Center	20 x 20	Individual team mail boxes.

Competition Management-Arena		
20 Commissioner's Office	20 x 24	Office for 2, conference table for 20.
20 Sport Manager's Office	15 x 19	Office for 2.
Field of Play		

21 Riding Course	150 x 285 arena	600-meter course, 15 obstacles, arena is start/finish point for the run.
	12 x 20	Elevated judges platform for 10.
	100 x 200	Warm-up arena for the ride.
22 Swimming	50 meters	Pool with 6 lanes; each lane with touch pads, start and timing equipment, starting blocks.
	30 meters	Warm-up pool, adjacent to competition pool.
23 Shooting	75 x 150	25-meter range with 24 targets.
23	20 x 140	Shade structure for athletes at shooting line, 3 chairs per shooter, 24 weapons benches, 24 individual booths.
23	73 x 95	25-meter practice range, 24 booths, 24 weapons, benches, 48 chairs.
	12 x 72	Shade structure at practice range.
	28 x 48	Pistol storage compound with 8 x 27 lockable container.

24 Running	4000 meters	Course marked with tape on both sides, 4 meters wide, start/finish in the riding arena. 70 meter incline. Finish line 12-foot wide, 2 start lanes.
------------	-------------	--

25 Fencing	27,000 square feet	Air-conditioned arena with 12 pistes, each 6 x 58.4 chairs per piste for officials, 10 chairs for athletes, scoring and timing equipment, batteries, 12 feet between pistes.
	12 x 20	Elevated judges platform.

Television		
26 Trailer Compound	80 x 240	Telephone and television transmission and production vehicles at riding and running center. No facilities at shooting, three vehicles at swimming. Compound also used for venue storage.

Technology		
27 Message Center	10 x 15	Communications and message receiving center for staff and officials.
27	16 x 16	Message center at swim site.

28 Results	12 x 60 trailer	Results output, photocopy and distribution center. Office area for 10 sponsors/vendors. 3 LAOC staff. Used for all disciplines.
Swiss Timing	8 x 27	Temporary storage container. 8-foot table for equipment at riding, running and swimming sites.

29 Telecommunications	10 x 15	Venue telephone switchboard facilities.
-----------------------	---------	---

Ticketing		
Administration		
30 Information	10 x 10 tent	Office area for 4 (see Venue Operations). Ticket information and will call. No on-site ticket sales.

Transportation		
31 Administration	20 x 20	Vehicle dispatch point.
32 Driver Lounge	20 x 20 tent	Lounge for 40, television, beverages.
32	10 x 10 tent	Lounge for 10 at swimming site.

Venue Operations		
33 Construction	12 x 60 trailer	Office for 7. Storage area for maintenance, material supply and construction. Venue manager office. Material Logistics office. Accreditation office.
34 Venue Staff Offices	20 x 20 tent	Venue management, staff lounge, message center at shooting site.
34	20 x 20 tent	Venue operations management at ride, run and fencing sites.
34	24 x 36	Office for Protocol 2. Ticketing 4, Personnel 1, Food Service 3, Language Services, Support 3, competition managers, staff and information center.
34	10 x 10	Office for 5 staff for venue manager, Finance, Construction, swimming site.

Spectator Services		
35 Food Service	(6) 10 x 10 tents	Food sales point for public. 2 tents moved to swimming on competition day.
36	(4) 10 x 10	Beverage stands.
35	(2) 8 x 30 trailers	Food storage.
36 Novelty Stands	(5) 10 x 10 tents	One tent moved to swimming site on competition day.
37 Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service. No trailer at swimming site
Program Stands	(4) 2 x 4	Portable sales points for programs. One cart moved to shooting site and swimming site on their competition days.
38 Public Information Public Seating	8 x 8 tent	Tent moved daily to site for competition day. Fencing: 2,000 Shooting: 1,000 (standing only) Riding, Running: 7,000 Swimming: 4,000

48 The new Los Angeles Tennis Center is in place in time for the Games and is host to the demonstration sport of tennis during the Games. The Olympic Village at UCLA rises in the background.

**7.03.15
Tennis**

Competition in the demonstration sport of tennis took place at the Los Angeles Tennis Center (LATC) at the University of California, Los Angeles. Four courts were used in the competition with a seating capacity of 10,000 (7,000 at center court).

Plans were under way for the construction of this tennis facility long before the LAOOC chose the LATC as the tennis venue. Construction began in December 1982 and was completed in the spring of 1984 in time to host the National Collegiate Athletic Association (NCAA) Women's Tennis Championships.

Since the facility was designed for tennis, it was not necessary to modify the competition aspect of the facility except to allow for a greater number of spectators at the two primary courts. The Construction Department contracted for temporary seats for the LATC: 1,513 bench seats and 504 box seats around the center court and 1,128 bench seats around court number two. Several rows of permanent seating were removed from center court to provide seating for the handicapped. A press area was built in the southeast corner of the center court and included power and communication lines. Three light standards were removed from the southwest, northwest and northeast corners of the center court to provide unobstructed spectator viewing.

Nine new gates around the perimeter of the facility were built: three single, five double and one sliding. An eight-foot-high venue fence was built around the perimeter to restrict access from Circle Drive West, Bruin Walk and the gymnastics venue in Pauley Pavilion.

A staff check-in area was built on the western corner of the venue by creating a limited access gate, a wooden deck raised off the ground and several 4-foot by 4-foot and 8-foot by 8-foot tents. A mixed-zone press area was created using three 8-foot square tents several yards to the north of the check-in area.

Concession tents were placed near the east entrance to the venue, the northwest corner of the venue above the center court seats and in the northeast corner adjacent to Bruin Walk. All three of these concession points utilized Festive Federal colors and sonotubes. Concession facilities on the concourse around adjacent Pauley Pavilion were also accessible to tennis spectators.

The will-call and public information tent was erected next to public entry number two in the southeast corner of the venue. Program and novelty positions were established near both public entries along the eastern edge of the venue. Portable toilets were brought in and situated behind the temporary bleachers on the east side of the center court.

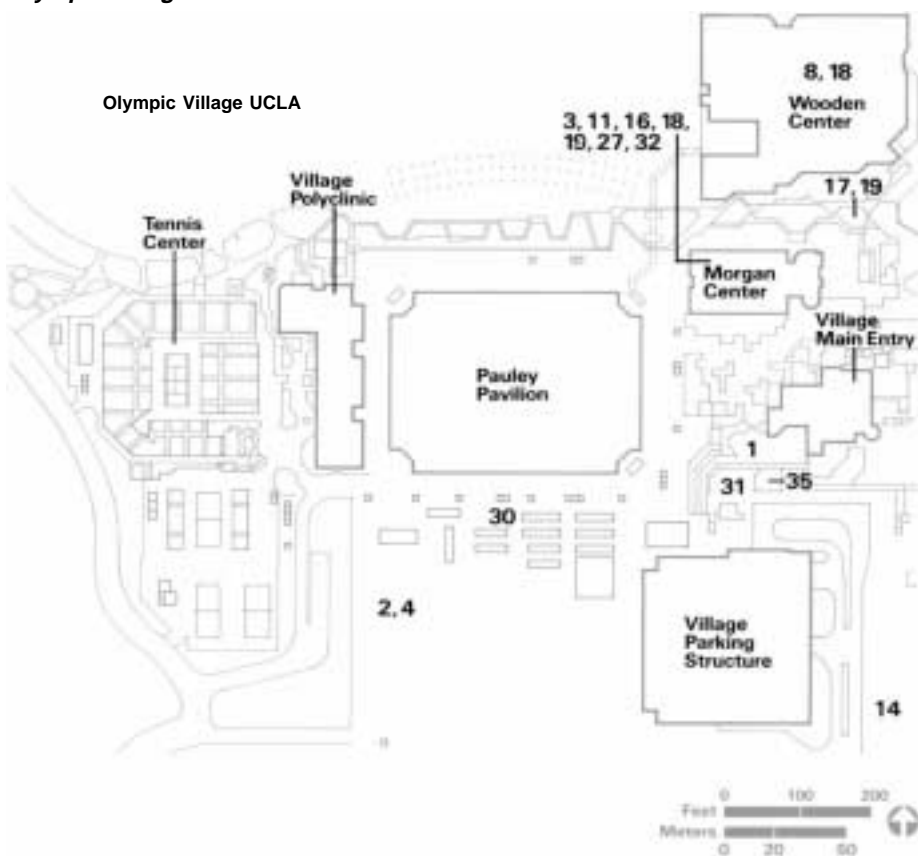

Temporary modifications were made to both the clubhouse and the storeroom areas beneath the north center court seats to accommodate the staff required to run the tennis competition. On the first floor of the clubhouse, offices were created for health services, technology, results, referees, competition administration, message center, sports manager, protocol, transportation, security, language services, International Federation officials and

communications staff. This required little actual construction, mainly additional electrical and telephone lines. The second floor of the clubhouse was used primarily as the Olympic Family lounge. The main room on this floor was divided into several areas of use by installation of rigid wood partitions. Entry to the lounge was through a small alcove used by the Security Department. The storeroom area under the center court's seats was cleared of extra material in order to establish additional LAOOC venue staff offices. Using wood partitions, Construction built offices for concessions administration, construction, materiel supply, awards and ceremonies, patron services, food services, ticketing, finance, security, personnel and venue management, a conference room and a staff lounge. Power, lighting and telephone services were brought in to make these offices operational. The entire concrete floor of the storeroom was carpeted.

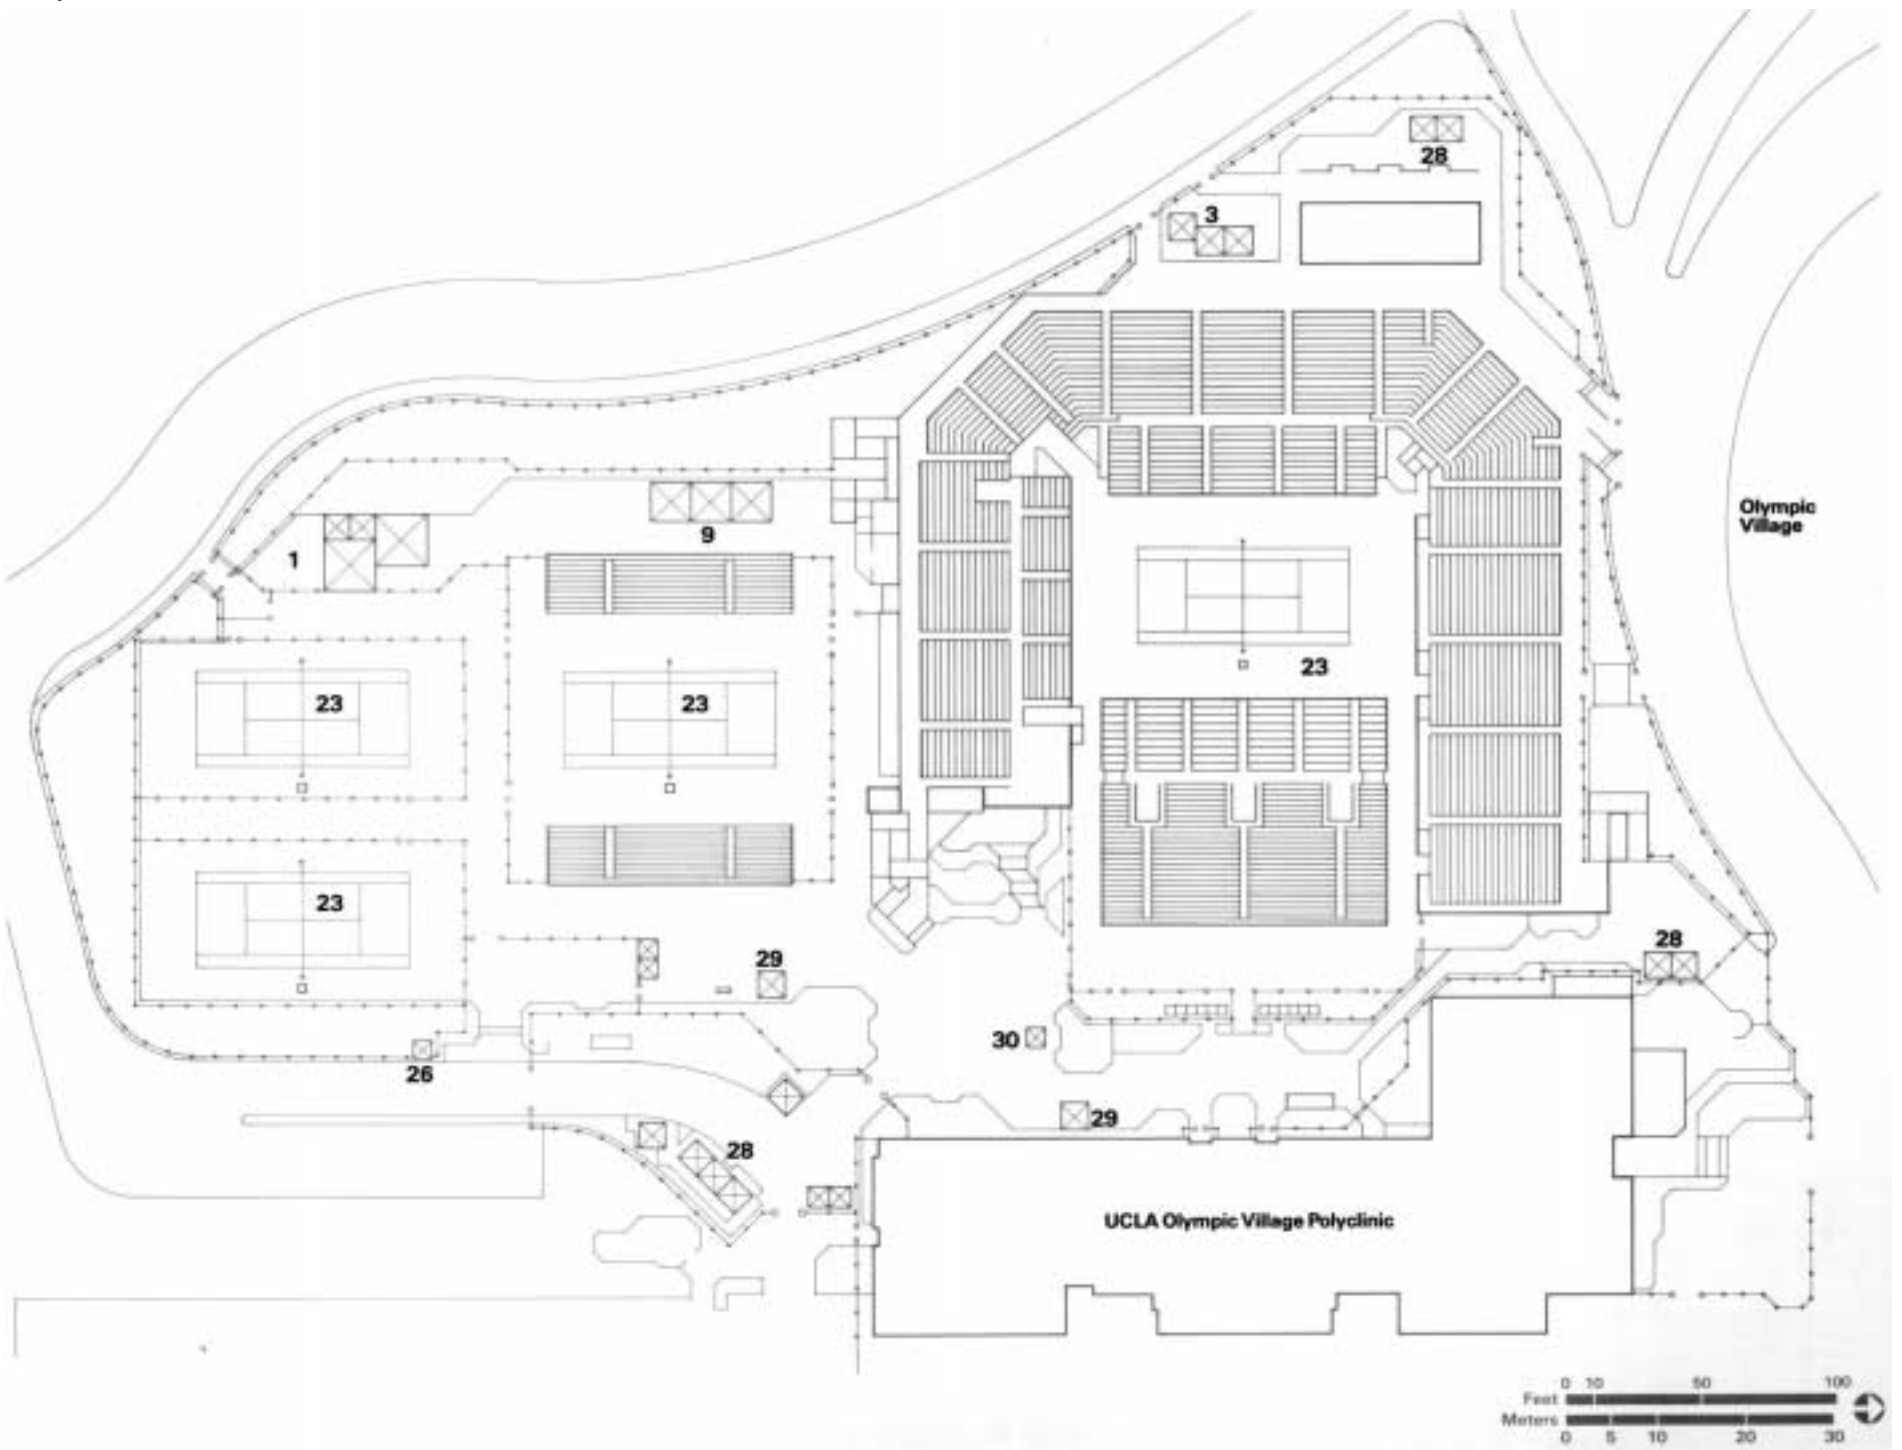

Temporary structures built by the LAOOC were done in keeping with the Look of the Games using Festive Federal coloring. Bunting and banners were draped over both temporary and permanent seating at courtside. Colorful pennants flew from flagpoles at the top of the grandstand seating. Olympic flags flew from three flagpoles placed in front of the entrance to the clubhouse. Additional pennants flew from the stairway ascending to the top of the clubhouse with the top of the building capped by several oversized magenta tennis pictograms. Colorful bedding plants were placed in the terraces around the clubhouse to complement the festive coloring of the temporary and permanent structures.

Working with the university, the Construction Department achieved a true festive atmosphere while maintaining the facilities' ability to host quality tennis competitions. With the success of the Olympic tennis competition still in mind, the university decided to keep several of the modifications that the LAOOC made for the benefit of future users.

						6 ball retrievers.		
						1 scorer's table.		
						4 chairs for players.		
						1 water cooler.		

7.03.16 Water Polo

Olympic water polo competition was held in the Raleigh Runnels Memorial Pool on the campus of Pepperdine University in Malibu, California. The pool facility was opened early in 1975. This facility was chosen as the venue for water polo because of the availability of a suitable 50-meter swimming pool, adequate office and locker room areas in the adjacent Firestone Fieldhouse and Heritage Hall for athletes, venue management and staff and parking. As a bonus, the spectacular beauty of the Malibu area near the Pacific ocean was a perfect backdrop for the water polo competition.

The major drawback was that the design of the swimming pool did not meet FINA regulations for an Olympic-caliber water polo pool, as pool depth decreased to 4 feet at the west end. To overcome this problem, the LAOC received permission to make the length of the water polo field of play one foot shorter than its ideal dimension (30 m) while, at the same time, shutting off the water overflow system and allowing the pool water level to rise to the edge of the deck surrounding the pool. These alterations to the field of play gave the pool the required minimum depth of 1.8 meters in the area of competition. With the addition of a decorative canvas screen behind the west goal, a shallow warm-up area was created for the competitors. Raised wooden decks were built on either side of the pool and were used as team benches and for the referee evaluation committee.

Temporary grandstand seating for 5,000 spectators was erected on the north side of the pool. Adjacent to these seats, a platform for handicapped spectators was constructed to accommodate 20 wheelchair-bound spectators and their attendants. On the south side of the pool, grandstands were constructed for VIP guests, spectator athletes and the press. Platforms were built at the back of the press seating to accommodate world broadcasters and camera positions. Shade structures were erected to protect the judges and technical delegates table alongside the pool. Another shade structure was added to protect the commentators.

Adjacent to the pool on the south side of the gymnasium was Firestone Fieldhouse. This building contained locker and shower facilities for athletes, as well as medical and recreation facilities. An athletes' lounge, a rest area and team meeting rooms with provisions for food services were constructed in the gymnasium. Lounges for staff and officials and offices for the FINA Technical Water Polo Committee were located in the fieldhouse. These areas were separated by eight-foot-high wooden partitions or piping and drapes. Carpeting was brought in to make the offices more commodious. LAOC offices were also placed in Heritage Hall, just beyond the fieldhouse.

51

A trailer compound was established in the south corner of the facility for the host broadcaster, telephone utilities, catering and other trailer-oriented operations. Other trailer operations and office supplies were located east of Heritage Hall.

Numerous chain-link fences and gates were temporarily constructed on the site to restrict entry to specific controlled zones and buildings. Access control tents were placed at entrances to the athlete bus compound, Heritage Hall, Firestone Fieldhouse and all non-spectator entries to the pool area. Tent structures were also constructed for the press, VIP hosting, concessions and for a drivers' lounge.

The only drawback to the water polo facility was the lack of permanent restroom facilities for staff and spectators. Temporary and portable facilities were used but were not well received.

An intensive effort was made to make the facility into a showpiece for the Look of the Games. Sonotube structures containing numerous flowering plants were placed around the pool area to complement the existing landscape design. In the spectator area, 40 Look shade structures (10-foot by 10-foot) were placed next to the food concession tents to provide protected seating areas. Country flags of the competing nations were flown from the back of the temporary grandstand. The crowning glory to the Look at the water polo venue was the construction of a 105-foot theme tower. Composed of three primary elements, the scaffold tower and two long banners strung on guide wires were situated behind the south end of the pool area.

52

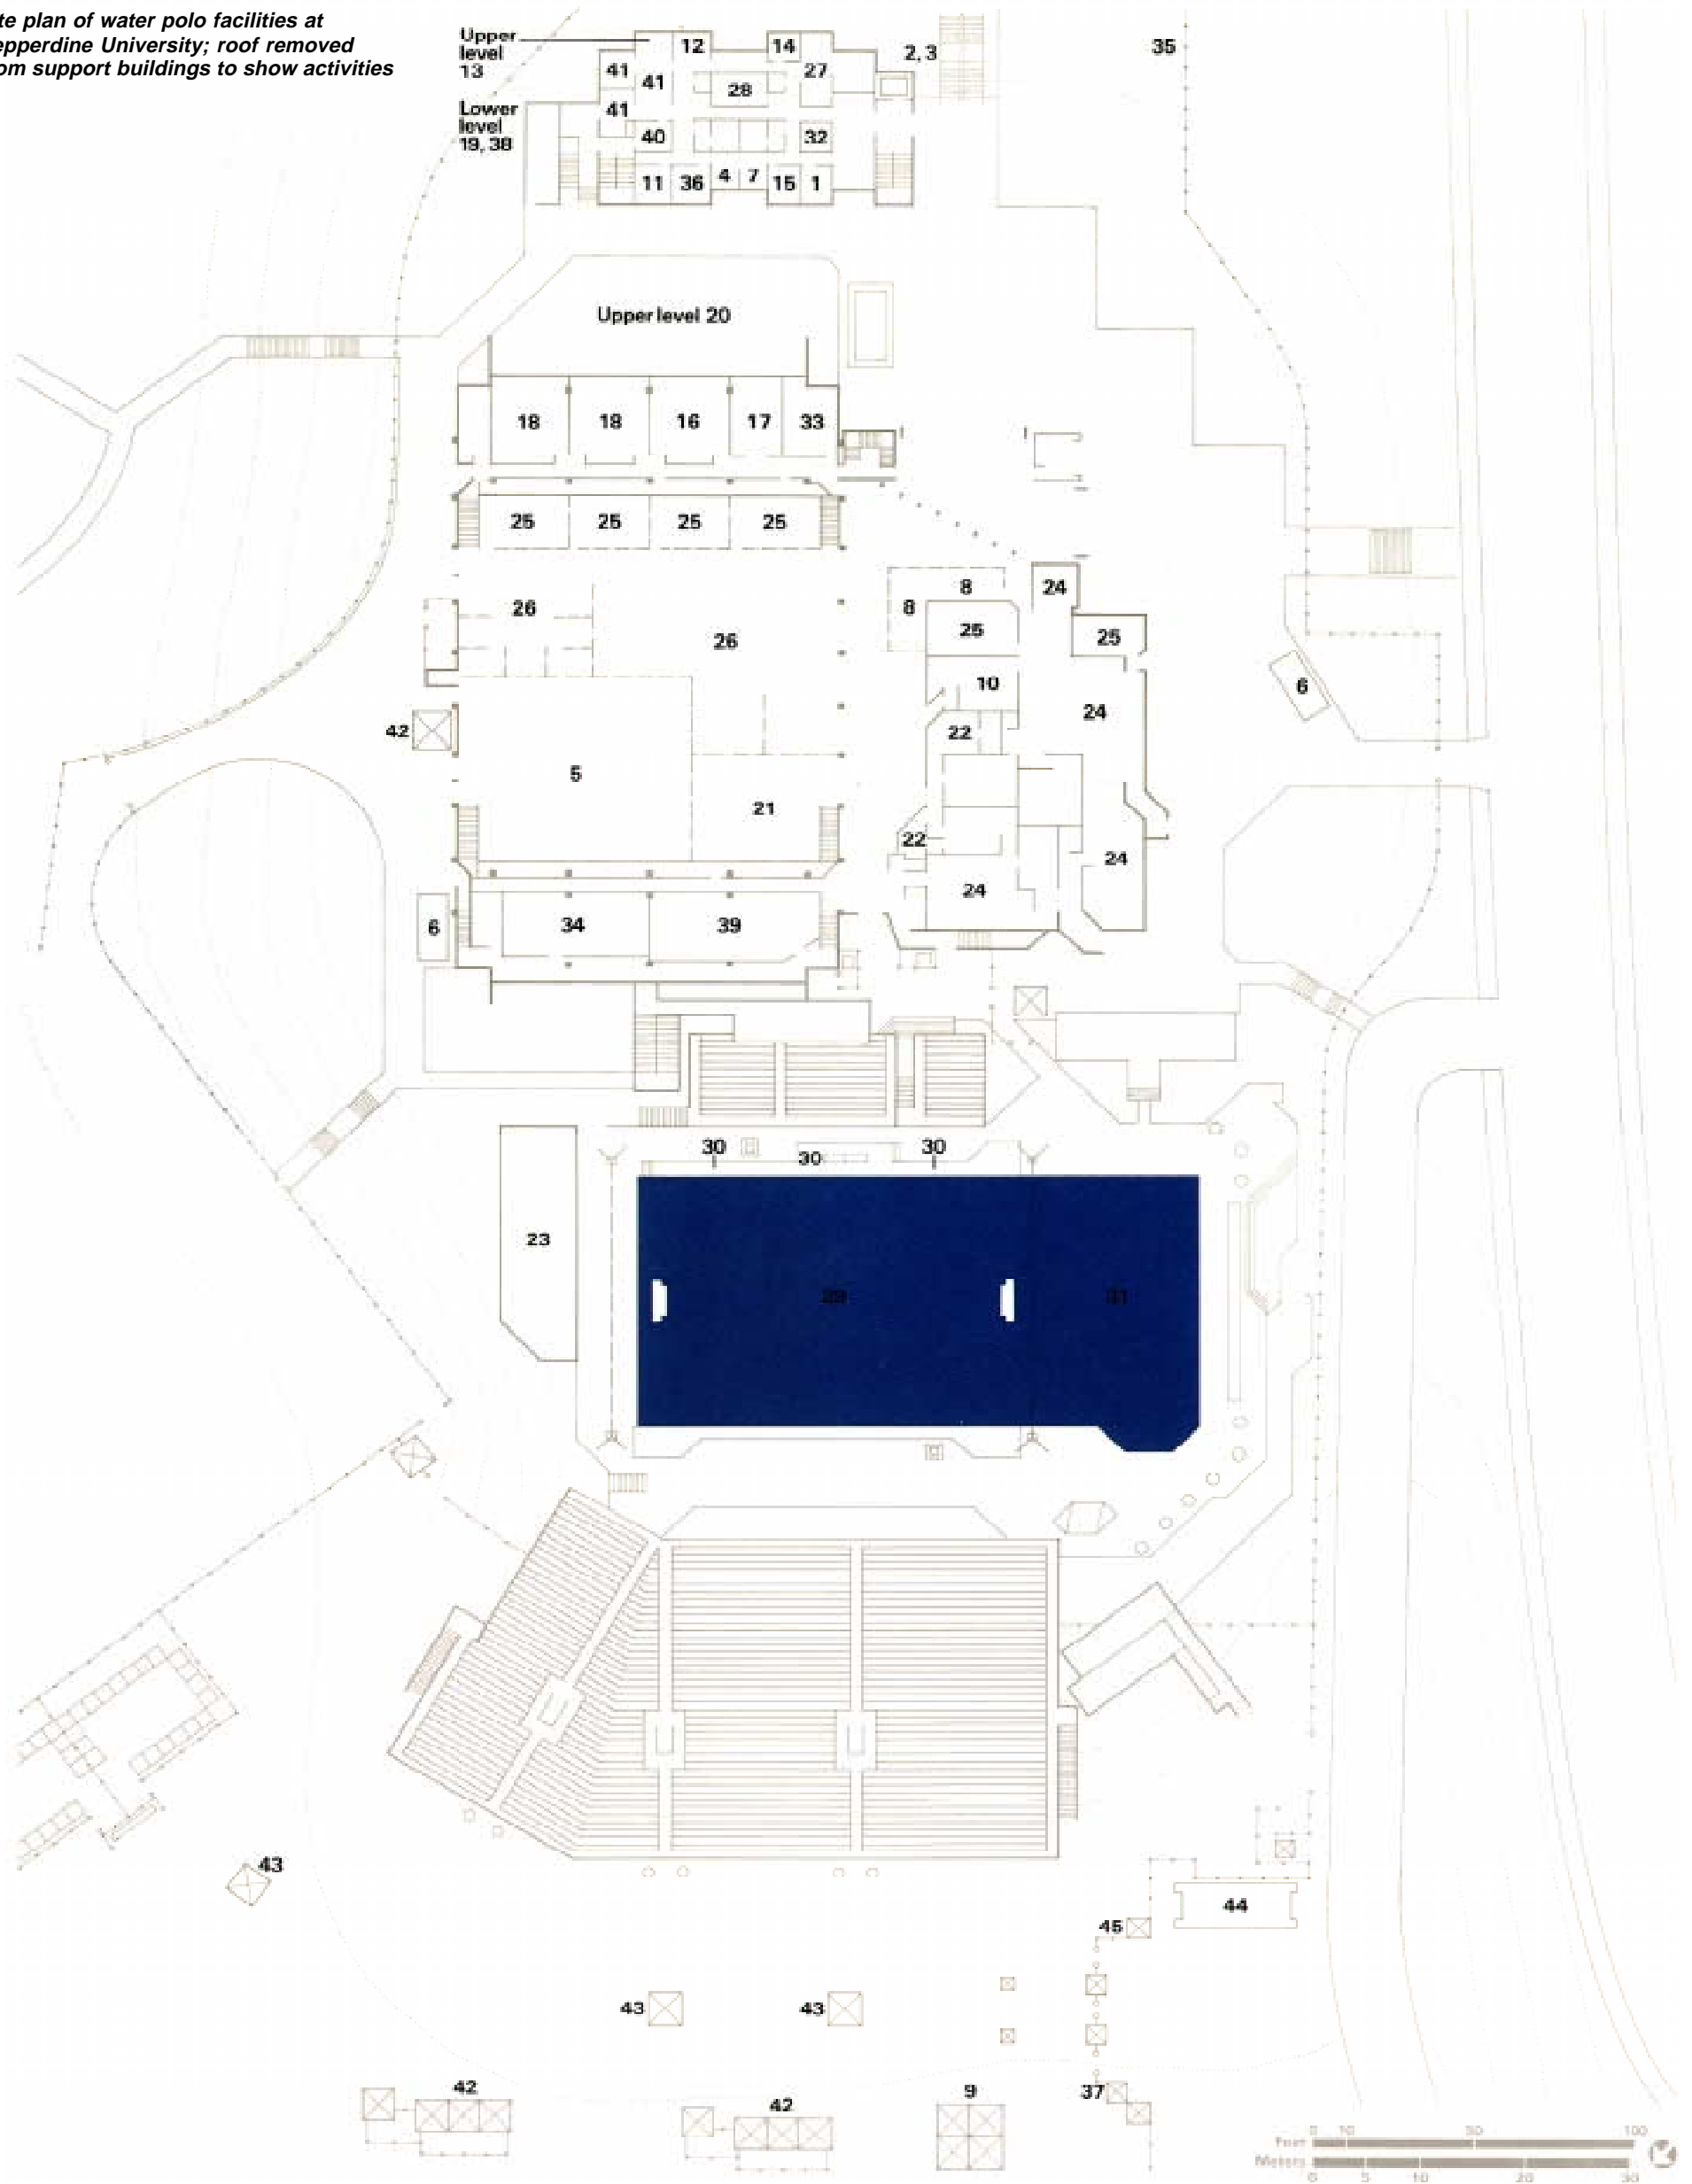

Having had the benefit of a 1983 pre-Olympic event in the III FINA Water Polo Cup, the water polo venue required no last-minute changes to the construction plan.

Tear down at the venue began on 14 August and was completed within a week.

51 Scenic Pepperdine University in Malibu, California is the site of Olympic water polo and incorporated temporary facilities including bleachers shown here.

52 Spectators viewing the water polo competition also had an impressive view of the nearby Pacific Ocean.

Site plan of water polo facilities at Pepperdine University; roof removed from support buildings to show activities

Water Polo

Introduction	Water Polo competition took place at Pepperdine University. An existing 50-meter pool was slightly modified for the competition. All spectator facilities were installed on a temporary basis while all athletes and officials' facilities were located in the gymnasium, and an office building in close proximity to the competition pool.	
Department/Function	Space use (in feet unless noted)	Notes
Accreditation		
1 Administration	10 x 10	Office for 1.
2 Guest Entry	10 x 10 tent	Olympic Family entry point.
3 Staff Entry	10 x 20 tent	Staff entry, badge issue, storage and distribution point. Work area for 4; 40 individual storage lockers.
Food Service		
4 Administration	6 x 10	Office for 1.

42 Food Service	(2) 10 x 30 tents	Food and beverage sales to public.
42	(2) 10 x 10 tents (4) 12 x 60 trailers	Food and beverage sales. Food storage.
42	15 x 15 tent	Food sales for press, VIPs
43 Novelty Stands	(3) 10 x 10 tents	Novelty sales point.
44 Post Office	20 x 40 trailer	Sales and service point for U.S. Postal Service.
Program Stands	(3) 3 x 3 carts	Portable program sales points.
45 Public Information	8 x 8 tent	Kiosk for 3, general public information point.
Public Seating	5,000	

7.03.17 Weightlifting

The LAOOC rented two gymnasiums, offices and locker space and had the use of surrounding athletic fields and parking lots at Loyola Marymount University for the weightlifting venue. The venue provided a complete and secure training and competition facility for the athletes.

The major temporary change to the site involved the addition of an athlete warm-up structure. The 11,000-square foot canvas-covered scaffold frame warm-up structure was erected in close proximity to the competition platform. The wood floor was carpeted and the structure air-conditioned. It contained 18 curtained 8-foot by 12-foot cubicles to provide each athlete with a private preparation area. Each was furnished with a cot, chair and table. The warm-up tent contained ten 10-foot by 10-foot warm-up platforms, each with adequate weights, rosin and chalk boxes and extra chairs. It had two large television monitors, an electronic scoreboard, a manual scoreboard, medical first aid equipment, administrative positions and electrical power. Look decorations were applied to the interior of the structure. The wood floor could not take the pounding of weights being dropped and began to bounce and vibrate, requiring daily repair.

The construction of the warm-up area scaffolding began in mid-May 1984. In mid-June, the LAOOC gained access to Gersten Pavilion, the main competition facility. The LAOOC commenced the installation of power, the scoreboard support structure, stage, commentator positions, television platforms and the television lighting and air-conditioning systems.

The main competition facility was carpeted with 920 square yards of carpet to protect the floor and add color for television coverage. Three large television screens were installed in the competition facility, allowing spectators to view the activities of the athletes in the warm-up room. A motorized flag apparatus was installed and used during awards ceremonies. A 12-foot by 30-foot electronic scoreboard was supplied by Swiss Timing. Major construction involved the building of a 40-foot-square carpeted lifting platform of one meter in height with stairs on each side and three inset judges positions.

Storage space was required behind the stage in the main competition facility for the awards platform, a spare lifting platform, ladders and spare weights. There was also a need for construction storage for electrical parts, a pneumatic lift, spare signs and bases and trash containers. Construction storage space was located in the concession truck storage area.

The competition facility was darkened by placing black plastic over the existing pavilion windows to prevent glare. Television crews were permitted to film using spotlights. The facility was

54

decorated with Look banners and flags and directional and informational signage.

The athlete warm-up tent and the competition hall were both air-conditioned with 400 tons of air. This made them as comfortable as possible and at the same levels, for the benefit of athletes moving from one to the other. Seven-and-one-half tons of air-conditioning were added to the technology results room to ensure the operation of the computers and photocopying machines.

LAOOC was granted access to the alumni gymnasium, offices and locker rooms and the parking lot and athletic fields on 1 July 1984. The athlete training facility located in the alumni gymnasium was constructed with 24 10-foot by 10-foot lifting platforms and chalk and rosin boxes. The floor was carpeted, and exercise equipment and Look decorations were added. The room was not air-conditioned but was well ventilated.

Athlete amenities included a 10-foot by 10-foot athlete information tent at the athlete entry to the site. Use was made of an existing athlete medical and physical therapy room in Gersten and office space in the training hall was transformed into massage and first aid rooms. The weigh-in rooms were located in an existing equipment storage room. The LAOOC remodeled the LMU swimming pool for the benefit of the athletes during the day and for social gatherings in the evenings. These improvements were left to the university as a gift. The athlete training facility was also a post-event party room. The lifting platforms were disassembled on the day of the super-heavyweight competition and the room was set up with tables and decorations for an awards banquet.

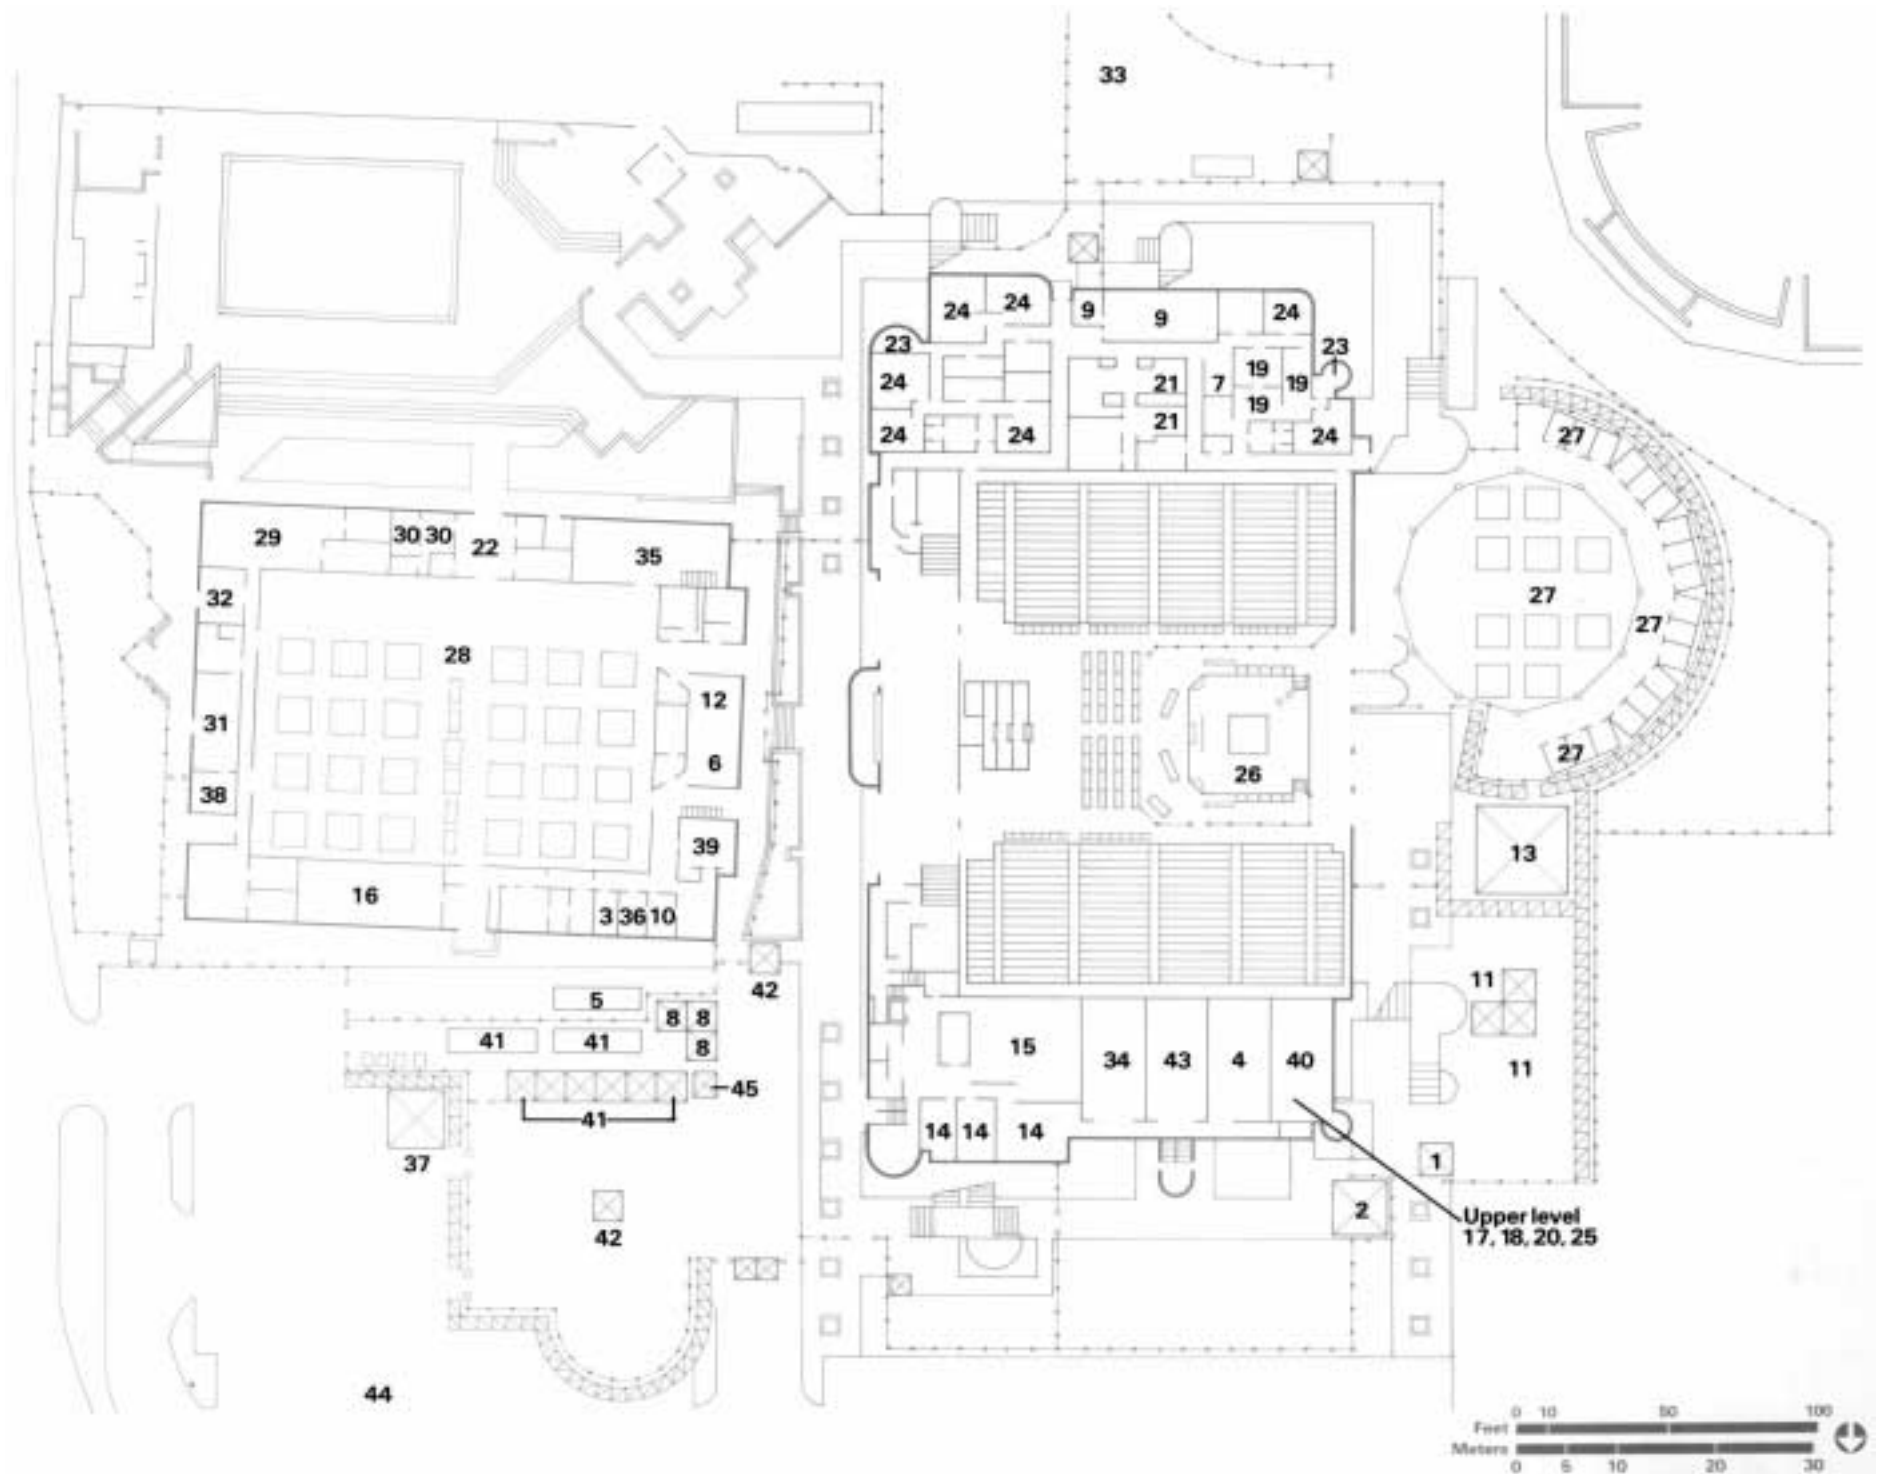

55

Many temporary facilities were erected outdoors for use by spectators including two entry tents, four turnstiles, one 10-foot by 50-foot concession stand and two 10-foot by 10-foot novelty stands, an information tent, a ticket problem/will-call tent and a 300-square-foot first aid tent. The venue had eight coin-operated telephones, with six inside the gates and two outside. A large outdoor eating area was provided with umbrella tables, trash cans, a music system and 4,300 pots of flowering annuals.

54 Gersten Pavilion at Loyola Marymount University provides plenty of space for the weightlifting competition and is enhanced through the use of temporary scaffolding.

55 This massive scaffold structure provided the warm-up area for weightlifters just outside of Gersten Pavilion.

Plan for weightlifting at Gersten Pavilion at Loyola Marymount University; roof removed and upper level seating removed to show support areas on floor below

Staff facilities provided by the LAOOC included a 20-foot by 20-foot staff check-in tent with carpeting, tables, chairs and badge racks. Umbrella tables and chairs were provided along with outdoor serving tables. A racquetball court was converted to an indoor staff lounge by carpeting the floor and draping the walls. The lounge was furnished with sofas and chairs, televisions and lockers. A 20-foot by 20-foot tent was set up outside the venue for use by unaccredited drivers. Press facilities included a 30-foot by 30-foot press interview tent that was carpeted and had a public address system, tables, chairs and Look decorations. The LAOOC constructed an indoor press workroom and lounge. One hundred press desks were provided on the main competition hall floor directly in front of the lifting platform. Fifteen raised commentator positions and two raised camera platforms were added for television use.

Hosting facilities included an indoor lounge and an outdoor area adjacent to the exit of the main competition gymnasium. A 10-foot by 10-foot tent served as demarcation of the entrance to the hosting facility. The area was covered with 1,600 square feet of Astroturf placed over the grass, umbrella tables and chairs, televisions, potted trees and serving tables. Security fencing and gates were added around the site periphery. Look installation was completed the night before competition began on 28 July. Platforms were removed from the training hall on the last day of competition, 8 August. The south-side scaffolding was dismantled by 21 August and the LAOOC worked with the university to restore the landscape to the university's satisfaction.

56

56 The lack of columns inside of Gersten Pavilion provides for clear viewing by spectators of the weightlifting competitors.

Architecture and Construction

Weightlifting			Security			Technology		
Introduction	Weightlifting competition took place in Gersten Pavilion, a newly constructed sports facility. A tent facility was established with 10 warm-up platforms adjacent to the competition platform. An existing gymnasium next to the pavilion served as the weightlifting training facility and staff offices.		16 Command Center	20 x 48	Work area for 12, briefing area for 21.	34 Message Center	18 x 18	Communications and message receiving center for staff and officials.
Department/Function	Space Use (in feet unless noted)	Notes	Sports Administration			35 Results/Offices	22 x 52	Results output, photocopying and distribution center, radio issue and recharging, staff office area for 4, sponsor/vendor work area for 10.
Accreditation			Federation Services				2 x 10	Results input area at stage perimeter.
1 Guest Entry	10 x 10 tent	Olympic Family entry point.	17 IWF Offices	12 x 20	Office for IWF secretary-general, 8 guests.	Swiss Timing	14 x 40	Scoreboard and scoreboard support directly behind stage.
2 Staff Entry	20 x 20 tent	Staff entry, badge issue, storage and distribution point. Work area for 12.	17	12 x 20	Office for IWF president, 3 guests.		2 x 4	Scoreboard control table for 2 at stage.
Food Service			17	20 x 32	Office for IWF staff.	Ticketing		
3 Administration	8 x 14	Office for 4	18 Conference Room	12 x 28	Conference room for 16.	Administration		Office for shared (see Finance). No ticket sales on site.
4 Eating Area/Lounge	20 x 40	Seating for 38, 2 televisions, bulletin board.	19 Judges/Officials' Dressing Room	24 x 24	Existing shower/locker area.	Transportation		
5 Storage and Distribution	8 x 40 trailer	Refrigerated storage.	20 Lounge	22 x 34	2 televisions, 25 chairs, couches.	36 Administration	10 x 12	Office for 6.
Finance			21 Weigh-in Room	(2) 10 x 16	Official weigh-in room with 1 scale per room.	37 Driver Lounge	20 x 20	Waiting area for 30.

Health Service & Medical Control			22 Information/Check-in	10 x 10	In training area.	38 Construction	12 x 16	Office for 6, shared with Materiel Supply staff.
7 Doping Control	14 x 14 and 4 x 7	Waiting area for 8, television; processing and testing area with 8 existing toilet facilities, refrigerator. Work area for 3.	23 Sauna	100 square feet and 38 square feet	2 dry heat saunas.	39 Venue Staff Offices	18 x 20	Office for competition director, assistant director, venue director and assistant director.
8 Spectator First Aid	(3) 10 x 10 tents	Waiting area for 10, treatment tables, refrigerator, television.	Competition Management			40 Conference Room	20 x 40	Conference room for 16.
9 Sports Medicine	17 x 38	Waiting area for 10, 4 treatment tables, television, refrigerator.	25 Commissioner's office Field of Play	12 x 18	Office for 2, 5 guests.	Spectator Services		
9	10 x 10	Office for chief medical officer.	26 Competition Stage	40 x 40	Elevated 1 m with 16-foot secured perimeter on floor. On stage is competition platform 4 m x 4 m x 5% inches high.	41 Food Service	10 x 50 tent (2) 8 x 40 trailers	Sales point for food and beverages. Refrigerated food storage.
Materiel Acquisition & Distribution			27 Rest Area	18 (8 x 11)	Private room with bed, chair, table.	42 Novelty Stands	(2) 10 x 10 tents	Sales and service point for novelty sales.
Administration		Office for shared with Construction (see Venue Operations).	27 Warm-up Room	11,000 square feet	Tent; circular structure, carpeted structure with 10 platforms and barbells.	43	20 x 40	Novelty storage.
Storage	(4) 8 x 40 trailers		Training Facility (Gymnasium)			44 Post Office	14 x 26 trailer	Sales and service point for U.S. Postal Service.
Olympic Family Services			28 Training	42 x 78	Training hall with: 24 platforms, each 12 x 12, 6 feet between each platform. Each platform had 312.5 kg barbell set of collars and weights, 2 weight racks, 2 squat racks, chalk and resin boxes, 2 chairs; 100 chairs total. Athletes had access to outdoor swimming pool and whirlpool, sauna and massage facilities and lounge. Also in hall; 4 abdominal boards, bench presses, 2 vaulting boxes, 6 stretching mats, 2 hyperextension benches, 2 free standing power racks, 2 bench presses, 2 incline bench presses, 6 177.5 kg barbell sets.	Program Stands	(3) 2 x 4 carts	Portable program sales points.
10 Administration	10 x 140	Office for 4 Protocol and Language Services staff.	29 Locker/Shower	20 x 60	Existing facility.	45 Public Information	8 x 8 tent	General spectator information.
11 Hosting	40 x 140	Outdoor patio with buffet service, tables and chairs for 80. Three 10 x 10 shade tents.	30 Athlete Information	20 x 20	Athlete information point on training site scheduling, transportation.	Public Seating	4,500	Handicapped seating for 42.
Personnel			31 Lounge	16 x 32	Lounge for 25, television and beverage service.			
12 Administration	18 x 18	Responsible for payroll, timekeeping, staff scheduling. Office for 10.	32 Staff Office	12 x 22	Office for training manager.			
Press Operations			Television					
13 Interview Room	30 x 30 tent	36 chairs, elevated platform for 6. Mixed Zone 12 x 28 near entry point for warm-up facility.	33 Trailer Compound	90 x 120	Telephone and television transmission and production vehicles.			
Mixed Zone	12 x 28	Near entry point for warm-up facility.						
Photo Positions		5 positions located at perimeter of competition stage.						
Press Seating	150	96 positions with table, 54 without.						
14 Staff Offices	(3) 12 x 28	Office for press chief, staff work room for 8, press staff lounge.						
15 Sub-Center	34 x 59	Work room for 36, telex, television, typewriters.						

7.03.18 Wrestling

Olympic competition in wrestling was

Center. This multipurpose facility was built in 1967 and is composed of several structures. The arena building, the lobby between the arena and North Hall, the North Hall and the north meeting rooms building were the only structures used by the LAOOC in conducting the competition.

The only major construction required at the facility was three octagonal competition platforms. Support vehicles were placed in compounds west of the arena building. A utility truck, catering truck and communications center were established in a compound southwest of the maintenance warehouse. Food storage, materiel supply, transportation and accreditation trailers were placed in a temporarily fenced area north of the exhibit hall. A tented lounge was built in this area for the LAOOC wrestling staff. The television compound was placed just west of the arena.

In the wrestling arena proper, seating and work tables were built for the press in the southeast loge level area. Handicapped seating was built in the first rows of loge seating on the southeast and northeast sides of the arena. Three competition mats were specially colored by the HGB Backstrand Company to match the Olympic Look and were set up on 30-inch-high octagon-shaped platforms in the Convention Center's main arena. A light gray carpet was placed around the mats, down the sides of the platforms and over the entire arena floor to create a safe, uncluttered field of play. An awards podium was an integral part of the platform.

A press area was created from existing office space adjacent to the grand lobby of the arena. Press rooms were created using pipe and drape partitions and an adjacent formal interview area was blocked off using stanchions and chain.

Venue management offices were created in the grand lobby areas using temporary eight-foot-high hardwall construction and pipe and drape partitions. Additional office space was created one floor down, using similar construction techniques.

The North Hall became a mini-day village for the athletes. LAOOC planners attempted to create a park-like atmosphere in the large, 100,000-square-foot area. Fifty carpeted team rooms, two temporary structures for 10 showers, two dry heat saunas for 10 wrestlers, and two whirlpools were just a small part of the total operation. Rooms were assigned based upon team size. Twenty teams received 24-foot by 25-foot semi-private rooms and 30 teams received 12-foot by 28-foot rooms. The walls of these rooms were established by use of pipe and drape partitions which were eight feet high. Two additional 14-foot by 25-foot hardwall private team meeting rooms were available and included a large conference table and chairs. In addition, training was available for the wrestlers in the North Hall. Six 10-meter by 10-meter mats were there for this purpose and were individually draped for privacy. Six stationary bicycles and two trial scales were also located in the North Hall.

The competition platform was an integral part of the Look. The three competition mats, each 12 meters (39.37 feet) in diameter, were made by HGB Backstrand of Sweden. They were colored to coordinate with the Look of the Games, with a chrome yellow competition zone, a red warning zone and a blue out-of-bounds area in concentric rings. The flags of the countries competing in the competition were strung across the ceiling of the arena. The centerpiece of the overhead decorations were two large wrestling pictograms.

Sonotubes, fence coverings, banners hanging on the outside of the area and a theme tower were all part of the Look constructed for the wrestling venue.

57

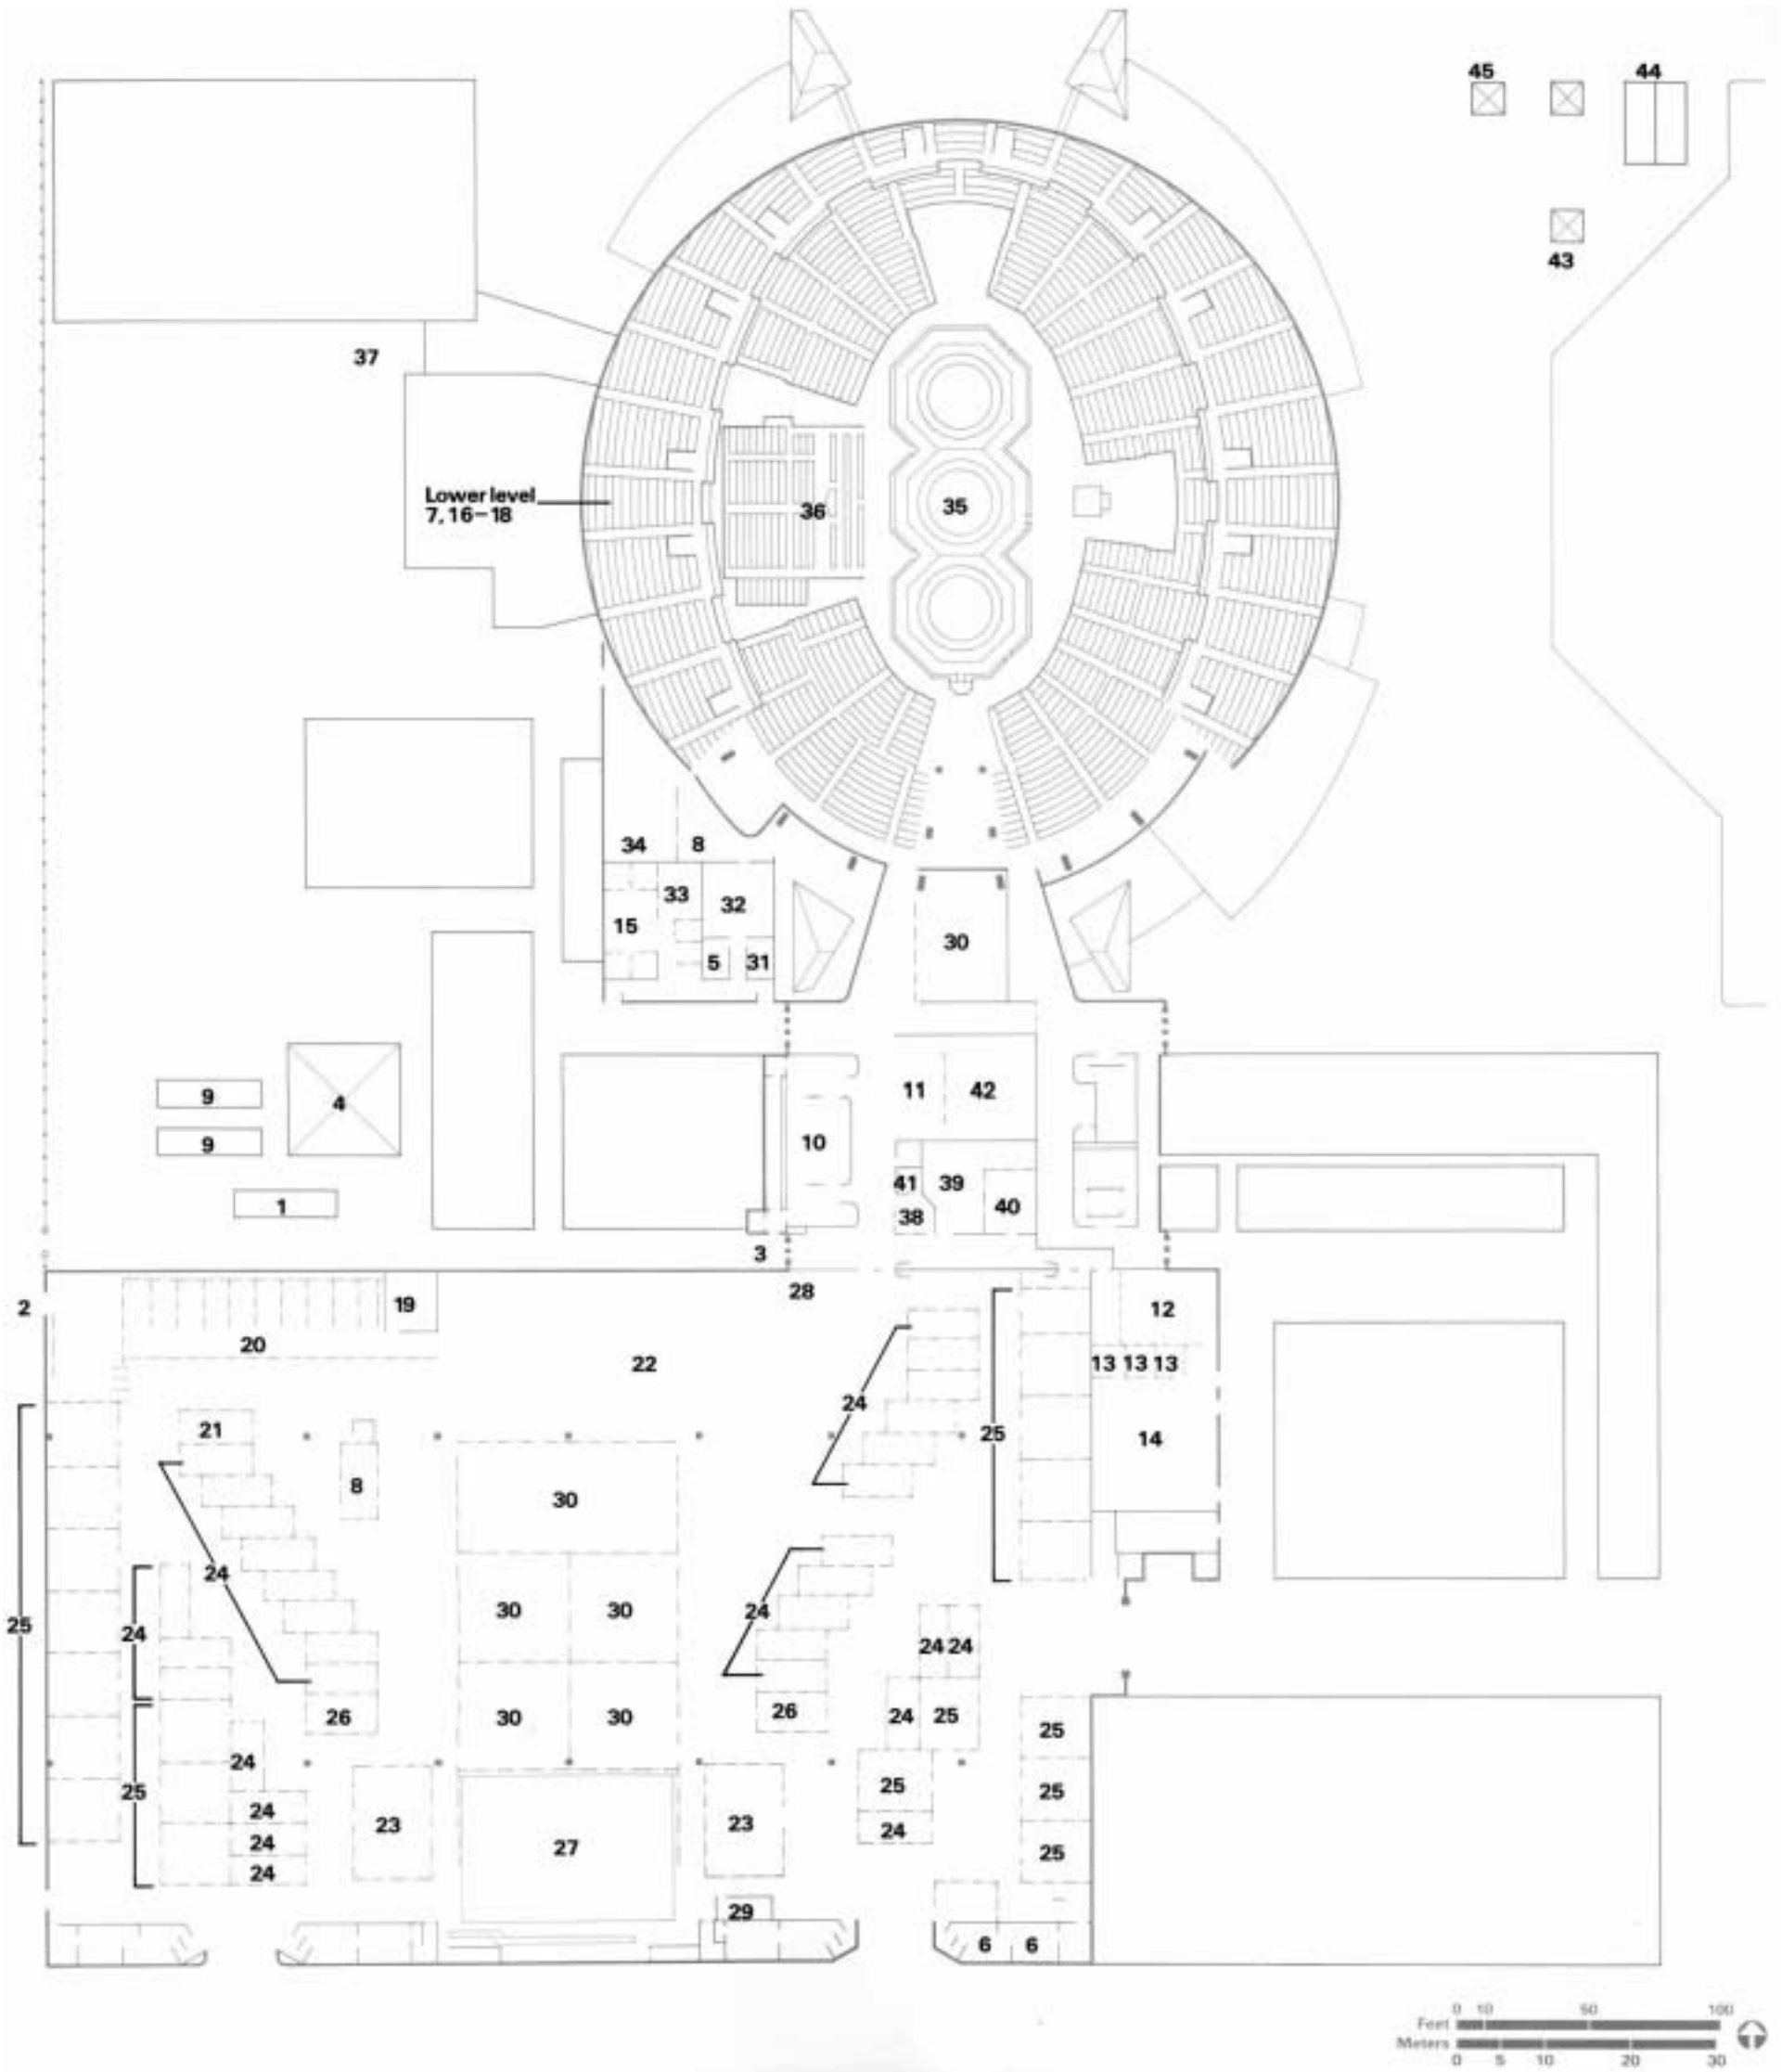

57

57 Temporary modifications for the wrestling competition include the construction of the special elevated platforms for the competition itself.

Architecture and Construction

Site plan of wrestling facility at Anaheim Convention Center; roofs removed and some seating cut away to show access and support areas

Wrestling			Sports Administration			Television		
Introduction	Wrestling competition took place in the Anaheim Convention Center, an existing multipurpose sports facility. All support facilities were established in the arena and in the adjacent "North Hall" a 100,000-square-foot convention hall. Facilities established there were on a temporary basis. Security								
15 Command Center	(4) 10 x 10	Private offices for law enforcement agencies.						
15	22 x 38	Work area for 8.						

7.03.19 Yachting

The yachting venue, directly adjacent to the fencing and volleyball venues, utilized the first five gangways of the Long Beach Downtown Shoreline Marina and a portion of the adjacent beach. The area came to be called the "Olympic Harbor". Two paved parking lots and three boat-owner shower facilities were the only existing facilities utilized. The only on-site facilities provided for spectators were a series of bleachers for the award ceremonies and an information booth on the west edge of the site on the marina green. Spectators could sign up for space on a boat that circumvented the race courses.

A site plan was developed by the LAOOC in 1983 and a skeleton plan implemented during the 1983 Olympic Classes Regatta held at the Olympic Harbor. As a result of observations made during the Regatta, the site plan was modified. A landscape architectural firm developed the master plan and final construction documents. The site is located within the authority of the California Coastal Commission which required permits for the staging of both the Regatta and the Games.

The LAOOC agreed to finance the construction of a permanent boat hoist as part of the contractual agreement with the city of Long Beach. The hoist was designed and built under the direction of the city of Long Beach engineers. It was in place for the 1983 Regatta and problems encountered at that time were corrected in 1984.

All venue operations were housed in trailers and a total of 26 were installed. They were located on the paved parking lots in groups creating courtyards to provide a seal to the venue. Tents supplemented the trailers for meeting and hosting areas.

The venue had two entrances: one for people, including staff, athletes, press and team support officials; and one for vehicles and boats. The layout of the entry for people accommodated accreditation procedures.

Competition facilities were housed in tents and trailers. Team tents were provided but were not regularly used. Teams, instead, congregated at their storage containers and shade structures adjacent to the storage containers were also utilized. Food and recreation areas were housed in large tents set on the existing lawn. Medical and doping control facilities were housed in a 60-foot trailer supplemented by an adjacent shade

58

structure which was used as a waiting area. Temporary cold water showers were constructed using tents set on concrete slabs with adjacent lockers. Existing showers and restrooms belonging to local boat owners were also used.

Boats were stored on the beach, both on trailers and on dollies. The LAOOC provided 29 (40-foot by 8-foot) and 14 (20-foot by 8-foot) containers for the storage of yachting equipment. Many countries brought their own containers and electrical power was supplied for those requesting it. Some containers were air-conditioned with refrigerators as well as machine shops. At times, the site had insufficient electrical power and outlets. Temporary security lighting was manually operated, rather than by time clock or master switch, which made the operation tedious.

A major problem encountered during the design phase was the stabilization of the sand to facilitate boat storage and movement. Although materials are made for this purpose, the costs were prohibitive. A lengthy search for alternative, less expensive materials resulted in the use of Astroturf and woven stabilizing fabric. SuperTurf, the LAOOC's official turf supplier, was able to supply turf from a used football field at a reasonable cost. The sand was rolled to compact the surface before the turf was installed. The turf functioned well but was not aesthetically pleasing. The woven

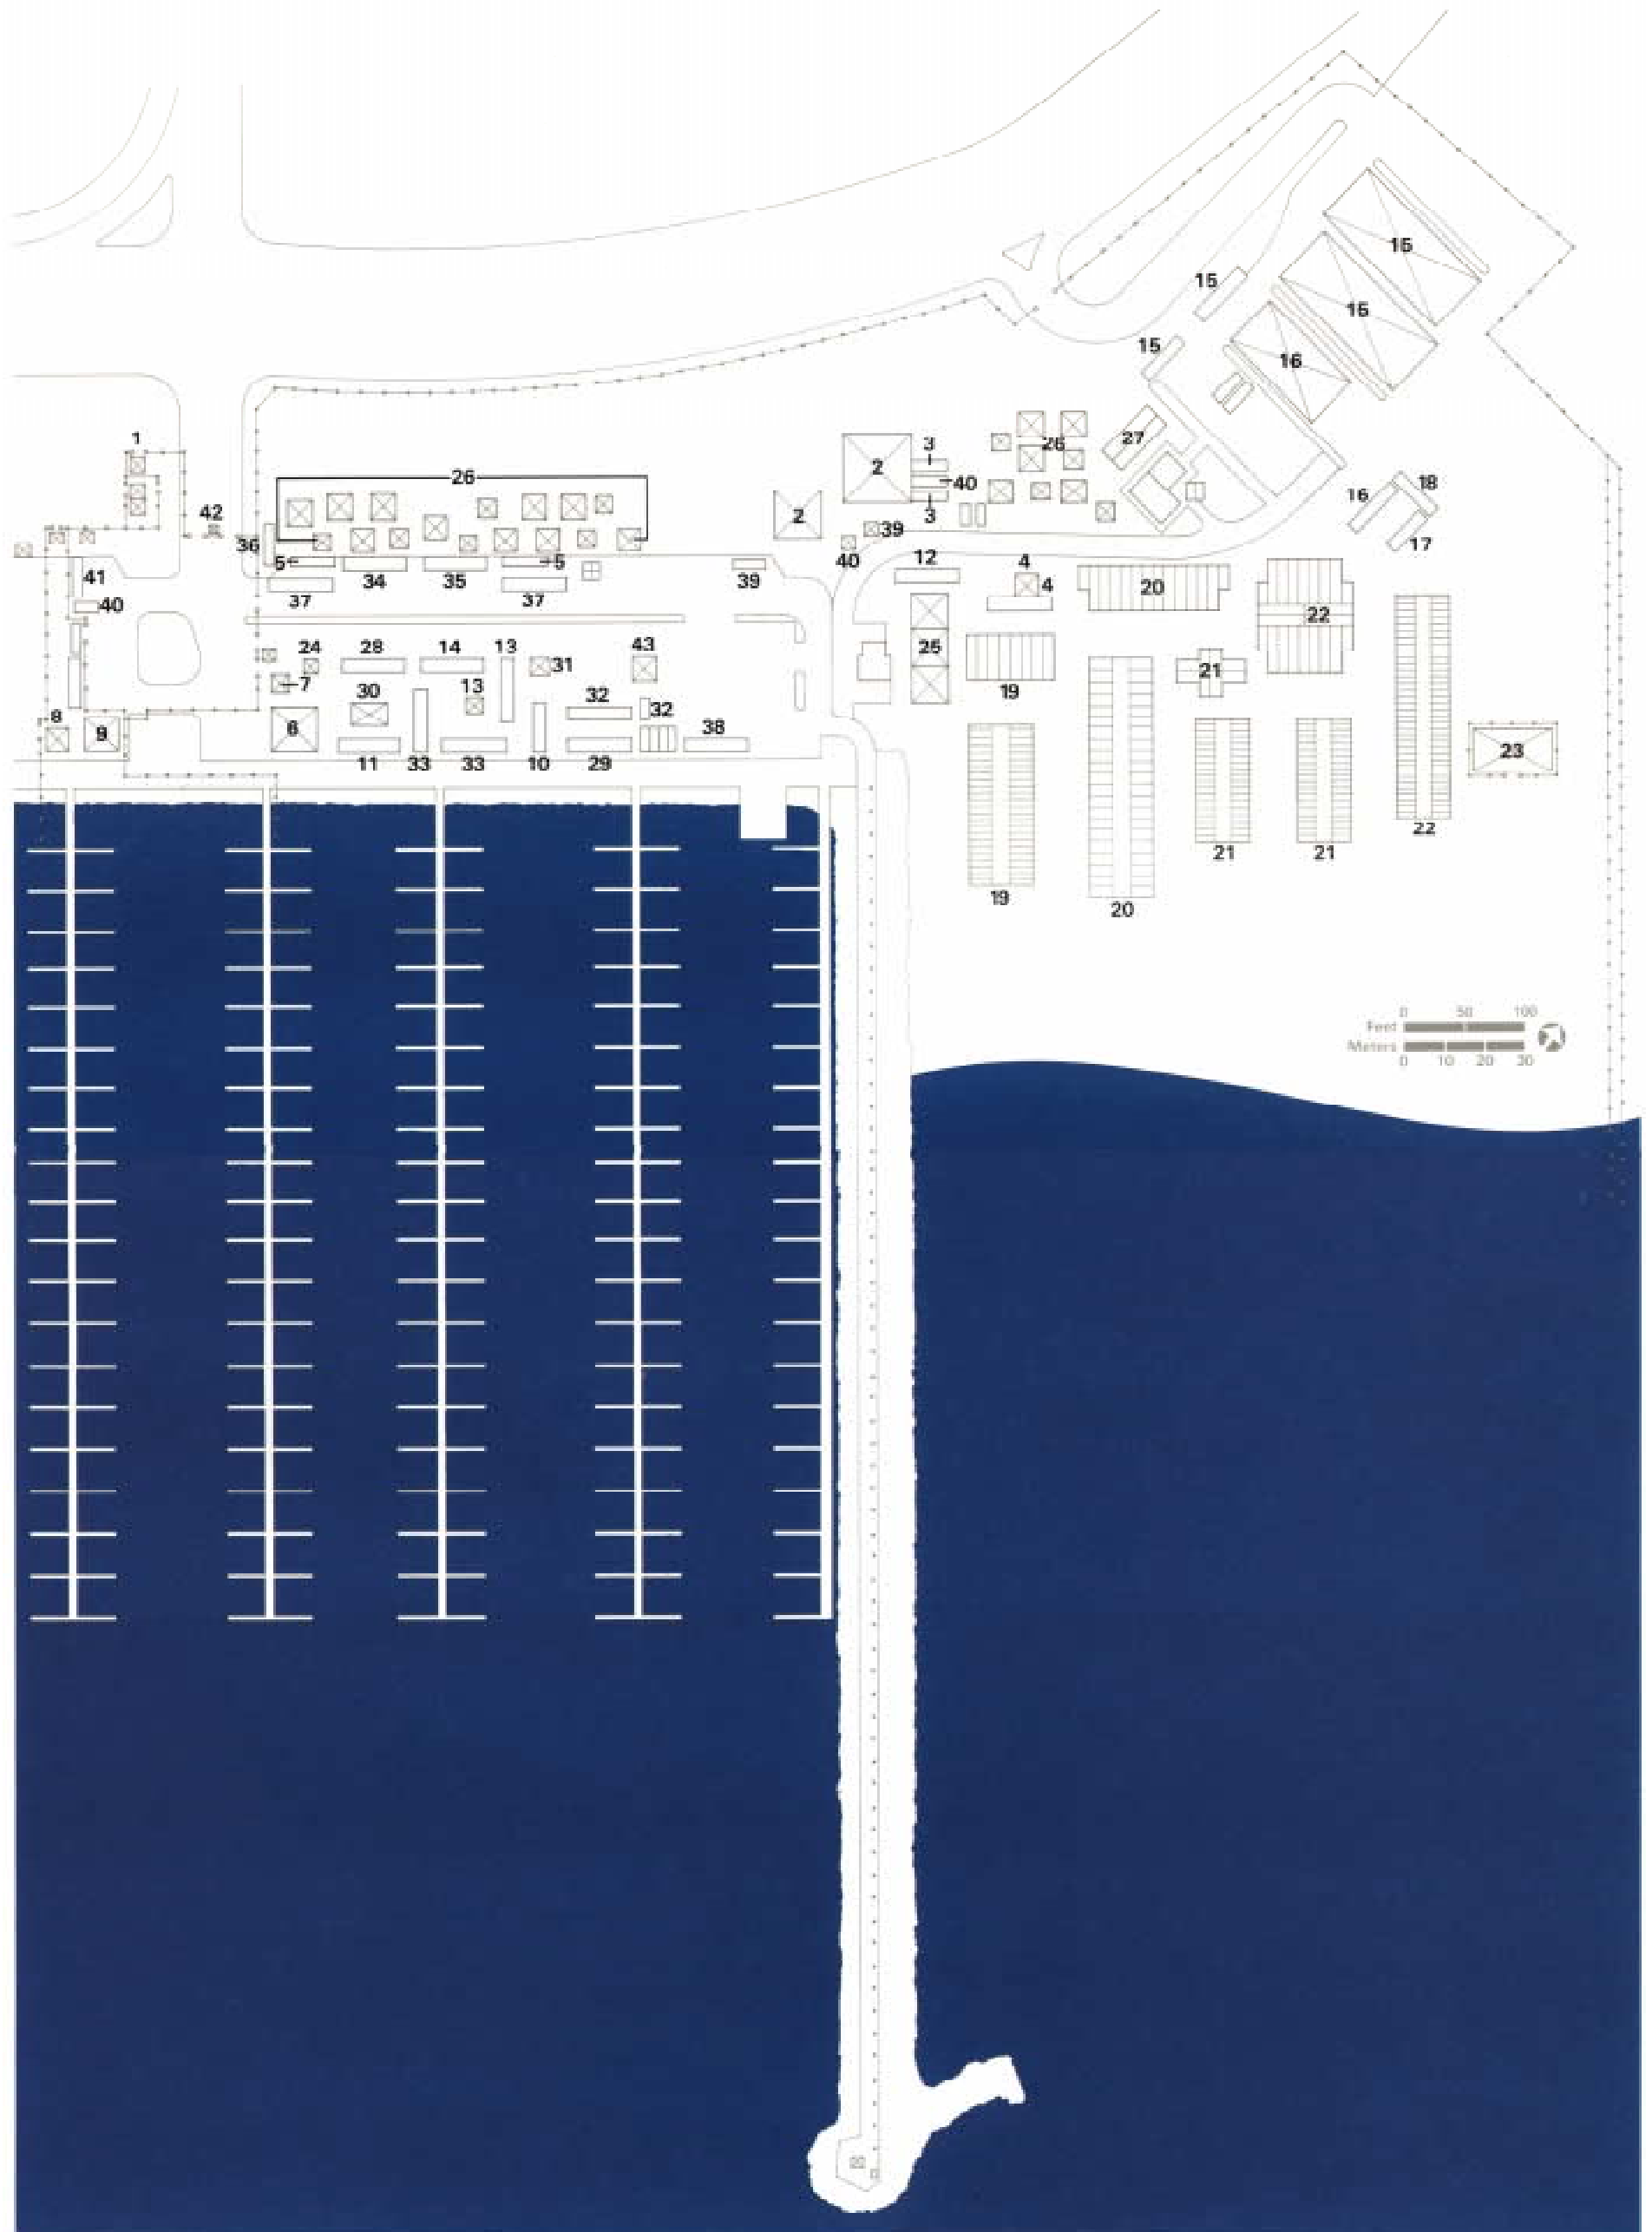

fabric was used in storage areas where there was little traffic. The dark color of the fabric made it hot and difficult to walk on. During competition, the turf was extended to the water's edge to create a stable walkway. Where it went beyond the high tide mark, it was covered with sand and had to be removed.

Boat measuring and repair were located in large tents to the far east of the site on a small paved parking lot. Adjacent trailers housed support offices. The beach adjacent to the measuring area was graded prior to the Olympic trials to accommodate boats and storage containers. A small portion of the Super Turf was laid as a test effort. It worked well and the remainder was subsequently installed. Most of the facilities were set in place from 6-13 July.

The most spectacular element of the site was the flags of the nations extending the length of the jetty on 30-foot flag poles and visible from the entire harbor. Bleacher seating for over 2,000 spectators was erected for use during the yachting Opening and Closing Ceremonies and the torch relay entry. The bleachers were located in the center of the venue on the lawn to the north of the paved lot.

58 Temporary facilities modify the Long Beach Downtown Shoreline Marina into the "Olympic Harbor" for the yachting competitions.

			30 Conference Room	20 x 30 tent	Conference seating for 28.			

7.03.20 Village: USC

The athlete village at the University of Southern California had the largest population of the three villages. It was created on 49 acres of the USC campus, located in downtown Los Angeles and also included the 32nd Street School, an elementary facility of the Los Angeles Unified School District, and the Shrine Auditorium Exhibition Hall. Contractual agreements signed in March 1982 specified a 40-day period of exclusive use and the identification of all residential, recreational, sports and training facilities to be used by the LAOOC. The village was occupied from 14 July through 15 August by almost 7,000 athletes and team officials, representing 79 NOCs.

Architects faced the challenge of creating a unified feeling to the USC village, as it was not contained wholly within the university but encompassed various other structures and city streets. The perimeter fence was constructed on properties belonging to USC, the city of Los Angeles, the Los Angeles Unified School District and several private property owners. Look elements were used not only to create a festive Olympic atmosphere but also to provide continuity between varied architectural spaces.

The University of Southern California reviewed all uses and construction details for compatibility with their requirements for continued use after the Games. USC paid particular attention to the way in which attachments were made to existing structures and to how construction operations would affect university programs which continued until the first week of July as well as during the Games, when over 1,200 USC employees worked in the village.

The physical layout and multiple property ownerships added to the complexity of securing almost 50 construction permits and approvals from various governmental agencies. A conditional-use permit was secured from the city of Los Angeles Department of Planning and Zoning as the existing zoning for the area did not allow for such uses as office trailers and tents. Permits were secured from the county of Los Angeles Health Department to construct and operate the food service facilities. The LAOOC obtained permits from the Los Angeles Department of Public Works and the Los Angeles Department of Transportation for fence and street modifications that had to be made on city property. The Bureau of Conservation of the Los Angeles Department of Building and Safety issued permits to the LAOOC for all temporary construction and for plumbing, mechanical and electrical system modifications.

59

The existing facilities at the University of Southern California required little modification to satisfy the space requirements of an athlete village. Temporary facilities were constructed for staff and guest entries, outdoor rest areas, additional kitchen and dining facilities, a wrestling training site and a transportation center. The only concrete and steel construction required was the building of a permanent two-story dining facility. Existing and necessary temporary facilities were organized into activity clusters that were visually connected by the Look elements. There were six distinct housing areas or pods, a transportation center, an administrative center and an area called the Village Square that included most of the general and recreational facilities required by the athletes and officials during their stay.

The layout of the facilities allowed for free movement of pedestrians and service vehicles. Athlete shuttle buses, maintenance vehicles and the electric carts used by the administration staff were the only vehicles allowed in the village. Buses entered the village from Jefferson Boulevard through a double gate system and proceeded to a central location. After passengers disembarked, the buses left the drop-off area and proceeded to a sweep area and a holding area before picking up passengers in the transportation center. The buses then headed out to training sites, venues and the other villages.

The main entrance to the village was located east of the Olympic Plaza. To the west, Taper Hall, a classroom building, was converted at ground level to an interior shopping mall including a bank, hair salon, convenience store, telephone center and video arcade. The second level of Taper Hall housed the NOC offices and meeting rooms. The International Zone was located south of the Olympic Plaza and tents were erected for informal interviews with news media.

The USC Village accommodated hundreds of non-residents on a daily basis. Up to 200 journalists gathered to watch the athletes training on Cromwell Field and hold informal interviews in the International Zone. As many as 350 NOC guests were in the USC village at any given time. Athletes passed through the village to gain access to nearby swimming, wrestling and gymnastics training sites. The athlete shuttle system transported athletes to the Coliseum, Sports Arena and Exposition Park, a few blocks away.

The Village Square had two main pedestrian arteries, 34th Street and University Avenue, a pedestrian mall.

59 Village administrative staff use electrically-powered golf carts to move quickly and quietly within the village.

Architecture and Construction

The LAOOC added decorative Look elements: painted scaffolding with elevated graphics and banners; tables, chairs and umbrellas; refreshment and sports information modules in special tents; a post office, specifically designed by the U.S. Postal Service; and thousands of plants to transform the mall into the Olympic Plaza, the village's main gathering place.

The northern edge of the village square was 34th Street. It was converted to a pedestrian way or Main Street from which athletes entered the polyclinic, coffee house, disco and pathways leading to Taper Hall, the plaza, a cinema and theatre, Olympic Park welcoming area, Baron's Bistro and Annenberg Hall where the main NOC offices, the NOC Service Center and the USC village mayor's office were located. The disco decorations extended into the street and the area in front of the coffee house was filled with tables and chairs.

The disco was located in a new sound stage and was enhanced by platforms and decorations. An outdoor stage was erected for the coffee house, located in the USC Religious Center. The polyclinic was located in an existing USC medical facility. New equipment was provided to meet the athletes' specialized needs. Refreshment and information kiosks equipped with EMS terminals and telephones were located throughout the village.

To ensure proper security a double chain-link fence surrounded the village. Both fences were 8 feet high with three strands of barbed wire above the exterior fence. The fences were placed a minimum of 10 feet apart. The U.S. Department of Defense added an intrusion detection system, consisting of cameras and motion detection devices attached to the fences surrounding the athlete pods.

The pods were located on the perimeter of the village. Each pod had one pedestrian entry point marked by a specialty tent that housed a guard station and magnetometer. The village boundary fence had 10 emergency access gates for use by the fire department. Only the gates at Jefferson Boulevard and a service entrance on McClintock Street were available for vehicular access.

Each pod consisted of one or more existing residence halls. A survey of room and suite size and allowable densities identified the capacity of the contracted rooms at 8,549 occupants. The LAOOC designed rooms for a maximum occupancy of 7,002 resident athletes and team officials. Common recreation/lounge areas and laundry areas were provided in each complex.

The LAOOC provided a 24-hour food service for village residents and guests in four facilities, including two 500-seat dining halls, plus a new two-story dining facility with seating for an

additional 900 persons. Athlete food service provisions included buffet-style service of pre-cooked foods in

6,800 meals were served in a three-hour period.

Two existing USC dining facilities, EKV Hall and Trojan Hall, were located within athlete housing pods. The LAOOC provided additional serving equipment and existing equipment not appropriate for LAOOC use was replaced. Additional tables and chairs were added to increase seating capacity to the allowable limit. Storage containers were placed outside the dining hall kitchens to hold food and service products.

The third dining facility was built adjacent to Webb Hall later and was named King Olympic Hall. It was a newly constructed facility paid for by the LAOOC and equipped for use during the Games in a similar fashion to the other dining halls. The two-story building was also located within an athlete housing pod and offered primary service for two other nearby pods. However, athletes were free to dine in the location of their choice.

The two existing dining halls, combined with the newly constructed facility, accommodated a total seating capacity of 2,000. But, a seating capacity of 3,000 was required to service the USC Village efficiently. As no existing facilities were available, the LAOOC constructed a temporary dining facility in an existing L-shaped surface parking lot west of the Village Square and in the geographic center of the village. The temporary dining facility, the "Baron's Bistro," was open 24 hours a day with seating for nearly 1,300.

The entrance to Baron's Bistro facility was from a walkway under barrel-vaulted tents which opened on each side to 45-foot-square, magenta-colored, canvas canopies on steel frames. Unlike the other dining facilities, food was prepared on location. The 13.5-foot by 90-foot kitchen was a specially outfitted, pre-fabricated cooler building. A similar adjacent building contained a scullery. The Shrine Auditorium Exhibition Hall adjacent to the USC campus was transformed into a food preparation and distribution center. A 3,600-square-foot temporary kitchen was added to existing facilities. A 3,000-square-foot prefabricated freezer and cooler storage space, a 3,000-square-foot dry storage area and a 2,000-square-foot area for administrative use were also accommodated there. The prepared food was transported from this central location to each of the four village dining halls.

60

Athletic services were available in existing and temporary facilities at the USC Village. The physical education building contained gymnastics training, rest areas for athletes from the other villages and swimming facilities. Cromwell Field was a training and competition warm-up site for athletics competitors. An LAOOC-outfitted weight room and a temporarily modified hydrotherapy area were located in the basement of Heritage Hall. The wrestling training area was built on three existing tennis courts. A plywood deck was built over the courts and covered by canvas to provide nine mat areas.

Village administrative offices were located in the 32nd Street School. Existing classrooms were modified with partitions to create the necessary office space. NOC administrative services were provided in the lobby of Annenberg Hall. The upper stories of Annenberg Hall, the second level of Taper Hall and the bungalow area of the 32nd Street School housed individual NOC offices and meeting rooms.

60 Even fences are painted to place the Look of the Games all through the USC Village.

61

62

61 The village square is the main gathering point for many competitors relaxing within the USC Village.

62 The transport depot at USC is clearly marked for use by competitors and officials on their way to competition and training sites.

63 Information is available from LAOOC guides and hostesses at multiple sites within the village.

Partitions, telephones and EMS terminals were added to all rooms. Rooms in the 32nd Street School were provided with temporary air conditioning and carpeting. Additional air conditioning was also added to the NOC photocopying center in Annenberg.

Transportation services were provided for all athletes and team officials to and from all venues, training sites, villages and the airport. The bus program operated from the northeast section of

63

the village. A portion of the 32nd Street School playground housed the transportation information and waiting plaza and the adjacent Shrine parking lot contained 36 bus-loading areas. A large reader board matched routes, buses and loading stations. The loading stations were marked by decorative sonotubes with applied informational graphics. The transportation operation was directed from a 42-foot-high, aqua scaffold tower. Athletes departing the village for the Sports Arena and the Coliseum used a special shuttle system located southwest of the village boundary. An existing tennis court served as a

processing area. Press arrived from the Main Press Center via another shuttle system. Included in the USC Village transportation program was the fleet of NOC-operated vehicles which were parked in the village perimeter lots and remote lots.

Construction on the University of Southern California campus began on 9 May, which was earlier than the contracted access dates. Fence crews worked daily until the USC Village opened on 14 July.

To ensure adequate power reserves, a completely independent electrical system was installed. The Los Angeles Department of Water and Power provided the LAOOC with 62 power poles and nine direct service drops to guard against using USC electrical reserves. The telephone line system and the EMS had notable requirements and had to be integrated into the power distribution set up. Although technology sponsor staffs performed their own installation, LAOOC construction staff verified placement, approved schedules and observed all work.

Look installation began at the village during the last week of June. Long-range visual elements were used to identify the village from a distance. Such elements included the decorative screening on the village perimeter fence, which created a decorative boundary and also served to block views into the village. The Olympic rings were located on all four sides of Phillips Hall, a tall university structure visible from the roads that accessed the university. The rings were made of plywood and cardboard facia and were illuminated at night. The globe atop another university structure, the VKC Tower was also illuminated with Tivoli lights.

Walkways and many temporary structures were illuminated at night, also with Tivoli lights. Tube balloons were hung in trees and marked the secondary access way from the sports service center in Heritage Hall to the Village Plaza. The balloons were filled with air and maintained by an air-pressure pump and a forced air system.

The main entrance to the village at the VKC Tower was decorated with the flags of the nations. A bold entry was created by draping large banners in the building's archways. The direct application of temporary banners and bunting created separate entrance ways for village guests and media and for athletes and officials.

In general, construction was completed on schedule. Early access to the Shrine Auditorium Exhibition Hall, permission to install exterior security fencing early and permission to get an early start on the technology command and data center trailers were major factors in meeting deadlines. Over 100 Look personnel, 30 fence installers and 30 electricians worked 18-hour days to complete the work on the USC Village which opened 14 July 1984.

Architecture and Construction

USC Village				
Introduction	The USC Olympic Village was created on 49 acres of the campus of the University of Southern California. More than 6,000 athletes and officials from 79 NOCs were housed in permanent residential halls and apartment style student accommodations. Other existing structures were adapted to new uses and temporary facilities were installed to create comfortable living and recreational areas.			
Department/Function	Space Use (in feet unless noted)	Notes		
Accommodations				
1	12 x 15	Olympic team accommodations at USC were provided in existing student housing structures. There are two basic types of housing units at USC: the residence hall complex and the apartment complex. Assignment of rooms met the requirements set by California state law of providing a minimum of 90 square feet per person and no more than 10 persons in a unit per 1 shower and 1 toilet facility.		
		The typical apartment buildings:		
		Bedroom units with 2 or 3 beds per room, desk, chair, dresser. 2 and 4 bedroom complexes were available and slightly larger.		
		Living room/dining room with couch, chairs, dining table with 4 chairs.		
		Bathroom with sink, toilet, bathtub/shower.		
		2	13 x 16	The typical residence hall: Bedroom with 2 beds, desk, chair, dresser, communal toilet and shower facilities.
				All units had a separate recreation or lounge room with chairs, television, video games.
				Athletes typically were housed three to a bedroom; NOC chef de mission typically received his own room or shared with the team doctor.
				Within the apartment complex there were (162) 1-bedroom units housing 972 athletes, (87) 2-bedroom units housing 2,296 athletes, (27) 1-bedroom units housing 54 NOC chefs and athletes, (70) 41-bedroom units housing 140 NOC chefs and team doctors, (45) 1-bedroom units housing 270 athletes and coaches, (12) 2-bedroom units housing 60 NOC chefs, or doctors and athletes, (40) 4-bedroom units with 2 bathrooms housing 400 athletes, 25 double rooms housing 50 athletes, 40 single rooms housing 40 NOC chefs or doctors, (23) 1-bedroom units housing 92 athletes, (41) P-bedroom with two bathroom units housing 410 athletes, (32) 1-bedroom units housing 160 athletes and (14) 2-bedroom units housing 84 athletes for a total of 5,028 beds in the apartment complexes.
				Residence Hall Complex
		There were a total of 6,978 beds in the USC Village.		
Athlete Services				
Religious Services Center				
3 Counseling Service Center	200 square feet	Counseling center for all denominations. Churches or worship centers available for Catholic, Islamic, Jewish and Protestant religions.		
Sports Services				
4 Armory	20 x 22	Two 6-foot work benches, 8 foot lockable cabinet, grinder.		
5 Athlete Registration/Information	14 x 24	Athlete registration room, capacity for 30.		
5	26 x 30	Sports information desk.		
6 Athletics Training Facility		Existing 400 m track with all infield facilities.		
6		Equipment supplied: 2 pole vault pits, 2 high jump pits, starting blocks, 15 shots of 7.27 kg, 16 shots of 4 kg.		
6		Auxiliary training area for throwing events with 15 hammers, 30 cables, 30 handles, 1 cage, 18 (1 kg) discus, 20 (2 kg) discus, cage, 20 (600 gm) javelin, 30 (800 gm) javelin.		
6	10 x 10 tent	Athlete check-in.		
6	20 x 40 tent	Athlete rest area for 120.		
6	20 x 60 tent	Medical services tent with 12 treatment tables, refrigerator, water cooler.		
6	15 x 30 tent	6 portable toilets and handwash facilities.		
6	10 x 40	Rest area.		
6	20 x 40	Rest area.		
7 Bicycle Repair	20 x 42	Four 6-foot work benches, compressor, bike stand, lockable storage cabinets.		
8 Gymnastics Training	8900 square feet	Existing gymnasium building. Gym with (2) 12 m x 12 m surfaces, carpet and 1 wood surface. For rhythmic gymnastics: piano, tape desk, 2 treatment tables.		
8	7800 square feet	Gym with 2 carpets for floor exercise, one each for men and women; tape deck, piano, treatment table.		
8	14 x 108	Vault runway and apparatus.		
8	24 x 108	Vault runway and apparatus, 2 balance beams, uneven bars.		
8	42 x 70	Men's gymnastics training area with parallel bars, horse, rings, high bar, 8 chairs.		
8	25 x 28	Sports medicine facility with 6 treatment tables.		
8	11 x 28	Sports medicine staff office.		
8	16 x 24	Training site director's office.		
8 Massage/Therapy	(2) 14 x 22	Separate room for men and women; each with 3 treatment tables, adjoining changing and shower room.		
8 Meeting Room	24 x 36	Team meeting room with seating for 77.		
Recreation Equipment		Equipment for check out: 16 cabinets, 16 hand pumps, 6 table tennis sets, 200 decks playing cards, 30 footballs, and 60 each of the following: jump ropes, checker sets, chess sets, scrabble sets, backgammon sets, frisbees, soccer balls, hula hoops, monopoly sets, kahala sets, domino sets.		
8 Rest Area	4910 square feet	3 separate rooms of various sizes with a total of 78 cots for approximately 100 athletes.		
8 Sauna	(6) 50 square feet	(4) units in men's locker room, (2) in women's locker facility.		
8 Swimming Pool	8800 square feet	Indoor 50-yard pool with 8 lanes, for recreation.		
8 Training Site Administration	16 x 44	Training site allocation and administration counter with 11 work stations, 6 computer terminals. For information and sign-up for all Olympic training facilities.		
9 Weight Training	30 x 38 and 74 x 80	Existing facility with universal and Nautilus equipment.		
10 Wrestling Training Facility	120 x 145	8 (10-meter) training mats placed outdoors in tented areas.		
10	11 x 11 tent	Athlete entry and check-in.		
10	10 x 10 tent	Reception and waiting area for 4.		
10	10 x 20 tent	Massage area with 2 treatment tables.		
10	10 x 10 tent	Storage facility.		
Entertainment				
11 Cinema		Existing facility for 341.		
12 Coffee House		Existing facility for 338.		
12	24x48	Open seating for 300, 72 tables, self-service area, 7 x 16 stage, band equipment, lighting system.		
12		Refreshment area and kitchen.		
13 Disco	3500 square feet	Existing soundstage.		
13	1775 square feet	Indoor seating for 100.		
13		Outdoor seating for 100.		
13	1625 square feet	Dance floor.		
13	10 x 30 tent	Refreshments.		
14 Showcase		Existing facility for 670.		
Food Service				
15 Athlete Service	(2) 81 x 150	King Hall dining room with 963 seats, (76 outside), serving stations, kitchen facility.		
15	(2) 64 x 142 and 30 x 85	EVK Residence Hall dining room with 752 seats (236 outside) with serving stations and kitchen facility.		
15	50 x 136 and 36 x 70	Trojan Residence Hall dining room with 476 seats (190 outside) and serving and kitchen facilities.		
16	(19) 20 x 20 tents	Lot P, temporary feeding facility established in the village in a parking lot. Seating for 1,016. 24-hour service facility.		
16	10 x 80 tent and (2) 20 x 30 tents	Lot P, serving and preparation facilities.		
17 Food Preparation	163 x 240	Shrine Auditorium modified for use as a food preparation area including: 26 x 124 temporary kitchen and product staging area, 88 x 150 dry goods and frozen storage.		
17	30 x 62	Existing kitchen facility in Convention Hall.		
17	(2) 126 x 40	Locker room for food service staff; 570 individual storage lockers in each, 350 for men and women.		
17 Food Services Office	18 x 28	Office for 10.		
17 Guest Food Service		1000 guests per day in village in team dining facilities.		
18 Staff Food Service	(3) 8 x 20 trailers	Refrigerated box lunch storage. 1800 meals served per shift (3 shifts per day).		
18	20 x 20 tent	Distribution area.		
18	(8) 20 x 20 tents	Staff eating area for 300, also athlete "overflow feeding area." Lot P.		
18	34 x 52	Staff eating area for 112, 32nd Street.		
18	26 x 26	Staff eating area for 48, 32nd Street.		
18	64 x 108	Staff eating area for 402, Lot C.		
18	62 x 90	Staff eating area for 256, Century.		

Main Street			46	1200 square feet	2 NOCs received: 1 private office, 2 secretary/support stations. 7 staff work stations, conference room for 16.	60 Laboratory	16 x 24	Complete testing facilities.
19 Bank	24 x 30	5 service window positions, work stations for 4.	46	1500 square feet	6 NOCs received: 2 private offices, 3 secretary/support stations. 10 staff work stations, conference area for 20.	60 Medical Records	12 x 14	Records storage.
20 Calling Center	(2) 16 x 30	Existing classrooms; 22 calling stations private.	NOC Services			60 Nurses Station	10 x 10	Observation and waiting area.
21 Convenience Store	(2) 25 x 30	Assorted products displayed on 32 tables.	47		Conference rooms were available to all NOCs on a sign up basis.	60 Pharmacy	12 x 24	Work area and dispensary.
22 Dry Cleaning/Tailor Service	15 x 16	4 racks, 1 desk, receiving point only-cleaning done off-site.	47 NOC Conference Rooms	(3) 13 x 16	14 seats.	60 Primary Care/Trauma	(2) 7 x 16	Examination and treatment area.
23 Flower Shop	16 x 20		47	(3) 16 x 32	20 seats.	60 Radiological Services	16 x 42	Dark room, X-ray room, viewing room.
24 Hair Salon	20 x 25	9 chairs and stylists	47	(4) 14 x 20	16 seats.	60 Reception	17 x 20	Waiting area for 20.
25 Information Kiosk	10 x 20 tent	2 chairs per kiosk.	47	48 x 64	NOC briefing room, 352 seats.	60 Staff Lounge	14 x 20	Lounge for 16.
26 Music Listening Room/Library	16 x 20	6 listening stations. Check-out for 1,000 paperbacks, 30 cassette decks, 200 cassettes, 120 magazines and newspapers.	47	34 x 46	NOC briefing room, 143 seats.	60 Staff Office	12 x 14	Office for chief medical officer.
27 National Park Display	8 x 16		47	10 x 16	10 seats.	60 Storage	(3) 8 x 14	
28 Post Office	14 x 32 trailer	Sales and service point for U.S. Postal Service.	47	10 x 24	24 seats.	60 Triage	15 x 16	Emergency patient evaluation, 2 cubicles.
29 Refreshment Tent	24 x 40	4 beverage dispensers. snacks.	47	32 x 36	100 seats.	61 Physical Therapy	38 x 74	6 hydrotherapy pools, 2 massage tables, 12 treatment tables, 8 taping tables. sauna.
30 Sports Results	10 x 20 tent	Counter with 4 terminals, 2 printers, tables, chairs.	47		148 theatre style. 200 theatre style. 50 theatre style.	Press Operations		
31 Technology Training Area	16 x 20	8 training positions and equipment.	48 Customs Broker	9 x 14	Work area for 2.	62 Press Conference Center "International Zone"	(4) 10 x 10 tents	Tables and shade structures for 200.
32 Travel Shop	20 x 25		49 Equipment Storage	(246) 9 x 20	Lockable storage bins, 1 or more assigned to each NOC depending on team size.	62 Press Interview Room	10 x 20 tent	Chairs for 12 at athletics training facility.
33 TV Lounge	16 x 16	Lounge chairs for 16, large screen television.	49	15536 square feet	NOC storage in Century Residential Complex.	62 Rest Area	10 x 40 tent	Lounge for 40, beverage service.
34 Video Arcade	(2) 20 x 25	25 video games.	50 General Assistance	9 x 17	6 clerks, lost and found area, telex and telecopy center.	62 Staff Offices	10 x 20 tent	Office for 3 at athletics training facility.
35 Video Viewing	16x34	12 viewing machines, work area for 1 staff.	51 Lounge	26 x 36	Work table for 14. kitchen, 3 desks.	63 TV Interview "International Zone" Security	20 x 20 tent	Seating for 15, elevated platform for 2.
Material Supply			51 Messenger Service		7 messengers.	64 Briefing Room	28 x 30	Table space and chairs for 60.
36 Administration	18 x 41	Staff office for 12.	52 NOC Transportation	10 x 10	Office for 1 transportation manager.	64 Conference Room	14 x 30	Meeting room for 22.
36 General Supplies	400 square feet	In parking structure C.	53 NOC Service Counter	12 x 46	Services ordering and reservation counter for 8 staff. Includes space for 200 individual NOC mail boxes.	64 LAOOC Staff Offices	9 x 12	Office for 2 supervisors
36 Office Supply Storage	8 x 20	Office for 2.	54 NOC Services Coordinator	8 x 8	Office for 2.	64	13 x 14	Office for 4 coordinators.
Mayor's Office			55 Office Manager	8 x 10	Office for 1, adjacent work area for secretary/support.	64	14 x 20	Office for 5.
37 Bureau Manager	(2) 8 x 9	Office for 1 each	56	24 x 26	Work space with table and chairs for 12 staff.	64	13 x 14	Office for 3 managers.
37	20 x 34	Lounge for 20.	57 Photocopying	(2) 32 x 32	Separate air conditioned areas with 10 copiers, work area, paper storage.	64	8 x 82	10 work stations for secretary/support.
38 Conference Room	12 x 14	Meeting room for 6	58 Translation Services	(6) 10 x 10	Rooms for ordering and providing translation services.	64	4 x 12	Radio base station.
39 Envoys and Aides	30 x 40	Chairs and table space for 42.	59 Typing	22x44	Work processing center, printers, personal computers. 15 work stations, copy center, waiting area for 6.	65 Los Angeles Police Office	(4) 30 x 30	Briefing room for approximately 30; 3 staff offices.
40 Envoy Manager Hospitality	(2) 10 x 15 200 square feet	Office for each. Refrigerator. tables, chairs.	Polyclinic & Medical Services			66 Reception Room	10x16	Waiting area for 4, reception desk for 1.
41 IOC Office	12 x 22	Semi-private office for 2 plus 5 guests.	60 Conference Room	16x28	Conference room for 26.	67 Rest Area	10 x 40 tent	Lounge for 40, beverage service.
42 Mayor	13 x 14	Desk, chair, television, 4 guest chairs.	60 Consultation/Examination	(7) 10 x 14	Existing examination rooms with chairs, table light.	Technology		
43 Protocol Officer	(2) 10 x 10	Office for 1, each with 2 guest chairs.	60 Dental	(2) 12x14	2 examination areas.	68 Message Center	600 square feet	Radio base station, paging base. 9 (6-foot) tables, 9 chairs, file cabinet, 6-foot message board, pigeonhole set.
44 Reception Area	12 x 18	Lounge chairs and table for 10, 1 secretary/support.	60 Doping Control/Gender Verification	14x16	Toilets and handwash facilities.	68 Paper and Copier Spares	(2) 10 x 45 trailers	
45 VIP Hosting	32 x 47	Existing lounge, tables and lounge chairs for 30.	60 Eye Care	6 x 14	Examination area, hand-wash facilities.	68 Radio Repair, Spares, Storage	12 x 18	Test equipment, 4 (6-foot) tables.
NOC Offices			60 Conference Room	16x28	Conference room for 26.	68 Radio Systems	18 x 36	13 repeater radios, 1 antenna mast, emergency back-up battery, 2 transmitters.
46		All NOCs received an office based upon team size. Each office was provided 1 television, 1 typewriter, 1 safe. Each NOC was also provided a pager.	60 Consultation/Examination	(7) 10 x 14	Existing examination rooms with chairs, table light.	68 Sponsors Work Area	38 x 42	Table space for 36 sponsor/vendors.
46	500 square feet	20 NOCs received: 1 secretarial/support work station, 2 staff work stations, conference room for 8.	60 Dental	(2) 12x14	2 examination areas.	68 Staff Offices	20 x 12	Work space for 8.
46	700 square feet	13 NOCs received: 1 private office, 1 secretary/support work station, 2 staff work stations, conference room for 4.	60 Doping Control/Gender Verification	14x16	Toilets and handwash facilities.	68 Telecommunications	20 x 22	Village switchboard facility; work area for 14 operators.
46	900 square feet	7 NOCs received: 1 private office, 2 secretary/support stations, 4 staff work stations, conference room for 12.	60 Eye Care	6 x 14	Examination area, hand-wash facilities.	68	20 x 22	Audio distribution office; work area for 12.
						68 Training Equipment Area	20 x 20	4 terminals and printers, IBM personal computer.

Architecture and Construction

Transportation			Village Administration			Village Entry Points					
69	Athlete Bus System	52 x 200	Athlete system bus dispatch, 42 bus and 18 x 125 loading/unloading bays; destinations include: airport, venues, training sites.	75	Administration	12 x 16	Private office for 1, 3 guests.	84	Athlete Bus Entry	32 x 118	East and west side bus entry route to village perimeter, exit on existing and newly fenced street. Holding area for 21 escort vehicles and escort vehicle turning circle.
70	Athlete Waiting Area	(10)10 x 10 tents	Waiting area for 60, restrooms, beverage service. 8 x 26 x 40 reader board with bus system schedules and route numbers.	76		22 x 28	Reception and waiting area for 4, 2 secretary/support stations, 2 staff work stations.			10 x 20 tent	Security gate house, at village fence perimeter.
71	Coliseum Shuttle	28 x 110	Shuttle for athletes to athletics and boxing site; 5 bus loading/unloading docks.	77	Construction	14 x 20	Conference room for 16. Office, 3 desks, 3 chairs.				East side bus entry/exit to village perimeter on existing and newly fenced street. Holding area for 23 escort vehicles and escort turning circle.
		28 x 48	Shuttle waiting area, shaded: tables and chairs for 90. beverage service. Magnetometer at entry/exit to shuttle boarding.			400 square feet	Conference area, 2 6-foot tables, 6 chairs.				Security gate house, at village fence perimeter.
72	Olympic Family Drivers Rest Area	(2) 30 x 30 tents	Water cooler, television, 250 chairs.	78	Coordinators' Office	26 x 30	Office area for 11, each with desk and 2 chairs.				
73	Tower-Athlete System	24 x 32	40-foot high platform for bus system dispatch and control. Work area for 12.	79	Directors' Office	28 x 64	Office for 17. each with desk and 2 chairs.				
74	Transportation Management	24 x 36	Work area for 8, television.	80	Finance	28 x 31	Office for 10.				
	Vehicle Call-Up Desk	10 x 10 tent	1 table, 2 chairs.	81	Personnel	28 x 31	5 staff, 10 chairs. Responsible for timekeeping, staff check-in.				
				82	Public Relations	14 x 20	Office for 2.				
				83	Staff Work Center	20 x 30	Chairs and table space for 10.				
				83	Uniform Distribution	12 x 15	Copy Center				
						26 x 38	8 (6-foot) storage lockers, tables.				
85	Deliveries	(13) 12 x 20 spaces	Food Service vehicle pick-up and delivery loading zone.	85				85			
		20 x 38	Receiving station.								
		12 x 12	Office for service entry manager.								
		12 x 12	Office for service entry security.								
	Internal Entry	(6) 10 x 10 tents	Check point at entry/exit to each athlete housing unit.								
86	Main Entry	(6) 12 x 12 tents	Guest reception area. Each tent with 2 tables, 2 chairs, telephone. Adjacent waiting area for 40.								
86		12 x 12 tent	Residents entry/exit. desk, chair, magnetometer.								
86		20 x 100	Guest credentialing area; 260 individual storage units for guest identity cards. Counter, work area for 14 staff.								
86		12 x 12	Main entry security office for 2.								
86		12 x 12	Main entry coordinators office for 1.								
86		10 x 10 tent	Escort check-in area.								
86		10 x 10 tent	Cashier for purchasing meal tickets.								
86		18 x 48	Shaded waiting area for 15 escorts.								
86		12 x 32	Waiting area for 30 guests.								
87	Press Entry	10 x 20 tent	Entry and press credentialing; work area for 3, magnetometer.								
		10 x 20 tent	Exit and badge return.								
		10 x 16	Waiting area for 30.								
88	Service Vehicle Entry-MC/lin-tock	60 x 280	Fenced area, sweep and inspection area for 3 vehicles, 70-foot turning circle.								
		10 x 20	Staff work area for 4.								
88	Service Vehicle Entry-Hoover	60 x 280	Fenced area, sweep and inspection area for 3 vehicles, 70-foot turning circle 40-foot unloading area.								
89	Staff Entry	16 x 50	Staff queuing area.								
89		30 x 60 tent	6 desks for preliminary identification check, 6 desks for credentialing, badge storage rack, holding area for 8, time clock and time card rack.								
89		20 x 20 tent	Village entry/exit point, 2 magnetometers, 2 staff, security.								

7.03.21

Village: UCLA

The athlete village at UCLA had a different ambience than the one at USC. The campus of the University of Southern California is compact and urban in character, whereas UCLA's is more park-like. Unlike the residential facilities used to house athletes at USC, the residential facilities in the UCLA Village were segregated from the rest of the campus. The UCLA Village design was simplistic in that a single fence system enclosed the housing sector and isolated it from the rest of the campus. The athletic training facilities at Drake Stadium, on the intramural field and at Wooden Center were also enclosed in the 65-acre village. A total of 4,400 athletes and officials were housed at UCLA. The four dining hall facilities had the combined capacity to serve 2,000 athletes simultaneously. There was a total of 33,000 linear feet of fencing surrounding the UCLA Village.

The construction task at UCLA was difficult, however, since the LAOOC construction crews gained access to the campus grounds only seven days prior to the opening of the village. Construction crews worked under the severe time constraint to complete all work within seven days. Early access was granted for infrastructure work such as the installation of power, telephone and technology cables.

The village was extended to include the James West Alumni Center which commanded a prominent position at the end of Westwood Boulevard. The West Center was architecturally suited and ideally located to serve as the entry to the village. Use of the West Center was not included in the original agreement with UCLA, but was added later. The West Center was decorated with ceremonial arches and Look scaffolding which were illuminated at night.

The UCLA campus was not as well equipped to handle the human needs of the athletes as was USC. The LAOOC developed an all-in-one solution by creating the "Main Street" concept, which consisted of a disco, coffee shop, barber shop, convenience store, video arcade, a park ranger station and telephone center along the 40-foot-wide concourse at the top of Drake Stadium. The concourse was suitable for pedestrians, with a concrete wall and restrooms on one side and stadium seats cascading down the other side. Scaffolding was extended over several rows of seats, creating a platform for the installation of tents. The necessary utilities, water and power, were available on the concourse and distributed through electrical wiring and pipes under the scaffold platform. Main Street became one of the most visible locations in the UCLA village and served as the focal point of social activities.

Additional entertainment facilities included a concert facility and four major concerts were held at UCLA (and at USC) during the course of the Games. An existing outdoor amphitheater was utilized for stage entertainment and also as an outdoor movie viewing area. The Sunset Canyon Recreation Center became a popular place for athletes to sun bathe.

64

A bus depot was located on the intramural field. The 25-stop depot was constructed south of Circle Drive East. Bus traffic was directed from a 35-foot-high scaffold tower constructed there. A decorative scaffold structure was erected adjacent to the transportation tower, providing shade for athletes waiting for buses. After the Games, the three lanes of asphalt that had been laid to create the bus loading area were removed and the area was re-sodded.

Athletic training facilities were constructed at UCLA. The LAOOC resurfaced the Drake Stadium track with Rekortan and temporary training facilities, including a javelin throw runway and discus ring, were placed on the intramural field. The existing swimming pool and weight training room were utilized. Four wrestling platforms were constructed on raised scaffolding. Temporary group sauna facilities were also constructed.

Scaffolding was used to construct a bridge between Wooden Center, the training and warm-up facilities used by gymnasts, and Pauley Pavilion, the venue used for gymnastics competition. The bridge linked Wooden Center, located within the security fencing of the village, and Pauley Pavilion which was directly adjacent to, but not part of, the athletes village. A bridge was constructed over the 8-foot grade change that existed between the two buildings. The scaffold bridge was covered with white sheer fabric to shield the athletes from view and was decorated with the Olympic rings and additional colored fabrics. The bridge became a ceremonial archway to pedestrians entering the UCLA Village. It led to the intramural field and the three concentric curve formation of the flags of the nations.

A perimeter security fence was constructed around the dormitories, isolating the village from the rest of the campus. As the village was totally contained within the confines of the university, the necessary permits and approvals were easily obtained. The athletic facilities at Drake Stadium, the intramural field and the new Wooden Center were also enclosed with fencing.

Existing residence halls and food facilities were adequate to service the needs of the village residents. The residential facilities were segregated from the rest of the university in the northwest section of the UCLA campus. The university improved the existing walkway by adding pavement and landscaping which greatly increased the accessibility of the campus from the residence halls.

64 Visitors to the UCLA Village were greeted with giant scaffold structures which served as decorative entryways to the village administrative headquarters.

Athletes were housed in four high rise buildings and two apartment complexes. NOC office space was located in the residence halls and in temporary office trailers. Accommodations within the high rise buildings consisted of rooms housing two or three athletes with bathrooms located on either end of each floor. The low rise apartments were designed to hold eight athletes each, with a separate toilet facility and living room for each apartment. Air-conditioning was not supplemented.

Take-down procedures after the Games were as critical as the pre-Games construction efforts. Construction crews worked under a rigid schedule to disassemble the village and repair the UCLA campus for the start of university classes. The intramural field and other athletic facilities were made ready for the start of collegiate athlete training and practice sessions within days following the close of the village on 15 August.

65

65 The coffeehouse and discotheque at the UCLA Village is supported entirely by scaffolding placed over the seating area of the university's Drake Track and Field Stadium.

UCLA Village

Introduction The UCLA Olympic Village was created on 60 acres of the campus of the University of California, Los Angeles. More than 3,600 athletes and officials from 61 NOCs were housed in permanent student residential facilities. Existing training and athletic facilities, administrative areas and others were adapted and temporary facilities installed to create comfortable living, recreation and administration areas.

Department/Function	Space Use (in feet unless noted)	Notes
---------------------	----------------------------------	-------

Accommodations

Olympic team accommodations at UCLA were provided in existing student housing structures called residence halls and residential suites.

Assignment of rooms met the requirements set by California State Law of providing a minimum of 90 square feet per person and no more than 10 persons in a unit per 1 shower and 1 toilet facility.

There were four high rise residential halls. The typical Residence Hall had:

Bedroom with 1, 2 or 3 beds, (if 2 beds, bunk style), B-foot table, 2 chairs, lamp, fan, dresser. Communal shower and toilet facilities shared with all units on the floor level.

All residential halls had a main lobby recreation or lounge room with 80 chairs, television, pool table, table tennis and video games. An additional lounge approximately 20 x 28 was on each housing floor. Televisions in all lounges.

Also in the lobby area were library/music listening room for 12; protocol staff office for 3; building management offices; key rack and reception desk.

Athletes typically were housed 2 to a bedroom; NOC chefs de mission and team doctors received their own room or shared with each other.

There were two residential suite complexes. The typical residential suite had:

2 bedroom units with 2 or 3 beds per room, desk, chair, dresser.

Living room/dining room with couch, chairs, dining table with 2 chairs.

Bathroom with 2 sinks, toilet, bathtub/shower.

At UCLA there were the following rooms: 30 single rooms for NOC chefs; 20 double rooms for NOC chef and team doctor; 1,126 double rooms for 2 athletes and 20 triple rooms for 3 athletes. A total of 2,362 beds were available in the residence halls.

The residential suites provided the following: (162) 2-bedroom suites for 8 athletes and (11) 2-bedroom suites for team doctors and NOC chefs. A total of 1,318 beds were provided in the suites. A total of 3,690 beds existed in the UCLA Village.

Athlete Services

3 Armory	16 x 31	6-foot work bench, 3 vices, 3 work lights, 2 grinders, B-foot storage cabinet.
----------	---------	--

4 Athletics Training Site		Existing 400 m track with all infield facilities and equipment. Separate throwing practice area.
---------------------------	--	--

5 Bicycle Repair	20 x 60	8 (6-foot) work benches and light, 12 lockable tool storage cabinets, B chairs, 4 vices, air compressor, 4 bike stands, cleaning tank and solution.
------------------	---------	---

5 Bicycle Storage	(5) 12 x 26	Individual NOC storage areas for 294 bicycles.
-------------------	-------------	--

5	(14) 12 x 12	
5	(10) 8 x 12	

6 Gymnastics Training	(5) 400 square feet	10 individual rooms assigned by team for changing and meeting; 5 men's, 5 women's with bench seating for 6 and full length mirrors. Adjacent toilet and shower area.
-----------------------	---------------------	--

6	20 x 35	Rest area for 100, television, beverage service. Staging area prior to call to begin competition. Wired to public announcement system in Pauley Pavilion.
---	---------	---

6	92 x 117 100 x 198 64 x 114	3 gymnasiums subdivided to establish 8 separate training areas with a total of 4 complete sets of apparatus for men and 4 for women; including 1 area for men and 1 area for women for pre-competition warm up. All areas converted for rhythmic gymnastics at the conclusion of the artistic competition. Desk for training coordinator located at entry to Wooden Center.
---	-----------------------------------	---

6	14 x 24	Gymnastics sports medicine station.
---	---------	-------------------------------------

7 Massage/Sauna	30 x 60 tent	Temporary structure with 10 x 30 dressing areas for men and for women; 5 private 10 x 10 massage rooms, work table; office for 1 coordinator.
-----------------	--------------	---

7	(3) 11 x 12	Saunas for 8-10 each.
---	-------------	-----------------------

8 Music Listening Room/Library	(4) 20 x 20	6 listening stations. Check-out for 1,000 paperbacks, 30 cassette desks, 200 cassettes, magazines, newspapers. Tables and chairs for 12.
--------------------------------	-------------	--

9 Religious Services Center	44 x 50	Meeting area for 100.
-----------------------------	---------	-----------------------

9	12 x 16	Office for director.
---	---------	----------------------

9	(2) 8 x 12	Counseling offices for 3 each.
---	------------	--------------------------------

10 Sports Information	(8) 12 x 16	Offices for 6 each.
-----------------------	-------------	---------------------

11 Swimming Training		Existing 50 m pool with 8 lanes.
----------------------	--	----------------------------------

12 Tennis Office	10 x 10 tent	Tennis training sign up.
------------------	--------------	--------------------------

12 Tennis Training		9 ITF regulation courts.
--------------------	--	--------------------------

13 Training Site Scheduling Office	12 x 16 and 20x30	Office for 4 and 4 computer terminals.
------------------------------------	-------------------	--

14 Video Tape Viewing	(12) 10 x 16	Room with 4 VCRs and 8 chairs.
-----------------------	--------------	--------------------------------

15 Weight Room	80 x 80	Complete Nautilus equipment sets.
----------------	---------	-----------------------------------

16 Wrestling Training	(6) 40 x 40 tents	6 training mats each 10 m x 10m with curtain around each for privacy.
-----------------------	-------------------	---

16	10 x 10 tent	Storage area.
----	--------------	---------------

16	16 x 40	2 massage tables, 6 body weighing scales.
----	---------	---

Entertainment

17 Cinema		Outdoor facility with 40-foot screen; amphitheater seating for 1,200.
-----------	--	---

	32 x 80	Indoor cinema with seating for 240.
--	---------	-------------------------------------

18 Coffee House	30 x 45 tent	Fruit and juice beverage bar; tables and chairs for 60, on Main Street.
-----------------	--------------	---

18 Disco	42 x 64	Hardwood dance floor, Main Street.
----------	---------	------------------------------------

18	28 x 48	Snack bar, beverages, table and chairs for 120, Main Street.
----	---------	--

18	14 x 20	Stage in disco, Main Street.
----	---------	------------------------------

19 Main Stage	48 x 132	Outdoor concert stage.
---------------	----------	------------------------

19	12 x 12	Sound mixing tower 10 feet high.
----	---------	----------------------------------

Food Service

20 Athlete Food Service	132 x 136	Sproul Residence Hall dining room with 386 seats, kitchen facility and serving stations.
-------------------------	-----------	--

20	110 x 200	Rieber Residence Hall dining room for 506, kitchen facility and serving stations.
----	-----------	---

20	100 x 166	Hedrick Residence Hall dining room with 504 seats, kitchen facility and serving station.
----	-----------	--

20	66 x 110 and 74 x 160	Dykstra Residence Hall dining room for 480, kitchen facility and serving stations.
----	-----------------------	--

21 Staff Food Service	(3) 30 x 50 tents	Tables and chairs for 480 total.
-----------------------	-------------------	----------------------------------

21	30 x 30 tent	Dispensing area.
----	--------------	------------------

21	24 x 28 tent	8 temporary toilet facilities.
----	--------------	--------------------------------

21	(2) 10 x 44 trailers	Refrigerated food storage.
----	----------------------	----------------------------

Main Street

23 Bank	16 x 78	5 serving windows.
---------	---------	--------------------

24 Calling Center	16x90	Office area for 2; waiting area for 10; 30 calling stations.
-------------------	-------	--

25 Convenience Store	20 x 60 tent	Assorted products displayed on 20 shelves.
----------------------	--------------	--

26 Dry Cleaning/Laundry	20 x 20 tent	Receiving point only.
-------------------------	--------------	-----------------------

27 Flower Shop	20 x 20 tent	
----------------	--------------	--

28 Hair Salon	20 x 40 tent	9 operators and stylists.
---------------	--------------	---------------------------

29 Information Kiosk	20 x 20 tent	General information booth.
----------------------	--------------	----------------------------

30 National Park Display	20 x 20 tent	
--------------------------	--------------	--

31 Refreshment Tent	15 x 25	4 beverage dispensers, snacks.
---------------------	---------	--------------------------------

32 Travel Agency	20 x 20 tent	Travel services booth.
------------------	--------------	------------------------

33 Video Arcade	16 x 36	28 video game tables.
-----------------	---------	-----------------------

Material Supply

34 Storage	60 x 70	Lot 11. Trailer compound for food service, material supply and dry goods storage. 22 trailers. 1 administration trailer.
------------	---------	--

Mayor's Office

35 Envoys	18 x 32	Office for 5.
-----------	---------	---------------

36 Mayor	10 x 16	Office for 1, 5 guests. Adjacent waiting area for 6.
----------	---------	--

36	8 x 12	Secretary/support.
----	--------	--------------------

37	18 x 30	Outdoor shaded hosting area for mayor with portable bar, snack service.
----	---------	---

38	36 x 40	Meeting room and lounge for 50 for mayor and staff.
----	---------	---

39 Protocol Manager	10 x 12	Office for 1.
---------------------	---------	---------------

40 Welcoming Ceremony	15 x 36	Stage for welcoming ceremony. Platform for athletes, sound equipment, flag poles, lighting. Adjacent 10 x 10 tents for beverages, general information.
-----------------------	---------	--

NOC Offices

All NOCs received an office or trailer based upon team size. Each office was provided with 1 television, 1 typewriter, 1 safe. Each NOC was also provided a pager.

41	(16) 12 x 28 trailers	16 NOCs received: 1 secretarial/support work station, 2 staff work stations, 1 private office, waiting area for 7.
----	-----------------------	--

41	(8) 10 x 44 trailers	8 NOCs received: 1 private office, 2 secretary/support work stations, 4 staff work stations, waiting area for 10.
----	----------------------	---

41	(4) 10 x 44 trailers	4 NOCs received: 1 private office, 2 secretarial/support work stations, waiting area for 13, 6 staff work stations.
----	----------------------	---

41	(2) 12 x 56 trailer	2 NOCs received: 2 private offices, 3 secretary/support work stations, 10 staff workstations, waiting area for 15.
----	---------------------	--

41	(2) 56 x 112	2 NOCs received: 21 private offices, 2 secretary trailers support work stations, 13 staff work stations, working area for 32.
----	--------------	---

7.03.22 Village: UC Santa Barbara

The 20-acre Olympic village at the University of California, Santa Barbara (UCSB) was used to house more than BOO rowing and canoeing/kayaking athletes, coaches and others who competed and assisted in the competitions held thirty miles away at Lake Casitas. Although the village was frequently referred to as satellite housing, UCSB was a complete village in terms of services provided.

By contract, the LAOOC did not have exclusive access until 9 July 1984, but early access was negotiated so construction could begin during the spring. On 20 March 1984, installation of fences and trailers and the repaving of parking lot 2 north began. Full construction began on 11 June, at the beginning of summer break. Internal fences and an eight-foot high double chain link fence from eight-feet to 20-foot apart, was installed around the village.

Acceptance of construction plans required approvals from the various university entities: fire marshals, environmental health and safety, facilities management and the campus police department. The agreement between UCSB and LAOOC obligated the LAOOC to obtain university approval on all construction documents. In turn, it was the university's responsibility to obtain all other approvals it deemed necessary.

The village had three main entrances: the bus entry, the pedestrian entry and the staff and service entry. There was also a controlled gate located at the south end of Lagoon Road for University employees who required access to the marine biology laboratory. They were shuttled through the village to the laboratory via Lagoon Road in a bus provided by the LAOOC.

A security tent was located at the bus entry gate to limit access to athlete buses only. Lot 12 was used for bus staging, transportation operations and parking for guests and the Olympic Family. The pedestrian gate served the athletes, their guests and press when traveling by foot. A tent structure separated the guests and press entrance from the athlete entrance. The third main gate, the staff and service entry, was located in the southwest corner of the village in parking lot 5. In addition, the lot was used to store trash containers, and housed staff dining areas and restrooms.

A typical athlete room was 12-feet by 14-feet and contained two single beds, two dressers or desks, two bookshelves, two chairs, two closets and two mirrors.

Residence halls also contained "triple" rooms used for team meetings and a lounge for recreation and videotape viewing. In all residence halls, existing furniture was utilized with the exception of a few extra long beds provided by the LAOOC. Santa Rosa Hall had eight single rooms, 200 double rooms and two triple rooms. Anacapa and Santa Cruz Halls had 12 single rooms and 204 double rooms each.

University House was used by the LAOOC for an administrative office and VIP hosting. Centennial House was used as an ecumenical center.

In addition to the permanent structures, tents were used for the main entry, staff entry, main street, cinema, disco/coffeehouse, sauna/massage/weightroom, staff dining, press interview, NOC service center, technology equipment, technology offices and supplemental space for the polyclinic functions. Trailers were used for NOC offices, the NOC service center, technology offices and equipment storage, press sub-center and to supplement the University House offices.

68 Decorative elements at the UCSB Village include art work appropriate for competitors competing on the water at Lake Casitas.

Architecture and Construction

Main Street was comprised of eight large tents, 29 smaller tents and three trailers set on top of parking lot 2 south. Hundreds of reflector lights were removed from the street to level the surface, and portions of the street were covered with Astroturf. Main Street included a beverage kiosk, results and information kiosk, national parks display, video arcade, dry cleaners, flower shop, convenience store, newspaper office, Main Street staff offices and a 250-seat cinema, all housed in tents. First Interstate Bank provided its own trailer. The U.S. Postal Service also provided its own post office trailer and the LAOOC supplied a trailer for General Telephone's calling assistance center. Additional recreational facilities—basketball and volleyball courts—were located adjacent to Main Street. The courts were refurbished by the LAOOC. A disco and coffeehouse tent located on the southeastern corner of parking lot 6 offered music and dancing.

The polyclinic inside the village provided physical therapy and other health care. These facilities were set up in the tent-covered patio of Santa Cruz Hall. The five physical therapy tanks required a temporary connection to an existing soil line for drainage. Temporary toilets were also added. All other medical services were available in existing facilities located in the university's student health center outside village boundaries. Modifications required at the student health center included a new partition wall and chain link fence; supplemental medical equipment was provided and installed (except for a film illuminator and X-ray machine) by LAOOC supplier AMI. Three saunas, six massage tables, two showers and a small weightroom were installed south of Santa Cruz Hall.

The NOC service center was set up in a combination of tents and one trailer. Photocopying and telex services were placed in the air-conditioned trailer. All other services, such as the typing pool, language, transportation schedule, communications, billing clerks, NOC aides, sports and general information, training site coordinators and storage were located under a large tent structure.

NOC offices were set up in four trailers. One was utilized as general work space, one was divided into two meeting spaces and two were divided and used for individual offices. The group of trailers was secured by a single eight-foot chain link fence. Power was provided in the following manner:

- Main Street, the NOC service center and NOC offices were served from a temporary transformer placed on top of an existing vault, located at the west end of the basketball courts. A distribution box, located adjacent to the post office trailer was connected to the transformer.
- Olympic Avenue, the ceremonies area, and the main entry were served from a temporary transformer. A distribution box was located at the east end of the basketball courts.
- The staff entry and technology trailers were powered by the electrical equipment room in the west wing of the De La Guerra Dining Commons.
- The administration trailers next to the University House, the security trailer and the staff dining area were served from a temporary transformer and distribution box in the northwest corner of lot 5.
- Polyclinic, weightroom, massage room and temporary sauna facilities, adjacent to Santa Cruz Hall, were served from an existing transformer located in the electrical equipment room of Santa Cruz Hall.

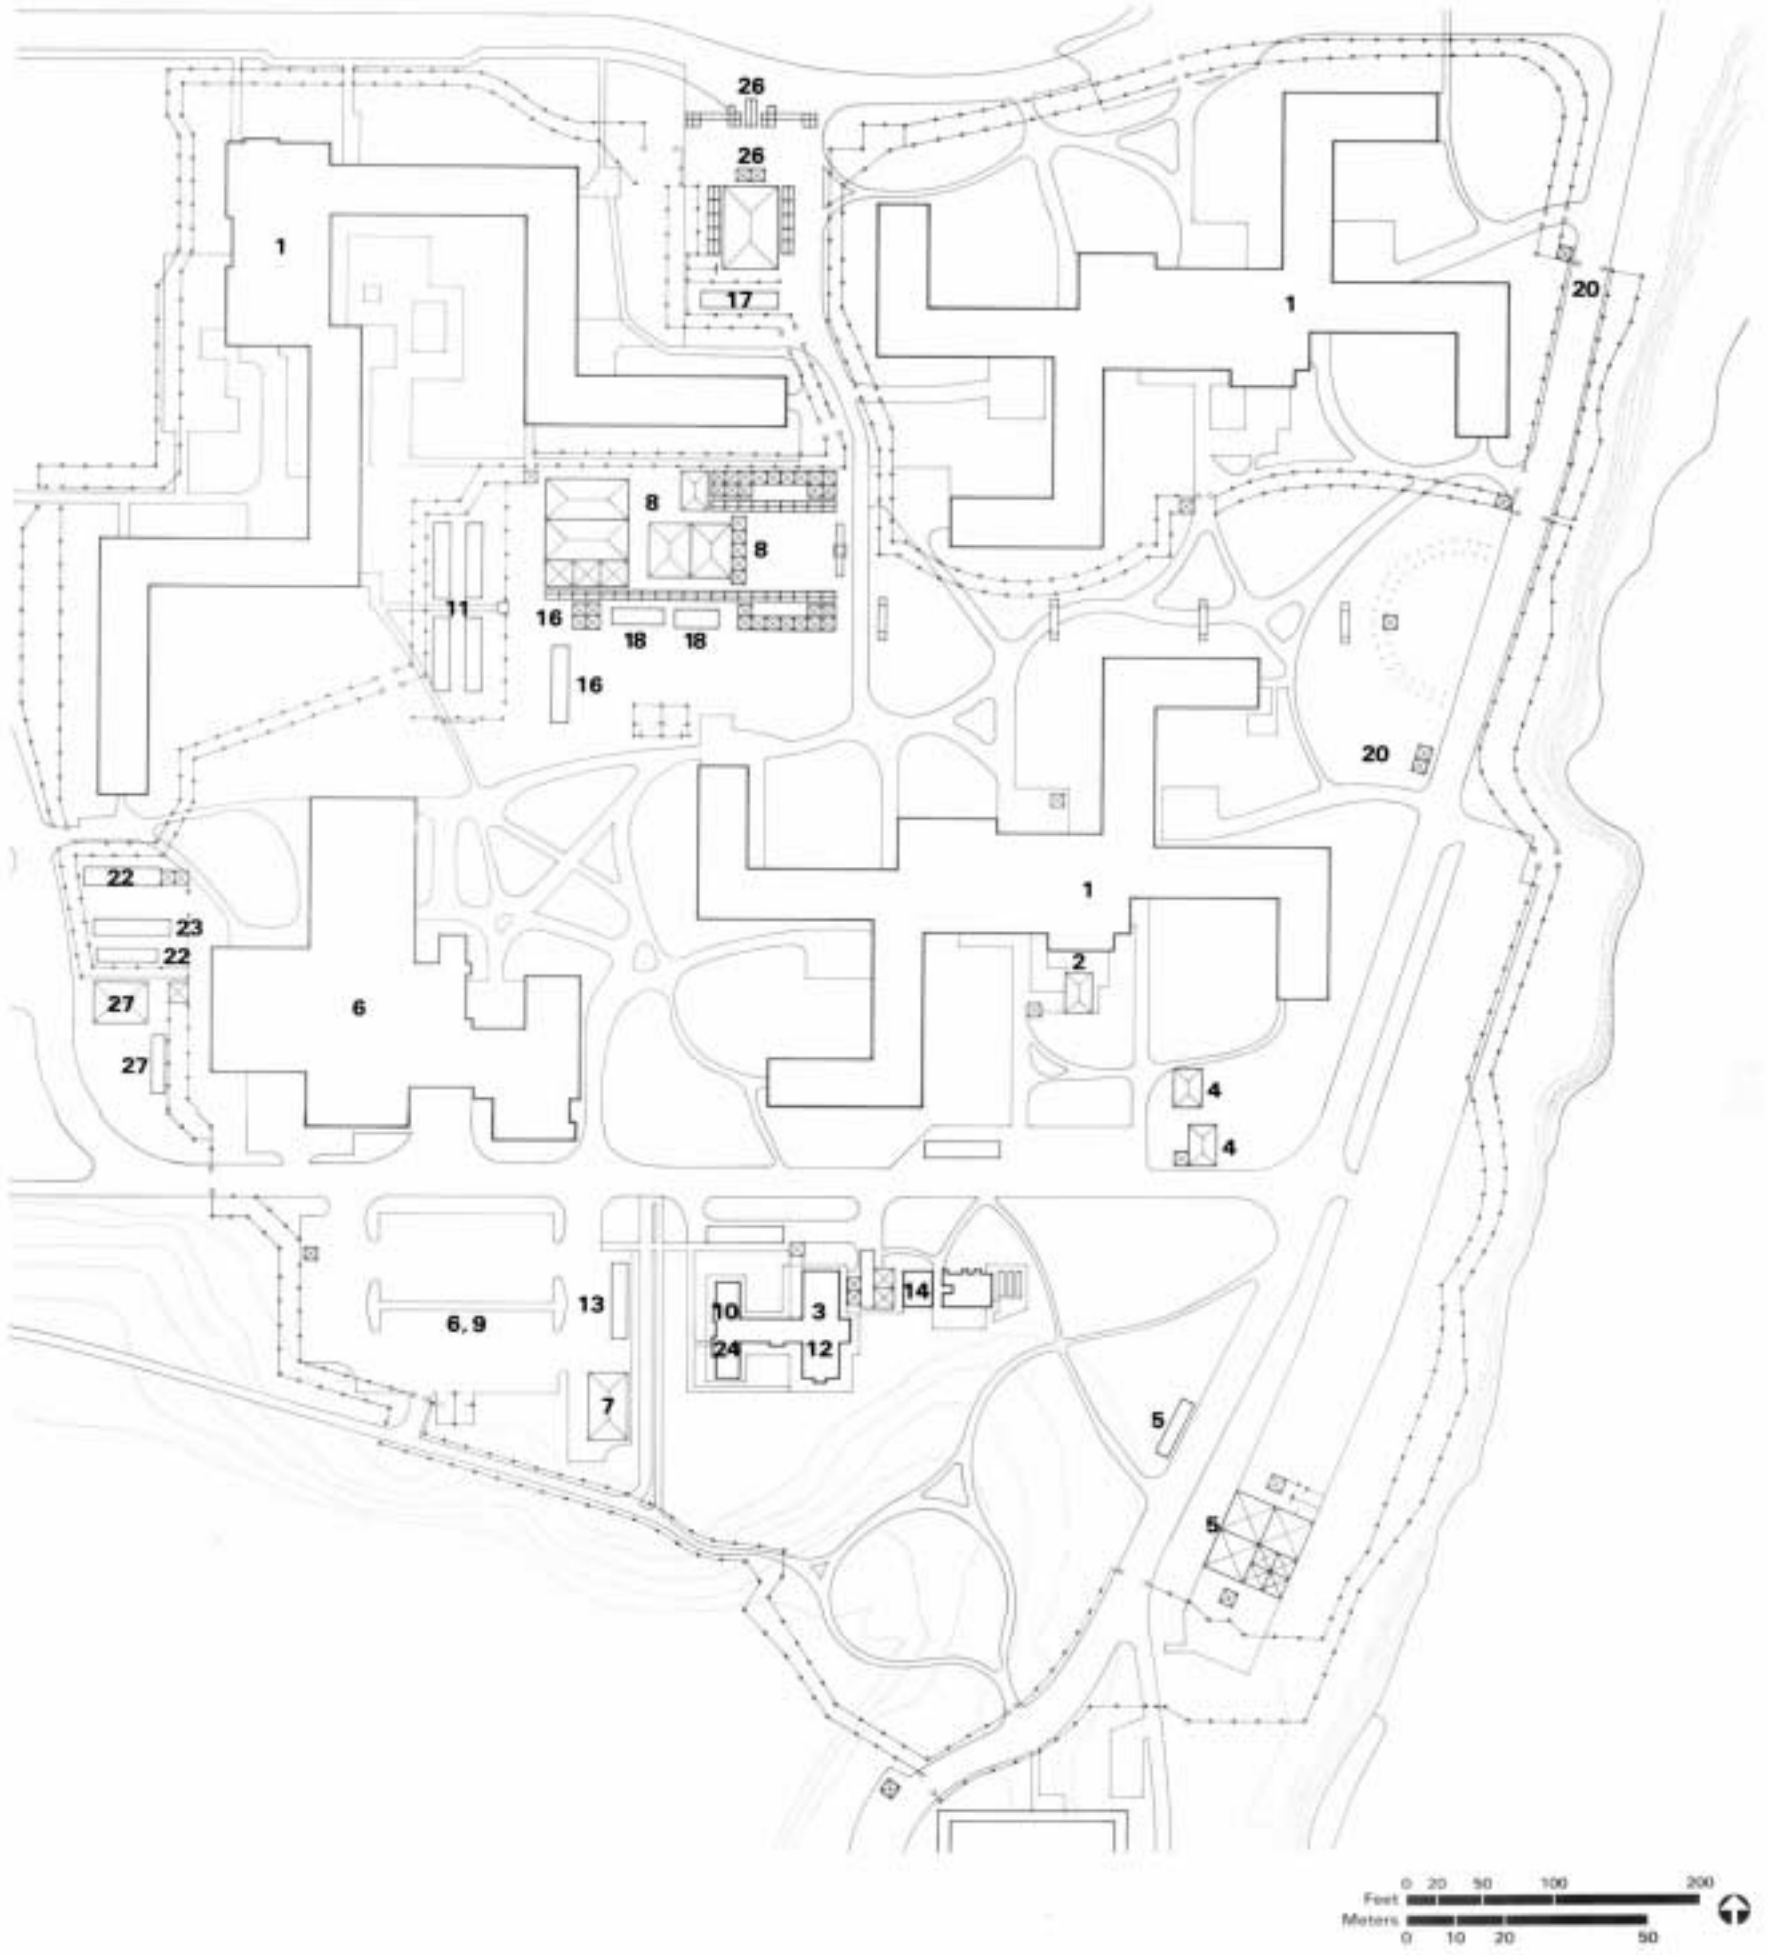

Athletes and team officials began arriving 14 July 1984. Village occupancy was at its peak on 5 August when the rowing competition ended. On 6 August, the two residence halls which housed rowing athletes, Santa Rosa and Anacapa, were returned to UCSB control and rowers were required to leave the village.

69

69 Competitors and officials at UCSB can relax in shaded areas like this coffeehouse during leisure time.

70 Both human services offices and objects d'art are part of the facilities installed by the L AIOC at the UCSB Village.

UCSB Village

Introduction The UCSB Olympic Village was created on 20 acres of the campus of the University of California, Santa Barbara. The village was developed primarily for athletes competing in rowing and canoeing and offered a shorter commuting time to the competition venue than the USC or UCLA villages. More than 850 athletes and officials were housed at UCSB in three residential halls. Food was prepared and served in one facility. Complete recreational facilities for athletes and administrative areas for staff and team officials were available. At the conclusion of their respective competitions, rowers and canoeists were able to return to either the USC or UCLA village to join their NOCs.

Department/ Function	Space use (in feet unless noted)	Notes
-------------------------	-------------------------------------	-------

Accommodations

Olympic team accommodations were provided in existing student housing structures called residence halls.

Assignment of rooms met the requirements set by California state law providing a minimum of 90 square feet per person and no more than 10 persons in a unit with 1 shower and 1 toilet facility.

There were three residence halls. The typical hall had:

12 x 15 Bedroom with 2 beds. 2 desks, 2 chairs, lamp, dresser. Communal shower and toilet facilities were shared with other units.

36 x 52 All halls had a main lobby recreation or lounge room with 20 chairs, television, pool table, table tennis and video games. An additional lounge approximately 20 x 22 was on each housing floor; televisions were in all lounges.

Athletes typically were housed two to a bedroom; NDC team leaders and team doctors received their own room or shared with each other.

There were 100 single rooms for team leaders or team doctors with 375 rooms for 2 athletes each. The total number of beds used at the UCSB Village was 856.

Athlete Services		
2 Massage	20 x 30 tent	6 massage tables, adjacent changing rooms for men and women.
Music Listening/ Library Recreation	15x16	Lounge for 5 stocked with periodicals and newspapers. Available for check-out: basketballs, volleyballs, soccer balls, tennis equipment, croquet sets, board games, jump ropes. Recreation facilities included volleyball, basketball and tennis courts; billiard and table tennis tables and game areas for football (soccer) and lawn games.
3 Religious Services Center	26x26	Services area for 20. Separate meditation area for 5.

4 Sauna/Weight Room	43 x 74	23 x 32 weight room with Universal weight machines and free weights. Towel issue and change rooms. 3 sauna rooms, each 8 x 10 and 6 private massage rooms.
Entertainment		
Amphitheater		Existing outdoor theatre with 25 x 40 stage, seating for 900.
5	10 x 45 trailer	Rest and changing area for performers.
5 Coffee House/ Disco	60 x 60 tent	Temporary structure for use as coffeehouse and disco; 300 square foot dance floor, 200 chairs, 20-foot platform for performers; stand up coffee bar for 12, food preparation and display area, coffee maker; portable toilets and handwash facilities.
Food Service		
6 Athlete Food Service		De La Guerra Commons dining and food preparation area. Seating for 382 in main dining hall; seating for 108 in annex and for 100 outdoors. 24-hour food service facility.
6	(4) 8 x 40 trailers	2 dry goods storage trailers, 1 refrigerated, 1 frozen storage.
7 Staff Food Services	30 x 50 tent	Staff lounge and adjacent eating area for 200.
Main Street		
8 Bank	10 x 40 trailer	7 serving windows.
8 Calling Center	12 x 60 trailer	Office area for 2; 14 international and national calling stations; waiting area for 8.
8 Cinema	40 x 60	240 seats. projection room.
8 Convenience Store	20 x 20 tent	Cash register, merchandise display area, clothing racks.
8 Information Kiosk	10 x 10 tent	General information for athletes.
8 National Park Display	250 square feet	
8 Post Office	14 x 32	Sales and service point for the U.S. Postal Service.
8 Refreshment Tent	10 x 10 tent	Sponsor product dispensing area.
8 Sports Information	20 x 20 tent	Sports and competition results center. Training site information.
8 Staff Office	10 x 20 tent	Work area for 3 main street staff.
8 Travel Agency	10 x 10	Office area for 30.
8 Video Arcade	20 x 20	15 video game tables.
Materiel Supply Administration		
9 Storage	(12) 8 x 40 trailers	Office for 1 (see Village Administration).
Mayor's Office		
10 Hosting	40 x 44	Hosting area for 50.
10 Mayor	16 x 18	Office for 1.
10 Protocol Manager	10 x 10	Office for 1.
NOC Offices		
11 Conference Rooms	12 x 60 trailer	2 separate meeting rooms with tables and chairs for 26 each.
11 Private Offices	(2) 12 x 60 trailers	Provided for 8 private offices. Each office had a television, chair and 2 side chairs for use by larger NOCs.
11 Work Stations	12 x 60 trailer	8 tables, 6 typing tables, 26 chairs for use by smaller NOCs.

NOC Services		
12 Conference Room	(3) 10 x 27	Meeting rooms for 24, on a reservation basis.
13 Copy Center	12 x 60 trailer	5 copiers, work area for 10.
14 NOC Service Center	60 x 70 tent	Facility provided services to each NOC and included: information desk, 2 NOC billing desks, language services, transportation desk, conference room scheduling desk, office for NOC aides, office for coordinator, lounge for 10, 4 typists, mail and communication desk. In all, a work area for 50.
Polyclinic and Medical Services		
15 Casting/ Examination Room	10 x 14	Examination table, hand-washing facilities.
15 Clinic Room	10 x 10	Examination table.
15 Chief Medical Officer	8 x 10	Office for 1.
15 Conference Room/ Staff Lounge	12 x 24	Lounge or meeting area for 20.
15 Dental Room	10 x 10	Dental chair, handwash facilities.
15 Examination Rooms	(2) 6 x 7	2 examination tables, handwash facilities.
15 Linen Storage & General Storage Rooms	(2) 10 x 10	Existing.
15 Medical Records	8 x 10	6 file cabinets and storage.
15 Nurses' Station	8 x 14	2 chairs, existing sink and counters.
15 Nurses' Work Room	9 x 10	
15 Observation Room	8 x 8	Examination table
15 Optometry	8 x 13	Examination room.
15 Pharmacy	10 x 14	Storage cabinet.
15 Physical/ Therapy	44 x 104	Registration and waiting area for 8. Equipment for coldpack ice, freezer, diathermy units. Dry therapy area, 8 massage/taping tables. 2 private offices. Wet physical therapy area with 6 whirlpools, hot tubs. Changing rooms for men and women.
15 Registration/ Waiting Area	24 x 28	Registration counter waiting area for 20.
15 Secretarial Station	8 x 8	
15 Trauma Room	10 x 22	Examination table, chair, handwash facilities, oxygen.
15 Triage Room	11 x 14	
Press Operations		
16 Press Interview	20 x 20 tent	Chairs for 40
16 Staff Office	12 x 60 trailer	Staff offices, work area for press, 30 chairs, tables, television, telex, telephones, 2 telecopiers.
Security		
17 Command Post	12 x 60 trailer	2 private offices, meeting room for 40, television, radio base station.

Technology		
18 Staff Offices	12 x 60 trailer	Private office for 1. Radio issue, recharging and storage room. Staff work area for 5, and sponsor vendor work area for 10.
18 Telephone Switchboard	8 x 40 trailer	
Transportation		
19 Athlete Bus System	270 x 480	Sweeping area for 8 buses. Holding area for 43 buses. Bus entry/exit. 2 bus maintenance trailers and repair bays.
19 Athlete Dispatch System	8 x 45 trailer	Athlete system dispatch office.
20	20 x 40 tent	Rest area for 150 drivers.
20	8 x 100	4 athlete bus loading/unloading bays, Destinations included rowing/canoeing venue, other villages. Also the ceremonial welcoming area.
20	10 x 30 tent	Athlete loading zone, dispatch tent.
20	10 x 20 tent	Athlete waiting area.
21 Dispatch-Fleet System Parking	8 x 45 trailer	Office area for 10.
	100 spaces	For visiting Olympic Family members.
	40 spaces	For Olympic Family residents of village.
Village Administration		
22 Administration	12 x 60 trailer	Private office for director of administration; table space and work area for 10 finance staff, 4 personnel staff, 2 materiel supply staff.
22	8 x 45 trailer	Private office for programs director, venue communications and message center.
23	12 x 60 trailer	Office for construction and graphics staff of 4, office for transportation manager. Work area for public affairs and 4 other staff.
24	22 x 26	Work area for director of operations, village administrator and assistant, housing manager.
24	14 x 18	Private office for LAOOC vice-president/Northern Region (UCSB Village and all venues north of Los Angeles).
Village Entry Points		
25 Athlete Bus Entry	40 x 160	Bus entry to village.
	(2) 10 x 10 tents	Security check point.
26 Main Entry	40 x 60 tent	Guest and press registration area; individual storage units for guest identity cards. Counter work area for 12. Office for security and entry coordinators. 14 x 20 waiting area for 14 escorts.
	10 x 20 tent	Security check point.
Service Entry	20x120	Service vehicle entry point and security sweeping.
27 Staff Entry	40 x 40 tent	Check-in desk for 4, office for entry manager. 6 check-in stations, 4 check-out stations.
27	10 x 10 tent	Security check point.
27	12 x 60 trailer	Accreditation staff office for 12.

**7.03.23
Biltmore Hotel**

The Biltmore Hotel in downtown Los Angeles was selected as the official headquarters hotel of the IOC. Nine hundred rooms were reserved for a period of 17 days for members of the Olympic Family and their guests.

Few construction modifications were made at the Biltmore. Move-in and set-up were accomplished in a one-week period and all functions were operational on 14 July. Major areas were as follows:

- In-processing and hospitality services were housed in the Galeria Room. These services consisted of LAOOC finance and accommodation functions, accreditation, transportation, travel, meal tickets, hostess request desk and the distribution of Olympic Family tickets. Temporary working areas were constructed for each of these departments and included desks and chairs, and, in some cases, screens which were set up to separate functional areas. Ropes and stanchions were set up to facilitate movement through the accreditation area.
- The LAOOC Protocol Office was located in the Olympic Room and also housed the Olympic Family Services and Government Relations Department. As in the Galeria Room, temporary working areas were constructed for each of these areas.
- The IOC Secretariat was housed in the Music Room. This consisted of work areas for approximately 25 administrative staff. Temporary work areas were set up for the administrative staff and areas were screened off to form a storage space and a private office.
- Office areas for technology and material logistics were housed in the Regency Room. Additionally, a results center operated at this location.
- Exhibit space was allocated in the Regency Room for the Seoul Olympic Organizing Committee and for bid cities for the 1992 Olympic Games and Olympic Winter Games.
- Olympic Solidarity headquarters was located on the Conference Level (mezzanine). This was a lounge area for members only. In this same area was an office for the IOC sports director and the sports secretariat. Offices for the IOC director of protocol and head of the IOC press commission were also installed. Other space was occupied by First Interstate Bank and two hospitality areas maintained by bid cities for the 1992 Games.

- Also on the mezzanine level was a security command center with representatives from the LAOOC, the LAPD and the Biltmore Hotel.
- Volunteer services occupied a large room on the lower level of the hotel. This contained a lounge area with large screen television, comfortable seating and refreshment area for volunteer staff waiting assignment.

To convert these rooms into functional office working areas, it was necessary to install additional lighting. Provisions also had to be made in each of the above rooms for the installation of photocopying and word processing machines, Electronic Messaging System terminals and telephone systems.

Three meeting rooms were set up as follows:

- The Session Hall was housed in the Crystal Ballroom. Interpretation booths were installed on balconies overlooking the room. Installation of Look items and equipment was done in one and one-half days.
- The IOC Executive Board had space in the Colonnade Room. Alterations were made to accommodate expanded Board meetings with other groups.
- The IOC Medical Commission was located on the third floor. A large one-bedroom suite and three adjacent rooms were utilized for all medical operations. Olympic Health Services provided medical care in two of the adjacent rooms. The main suite living room had simultaneous interpretation facilities to serve members of the Medical Commission at their daily meetings. A medical command center was installed in the bedroom of the main suite and adjacent room was utilized by the LAOOC medical director.

Special suites were designed for IOC Director Monique Berlioux, IOC President Juan Antonio Samaranch and LAOOC President Peter V. Ueberroth. All suites contained complete office facilities, telephone systems, conference rooms and dining areas. Design elements were also installed.

72

72 The LAOOC flag flies high above the Biltmore Hotel, site of the 88th Session of the International Olympic Committee.

Plan of galeria level of Biltmore Hotel, the IOC hotel

Plan of mezzanine level of Biltmore Hotel

Biltmore Hotel

Introduction The Biltmore Hotel was located in central downtown Los Angeles. It served as the headquarters for the Olympic Family and meeting site for the 88th IOC Session, IOC Commissions and Executive Board Meetings.

Level/Room	Size	Notes
Galeria Level		
1 Athenian Room	23x37	Falun hospitality room (bid city), 20-26 July Ernst & Whinney hospitality, 27 July-1 2 August.
2 Colonnade Room	48x88	Meeting room for up to 200. Used by IOC Executive Board and Commissions, IOC Executive Board/ International Federation coordinator meetings.
3 Cordoban	28x30	Office for IOC director of protocol.
4 Corinthian Room	24x47	Secretariat for Olympic solidarity staff of 6, copier, waiting area for 7.
5 Corsican Room	16x28	Service center for First Interstate Bank.
8 Crystal Ballroom	67x91	Meeting room for 88th IOC Session. Booths for translations. Horseshoe seating for 78, with inner 'U,' elevated seating for 13, podium. Reception room at the conclusion of the session.

7 Florentine Room	16x23	Office for 3 staff of IOC sports director secretariat.
8 Galeria Room	61x90	LAOOC staff offices and service area (in-processing); desk for 3 ticketing, 2 finance, 11 accreditation, 6 accommodations, 1 hostess coordinator, 5 travel service, 3 transportation, 1 insurance.
9 Gold Room	66x90	ANOC executive council meetings. Reception room for 350.
10 Grecian Room	22x23	Office for director of Olympic solidarity, desk, meeting table for 4.
11 Mediterranean Room	18x37	Lillehammer hospitality room (bid city)23 July-12 August.
12 Message Center		Main Galeria hall. Message board and message receiving center with 4 staff in main hallway adjacent to the Olympic room.
13 Moroccan Room	16x37	LAOOC Security office with table space and chairs for 16.
14 Music Room	46x70	IOC secretariat work area for 18. Waiting area for 12. Storage room.
15 Olympic Room	26x34	LAOOC secretariat protocol relations for 21.
16 Renaissance Room	54x101	IOC, NOC, IF dining room for 300. Breakfast, lunch, dinner.
17 Roman Room	24x47	Olympic Club Lounge with table and chairs for 30.
18 Valencian	18x23	Office for IOC sports director, desk, meeting table for 4.

Lobby Level

19 Main Entry Main entry to hotel, registration, concierge, shops. Motorpool call-up at main entrance.

Lower Level

20 Biltmore Bowl 120x140 IOC press briefings ANOC General assembly (29 July).

20 Hostess Room 44 x 64 Waiting area for more than 100 hosts/ hostesses.

Second Lower Level

20 Regency Room 120 x 140 Press sub-center with 56 working places. Results output and photocopying area. Adjoining copy center for IOC, LAOOC needs. Office for IOC press liaison. Sponsor exhibit space and work area for 10. Offices for 2 material supply and 3 technology

20 Amsterdam exhibit and hospitality. Cortina exhibit and hospitality. Seoul exhibit end hospitality. Technology support administration.

Third Floor

Suite 3-235 IOC Medical Commission, LAOOC Health Services infirmary.

Main Press Center

The Main Press Center (MPC) for the Games was located at the Los Angeles Convention Center. Opened in 1971, this facility offered more than 334,000 square feet of open space. Utility ports and electrical outlets in the main area (Yorty Hall) cover the floor on regular 10-foot, 6-inch centers making this facility optimal for any kind of temporary construction using partitions or piping and drape.

Space planning for the Main Press Center began in late 1981. It was decided then that the main press working area must contain space allocations for a large photography lab, camera repair, typewriter repair, writing, results/information, telecommunications, television viewing and private agency offices. Additional space was required for press accreditation and conference areas.

Initial conversations with journalists who would be covering the Games indicated that one of the most desirable features of an Olympic press center would be the inclusion of solid wall and locking door office structures for news agencies, which became the keystone for construction planning within the Convention Center.

As a convention-holding complex, the Los Angeles Convention Center already had facilities for every imaginable use, including utilities, food service, offices, workrooms, lounges and 21 meeting rooms. Parking existed on-site for 3,450 automobiles. All of these facilities made it ideal for conversion for use as a central press area for the Games.

By the end of 1982, Press Operations staff had worked out a general floor plan for the MPC. This plan was turned over to an outside design consultant who formalized the plans. This formal space plan kept intact the concept of a "main street" approach where all the common press functions—information, typing, telecommunications and television—were placed along the primary corridor. Office space was blocked out in units of 384 square feet (16 feet x 24 feet). Press agencies requiring private office space were changed for the wall structures; floor space was provided at no charge. By the middle of 1983, the plan for construction of the MPC was ready to be submitted for contract bids. Three decorating/exhibition companies submitted formal bids to do the construction. The company whose bid was selected was given the contract primarily on the basis of their price for fabrication, placement and tear down of the private office wall structures (\$11.50 per running foot), although the price and scope of the other furnishings offered was considered. This company researched the available type

73

of wall and partition units available and selected a manufacturer from the FRG. Details of the amount of floor space allocated to them were sent to press organizations who had requested space by December 1983. They were given the option of ordering additional space and wall units. Additional areas on the order forms allowed for agencies to request private darkroom areas within their office. This additional construction company was hired to set up the press center. In all, 17 custom-built darkrooms were installed within the main press hall. Light-proof ceilings, composed of double sheets of thick black plastic, were attached to the custom-constructed darkroom walls.

All of the office wall structures within the main hall were of hardwall construction to increase sound attenuation. Pipe and drape walls (at \$1 a foot) were placed within large private agency offices to create sub-offices. This pipe and drape type of construction was also used in the administration offices outside the main hall.

The LAOOC was not given access to the Convention Center until 5 July 1984. The construction company came in on the morning of the 5th to begin wall construction. This aspect was completed by 9 July, along with wall and ceiling construction on the private

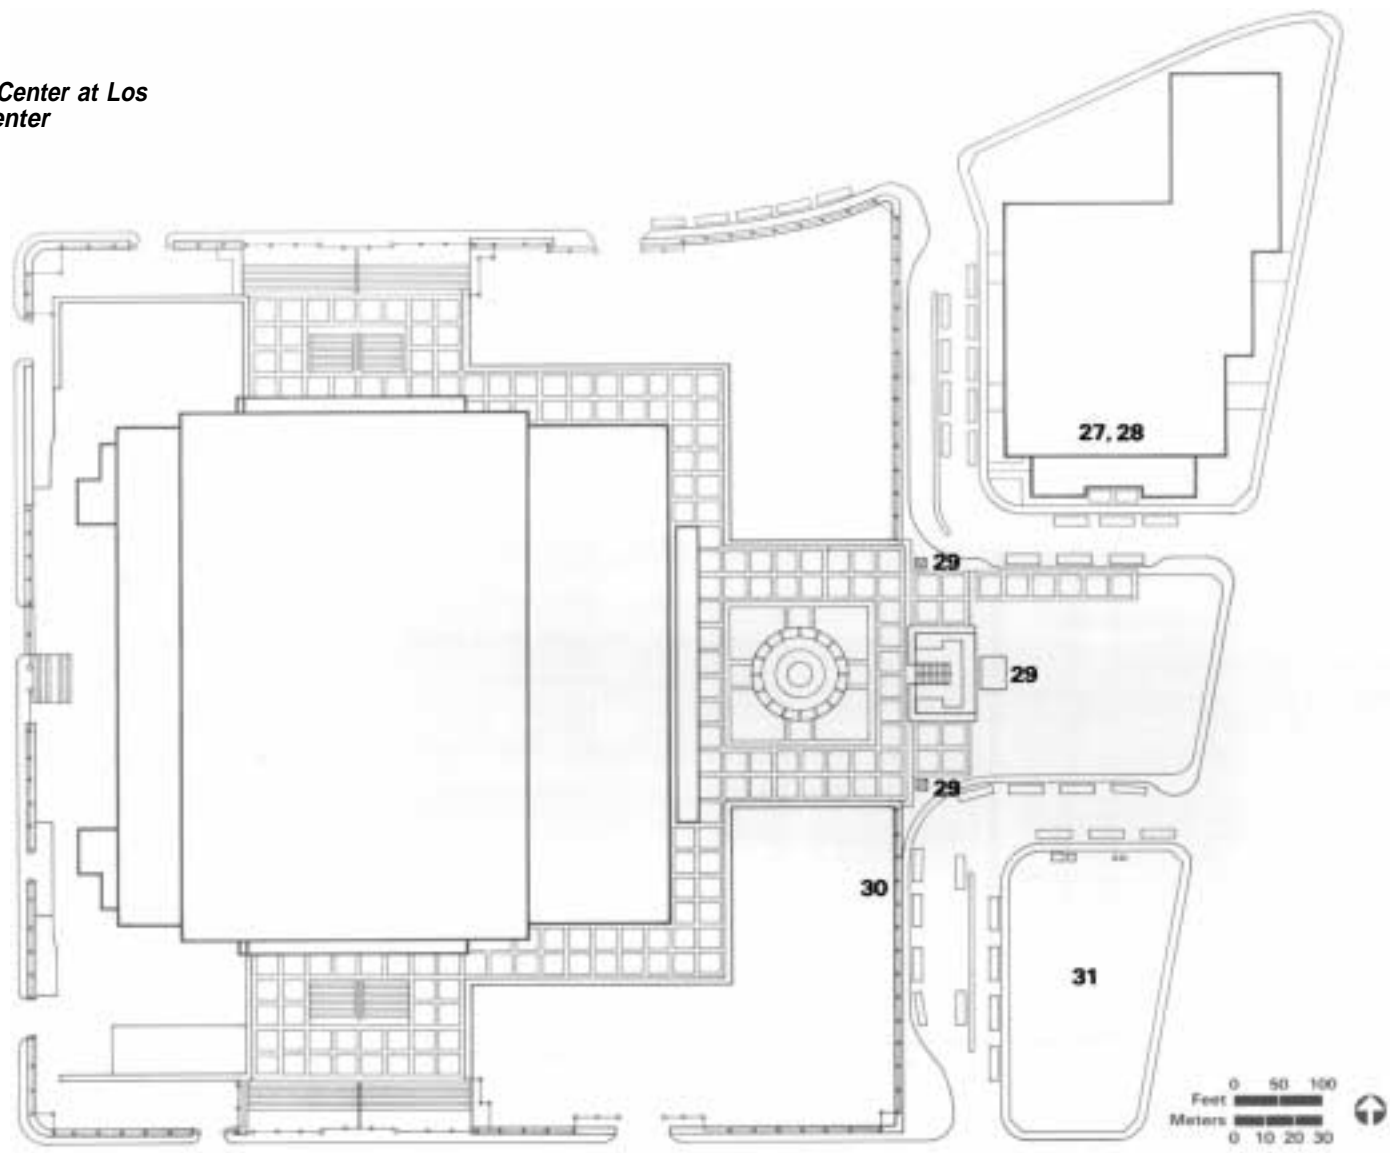

agency darkrooms. Carpeting was placed in the main hall at the same time that wall construction finished. Banners, signage and sonotubes were produced and installed by the construction company from 9-12 July. Late additions to the Look of the MPC were the placement of several large banners and signs on the exterior of the main Convention Center building. A remarkable esprit de corps developed among the employees of the construction company which allowed them to complete construction work on the press facility by the end of the day on 12 July. All furniture was installed by the morning of the 13th with darkrooms completed on the 17th and all equipment installed by the 18th. The MPC opened on 14 July but most of the press did not arrive until about one week later.

Any additional material or construction work was facilitated by the presence of the construction company's order and freight desks in place at the MPC.

Move out and tear down operations were originally scheduled to commence on 15 August but the press exodus from the MPC began on 11 August, allowing the LAOOC to begin these operations earlier. Tear down began on 13 August and was completed by 1800 hours on 16 August. A survey of the facility, conducted by the venue's owners and LAOOC staff, revealed minor damage to the facility, which the LAOOC agreed to have repaired.

73 Temporary walling is used to form office spaces and work areas in the Main Press Center at the Los Angeles Convention Center

Site plan of Main Press Center at Los Angeles Convention Center

Architecture and Construction

Main Press Center

Introduction The Main Press Center was housed at the Los Angeles Convention Center, an existing convention facility in downtown Los Angeles. Media Transportation and Awards Ceremonies departments were located in the North Hall, adjacent to the main building.

Department/Function	Space Use (in feet unless noted)	Notes
Support Functions		
1 AIPS office	28x44	Tables and chairs for 12.
2 Archives/storage	14x24	Storage cabinets, table space and chairs for 3.
3 Editorial and video services	56x88	Video viewing room with 64 VCRs and 12 monitors; video duplication room with 2 VCRs; 2 offices video library, electronic messaging room, communications center, editorial services area with 20 work places.
4 Interview holding area	14x16	Lounge for 10
5 IOC Press Office	28x44	4 secretarial stations, 1 work station, conference table for 4.
6 Language Services	28x44	3 private offices, work area for 16.
7 Lounge	16x44	Lounge for 36.
8 Main Press Center Administration Headquarters	28x46	2 private offices each with conference area for 4, 2 private offices, 2 secretarial stations.
9 Main Press Conference Room	106x112	Seating for 694, elevated speakers platform for 12, elevated platforms for 10 television cameras, elevated platform for 5 interpreter booths (3 interpreters per booth), sound patch.
10 Media Protocol Services	14x22	Office for 2.
11 Conference Room	44x56	Meeting room for 90.
12 Conference Room	56x66	Meeting room for 120.
13 Message Center/Technology	20x44	Message center, work space for 8 staff; venue switchboard with 8 operators.
13	38x44	Technology sponsor/vendor work area for 20.
14 News Department	28x46	2 private offices; work area for 4.
15 NOC Press Attaches	28x44	Table space and chairs for 40 in 10 semi-private offices for 4 each.
18 Office Area	14x44	5 work stations for Language Services, 1 station each for Finance and Material Supply department staff.
17 Press Operations Conference Room	16x24	Conference room for 30.
18 Press Operations/Photo	28x46	4 private offices, work area for 8.
19 Public Information Office/Village Newspaper	14x56	Work area for 4
20 Receptionist	14x16	Office for 1
21 Rest Area	16x24	Rest area with 3 cots,
22 Results Publication	14x44	1 private office, work area for 8.
23 Security	28x44	2 private offices, 16 work areas.
23	13x16	Observation room overlooking main floor.
24 Television Operations	28x46	2 private offices, 20 closed circuit television monitors, work area for 11.
25 USOC Press Office	16x28	Private office for 1, work area for 4.
26 VIP Interview Room	20x24	Seating for 6.

North Hall

27 Awards Ceremonies	18x32	Office area for 9.
	16x26	Storage.
27 Calligraphy	18x35	Office for 10.
27 Conference Room	18x18	Meeting room for 10.
27 Food Service	16x24	Food preparation area.
27 Message Center	12x16	Message receiving center, staff of 3.
27 Staff Lounge	60x64	Lounge for 90.
28 Transportation	48x92	Meeting room for 12, work area for 24, 4 private offices.
29		Vehicle dispatch towers.
30	20 spaces	Motorcycle photo-courier parking.
31	180x300	Holding yard for 48 buses.

Press Functions

32 Accreditation Center	84x112	6 information desks, 18 lounge chairs, television, 16 accreditation work stations and 8 back up work stations, data input room with 4 work positions, 4 private "trouble rooms", 5 staff offices; 20 housing coordinators' work stations.
33 Food Service	116x224	Cafeteria/Restaurant seating 411, separate pub/cafe seating 220.4 food stands in main hall.
34 Mail and Check	24 x 52	Personal mail boxes and individual storage units.
35 Main Lobby and Entry Area	92 x 110	Staff check-in, security desk, 12 lounge chairs, binocular rental and car rental desks, transportation desk, stationery sales desk, magazine racks, 16 electronic messaging terminals, official program distribution, LAOOC information and Greater Los Angeles Visitors and Convention Bureau counters.
36 Photo Messengers	12x28	Work room for 8, waiting area for 20.
37 Postal Service	24x26	Sales and service point for US. Postal Service. Adjoining area with writing tables for 8.
38 Storage	52x56	Secured storage room.
39 Support Services Center	20x60	First Interstate Bank.
39	10x12	Securable storage.
39	12x40	United Airlines reservation counter, LAOOC travel counter, American Express counters.
39	20x28	Sponsor area: Xerox counter, Motorola and Pacific Bell counter.
39	24x32	3 desks for customs-broker, 2 work stations for DHL Courier Service.
40 Video Viewing	32 x 52	40 monitors, with video cassettes players for tape viewing.

Main Press Working Area

41 Results	48x48	Results receiving and distribution room with 24 terminals. Result racks surrounded this area.
42 Telecommunications Center	56x88	90 on-line telexes and 66 work places, 40 telecopiers, 16 off-line telexes.
43 Telephone Center	54 x 102	24 coin operated phones. Space for 60 privately-ordered telephones. 96 charge-a-call telephones.
44 Television Lounge	50x74	136 lounge chairs.
45 Typewriter Repair	54x34	Service area run by Brother Industries.
46 Work Area I	68x96	288 individual work spaces.
47 Work Area II	74x96	324 individual work spaces.
Agency Work Areas		Note: Agencies were given various sized offices at no charge for the raw space or basic electrical power. They were required to pay for 8-foot-high, double-sided hardwall which enclosed those spaces.

7.03.25 Olympic Arrival Center

The arrival center facilities at the Los Angeles International Airport were planned to in-process a majority of the Olympic Family, including the athletes. This system for greeting and processing of the Olympic Family consisted of the following elements:

- Reception/Information at all airport terminals
- Immigration, customs proceedings and VIP reception at the Bradley International Terminal
- Transportation to the in-processing center by means of infield routes from the Bradley International Terminal and loop shuttle from all other terminals
- In-processing of the Olympic Family in the Olympic Arrival Center "bubble" adjacent to Terminal 2
- Transportation of athletes to the Olympic villages and the other Olympic Family members to their respective hotels

Negotiations were started with the Department of Airports of the city of Los Angeles to establish a leasing agreement for the use of the bubble structure. Contingency plans were established to relocate the OAC to the LAOOC Administrative Headquarters complex in Culver City if the Bradley International Terminal was not completed on time and the Department of Airports had to use the bubble for normal airport business.

Modification plans for the bubble were prepared from March through May, 1984. These plans were presented to the Chief Airports Engineer on 31 May 1984. The requested modifications fell into four basic categories:

- Cleaning and painting the structure
- Installation of temporary electrical wiring and telephone lines
- Removal of baggage conveyors
- Installation of flags and banners

On 18 June, the Board of Airport Commissioners granted permission for the placement of the Olympic Arrival Center in the bubble. Work on modifications began immediately using contracted services outside of the Department of Airports.

The Department of Airports had access to the bubble during construction and was kept aware of activities related to the development of the OAC. Likewise, the LAOOC was informed of construction progress of

the new Bradley International Terminal since any major production slowdowns would result in the DOA's need to take back the bubble for regular LAX use.

Once conditional approval had been given, the LAOOC's Architecture/Construction Department began plans to convert the bubble from a baggage inspection facility to a structure capable of processing approximately 10,000 Olympic Family personnel through its doors in the course of a two-week period. Because the bubble would be the first glimpse the Olympic Family would have of the Los Angeles Games, particular attention was paid to the OAC's Look. Security considerations were also a high priority, since processing of NOC delegations with high exposure and high risk profiles would take place.

Aside from the removal of two high-capacity baggage conveyors, very little of the existing interior of the bubble had to be removed. The majority of the work concentrated on restructuring the interior to accommodate the various working departments of the Olympic Arrival Center. Temporary offices were built along the west wall of the bubble to house the security, delegate registration, finance/accommodations, data entry, accreditation, government relations, transportation, technology, communications and venue management departments. Lounges were designed for guests, the Olympic Family and staff.

In addition to the modifications made to the bubble, several other LAX sites required minor structural or cosmetic changes. At the Bradley International Terminal, a ticket counter and back office were converted into a coordination center for hosting, inbound baggage, intra-airport transportation, NOC aides and VIP greeters. In Terminal 2, a ticket counter and back office were converted into a hostess lounge and secondary coordination office. An airline lounge on the mezzanine level of Satellite 2 was converted into a VIP waiting and hosting area. Also in Satellite 2, office space was established for a government relations office in the U.S. Immigration and Naturalization Services (INS) area. A partition was designed to separate the east and west halves of the U.S. Customs Service baggage inspection area. Budget Rent-A-Car (an LAOOC supplier) booths were converted to information counters and required extensive placement of signs. Signs were also placed to indicate Olympic Family bus pick-up points on the arrival level of the vehicle loop.

74

74 The LAOOC's Olympic Arrival Center uses a pre-existing inflated customs inspection terminal for the greeting of athletes and guests. Temporary installations modify the interior for Olympic use.

**7.03.26
Olympic Arts Festival**

Modification to the sites used by the Olympic Arts Festival were limited to decorative elements. The design staff was charged with design, procurement, installation and maintenance of Look items for 43 Olympic Arts Festival sites located throughout Southern California. The objective was to decorate all sites with a Look consistent with that developed for the various sports venues, villages, training sites and streets. A separate kit of Look parts was developed for the OAF sites, using the same color scheme but varying scales, patterns and shapes.

In addition to exterior decorations, separate interior kits were developed by Architecture and Construction. These kits were comprised of three-foot by nine-foot OAF banners, plain nylon banners, posters, styrene and cut-outs. These were installed in 14 different OAF sites with an additional eight kits given to the L.A. theatres for them to install. Approximately 400 miscellaneous signs were fabricated to supplement existing signage.

The venue owner approval process began on 6 April 1984. Proposed designs, installation methods and schedules were presented during a weekly meeting at the LAOOC's Design Center. Between two and eight designs were presented at each meeting. This process was completed on 23 May 1984—nine days after the first installations. The OAF staff was responsible for getting final approval from the venue owners. This was accomplished by sending a letter, an installation document and a list of elements to the venue owners summarizing the Design Center meeting.

Procurement of the kit began 1 May 1984. The majority of the kit fabrication was completed by 14 May 1984 with the exception of long lead time items. These items were added to the kits as the installation schedule dictated. Because of the early OAF start date, procurement and warehousing of kit items was done separately from other venues and villages. All items not installed by the fabricator, for example, the three-dimensional plywood fragments, were warehoused and packaged at the installation company.

Exterior kit elements

Description	Quantity
36-inch by 20-foot zebra-striped sonotubes	22
36-inch by 20-foot Arts pattern sonotubes	4
30-inch by 15-foot zebra-striped sonotubes	2
30-inch by 15-foot Arts pattern sonotubes	2
5-foot square fabric fragments	15
5-foot triangle fabric fragments	22
5-foot, 6-inch star fabric fragments	26
5-foot, 6-inch star fabric fragments	9
18-foot star fabric fragments	24
18-foot star-on-bars fabric fragments	N/A
14-foot star fabric fragments	5
14-foot bar-on-motion fabric fragments	10
14-foot stars-on-bars fabric fragment	1
10-foot star fabric fragments	1
10-foot stars-on-bars fabric fragments	3
10-foot bar-in-motion fabric fragments	2
21-foot, 3-dimensional plywood stars with signs	10
22-foot, 3-dimensional plywood star-on-bar	3
20-foot high scaffold entrances	5
15-foot high scaffold entrances	1
3-foot by 9-foot single face OAF banners	60
3-foot by 9-foot double face OAF banners	24
square feet of plain nylon banners	42
linear feet of 54-inch weft coat banner	30

These items were successfully installed at the OAF sites and clearly identified their affiliation with the Olympic Arts Festival.

75

75

75 Specially designed elements are mounted to mark the sites of the Olympic Arts Festival.

**7.03.27
Transportation sites**

Many remote support sites were required by the Transportation Department for staff parking, athlete bus parking and vehicle maintenance. Due to the late acquisition of these sites, the Architecture and Construction Department minimized detail design work and focused on on-site design.

Listed below are the transportation site locations, functions and scope of work done by the department:

There was one construction manager, two site superintendents and two temporary site superintendents used to construct the transportation sites. These people managed a group of contractors.

Construction on these sites began in April 1984, with VA Lot #1, and did not end until 15 September 1984 when restoration of these sites was completed.

Work summary

Site	Function	Scope of work
VA Lot # 1	Bus driver parking Athlete bus parking Bus maintenance	Demolition of quonset hut Site grading Application of oil and calcium chloride for dust control. Installation of: temporary power and site lighting, temporary toilets, office trailers, storage containers, striping, 8-foot chain link fence
VA Lot #2	UCLA Village staff parking	Grading and oiling; installation of chain link fence, temporary lighting; installation of temporary barricades, striping, removal of road signs
VA Lot #3	UCLA Village staff parking	Curb cut for driveway; installation of: chain link fence, temporary protection for sprinkler heads, gravel driveways, shade tents, temporary toilets, storage shed, lawn renovation, asphalt road renovation
VA Lot #4	UCLA Village staff parking	Curb cut for driveway; installation of: chain link fence, temporary protection for sprinkler heads, lawn renovation
Intersection Sepulveda/ Constitution Blvds.	Bus traffic	The northwest corner of this intersection was cut back to widen the roadway to allow bus traffic. This involved moving two traffic lights, a storm drain catch basin, electrical control panels and the curb and gutter.
GM South Gate Plant	Bus holding and USC staff parking	Curb cut for driveway; remove asphalt and rail bumper, install water line and hose bib, remove fence and guardrail in tire building, refurbish dispatch building, install air-conditioning in dispatch building; installation of: temporary power, shade tents, temporary fences, striping, light pole repair
Post Office Lot	Coliseum and USC staff parking	Curb cut for driveway; remove existing fencing, shade dispatch tents, placement of gravel for driveways, application of calcium chloride, placement of temporary light generators, office trailer rental, temporary toilets
Airport College	LAX bus holding	Widen and install permanent sliding gate, temporary toilets, repave and restripe entire asphalt parking lot with restoration
Main Press Center	Press shuttle bus system	Install two scaffold dispatch stands (15-foot), apply calcium chloride, installation of: temporary toilets, directional signing, shade tent, temporary power, storage shed, curb cuts for driveways, removal of asphalt curbs where air-inflated building had been removed
Jefferson and Grand Blvd.	Bus holding and USC staff parking	Installation of: curb cut, temporary toilets, fence repair
Pershing Square garage	Biltmore transportation center	Installation of: temporary electrical power, divider fence, pipe and drape partitions
International Broadcast Center	Bus holding and staff parking	Installation of: one office trailer, permanent 12-foot fence
Bell Lot	Bus holding and staff parking	Installation of: one office trailer, four light plants, application of calcium chloride for dust control, repair damaged fire hydrant
LAX	Bus holding	Installation of: one storage shed, two light plants
World Trade Center/Long Beach	Long Beach staff parking	Removal of debris, site grading, application of calcium chloride, installation of barricades

7.04

Decoration of the sites: Look items

The LAOOC Look organization began in January 1982 and it was located at the LAOOC Design Center in downtown Los Angeles. The center began under the direction of the Jerde Partnership, an architectural firm and Sussman/Prejza & Co., a graphic design firm. The LAOOC entered into separate consulting contracts with the two firms and each recruited additional firms and individuals to assist in the creation and realization of the Olympic Look program.

The Design Center functioned independently from the LAOOC's administrative headquarters in Culver City. An environment was maintained to afford the designers the liberties needed to experiment with a myriad of concepts in developing a temporary Look unique to Los Angeles. The centralization of all design participants maximized the opportunity for a cross-pollenization of thoughts and ideas.

The single most unifying element of the Look was the color palette. The palette ultimately represented the Mediterranean environment of the original Greek Olympic Games and the Mediterranean-like climate that exists in the Los Angeles area. The colors were magenta, chrome yellow, aqua, light blue, french (dark) blue, vermillion, green, lavender, information yellow, pink and violet. These colors provided a distinctive presence which visually unified the geographically diverse sites in the Los Angeles area, presenting the spectator television audience with an identifiable degree of unity from site to site.

Design strategies included:

- Discreet use of the LAOOC logo and the Olympic rings; the objective was to instill a sense of quiet dignity to the unique way in which the Games were being staged in Los Angeles.
- An expression of the international qualities of both the Games and the host city; graphics and signing created an environment responsive to the world-wide participants and spectators.
- Color and form used to demystify the environment for visiting athletes and spectators.

A series of pre-Olympic international events were staged in Los Angeles during the summer of 1983. These events gave the Look organization the opportunity to implement early concepts and designs and experiment with actual application.

In January, 1984 the Look organization expanded as it began to finalize plans. A contracts and procurement organization was established to locate material, fabricators and contractors of more than 100,000 Look elements.

The first major contracts were executed in February, 1984, and included:

- An initial order of 250,000 yards of nylon in the eleven colors of the Olympic palette; many of these orders were of special dye lots matched precisely to the established colors.
- The painting of 1,500 (8-foot) sonotubes. The total number of tubes painted ultimately would be over 3,500.
- Fabrication and installation of 600 specially designed tents to be used at nearly every venue.
- Contracts with growers identifying the types, colors, plant sizes and blossom size of the annual flowers to be used at the venues; the Look organization was responsible for overseeing the growing of these plants to ensure maximum color and blossom when the Games commenced. Growers were required to pinch back the buds on flowers at certain intervals to ensure plants were in full bloom when used. Over 400,000 quarts of flowers were finally ordered and placed at the venues.

As the Look of the 1984 Games continued to evolve, the potential complexities of the task became more and more evident. The logistics of receiving, sorting, distributing, shipping and installing more than 100,000 Look elements was a monumental assignment. As a result, the Look organization continued to evolve and in May 1984 consisted of the following sections:

- Design; responsible for the finalization of the design of all Look elements at each venue.
- Procurement/contracts; responsible for the procurement and contacting of all Look elements, including the field installation of the elements,
- Supplier quality expediting network; responsible for ensuring that all Look items procured were delivered on schedule and that the desired quality was achieved.
- Support operations; responsible for providing computer support for procurement, inventory and warehouse operations.
- Warehousing operations; responsible for receiving all Look materials and for sorting items for delivery to the venues.
- Look coordination; responsible for assigning a look coordinator to each venue to oversee implementation and installation of the Look.

In order to effectively fabricate the Look elements and make them uniform from site to site, a "kit of parts" was developed. The kit was a catalogue listing Look elements which could be used at each venue. Implementation of the kit of parts concept was important in minimizing the complexities of production. Each item designed was assigned a materiel identification number and produced in quantity.

Production time requirements and long-lead time materials were evaluated to gain an understanding of the constraints associated with the

76

procurement process. The most serious materiel lead-time constraints were with the specially dyed nylon fabric required for the flat Look elements. The nylon material had to be ordered early to ensure availability when production commenced. However, in February 1984 design was not complete and a firm estimate on the quantities of nylon material had not been determined. An order was placed for 240,000 linear yards of 60-inch wide nylon material. The Look organization designed around the quantity ordered.

The next step in the procurement process was to find sufficient sources to fabricate the thousands of banners and thirty-five miles of fabric to cover fences. Although the final design requirements were greater than industry capabilities, the procurement organization had to rely on a few firms to modify their production facilities to accommodate the long, continuous

76 Colorful banners and directional signs announce the coming of the Games and the way to specific venues.

runs of fence fabric and the oversized banners. Due to time constraints, it was not possible to modify the design so that the work could be distributed among several firms.

The overwhelming number of Look items and tasks included:

- Thirty-four Olympic sport venues, support venues and villages were decorated with Look items.
- Approximately 2,300 Look elements were designed.
- In excess of 110,000 Look items were requisitioned.
- More than 3,000,000 square feet of nylon and vinyl open-weave fabric was used.
- Approximately 1,500,000 cubic feet of scaffold structures were constructed.
- 400,000 quarts of annual flowers were grown to Look specification.
- Approximately 35 miles of fence fabric (mostly open weave and vinyl) were fabricated and installed on temporary and permanent chain link fence.
- Over 11 miles (58,735 linear feet) of glitter strips were utilized for the decoration of scaffolds, stages, award backdrops, etc.
- Approximately 20,000 informational and directional signs were produced.
- 20,000 street banners were fabricated: 10,000 banners were installed on the streets of Los Angeles and the remaining 10,000 banners were allocated to other cities.
- The total number of sonotubes utilized was in excess of 3,500.
- In excess of 2,000 flags of the nations were procured.
- 600 specialty tents designed by the LAOOC were produced and erected at nearly all the venues.
- Entrance theme scaffold decorations included 300 (3-foot) stars and circles, 120 (42-inch) diameter spheres, 60 (36-inch) square cubes, 500 hardwood panels and thousands of soft flat decorative panels.
- More than 200 specially designed canopy shade structures utilized for decorative and shade purposes.
- Twenty-four 13-foot helium-filled balloons were staged at various venues.
- The Look warehouse received more than 500 shipments from more than 50 manufacturers,
- 280 trucks were dispatched from the Look warehouse to the 34 venues.

Installation contracts were entered into with seven local decorating companies. Each company was responsible for installing the Look at specific venues. The professional expertise of these firms was invaluable in achieving successful installation. While many of the Look elements used in the 1983 events were installed by

LAOOC staff members, the number of venues, large volume of items to be installed and the complexity of the installation made it impossible to do so for the Games.

Thirty Look coordinators joined the LAOOC to manage the installation process and was responsible for overseeing installation at one or more venues. The coordinator was also responsible for the following:

- Coordinate Look element deliveries from the warehouse
- Verify that all Look materials were available on the dates needed
- Devise alternate plans in the event of late deliveries or construction delays
- Finalizing contracts with the Look installers

All of the original contracts entered into with the Look installers were based upon lump sum figures. In nearly every case, these contracts were converted to a time and materials-used basis. The rationale for this was:

- Actual conditions often differed dramatically from those presented during negotiations.
- Delays in the completion of supporting construction or the delivery of materials forced the installers to deviate from their original schedules.
- Changes in scope increased the work load.
- Changes were requested by venue managers and commissioners in the field.

The change to time and material contracts contributed to the three-fold increases in installation cost estimates, but was unavoidable due to the uncertainty of the condition of the sites when installation began. After all, the LAOOC's approach to both construction and Look had never been tried before.

The installation of Look elements commenced on 25 June 1984 at the UCLA and USC Villages. Installation at the first competition venue (rowing and canoeing) started on 5 July. Two primary considerations were the availability of materials on the dates needed and their timely delivery to the site. Logistics were especially difficult because the Look was installed at 34 venues nearly simultaneously.

It was difficult to accurately estimate and budget time and money for installation. The Look items could not be installed until after construction at the venues was complete, as much of the Look was attached to completed construction items. All Look installation was done on a compressed time schedule (only three weeks) and any slip in the construction schedule made a major impact on the Look schedule. Any deviation in the availability of materials at any venue forced immediate adjustments. Any schedule slips or temporary material shortages resulted in added installation costs.

77

The actual Look installation was more time consuming than originally forecasted and required a great deal of overtime hours to be worked. In excess of 100,000 man-hours were expended over the actual five-week installation period, nearly three times the original estimate.

Delays often prevented close inspection of packaged Look items prior to shipping and resulted in items that were shipped incorrectly. Daily communication with production coordinators was required to guarantee substitutions when the wrong items were shipped.

Upon completion of each venue, the Look organization evolved into Look maintenance. Individuals were assigned to one or more venues to oversee the maintenance of the Look elements during the Games. The primary responsibility of the Look maintenance crews was to ensure the integrity of the Look and to arrange for any repair or replacement of damaged items.

During the first week of the Games, requests came from many facilities to increase the quantity of decorative elements. It became necessary for coordinators and installation crews to return to the venues to determine how the Look could be embellished. Maintenance of the decorative elements began almost as soon as they were installed. Prior to the opening of some venues, items needed to be adjusted to accommodate various venue contractors, i.e., electricians who were rewiring over banners and lawn mowers which were catching handrail skirts on the fields of play. In

77 Decorative elements such as sonotubes help to bring alive the LAOOC's Festive Federal color palette.

addition, daily repairs were necessary due to the accessibility of the decorative elements to the general public. Signage was stolen, mustard and catsup stains were found on refreshment skirts, beer-soaked and warped cardboard signs were useless and some fabrics were torn. Replacement of the Look items was part of the daily routine.

Overall, however, the goals of the 1984 Olympic Games design program were realized at the venues. The Look celebrated the festive qualities and international spirit traditionally associated with the Games. The vivid colors created an exciting backdrop for the drama of the Opening and Closing Ceremonies and of the competitions at each venue. Most importantly, the Look visually linked the geographically diverse sites.

The Look added vivid color to existing flagpoles and scoreboards, and colorful backdrops were designed for the field of play at each venue. Additional Look elements included skirting, fence fabric and vinyl banners which were added to the environmental decoration of each site.

The Look of the Games of the XXIIIrd Olympiad was established for two clearly identified audiences: those watching over television and those watching in person. Remote viewers saw the decorative elements as a colorful and festive backdrop to the competition. Spectators were exposed to the visual flavor of the Games from the moment they entered the individual venues. They were greeted by balloons, majestic magenta gateways and huge pictograms. The use of color on the individual fields of play maintained the simple, elegant treatment of the Look without distraction to the competitors.

The sports facilities took on a dynamic character at night. Selective lighting at some of the venues brought certain Look elements to life. Scoreboards were lit with various messages. Entry structures and various sculptures had lighting integral to the structures.

78

In order to gather the local support required to implement community decoration programs, multi-media presentations showcasing the Look of the Games were presented to business, civic and community leaders. Understanding of the design scheme bred enthusiastic acceptance of the Look. Daily contact with various civic leaders and community representatives was required to schedule, coordinate and finance the street banners program.

The colorful "invasion of butterflies" descended and although the greater Los Angeles area and the city of Los Angeles were not totally shrouded in Look, the program captured the imagination of those with the Olympic spirit and assisted in the transformation of the 1984 Games to an unforgettable experience for the Southern California area and much of the world. The enthusiasm which evolved in the heart and mind of the public and represented by the athletes themselves in the harmonious display of international brotherhood during the Opening Ceremonies and the Games was founded in the Olympic spirit itself. But the Look contributed to the uniqueness of the experience of the Games of the XXIIIrd Olympiad.

79

78 Scaffold structures at many sites incorporate the use of colorful fabric as well as geometric shapes and glitter boards to form an impressive greeting for spectators.

79 Distribution of Look items for installation is a continuous task in the days prior to the Games.

7.05 Street banner program

7.05.1 Goals and parameters of the banner program

An important feature of the overall decorative effect of the Olympic Games on the Southern California area was the street banner program. The objective was to decorate the streets of the city of Los Angeles and other outlying cities in such a way as to announce the arrival of the Games. These same decorations remained up during the Games as a reminder that the Games had commenced. The banner program was also concentrated in location to support the Look efforts at the specific Olympic and Olympic Arts Festival sites around the city.

In April 1984, a decision was made to implement two distinctive banner programs. One was aimed at the city of Los Angeles only and the other was aimed at the non-Los Angeles cities.

7.05.2 Los Angeles banner program

Initially, 7,050 banners of twelve basic designs of a three-foot by nine-foot configuration and two of a four-foot by 12-foot configuration were produced. In an agreement with the city, the LAOOC arranged for the installation and removal of the banners as well as the hardware. These banners were originally planned to be concentrated in pre-determined areas of the city upon approval of the Los Angeles City Council.

Actual installation of the banners commenced 28 May 1984 and was completed 14 July 1984. The LAOOC contracted with one company for the installation, maintenance and removal of all the banners. It took an average of five minutes to install each banner.

Prior to the completion of the installation of the initial order of banners, the LAOOC ordered an additional 4,046 banners to supplement existing locations and to decorate certain additional areas of the city not previously considered. These additional banners ensured that the entire route of the marathons would be adequately covered. Two additional banner designs were added and three additional companies were used in the fabrication process.

Originally, the total number of banners and associated hardware were to remain the property of the LAOOC, but following the completion of the Games, the LAOOC gave the banners to the city and in return the city assumed the obligation of removing them from their street positions.

80

7.05.3 Non-Los Angeles city banner program

Ten thousand Olympic banners were purchased for this program. The Community Relations Department of the LAOOC chose six of the 12 three-foot by nine-foot styles for the non-Los Angeles program. The difference between the two programs was that the other cities were required to install the banners with their own hardware prior to the start of the Games. These cities were also given the opportunity to purchase additional banners from the original fabricator to further decorate their cities.

7.05.4 Design and fabrication

The banners were fabricated in a combination of six LAOOC Olympic colors—aqua, vermillion, magenta, chrome yellow, green, lavender and blue. In addition to these color combinations, there were four three-foot by nine-foot silkscreen-type banners:

- Stars and confetti Olympic Arts Festival banners used at the OAF sites
- LA84 banners in two variations
- *Star in Motion* banner
- Plain banner with Olympic rings

The banners were all made of nylon and dyed to the Olympic color palette with an ultra-violet inhibitor chemical in the fabric. Unfortunately, the chosen colors for the banners were sensitive to the bright summer sun of Los Angeles and the banners tended to fade after several weeks. However, the fading did not occur until the last week of or after the Games.

80

80 Street banners add color in areas near Olympic venues and help make the community aware of the coming of the Games.

7.05.5 Results of the banner programs

With over 20,000 Olympic banners placed on the streets of Southern California cities, the banner programs were an unqualified success. Although it is impossible to attribute the greater community involvement and civic pride solely to the street banner program, it was a major factor.

This program was quite possibly the single largest banner program in history. The banners covered 125 miles of streets in the city of Los Angeles alone and used approximately 40,000 linear yards of 60-inch wide fabric.

7.06 Signage

7.06.1 Goals and parameters of the signage program

From a functional standpoint, the Olympic sign program was designed to direct pedestrian and vehicular traffic and to instruct and inform all users of Olympic facilities. From a design standpoint, the signage program had more specialized goals. The signs within the program had to appear as an integral part of the Look of the Games: a sign had to be a decorative element as well as a source of information. And, to avoid confusion with non-Olympic signage already in place at these facilities, Olympic signs had to be visually unique so that they stood apart from existing signs. The program was also designed to provide a flexible, modular system with a minimum number of installation conditions and details while, at the same time, deterring the actions of would-be Olympic souvenir collectors.

Conditions for the implementation of the signage program varied from venue to venue. At existing facilities, such as The Forum or the Los Angeles Memorial Coliseum, there was a sign system already in place. Regular spectators at these facilities moved about in established circulation patterns. The LAOOC signage program at this type of facility masked the existing system and modified the accepted circulation pattern to work for the facility's new functions. This type of signage program also worked at the Olympic villages since they already had existing university signage.

At new or temporary facilities, such as the shooting and rowing/canoeing venues, the signage program was more simple and direct—signage was created to operate solely for this new environment without concern for other sign systems or circulation patterns.

The size of the signs was greatly affected by the requirement that all signs utilized by the Olympic Family must have bilingual messages.

7.06.2 Responsibilities of the signage program staff

The staff of the signage program worked in the Architecture and Construction Department. Requests for signage were usually initiated in other departments and directed to the signage staff. The Transportation Department was responsible for initiating the largest number of sign requests. In most cases, the signage staff handled the design and coordination with the outside fabricators, while Transportation worked out the location planning and paid for the fabrication and installation costs. The most expensive of these signage requests was the freeway overhead and off-ramp system.

The street guide sign system was designed and coordinated by the signage staff, but the arrangements with the cities was handled by Transportation and varied from city to city. In simple form, guide signs in the city of Los Angeles were fabricated, installed and maintained by the city, while unincorporated host cities were responsible for locating, installing and maintaining the signs Transportation provided them. The cost of fabrication (one sign and three replacements per sign location) was covered by the LAOOC.

The staff, athlete and media shuttle sign systems were designed and coordinated by signage staff with Transportation picking up the cost for the staff and media shuttle sign systems.

Standard event vehicle directional signs, such as "exit" or "one way" were rented or purchased by Transportation, with no input from the signage staff.

During the planning stage, field of play signage was a questionable area of responsibility. After duplication of effort by several departments, including the signage staff, this area was given over to the Look group. They worked directly with sports equipment manufacturers to create the desired effect on such items as athletics competition numbers, archery distance markers and equestrian bridle numbers.

The only other area of debated responsibility was the Look decorative pieces with messages on them. Since the fabrication of these items was based on different constraints than that of the sign program, the Look staff handled these items from design through installation.

7.06.3 Development of the signage program

In temporary installations, signs run the risk of being eyesores, distracting and jarring to the eye. The Olympic signage, as part of the Look program, were seen as objects d'art and an integral part of the Olympic decorations.

The colors, stars, bars and confetti which were the background to the signs' messages, tied the signs into the overall Look of the Games. Their decorative qualities were enhanced by architectural forms and substantial sizes. These colors and forms were also chosen to make them readily identified as Olympic-related information. In the sign, the colors took on the additional purpose of codifying major groups:

81

81 Signs mounted on hollow doors point the way for multiple functions within a single site.

- Automobile directional; aqua with magenta
- Pedestrian directional; information yellow with vermillion
- Pedestrian information and identification; aqua with vermillion
- Athlete bus system; violet with vermillion
- Media bus system; chrome yellow with magenta

The typefaces were chosen to distinguish the two languages used on the signs. English was printed in Univers 67 and French in Univers 68 (italic). For the Olympic Family, the messages were printed in English and French—the two official Olympic languages. For the spectators, of which over 90 percent were from the United States, the signs were in English only.

As an aid to communicate, internationally known pictograms, such as “no smoking,” “Red Cross,” “men” and “women” were used. It was decided to use only the most common of these pictograms to avoid incorrect interpretation of the lesser known symbols.

Once general content of the signage was established, a programming sequence was invoked to determine type, quantity and placement. The first part of this sequence involved the identification of circulation patterns. The user groups were stratified in the following manner:

- Vehicles
- Buses and limousines; 1) Athletes and officials, 2) media, 3) staff, 4) spectators and, 5) VIPs and patrons
- Delivery and maintenance trucks
- Passenger vehicle; spectators and physically challenged
- Pedestrians; 1) athletes and officials, 2) physically challenged, 3) media, 4) spectators, 5) staff, 6) VIP and patrons

These groups were also overlaid with the accreditation zone and security systems.

The second part of the programming sequence was to identify special user requirements. This type of signage varied from venue to venue depending on the needs of the commissioner or the governing sports federation. For example, the rowing and canoeing venue at Lake Casitas needed signs which prohibited the spectators from wading into the lake.

The next step in the sequence was the selection of appropriate sign types. The staff, using the sign types list as a menu, selected the sign type which most fit the bill concerning the siting, mounting condition, required visibility and size, number of messages and whether it needed to be printed in both English and French or English alone.

Once the programming sequence was completed, the output from the programming was documented. All of the sign information was logged onto two complimentary systems: the first, location plans which showed where the signs were to be placed and, the second, graphic schedules which told what information went on each sign.

82

Several of the sign needs were of a repetitious nature. These included signs for first aid and doping control and many versions of vehicular and pedestrian restrictive signs. These signs were produced in bulk, and wherever possible, given to the responsible department to distribute.

Accreditation and access control signs were handled in a similar fashion. Due to the fact that most of the controlled access points had slightly different combinations of restrictions, the sign staff developed two standard sign forms (one for perimeter access and one for internal access). To create the appropriate access restrictions, the access control staff placed special decals on the signs. This flexible yet uniform solution served well.

The entire evaluation and programming process took 10 to 14 days per venue and just under a month for each of the villages. It was structured as follows:

- Review of site plans and Venue Development space plan
- Site visit and walk-through
- Meeting with coordinating architect
- Production of preliminary sign plan
- Presentation to commissioner/ mayor
- Period of review by commissioner/ mayor
- Correction of sign plan
- Production of final sign plan
- Minor additions and corrections to the final plan

7.06.4 Fabrication of the signage

The LAOOC instituted a bid program to determine which companies would produce the signage. The bid package consisted of working drawings, specifications, schedules, a time line and a preliminary estimate of quantities for the items to be produced. The bidding was done by invitation after the LAOOC reviewed the abilities and facilities of various fabrication companies. The original bid called for a single entity to take the entire scope of the work, which included fabrication, installation and removal of signage. The completed bids came back at approximately four times the proposed signage budget so an alternative strategy was developed where installation and removal were handled as part of the Look program via a budget shift from the sign program. The fabrication process was then divided into component parts and awarded to two major fabricators with a number of smaller contracts awarded to other companies.

The contract quantities were estimates based on plans for 80 percent of the sites. During fabrication, additional material was ordered when the actual quantities were established.

The dominant sign blank material was styrene (plastic) with silk-screened graphics applied. The sign blanks, after copy was applied, were either installed as signs or applied to the backing panels to make larger, more decorative signs.

82 Signage allows easy identification of functions within a site as well as identifying sites for the various Olympic sports.

Two different structural materials were used to make backing panels: hollow core doors for hard surface installations and multifiber boards for ground and sloped installations. Both types of material were painted and received pressure sensitive vinyl graphics.

The vinyl graphics consisted primarily of die-cut letters and words and computer-cut words and phrases. Due to time delays and application problems with the die-cut process, the signage program was put weeks behind schedule. The computer-cut process, which had immediate turnaround and unlimited letter size but inferior letter forms, was implemented to assist the fabricator. The computer lettering system also became the basis for the emergency sign system used during the Games.

Additional materials used in the signage fabrication were:

- Cardboard tent card signs with silkscreened graphics and applied copy
- Rigid tent valences made from multifiber board with painted and applied graphics
- Soft tent valences made from vinyl with silkscreened graphics and applied copy
- Sonotubes with painted graphics and applied copy
- Concrete bases for hollow core door backing panels
- Posts and hardware for multifiber board backing panels

Several programs occurred in the fabrication process due in large part to the extremely tight production schedules. Errors in letter spacing, overall assembly, silkscreening, color matches and spelling all slowed down the process. Bilingual messages were difficult to monitor since the fabrication processing was operational almost 24 hours a day and Language Services, which provided the translation and proofreading, did not have the manpower to keep up with production.

In an effort to maintain inventory and quality control, all signage was shipped and stored at a central warehouse. This aided the packaging, delivery and storage functions but was never quite able to make up the lost time from earlier production problems.

7.06.5 Installation, maintenance and repair of signage

The installation of the sign program was within the scope of the original bid package but when the bid response caused the LAOOC to break out the component parts of the work, the installation function was given to a few

sign installation companies to complete. When it became apparent that the same companies who were bidding on the Look installation were also bidding for the sign installation, and that separating the work would cause scheduling difficulties, the sign staff decided to lump all sign installation into the Look contracts. At this point, on-site sign installation was inherited by the Look coordinators.

There were so many signs at some sites that installation required full-time attention. To aid the Look coordinators during the few weeks just prior to the Games, the sign staff provided a traveling crew of installation coordinators. This crew, armed with an understanding of the sign system, installation methods and a sign repair kit, repaired and modified signs that required skilled attention. This traveling crew also gave appropriate direction to the on-site sign installation crews.

7.06.6 Signage requirements developed in the Games period

The emergency sign system was an essential part of the signing effort for the Games. A single sign shop was established in a centralized location in Los Angeles. The staffing was as follows:

- Information coordinator/quality controller
- Computer lettering machine operator with two machines
- Letter applicators/sign assemblers (two)
- Driver with van

The sign shop depended heavily on Games technology to complete its assignments. All orders for signs were placed via the Electronic Messaging System. The information coordinator used a print-out of each requested and formatted it for the computer lettering machine operator to input. Once entered into the computer, the letters were cut by the vinyl printer and transferred to the applicators. The applicators prepared and applied the messages to standard blank sign stock, which was then inventoried. The information coordinator then notified the requesting party and arranged for delivery.

During three weeks of operation, the sign shop filled 215 orders, amounting to over 3,000 signs. The average turnaround time for service was 24 hours.

Installation and maintenance of these new signs was handled by the venue management at the requesting site.

7.06.7 Post-Games disposition

A majority of the signs in place around the venues and villages were offered to the LAOOC Games staff as keepsakes once the sites were closed. Structural signs placed on freeways were auctioned off by sealed bid by the California Department of Transportation. The more elaborate signs of the venues and villages were brought back to the Materiel Distribution Center and auctioned off with other Olympic memorabilia.

Examples of signage installation at the venues

Sign type	Quantity	Mounting
Gymnastics—Pauley Pavilion (an indoor arena)		
Sonotubes	1	Post
Hollow core doors	30	Concrete base
Tent menu boards	30	Canopy clip
Styrene wall signs	150	Neoprene tape
Cardboard wall signs	30	Neoprene tape
Cardboard desk signs	150	None
Hockey—East L.A. College (an existing stadium)		
Sonotubes	5	Post
Multifiber boards	3	Post
Hollow core doors	25	Concrete base
Tent valences	30	Cable
Tent menu boards	10	Canopy clips
Styrene wall signs	100	Neoprene tape
Cardboard wall signs	35	Neoprene tape
Cardboard desk signs	15	None
Swimming—USC Swim Stadium (temporary outdoor stadium)		
Sonotubes	4	Post
Multifiber boards	1	Post
Hollow core doors	25	Concrete base
Tent valences	120	Cable
Tent menu boards	25	Canopy clips
Styrene wall signs	225	Neoprene tape
Cardboard wall signs	5	Neoprene tape
Cardboard desk signs	10	None
A-frames	10	None
UCLA Village		
Sonotubes	45	Post
Multifiber boards	60	Post
Hollow core doors	15	Concrete base
Tent valences	30	Cable
Ceiling signs	175	Wire
Styrene wall signs	175	Neoprene tape
Cardboard wall signs	350	Neoprene tape
Cardboard desk signs	75	None
Food flags	1,300	None

Sign quantities

Sign type	Size	Mounting	Quantity
Wall or fence mounted	5 by 7-inches to 4 by 2-feet	Double stick tape or plastic ties	2 1,300
Freestanding	6-feet, 8-inches by 2-feet, zero inches	Post or concrete base	1,725
	8-feet, zero inches by 3-feet, 6 inches		
	10-feet, zero inches by 3-feet, 6 inches		
Sonotube	10, 12 or 15-feet high	Post with spacers	340
Desk cards	6 by 18-inches	None	1,250
Food markers	3-inch diameter	None	3,500
Tent valence	10 and 15-feet		1,000
A-frame and sandwich	Various		200
Totals			29,315

Ceremonies

8.01 Mandate of the Ceremonies Department

The planners of the Opening Ceremonies were given an important goal to accomplish: get the Games started on a positive, emotional and thrilling note and lay the groundwork for a successful Olympic Games.

The Los Angeles Olympic Organizing Committee's senior management, like that of organizing committees before it, recognized the importance the ceremonies played in the Games. If the Opening Ceremonies were poorly done, negative opinions could spill over into the competition phase of the Games; moreover, the lasting impression of Los Angeles could be a negative one if the Closing Ceremonies were bad.

To add to the challenge of the ceremonies staff, worldwide expectations for spectacular shows were high since the Games were being held in Los Angeles, long heralded as the entertainment capital of the world.

8.02 Opening Ceremonies

8.02.1 Concept and early development

Two years before the start of the Games, the LAOOC asked Walt Disney Productions, Inc. to draw up preliminary plans for the production of the Opening and Closing Ceremonies as well as the venue awards ceremonies.

Disney's plan for Opening Ceremonies called for a parade through the streets of Los Angeles, temporary spectator stands near the Los Angeles Memorial Sports Arena, street decorations from Figueroa Street (adjacent to the Los Angeles Memorial Coliseum/Sports Arena) to downtown Los Angeles and an officials' grand review stage built over the seats at the Coliseum peristyle.

The LAOOC senior management wanted to hold costs for the ceremonies to half of a projected budget total and asked Disney management to guarantee that figure. Disney did not feel it could, so the LAOOC decided to explore other options.

Eventually, David L. Wolper, an internationally respected filmmaker and a member of the seven-person committee that was instrumental in bringing the Games to Los Angeles, was asked by senior management to take responsibility for the Ceremonies Department as commissioner and producer.

Tommy Walker, who had directed the ceremonies and awards for both the Squaw Valley and Lake Placid Olympic Winter Games, was later chosen as director of ceremonies.

Planning for both the Opening and Closing Ceremonies began in earnest just nine months before the Games. In January 1984, the LAOOC decided ceremonies and awards should be divided into two separate departments so each area could receive proper attention.

8.02.2 Development of the actual plan

In November 1983, there was no script, no music, no performers and no costumes for either the Opening or Closing Ceremonies. Planning for both ceremonies began at the same time by obtaining available video tapes of previous Olympic ceremonies, studying them and deciding which ideas worked and which did not. As the video tapes of the previous ceremonies were viewed, it became apparent that each of the previous organizing committees presented a tough act to follow.

During this preliminary planning stage, many wild, extravagant ideas were formulated. Slowly, each element of the ceremonies was pieced together. The staff wanted to present Opening Ceremonies that were emotional, majestic and inspirational. Wolper, who had attended six previous Olympic Games, understood the importance of the Opening Ceremonies and also understood that if they were not spectacular, Hollywood's entertainment industry in particular and the United States in general might be subject to severe criticism.

From the beginning, the LAOOC was besieged by famous entertainers who wanted to be a part of the ceremonies. At one point, more than 35 entertainers had offered to sing the United States' national anthem. However, it was decided that although considerable well-known talent was available for use in the Opening Ceremonies, none would be used. It was feared that by using established stars, the audience would take a passive attitude and wait to be entertained. By using youths from the

Los Angeles area, the ceremonies staff hoped to encourage a sentimental, positive response from the audience for the youths to do a good job.

Two other factors were considered in the development of the Opening Ceremonies program. Because a large number of athletes was expected to attend the Games, the entertainment segment of the program was placed before the entrance of the athletes since the number of athletes alone was enough to fill the entire infield of the Coliseum. The other factor taken into consideration was the start time of the ceremonies. To lessen the effect of the mid-summer heat, the entrance of the athletes was scheduled for late afternoon when the Coliseum floor would be cooler.

The organization of the Opening Ceremonies script progressed steadily as new elements of the show were identified. The show had to include something that had not been done in past ceremonies, but also followed the tradition of showcasing the host nation's culture. The music of the United States was thus chosen to tie all of the elements of the ceremony together.

Although there is a rich heritage of music in the United States, there were certain events within the Opening Ceremonies for which no suitable music could be found. When Disney began its preparations for the Opening Ceremonies, composer John Williams was asked to write a theme for the Los Angeles Games. Williams was asked to continue writing the theme after the LAOOC took responsibility for planning the ceremonies.

In addition, a meeting was held of leading members of the music community to gather information and obtain suggestions for additional music and composers for the ceremonies. One piece that could not be found in existing form was an appropriate "welcome" song. Composer Marvin Hamlisch was contacted and asked if he would write the music. Hamlisch was instructed that the staff wanted a song that would repeat the word "welcome" in a dramatic, rather than sing-song style, since it would be the first song to follow the introduction. Hamlisch completed the music in three weeks and suggested lyricist Dean Pitchford for the words.

The third piece of original music commissioned for use in the Opening Ceremonies was written for the final lap of the torch relay and lighting of the

Olympic flame. Something classical in style and reminiscent of the ancient Greek torch races was desired, so the music committee recommended classical composer Philip Glass, who had previously written for opera, film and theatre. Glass was sent video tapes of past Opening Ceremonies to study and the result was "*The Olympian*" which was ultimately used during the lighting of the torch.

To include an element representative of United States culture, a marching band, the origin of which has been traced to the fife and drum corps of the Revolutionary War, was included. The band numbered approximately 800 members and produced the only live music during the Opening Ceremonies. All other music was pre-recorded.

To complement the marching band, another staple of United States culture, the drill team, was included. The staff felt that many of the dance numbers could be performed by drill team members, reducing the number of professional dancers needed for the ceremonies.

As each part of the program was planned, it was important to note that the Coliseum field provided a gigantic stage and, therefore, all planning was conducted on a grandiose scale. The scale required to produce the desired dramatic effect was best illustrated in the George Gershwin portion of the "*Music of America*" sequence. Gershwin wrote "*Rhapsody in Blue*" to be played by a jazz band and piano. Keeping in mind the size of the Coliseum, one, two or even 10 pianos would be lost in the vastness of the "stage." To compensate, 85 pianos were used to fill the arches of the peristyle.

Each portion of the show was similarly designed. "*The Pioneer Spirit*" segment, which depicted the United States' westward expansion during the 19th century, utilized Hollywood-type sets which were moved onto the field by the dancers, set up and then quickly taken off the field by the cast.

The rest of the "*Music of America*" portion of the show traced the chronological progression of American music from jazz, gospel and ragtime through the Big Band sounds of the 1940s to contemporary music.

Ceremonies

While the musical portion of the show was being planned, other details of the show were worked out. Since it was felt there was no way to improve on the precision of the card stunts performed in Moscow, one spectacular stunt which involved the entire stadium was planned. The ceremonies staff worked in conjunction with a firm which designed card stunts for several Southern California universities. It was decided that depicting flags of the participating NOCs would be appropriate, so the planners used a computer and a seating manifest of the Coliseum to design the card stunt seat by seat. The theme of the card stunt was kept as secret as possible.

While the ceremonies staff was given free reign to plan the entertainment portion of the Opening Ceremonies, a large portion of the program was dictated by the 1978 provisional edition of the Olympic Charter. However, the ceremonies staff requested one change in the Charter-mandated sequence and was granted the change by the IOC.

The charter stipulated that the following take place:

- Parade of athletes.
- Organizing Committee president introduces the president of IOC.
- IOC president introduces the host nation's sovereign or head of state.
- Sovereign or head of state declares the Games open.
- Olympic flag is raised as the Olympic Hymn is played.
- Antwerp flag is exchanged.
- Torch is lit.
- Athlete's oath is taken.
- Official's oath is taken.

The LAOOC requested that the Antwerp flag exchange be moved to a portion of the ceremony which would not detract from the build-up of emotion and anticipation for the arrival of the torch. It was moved to follow the card stunt and precede the athletes' march.

Two important elements remained to complete the basic planning of the script for the Opening Ceremonies. The first was the logistics of lighting the Olympic flame and the second was finding the appropriate finale.

The ceremonies staff was concerned that the torch would not arrive at the Coliseum at the right time if the torch relay was conducted up until the time of the Opening Ceremonies. Thus, the torch's arrival at the Coliseum was

planned for at least a couple of hours before the start of the ceremonies to avoid traffic and crowds.

Getting the torch to the Coliseum was easy, lighting the Olympic flame was the hard part. How to get the final torchbearer into position to light the cauldron on top of the peristyle 145 feet above ground level was puzzling at best. Since there was no torch relay during the 1932 Los Angeles Games, the flame had been ignited by the flick of a switch.

After many designs were considered and rejected, a member of the planning staff suggested lighting the Olympic rings, which were planned for the front of the peristyle directly above the archway and in direct line with the cauldron. From there, it was a simple matter to arrange stairs that could be erected to the top of the archway where the final torchbearer could light the rings and the flame could then travel through a tube, up the peristyle and to the cauldron. A "slip-stair" was chosen which could remain out of public view and then be raised hydraulically at the appropriate time.

For the finale, an emotional, inspiring theme was needed. Beethoven's "Ode to Joy" was suggested, but it was felt that it didn't project enough emotion. The theme song from Disney's "It's a Small World" exhibit was also suggested, but discarded because it was cute rather than powerful. Finally, the song "Reach Out and Touch" was suggested. While the chorus lyrics were exactly what was wanted, the rest of the lyrics needed to be rewritten. The authors of the song agreed to rewrite the lyrics with an appropriate international theme.

The ceremonies staff envisioned the athletes and spectators joining hands and singing the chorus. Even though the singer would instruct everyone to join hands, an example was needed. To accomplish this, a plan was developed to recruit 2,000 multi-national volunteers and invite them to encircle the field dressed in their native costumes. Since Los Angeles is such a culturally diverse city, the staff felt that it would be fairly easy to recruit the necessary number of people.

To further add to the atmosphere of the symbolic world-wide joining of hands, it was suggested that one of the two giant Coliseum scoreboards be used to show satellite pictures of people from different countries joining hands and singing along. However, in trying to arrange for satellite transmissions, it was discovered that all available connections were being utilized to transmit pictures of the ceremonies. The idea was still carried out, but the pictures were videotaped before the Games.

The joining of hands in the "Reach Out and Touch" number served as the inspiration behind the cover of the Opening Ceremonies program. The cover was a reproduction of a Pablo Picasso drawing entitled "La Ronde des Enfants" (The Dance of Children) that belonged to Wolper. The drawing depicts children joining hands and dancing in a circle with a bird of peace flying overhead. Ironically, the dance was one that IOC President Juan Antonio Samaranch performed as a child in his hometown of Barcelona where Picasso produced the drawing.

It is important to note, that while a great amount of planning went into the Opening Ceremonies, the continuous creativity surrounding the production caused changes to occur in the program as late as two days before the actual ceremonies. Some production numbers were dropped because they did not fit into the overall scheme. In one case, a number was dropped because the star performer, a bald eagle, died just days before the show.

8.02.3 Formation of the cast and gathering of the technical elements

With the basic plan of the Opening Ceremonies completed, the process of recruiting cast members and arranging for props, wardrobes and support services began.

Wolper began by recruiting some of the top professionals in the fields of choreography, marching bands, choirs, drill teams, props and wardrobe, design, production and lighting to help in the planning of the different segments of the program. Each of these professionals was responsible for planning the details of their areas and recruiting the necessary staff.

To begin assembling the marching band, the ceremonies staff contacted University of Southern California band

director, Dr. Arthur Bartner. Bartner contacted university band directors from across the United States and invited them to a three-day conference to help plan the process of recruiting the best band members. The directors decided to recommend outstanding band students from all 50 states for a four-week band camp which was held at Pepperdine University just prior to the Games. The LAOOC utilized Pepperdine's facilities for housing, training and rehearsing. Band members were sent the Opening Ceremonies music prior to arriving in Los Angeles so that rehearsals could concentrate on the marching element of the performance.

A similar method was used to organize the Olympic Honor Choir. In late 1983, Dr. Charles Hirt, also of USC, contacted choir directors at colleges and universities in the Southern California area. Hirt requested that each choir director recommend top students by quartet (soprano, tenor, bass, alto) and designate the quartets in order of talent. The students were also required to demonstrate ability to read music well. The choir directors responded by recommending more than 3,500 students from which 1,000 were chosen. The students were required to attend two of three rehearsals which were scheduled in spring 1984 in the Westwood, Long Beach and East Los Angeles areas. A separate choir was used for the gospel number in the "Music of America" sequence. Members from three black church choirs were combined into one choir for the number.

To organize a 1,200-member drill team, Southern California drill team instructors were notified of a drill team try-out and a contest was conducted to select the finalists.

The greatest difficulty was in recruiting a large number of highly-skilled dancers. While a portion of the simpler, repetitive dance numbers could be performed by drill team members, the more complex dance numbers, such as the "The Pioneer Spirit," required professional dancers.

Approximately three months before the Games, a tryout was held in the Los Angeles area, but not enough quality

3

3 The hydraulic slip-stair used by the final torchbearer to light the torch is tested.

dancers were found. Since the majority of professional dancers live in San Francisco, Las Vegas and New York where Broadway-style shows are produced, the LAOOC sent assistant choreographers to these areas to hire the 300-400 dancers needed. Because professional dancers are expected to learn their routines quickly as part of their profession, the dancers were not brought to Los Angeles until two weeks before the Opening Ceremonies.

One of the most important acquisitions was Lieutenant Colonel Tom Groppel who was given a leave from the U.S. Army to organize the march of the athletes. Groppel was instrumental not only in planning the athletes' seating in the Sports Arena, their precisely timed march into the Coliseum and their placement on the infield, but also in obtaining the national anthems for all competing nations for use in the awards ceremonies. Information was obtained regarding delegation sizes from each NOC's chef de mission. However, the information obtained was rarely accurate which complicated the planning of the march.

The multi-national group members for the "Reach Out and Touch" number were recruited from existing ethnic groups and clubs and invitations to participate in the Opening Ceremonies were extended after individual meetings with each group. The

culturally diverse Los Angeles area provided an almost endless resource area for recruiting the participants, who eventually numbered more than 1,500. The participants were required to provide a costume that was representative of their ethnic origin.

The selection of the singer for the "Reach Out and Touch" number happened almost by accident. A recording of the number was needed to check the arrangement and the choir director was asked to make one during the next rehearsal. The director picked one of the choir members, Vicki McClure, to sing the song for the taping session and sent it to the ceremonies staff. Sticking with the original concept of not using star performers, the staff was fully satisfied with the tape made by the choir director and decided to use the same singer during Opening Ceremonies.

Even before the ceremonies script was completed and the cast members were selected, the props and wardrobe staff began planning for necessary support materials such as costumes, placards, spectator stunt cards, balloons, banners and flags.

The design and production of costumes was a tedious process that was complicated by an ever-changing script and a turnover of volunteer performers. Approximately one and one-half years before the Games, preliminary costume planning was completed under the direction of Walt Disney Productions. Wolper then retained some of Disney's wardrobe staff.

The marching band uniforms were the first wardrobe pieces planned since the band was one of the few constants in the ceremonies script. The LAOOC asked Levi Strauss & Co. to provide the costumes for the ceremonies in addition to Levi's commitment for LAOOC Games staff uniforms. However, the LAOOC and Levi's could not reach agreement regarding a final design for the uniforms and the LAOOC eventually contracted all uniform production to various other companies.

New costumes were designed as each portion of the show was developed. The production of the costumes was done by different vendors including costume houses and regular retail

manufacturers. While the costumes were in production, a warehouse was located where costumes could be fitted and distributed. On 1 May 1984, a warehouse which had previously been occupied by the LAOOC's Design Department was converted for ceremonies' use.

Once the costume distribution center was identified, a paid staff of 40 was hired to supplement a staff of 100 volunteers to distribute and alter the costumes. The center served as a storage house for the costumes and was equipped with rental sewing equipment for alteration purposes.

Opening Ceremonies performers were notified of fitting date assignments through their production coordinators during rehearsals. In some cases, performers were also contacted by letter. In all cases, performers were given a card that indicated the type of costume they were to receive at the distribution center.

Costume fittings began eight weeks before Opening Ceremonies. Approximately 5,000 performers were processed through the center and were fitted for both shoes and costumes. Alterations were performed on-site while the performers waited and all performers left with a finished costume. Choir robes and pages' outfits, which did not require fitting, were packaged and sent to rehearsals for distribution. In limited cases, where slight alterations were necessary, arrangements were made on an individual basis.

Overall, the costuming process worked well. However, many performers did not report to the distribution center at their assigned times and some performers quit before the Opening Ceremonies and were replaced. Because of these two problems, a full-time staff member was hired to work strictly on rescheduling appointments for performers who missed their original fitting and scheduling replacement performers for their first fitting.

Props were divided into two groups: those used in the performance and those not. Props for the performance included the country placards, balloons, banners, flags and the "Pioneer" segment western town and wagons. Some props, such as the Pioneer town and country placards, were designed by ceremonies staff. Additional props, such as balloons, were acquired from outside firms. Also included in the performance props was a field grid which was installed on the grass and had a specific location mark

4

for each performer to use as a point of reference. The major components of the non-performance prop grouping were the cards used in the spectator card stunt and the welcome flags.

The manufacturing of the stunt cards was handled by a contracted firm. The cards arrived pre-packaged with a computer label attached to each which designated a specific seat in the Coliseum and the color of the card contained inside. The cards were grouped by color.

8.02.4 Installation of the physical elements

The Los Angeles Memorial Coliseum, built between 1921 and 1923 and renovated for the 1932 Games, underwent major rehabilitation work for the 1984 Games.

The Coliseum Commission, which manages the Coliseum and Sports Arena, was concerned that any improvements made to the Coliseum respect the tradition of the facility while the LAOOC was concerned that the Coliseum portray the Look designed for the venues since it would be the focal point of the Games.

Improvements to the facility were not only made for the Opening and Closing Ceremonies but also for the athletics

competition. Construction at the site became difficult when the Los Angeles franchise of the United States Football League qualified for play-off competition requiring additional games at the Coliseum close to the time of the Games. Also, the United States Olympic track and field trials were held at the Coliseum and did not conclude until 24 June 1984. The LAOOC gained exclusive access to the facility the next day. While more than \$5 million in improvements were made to the Coliseum overall, those that affected the Opening Ceremonies were made in the peristyle area. To allow the Opening Ceremonies cast ample time for rehearsals, the construction timetable was compressed into approximately two weeks. The majority of the work was accomplished without utilizing a 24-hour construction schedule although the Construction Department was prepared to do so, if necessary.

To prepare the peristyle area for the ceremonies contractors, the Architecture and Construction Department

used a design which called for a continuous horizontal fascia that hung over the top of the existing peristyle and extended to the central arch. On one side of the central arch the words "Games of the XXIIIrd Olympiad" were hung and on the other were the words "Los Angeles, California 1984." Directly above the main arch, the 35-foot Olympic rings, which were involved in the lighting of the Olympic torch, were added.

A limiting factor in the design of all the peristyle elements was the two scoreboard structures. They were not conducive to hanging ornamentalations. To remedy that problem, four structural columns were added to the section of the fascia which crossed in front of the scoreboards. Eight extra columns that were not structural in function were added to complete the design. Three-foot round sonotubes set on four-foot six-inch bases were used to decorate the columns.

Other peristyle area construction included replacing the concrete between the peristyle seats and perimeter fence, painting the seats, painting the peristyle ceiling, adding a new natural gas line to the torch and adding decorative, colorful, four-tiered "wedding cakes" to each end of the peristyle.

Once the peristyle construction was completed, the ceremonies' contrac-

ters installed the hydraulic slip-stair for the final torchbearer and the ceremonies stage, part of which included the three-tiered platforms used to roll 85 pianos through the 14 archways.

The planning for the President of the United States' arrival was a time-consuming process that affected not only construction of the press box, but also included additional fences for appropriate access/exit routes. In the press box, a steel plate was added to the floor and bullet resistant windows were installed. The changes in the access flow caused by changing fence lines affected the routing of the ceremonies performers and had to be dealt with on a continuing basis.

One unexpected installation project was added at the last minute. During the early planning stages, a search was conducted to obtain the best sound system possible. Small, high quality speakers that would not dominate the field and give the appearance of a rock n' roll concert were desired. Small-

sized speakers were eventually chosen, but after the dress rehearsal, the ceremonies staff was unhappy with the quality of the sound system. In the meantime, another sound company had located a new speaker that included the desired features. The speakers were obtained and installed in the Coliseum overnight before the Opening Ceremonies.

Two 60-foot by 60-foot fenced areas were installed for fireworks. One was located north of the peristyle plaza and the other was located near Figueroa Street. Additional fences were installed from the Sports Arena to the Coliseum to allow delegations to leave the Sports Arena on the concourse level and march toward the Coliseum tunnel.

The prop crew was involved in two massive installations for the Opening Ceremonies. In addition to making sure props were available for the rehearsals and performance, the crew was also responsible for maintaining a field grid, which served as location points of reference for the performers, and for distributing the cards for the card stunt.

Because the Coliseum infield was a natural turf surface, the field grid was installed and removed approximately every three days to allow mowing of

the grass. The grid consisted of plastic disks held in place by spikes and placed every two-and-one-half yards on the infield. Both pieces were painted green, to match the grass as closely as possible. Each disk was identified by a number and letter for specific reference points for the performers.

Thus, when the director told a performer could stand at A-8, the performer could locate the exact position. That meant that each piece had to be installed in exactly the same location every time. The initial installation of the grid utilized marks prepared by professional surveyors.

The other prop installation project that consumed a great deal of time was placing stunt cards in the correct seats. The cards arrived at the Coliseum in packages labeled with a computer tape. Approximately 50 volunteers took the packaged cards, which were grouped by color, and matched each package with the correct seat within the Coliseum. The original distribution of the cards took place two days

before the Opening Ceremonies and a check was made the day of Opening Ceremonies to make sure cards were still in place. Seats that did not have a card package received replacement cards.

8.02.5 Rehearsal and training

Coordinating the schedules of thousands of performers was an almost impossible task, especially considering that most of the cast consisted of volunteers.

To accommodate the performers as much as possible, a master rehearsal schedule was developed approximately three months ahead of time and adjustments were made only when absolutely necessary.

Before the schedule could be planned, a rehearsal site had to be located since access to the Coliseum before 24 June 1984 was impossible because of the U.S. Olympic track and field trials. Even after the trials, access to the Coliseum was limited since construction and installation of other elements necessary for the athletics competition and ceremonies took first priority.

By 15 June 1984, all ceremonies performers were selected and

⁴ Two days before Opening Ceremonies, all performing groups were brought together for the only complete rehearsal held.

Ceremonies

rehearsals began. The LAOOC utilized a total of nine rehearsal locations for the Opening Ceremonies, including El Segundo High School, which the LAOOC rented for the summer as the main rehearsal site. The high school proved ideal. Multiple practice areas, including four fields and several gymnasiums, were available on the grounds and the school was located centrally near the Los Angeles airport. This allowed each of the individual casts within the show to schedule practices separately according to individual requirements.

Several problems were encountered during the rehearsal phase. One of the recurring problems was attendance. Because most performers were volunteers, they had conflicts with jobs, school or any number of other reasons. The volunteers also were not used to the amount of rehearsal required to satisfy the professional standards of the ceremonies staff. This caused some of them to become disenchanted, although the staff knew that the performers would be happy with their efforts after the ceremonies were completed. Maintaining morale during the rehearsal phase, however, was a constant battle.

Use of the Coliseum was required to test everything from staging performers to testing technical equipment. Support from departments such as Food Services, Health Services and

Material Supply were required for the thousands of people involved in these activities. This caused each of the support departments involved in Coliseum operations to reevaluate their planning at an extremely late date and adjust accordingly. Moreover, inadequate interdepartmental communications prior to the rehearsal dates resulted in a somewhat disorganized delivery of services because the support departments were not prepared for the nature and size of the ceremonies and the scope of the services they were expected to provide. Support services were further complicated every time a change occurred in the rehearsal schedule.

Although many of the segments of the show were rehearsed many times and for relatively long periods before the ceremonies, there were some segments that could not be rehearsed until just before the Opening Ceremonies. One portion in particular was the lighting of the torch, which could not be rehearsed until the LAOOC named the final torchbearer.

Before the torchbearer was named, several athletically inclined people were asked to run around the track and then up the stairs. No one could complete the distance. Approximately 10 days before the Opening Ceremonies, 1960 Olympic decathlon champion Rafer Johnson was chosen as the final torchbearer—although not publicly—and was brought to the Coliseum to rehearse. Others were asked to rehearse as well so that the identity of the final torchbearer could be kept secret. The 50 degree angle of the hydraulic slip-stair combined with the total number of 96 steps made it

difficult to establish a rhythm going up the stairs. While practicing, Johnson developed a muscle cramp in his leg which made it difficult for him to reach the top of the staircase.

Because of the injury, a back-up plan was devised in case Johnson faltered during the actual Opening Ceremonies. Since the raising of the Olympic flag immediately preceded the lighting of the torch, it made sense for one of the flag bearers to serve as a backup. Olympic decathlon gold medalist Bruce Jenner (1976) was given a running suit to wear under his ceremonial suit. In the event Johnson could not make it to the top of the stairs, Jenner would come to his aid.

Although the Opening Ceremonies cast was involved in many small-scale rehearsals, there was only one complete dress rehearsal which approximated the entire script and circumstances of the Opening Ceremonies.

The full dress rehearsal was scheduled two days before the Opening Ceremonies. All portions of the day simulated Opening Ceremonies as closely as possible to test everything from transportation to access control to the performance.

The cast members were instructed to duplicate their day from the moment they got up until their performance was completed. That included driving to Santa Anita Park, eating lunch, board-

ing the bus, sitting in the appropriate seat in the Sports Arena or swimming pool area, lining up for the performance, performing and exiting. No athletes, with the exception of the flag bearers, participated in the rehearsal. Approximately 3,000 Disneyland employees acted as athletes for the march.

The dress rehearsal was closed to the general public and press but open to ticketed LAOOC Games volunteers and parents and friends of performers. This allowed the LAOOC an opportunity to thank many of the Games volunteers. The decision to close the rehearsal to members of the press was not due to any concerns that stories would be written about the ceremonies, but in an effort to protect the visual appearance of the ceremonies until the performance itself. The LAOOC allowed television commentators into the Coliseum so they could prepare to describe the ceremonies, however. The LAOOC's policy regarding the entrance of press to the rehearsal was foiled, since access control around the Coliseum during the dress rehearsal was generally lax and members of the press attended anyway.

After the dress rehearsal, the ceremonies staff made substantial changes in the show by cutting some segments, revising others and eliminating costume changes for the marching band. The dress rehearsal was purposely scheduled two days before Opening Ceremonies so that changes could be made in the script. One of the more drastic changes was switching the costumes of the drill team. It was felt that the uniforms did not project

5

6 Flower girls mingle with the crowd at Opening Ceremonies.

7 Athletes from Australia wave to the crowd.

6

7

the right image, so a change was made and each drill team member was required to be refitted with a new costume. Since all music in the show with the exception of that played by the marching band was pre-recorded, music needed to be re-edited. The changed segments of the show were rehearsed over again.

By the end of 27 July 1984, 380 rehearsals for 10,000 cast members totaling 304,000 rehearsal hours had taken place.

8.02.6 Staging and performance of the Opening Ceremonies

The staging of the Opening Ceremonies was a cooperative logistical effort of tremendous proportions. Because the ceremonies staff preferred to stage the performers and athletes hours too early than a minute too late, the day's schedule commenced many hours before the start of the ceremonies.

Last-minute details were worked on and completed all day long. In the Coliseum, a helium tanker blew up more than 1,200 five-foot balloons which were then placed in the proper positions on the field. Volunteers checked each seat to make sure the correct plastic packages of colored cards were set for the card stunt. Ninety-two thousand "welcome" flags were taken to the entries where they later were passed out to each spectator. Thousands of fresh flowers were placed on the peristyle stage. The sound system was tested and music tapes were double-checked.

Meanwhile the performers reported to their designated locations. Most of the performers reported to Santa Anita Park while the "multi-national group" reported to a location in downtown Los Angeles. Once the performers arrived at their designated points, they checked in, were stamped with a security stamp and were fed. They would not have another opportunity to eat until the ceremonies had concluded. Once fed, the performers were loaded onto 160 buses and taken to the Coliseum area.

At the Coliseum, the cast was held at two locations within a short walking distance of the Coliseum main entry. The first was the Sports Arena, which was also used to hold the athletes prior to their entry into the stadium. Because the 16,000-seat Sports Arena was not large enough to hold all the athletes and performers, the grandstand of the 1932 Olympic swimming pool was used as an auxiliary area and was specially covered to provide shade. Each performer was seated according to a computer-devised seating chart.

The arrival of the athletes was carefully planned and well-executed. The Transportation Department performed extraordinarily well in moving the athletes from the three villages to the Coliseum and back without a major incident. Approximately 120 buses, in convoys of 20, were used for UCLA delegations and a 20 bus shuttle was used at USC. The planning of the athletes' arrival was coordinated through the village mayors, village administrators, chef de missions and LAOOC envoys. Meetings were held with NOC officials at each village to provide information such as reporting times and locations, bus locations, bus routes, drop off spots and Sports Arena seating arrangements. NOC officials were also instructed to inform their athletes to eat before the ceremonies and to abide by long-established rules concerning protocol during the march.

Once the athletes arrived at the Coliseum, they were greeted by team aides who were responsible for escorting the teams to the Sports Arena. There, the flags of each country and placards for each country were placed. The aides were also responsible for helping to line up the athletes and escorting them to the Coliseum entrance to begin the march on time. The number of aides per team was determined by the size of the delegation.

The Opening Ceremonies started exactly on time—1636—and began with 110 trumpeters and 20 tympanists playing the "Los Angeles Olympic Theme." "The 1,000 members of the Olympic choir and the 60-piece Olympic orchestra were located in the peristyle seats directly in front of the fanfare trumpeter unit.

As soon as the notes of the Olympic theme faded, five skywriting airplanes began forming 2,000-foot letters and spelled out the word "welcome." Flower girls then passed out flowers with multi-language greetings of welcome written on the attached ribbons and a man with "welcome" written on his back and powered by a rocket belt flew into the stadium and landed on the field.

8

8 The Rocket Man comes in for a landing during Opening Ceremonies.

Ceremonies

The 1,262 members of the Olympic drill team began performing their routine to the specially-written "Welcome" song using the five-foot diameter white and gold balloons as props. During the welcome number, the video display scoreboard showed pictures of Los Angeles residents waving hello while the matrix scoreboard showed an animated film of the word "welcome" in 23 different languages. The drill team members performed several formations including the Olympic rings and the word "welcome". Once the routine was completed, the drill team members released the balloons. As the balloons flew into the sky, streamers unrolled from the bottom of the balloons and each streamer had the word "welcome" printed in one of 23 languages.

Shortly after, "Ruffles and Flourishes" and "Hail to the Chief" were played to announce the arrival of United States President Ronald Reagan, IOC President Juan Antonio Samaranch and LAOC President Peter V. Ueberroth. After the U.S. national anthem was played and the colors were presented, the entertainment portion of the program began.

The 800-member Olympic marching band, which entered the Coliseum through the numerous tunnels located around the Coliseum, signaled the beginning of a 30-minute presentation of the "Music of America." Included in the band were 144 trumpets, 96 trombones, 48 sousaphones, 48 percussion instruments, 64 piccolos and flutes, 56 altos, 52 clarinets, 36 tenor saxophones, 16 baritones and 128 band silks.

The "Music of America" segment consisted of six parts, each of which depicted a unique portion of the United States' musical development. They were:

□ "Americana Suite": portrayed the development of the marching band from its Revolutionary War roots through one of its most popular periods when the U.S. Marine Corps band was led by John Philip Sousa. The number was performed by the 800-member Olympic marching band.

- "The Pioneer Spirit"; showed the westward expansion which occurred during the 19th century. The production included movable props, which when set up by the performers themselves, formed a small western town. The cast included 300 members of the Olympic dance corps, 10 character dancers, 50 gymnasts/fiddlers and 50 youth dancers.
- "Dixieland Jamboree"; depicted the birth of jazz in New Orleans and the associated vocal style whose origin dates back to the gospel traditions of Afro-American spiritual music. A 300-member Olympic gospel choir joined the marching band and 75 dancers.
- "Urban Rhapsody"; showed the incorporation of jazz and classical styles made famous by George Gershwin. The "Rhapsody in Blue" number was highlighted by three rows of pianos (84 black and one white) rolling through the peristyle arches. The presentation utilized 85 pianists and 200 dancers.
- "The World is a Stage"; traced the musical development of the United States from the 1940s' Big Band

sound to the present. Approximately 1,500 members from the drill team and dance corps performed throughout the sequence.

- "Finale"; the entire "Music of America" cast was reunited while portions formed an outline map of the United States.

Following the "Music of America" presentation, the Coliseum announcer instructed the audience to locate the packets which had previously been placed at their seats. The plastic packets contained a colored plastic card and instructions in six different languages which requested the audience to raise their cards at a designated time. When the audience raised their cards to form the flags of every participating NOC, it was the first time the card stunt was performed. Finding 85,000 people to test the stunt, of course, was not practical. All sections of the Coliseum, with the exception of the press section, participated in the stunt. The press

Ceremonies

16

section was excluded because numerous journalists had indicated that they would not participate; moreover, the press section allowed actual seating only in every other row of seats to accommodate specially-designed tables. These tables would have left "holes" in any flag formed in that section.

The Olympic Charter-mandated portion of the ceremonies followed the card stunt and was begun with the Antwerp Flag Exchange. IOC President Juan Antonio Samaranch presented the flag to Los Angeles Mayor Tom Bradley who in turn presented the flag to LAOOC Chairman Paul Ziffren. Two members of the United States Olympic delegation to the 1920 Games in Antwerp, Alice Lord Landon and Aileen Riggen Seoule, were included in the exchange ceremony. The playing of the "Los Angeles Olympic Theme" followed the presentation and set the stage for the entrance of the athletes.

The athletes' march was coordinated through the efforts of a director located on the field, staff located in the Coliseum press box and aides located in the Sports Arena. The march was precisely timed to each count of music and, remarkably, ran only two minutes late.

Prior to entering the Coliseum, the athletes watched the Opening Ceremonies on the large screen televisions provided in the Sports Arena. As time drew near for the march, teams were called in alphabetical order in English (with the exception of Greece, which traditionally marches first and the United States, which as the host nation, marched last) to begin lining up. Once lined up at the Sports Arena, the athletes walked approximately 250 meters to the entrance of the Coliseum where aides again checked to make sure the athletes lined up properly and started to march at the correct count of music. The use of the aides was especially important to help curb the athletes' enthusiasm since the athletes were charged up emotionally for the opening of the Games.

Because the LAOOC anticipated a total of between 7,000-9,000 athletes and officials to march in the Opening Ceremonies, a number of precautions were taken to ensure that the operations conducted on the field were carried out in the simplest, most organized way possible. Once the athletes' march began, all operations were cleared through the director, who was located on the field. This was especially important in directing medical help to participants, many of whom were affected by the heat. Spotters were located in the press box to look for possible problems in any area of operations. The spotters and

18

director were connected through radio communications as were many of the placard bearers. Once a problem was identified, the spotters notified the director who in turn made a decision regarding appropriate action and informed the responsible parties. No actions were authorized by anyone other than the field director. This process prevented duplication of efforts and allowed decisions to be made by one person who had an understanding of the total effort.

It took a total of one hour, 22 minutes for the delegations from 140 countries to march into the Coliseum and take their places on the infield. The placard bearers and individual team flagbearers were instrumental in leading the delegations to the correct place on the field. Especially warm and enthusiastic welcomes were given to the delegations from People's Republic of China, Romania, Yugoslavia and the United States of America.

With the athletes present on the field, it was time to declare the Games officially open. LAOOC President Ueberroth welcomed the athletes to Los Angeles and then introduced IOC President Samaranch, who in turn invited U.S. President Reagan to open the Games officially.

19

18 Aides keep athletes in order during the walk from the Sports Arena to the Coliseum for the Opening Ceremonies.

19 Athletes from Jordan wave to the crowd.

Ceremonies

The text of Ueberroth's speech was as follows:

"President, honored guests, ladies and gentlemen.

"It's been said, before you stands the finest group of young men and women ever to assemble in the history of sport. They represent the best that this world has to offer. They represent the best hope for the future of mankind. One hundred forty different nations gather here today to honor their own countries, and at the same time to honor the Olympic Movement. In a few minutes the Olympic torch will enter the stadium and the Games of the XXIIIrd Olympiad will begin. We at the Los Angeles Committee had a new idea, an idea to carry the flame on the longest route in the history of the Olympics. It began in the great and wonderful city of New York, and went across this country to this historic site of the 1932 Olympic Games. Rather than go on a straight line, we thought it best to wander up and down and criss-cross this country to most major cities and most small communities. The success of this torch run has exceeded our fondest dreams. Millions and millions of our fellow Americans stood by along the roadsides, cheering the runners and thereby becoming part of the Olympic Movement. These Americans had two messages to give to the world. The first is an enormous rekindling of pride in our own country, the United States of America. And more importantly, these millions and

millions of people turned out along the way to express a friendship and a love and a caring for all nations of the world. It was an outpouring of pride and love that was demonstrated by a people to ward an idea that through sport we can take an important step to ward world peace and understanding.

"As these Games are about to begin, we must thank the thousands upon thousands of people in Southern California who have dedicated years of their lives to make these a great Games for the athletes of the world. For you see, that's clearly our goal; we wish no political statement. We wish only to show hospitality and friendship, and through these efforts make a better world if we can.

"It's now my pleasure to introduce His Excellency, Mr. Juan Antonio Samaranch, President of the International Olympic Committee, to whom I extend the warmest welcome."

The text of Samaranch's speech was as follows:

"Here we are, once again in Los Angeles, where 52 years ago we celebrated the Games of the Xth Olympiad.

"Today, however, our family is much larger. A record score of 140 National

Olympic Committees are taking part in these Games. We are proud to say that a great many of the finest youth in the world are present with us in this historic Coliseum. May I extend a warm welcome to all the athletes and officials. I am sure that they will compete and participate in the true Olympic spirit of cooperation, understanding and friendship without any political influence. Nevertheless, our thoughts also go to those athletes who have not been able to join us. On behalf of the Olympic Movement, I would like to thank the City of Los Angeles, "El Pueblo Nuestra Senora la Reina de Los Angeles," as it was originally called, the State of California, and the entire nation for receiving us with open arms. Our gratitude must also go to the Organizing Committee, and particularly to Chairman Paul Ziffren, President Peter Ueberroth, and also to the more than 50,000 volunteers who are giving so much for the success of these Games.

"Finally, I have the high honor to invite the President of the United States of America, President Ronald Reagan, to proclaim the Games of the XXIIIrd Olympiad in Los Angeles open.

"God Bless America."

Reagan, who became the first United States president in history to open an Olympic Games, called upon his formal acting experience and altered the traditional wording of the opening slightly to, *"Celebrating the XXIIIrd*

Olympiad of the modern era, I declare open the Games of Los Angeles."

Once the Games were officially declared open, only the raising of the Olympic flag remained before the longest torch relay in history was concluded with the running of a final lap and the lighting of the Olympic flame. The Olympic flag was brought into the Coliseum by former Olympians:

Name	Job
Richard Sandoval	escort
Dr. Sammy Lee	escort
Pat McCormick	escort
Wyomia Tyus	bearer
John Naber	bearer
Parry O'Brien	bearer
Al Oerter	bearer
Bruce Jenner	bearer
Bill Thorpe, Jr.	bearer
Billy Mills	bearer
Mack Robinson	bearer

The flag was raised to the traditional music of the *"Olympic Hymn"* which was written in 1896 by Spyros Samaras of Greece. Another traditional part of the ceremony was also observed as 4,000 homing pigeons were released from either end of the Coliseum to symbolize the spirit of

20

27

peace. As the pigeons flew away, the music written for the entrance of the torch, "The Olympian," began.

The entrance of the torch has traditionally been a highly emotional moment for athletes and spectators alike, especially since at most Games the name of the final torchbearer is a closely guarded secret. The light from the torch could be seen in the main tunnel of the Coliseum and the crowd cheered loudly as Gina Hemphill, granddaughter of Jesse Owens and one of two runners to run the first kilometer of the torch relay, entered the Coliseum to run the first lap around the track.

A problem arose as the members of the teams standing in the infield pressed forward to get a better look as the torch passed by. The ceremonies staff used the communications system to instruct the placard bearers to help get the team members back in their correct locations. However, the teams were not ushered back in time to prevent Hemphill from having to struggle through a crowd and at times having to slow to a walk.

After finally running around the track, Hemphill handed the torch to Rafer Johnson who ran up the steps of the peristyle stage. As Johnson climbed to the top of the permanent steps, the hydraulic slip-stair began to rise in front of him and he continued climbing the stairs until he reached the area directly

below the bottom of the archway. After standing on the top stair, Johnson reached up and touched the torch to a tube which allowed the flame to travel up to the Olympic rings, which then burst into flame. The flame then continued up the tube until it reached the top of the cauldron where the Olympic flame ignited to the cheers of an appreciative crowd. The problems Johnson experienced negotiating the steps during rehearsal never materialized during Opening Ceremonies, although it was evident that it took a great deal of physical effort to climb the staircase.

Once the torch was ignited, the flag bearers of each NOC formed a semi-circle around the speaker's podium, which was located on the field. Edwin Moses then took the competitors' oath on behalf of the athletes and Sharon Weber took the officials' oath.

As the flag bearers returned to their positions on the field, the 2,000 members of the multi-national group, dressed in their native costumes, entered the Coliseum and formed a ring around the athletes. At the same time, the members of the International

28

29

27 Members of the multi-national group, all dressed in native costumes, form a circle on the Coliseum track around the athletes.

28 Hands are clasped as a celebration of international brotherhood during the Opening Ceremonies.

29 The spectators clasp hands at Opening Ceremonies as everyone sings "Reach Out and Touch".

Children's Choir took their places on the peristyle stage to sing "Ode to Joy" from Beethoven's Ninth Symphony. As "Ode to Joy" concluded, a young singer, Vicki McClure, stepped forward on the stage to sing "Reach Out and Touch." Simultaneously, the lyrics of the song were displayed on the matrix scoreboard while video tape of people from around the world joining hands was shown on the video scoreboard. Before McClure could instruct the spectators and athletes to join hands, groups of people who had already been swept up in the emotion of the moment joined hands and began to sing along. By the end of the song, more than 180,000 hands had clasped together to celebrate a moment of international brotherhood. Although the athletes were supposed to leave the field after the finale, many stayed behind to continue dancing and singing. Finally, by 2000 hours most of the athletes boarded buses and were on their way back to the villages.

8.03 Closing Ceremonies

8.03.1 Concept and early development

While the Opening Ceremonies were produced to provide a majestic, emotional experience to start the Games on a positive, inspirational note, a totally different atmosphere was desired for the Closing Ceremonies.

It was felt that by the time the competition phase of the Games ended, the athletes' mood would be one of wanting to have fun rather than inspiration. With that thought, the ceremonies staff set out to produce a show full of fun and surprises—a reward to the athletes for a job well done.

The planning for both the Opening and Closing Ceremonies was done at the same time which caused the Closing Ceremonies to take a back seat on occasion. Because a large portion of staff efforts had to be concentrated on planning the Opening Ceremonies—if only because they occurred first on the schedule—the staff divided the planning of Closing Ceremonies into two parts. The first part consisted of all tasks that could not be accomplished in the two weeks following the Opening Ceremonies. Those tasks were given priority and scheduled for completion as necessary. The remaining tasks which could be completed during the two weeks of Games' competition were put on hold until then.

The Closing Ceremonies program was then divided into four parts for planning purposes: the prelude, the marathon, formal ceremonies and the celebration.

8.03.2 Development of the actual plan

The actual development of the Closing Ceremonies script was much simpler than the Opening Ceremonies. From the start, the ceremonies staff wanted the focus of the program to be a spaceship. They also wanted to utilize the enormous technical resources available in Hollywood. In direct contrast to the policy set for Opening Ceremonies, a big name entertainer was used to say "thank you" to the athletes.

Like the Opening Ceremonies, major portions of the Closing Ceremonies program were dictated by the 1978 provisional edition of the Olympic Charter and by the fact that the end of the men's marathon would be held in the Coliseum. Those portions of the show were fairly easy to plan.

The prelude was designed to set the stage for the conclusion of the men's marathon. The staff invited seven previous marathon medal winners to attend the Closing Ceremonies as honored guests and planned to introduce them to the audience. In addition, the staff planned to utilize the two Coliseum scoreboards to allow ceremonies spectators to keep up with the progress of the marathon participants through video of the leaders and a leader board showing times and placings.

Two awards ceremonies were also planned. Following the marathon awards presentation, the medals for the equestrian individual jumping competition were awarded, since the event was held on the same day.

The third section of the show, the formal ceremonies, were dictated by the charter. The charter states that the following order be followed:

- Flag bearers of the participating NOCs march into the arena single file behind the country placard bearers.
- Six competitors from each delegation march in the ceremony without distinction of nationality.
- Flag bearers form semicircle behind rostrum.
- President of IOC proceeds to the foot of the rostrum.
- Greek national anthem is played.
- Greek flag is raised.
- Host country's flag is raised.
- National flag of next organizing committee is raised.
- President of IOC declares Games closed.
- Olympic flame is extinguished.
- "Olympic Hymn" is played as Olympic flag is lowered.
- A five gun salute is sounded.
- Placard bearers, flag bearers and competitors exit.

The LAOOC requested several changes in the program which the IOC granted. The first was to move the extinguishing of the torch to the last part of the charter-mandated portion of the ceremony. The second change was to present an

entertainment portion of the ceremonies after the extinguishing of the torch. In addition, the Antwerp flag exchange to the next organizing city was added to the program for the first time.

Once the IOC granted permission to use the Antwerp flag exchange in the Closing Ceremonies, its proper place in the program had to be determined. The exchange was placed after the raising of the flags from Greece, the United States and Korea. The president of the IOC and mayors of Los Angeles and Seoul were invited to participate in the exchange as were the chairman and executive vice president/general manager of the LAOOC.

After the exchange of the flag, a demonstration of cultural elements from Los Angeles and Seoul was planned.

With the basics of the prelude, marathon and formal ceremonies in place, only the celebration portion of the ceremonies remained. The basic idea was to present something that had never been done before and then stretch the concept to its furthest extreme. Director Tommy Walker had used a small spaceship in a previous show, so it was decided to build one bigger and better. To add to the outer-worldly atmosphere, the staff decided to use a laser light show and an "alien creature."

During the planning of the Closing Ceremonies, the LAOOC was contacted by Union Carbide Corporation with an offer for the use of 90,000 flashlights. The offer was accepted and it was decided to have the audience use the flashlights to "contact" the spaceship. To signal the spaceship, the flashlights were equipped with a blue, red and clear plastic strip that could slide across the light to change the projected color.

In the spirit of producing a spectacular show and taking each element to its limits, the LAOOC planned an enormous fireworks display. The fireworks, 3,000 of which were donated, were used to pay tribute to each of the host cities of the modern Games.

Finally, all that remained in the basic planning was the choice of an entertainer. In spring 1984, Wolper attended a charity benefit where Lionel Richie performed his popular song "All Night Long" accompanied by break-dancers. He was struck by the fact that nothing he had seen came close to projecting the power of that particular song as well as projecting a party-like atmosphere. Richie was asked to rewrite the lyrics of his song especially for the Closing Ceremonies. The idea of using break-dancers during Richie's number was also quite appropriate

since break-dancing originated in the streets of the United States and was just gaining exposure in countries outside of the United States.

8.03.3 Formation of the cast and gathering of the technical elements

The formation of the cast for Closing Ceremonies was infinitely simpler than that for Opening Ceremonies. The marching band, orchestra, choir, placard bearers and tall flags unit were utilized from Opening Ceremonies. The additions to the cast for the Closing Ceremonies were the Dance Theatre of Harlem, the Seoul City Dance Theatre, an "alien," Lionel Richie and 300 break-dancers.

The two additions which required the LAOOC to search for performers were the "alien" and the break-dancers. An exceptionally tall person was needed to play the part of the alien so that with the addition of the appropriate costume, the alien would appear much larger than life. The search resulted in a seven-foot eight-inch local resident playing the part of the alien.

The search for break-dancers proved almost as easy. The ceremonies staff placed advertisements in local neighborhood newspapers asking for break-dancers to attend tryouts at specified times and locations. The LAOOC asked recognized specialists in the area of break-dancing to serve as judges for the tryouts which easily produced the required number of performers.

The gathering of the technical elements for the Closing Ceremonies, however, was as difficult or more so than gathering the cast for the Opening Ceremonies. The first priority of the Ceremonies Department was designing a workable spaceship. The LAOOC contracted with a firm to produce the original design and build a prototype spaceship. However, the firm was not able to complete the project which resulted in a second firm taking over just weeks before the Closing Ceremonies.

The LAOOC contracted with a San Francisco production firm to build the center stage which was designed by the ceremonies art director. The stage was a complicated multi-level structure that housed all the physical elements which made Lionel Richie's "All Night Long" number so spectacular. Included in the stage were provisions for Dancing Waters, pyrotechnics, an orchestra pit, liquid nitrogen smoke effects tanks, pools of water and lighting panels.

Four special four-column light towers were brought in to produce theater-quality lighting. Although the Coliseum stadium lights could have been used, the show required the dramatic effects that could not be achieved without the special lighting.

Ceremonies

The props and wardrobe crew was responsible for assembling the flashlights which were distributed to each spectator. The flashlights, which came packed in boxes, needed to have batteries placed inside and also needed to have the three-colored plastic strip attached. Once the flashlights were assembled, the props crew placed them in plastic bags to ready them for spectators. The volunteer crew also passed out the flashlights prior to Closing Ceremonies.

The fireworks used in the tribute to each of the previous Olympic Games' host cities were donated to the LAOOC by the Japan Shipbuilding Industry Foundation. The lighting of the fireworks and the playing of the accompanying music were coordinated by a computer.

Costume fitting for Closing Ceremonies staff was handled at the design center using the same procedures used for Opening Ceremonies staff. The alien's costume was created by the same artist who created the costumes for the futuristic epic movie *"Star Wars."*

8.03.4 Rehearsal and training

Immediately after the completion of the Opening Ceremonies, rehearsals and final planning for the Closing Ceremonies kicked into high speed. Not only did details surrounding the

Closing Ceremonies need to be completed, but also much of the major work was undone. The spaceship, which was the focal point of the show, was still untested.

The LAOOC rented a vacant high school for use as the rehearsal site for Closing Ceremonies. While much was still undetermined regarding the format of the Closing Ceremonies just weeks before the performance, one fact was inescapable. Whatever occurred at the Coliseum during the ceremonies would be directly affected by the fact that all major technical elements had to be installed within a short 18-hour period between the completion of athletics and the start of the ceremonies.

One of the biggest problems facing the technical crew was the assembly of the complex center stage and the focusing of the lights on the four large lighting towers. To practice this massive undertaking, approximately 300 crew members were utilized to assemble and disassemble the stage on three different occasions. The first rehearsal, which took place at Aviation High School in Manhattan Beach three weeks before the Closing Ceremonies, put into perspective the undertaking at

hand. The stage and lighting sequence took 20 hours to complete, a couple of hours too long. The rehearsal was complicated by the fact that lighting at Aviation was inadequate for a night-time rehearsal, therefore, the rehearsals were conducted during the day. This made practicing adjustment of the lights in the four lighting towers an impossible task. The second and third attempts at putting the stage and lights together resulted in trimming four hours off the initial effort and gave the crew confidence that they could accomplish the task of transporting the equipment and installing it in time for the ceremonies.

The other major worry was the construction and successful testing of the spaceship. The first prototype measured 50 feet, 2 inches in diameter, weighed 3,689 pounds and had a fabric covering which hid the interior structure. The idea was for a helicopter to lift the spaceship into the air where it could be flown to the edge of the Coliseum in view of the spectators. To hide the fact that the spaceship was being lifted by a helicopter, two escort helicopters accompanied the spaceship to account for the noise, the lift helicopter was painted black and all lights in the Coliseum were turned off.

On the first test flight, which occurred in a deserted field just nine days before the Closing Ceremonies, the helicopter lifted the spaceship into the air only to have it collapse two minutes into the

flight. The collapse was caused by some of the welds breaking on the connecting structure and provoked the staff to dub the maiden voyage of the spaceship "the flight of the aluminum taco."

Despite initial disaster, the design crew felt it gave them an opportunity to build a better spaceship. In a matter of days, the second test flight was under way. The covering which had formed a skin over the structure was removed. During the original flight the force of the helicopter rotor draft caused the covering to billow on one side, which not only made the spaceship look unrealistic, but contributed to the collapse of the interior structure. The final design of the ship consisted of nothing more than a generator and trusses which were augmented with strobes, pulsating lights, reflectors, prisms and a search light. The lights placed on the outer rim of the spaceship were computer programmed to light sequentially, giving the appearance of movement to the lights. The lights were controlled by a box which was operated by a passenger in the lift helicopter.

Once the rehearsal of the spaceship flight moved from the deserted field to

the Coliseum, the ceremonies staff had to deal with a whole new set of problems. Because the athletics competition was under way and because U.S. Federal Aviation Administration (FAA) regulations prohibit flight paths passing over people, the rehearsals were held at midnight. The noise created by several helicopters provoked complaints from families living near the Coliseum who were trying to sleep.

The spaceship continued to experience problems during the test flights. The central generator, which was equipped with elaborate computer controls, functioned well on the ground but experienced complete failure when blasted by the rotor draft from the helicopter. The test crew stripped the generator to the bare essentials which ended the problems. Just 20 hours before the performance, the crew successfully tested the spaceship twice.

With the successful testing, there was one other major concern about the spaceship's flight—the weather. On one night during rehearsals, a light fog developed in the Los Angeles area, causing two problems. First, the FAA has established rules regarding flight ceiling levels during fog. If the fog was heavy, the lift helicopter would not be high enough to allow spectators to view the spaceship. If the fog was light enough for the spaceship to be allowed

in the air, the ambient light in the area would be reflected by the fog, thus revealing the structure of the spaceship. Consequently, it was hoped that clear skies would prevail.

The rehearsals of the cast were conducted throughout the two-week period between Opening and Closing ceremonies. A dress rehearsal was conducted at Aviation High School since it was impossible to schedule any rehearsals in the Coliseum. Once the main stage was constructed at the Coliseum, Lionel Richie was able to rehearse briefly before spectators were allowed to enter.

8.03.5 Installation of the physical elements

As soon as the athletics competition concluded at the Coliseum, preparations began for the Closing Ceremonies. A total of two-and-one-half acres of plywood was placed over the Coliseum track to protect it from trucks driven into the Coliseum to deliver the stage and lighting equipment.

Prior to the end of athletics competition, the Closing Ceremonies stage had been broken down into its modular units and packed into forty-six 22-foot

flatbed trucks. At approximately 2100 hours, a total of 60 trucks traveled 16 miles from Aviation High School to the Coliseum in a two-mile long caravan. The caravan was assisted by ground and air police escorts.

A ground cloth was laid on the Coliseum infield to designate where each piece of equipment should be placed. The trucks entered the Coliseum on a specific schedule and each truck was numbered to aid entry in the proper sequence. Since the final installation of the stage was the fourth time the crew put the stage together, the construction proceeded without any major problems.

The installation crew for the four lighting towers encountered problems early in the process. The staff needed three-phase power to erect the lighting towers and planned to utilize four large transformers which were located on the field. However, the Coliseum staff had hooked some generators into the main line that fed the transformers without notifying anyone. When the installation crew hooked up to the transformers, expecting 400 volts of power, they got only 120 volts per phase. The lines were traced, generators found and bypassed. As a result, the lost time caused the focusing of the lights to run late. The lights had to be focused before dawn to achieve the proper effect and was barely finished as the sun rose. The focusing crew was also

delayed because of overcrowded frequencies on the radio communications system. The focusing crew had planned to rely heavily on the radios to communicate from tower to tower for coordination but often could not hear one another or could not break into other conversations.

The other major installation projects for Closing Ceremonies occurred at the peristyle. The main concerns of the lighting crew were providing a dramatic effect at the base of the torch for the trumpeters and alien, simulating the landing of the spaceship by providing bright, flickering lighting behind the peristyle and outlining the peristyle with frontal lighting. The lights used for the simulation of the spaceship landing were heavy concentration, high-candlepower lights that produced a flickering sensation when manual shutters were operated in front of them. For the front lighting, 32 light bars with blue and pink lights were used to produce a soft image that blended well with the 90,000 blue flickering flashlights. The laser lights were installed at the top of the peristyle as were two spotlights which were used to light the Olympic flag.

30 Workmen reassemble the stage on the floor of the Coliseum for Closing Ceremonies.

31

32

31 IAAF President Primo Nebiolo gets set to present a men's marathon award.

32 Athletes break ranks during Closing Ceremonies.

Other elements installed at the Coliseum for Closing Ceremonies were three fenced areas, two for the fireworks display and one to hide the spaceship. One fireworks compound was a 60-foot by 60-foot area north of the peristyle. The second compound was located on the Figueroa Street "finger" and was 60 feet by 250 feet. A fabric-covered fence 120 feet by 150 feet was constructed in front of the Sports Arena for the spaceship.

In a period of 16 hours, the ceremonies construction crew laid 10 miles of electrical cable, installed more than 4,000 lighting elements, laid more than two-and-one-half acres of plywood on the track, installed a 180-foot wide multi-level stage with accompanying special effects and utilized hundreds of thousands of square feet of timber and scaffolding.

8.03.6 Staging and performance of the Closing Ceremonies

The Coliseum was opened to spectators at 1700 hours. Each spectator was given a plastic bag which contained a flashlight as they entered. Over the next two hours, spectators entered the Coliseum and watched the progress of the men's marathon on the large video scoreboard on the peristyle.

At 1845 hours, the prelude to the Closing Ceremonies began with a short fanfare and the introduction of seven former marathon medalists. They were:

- Kee Chung Sohn (KOR) gold medalist in Berlin, 1936
- Reinaldo Gorno (ARG) silver medalist in Helsinki, 1952
- Alain Mimoun (FRA) gold medalist in Melbourne, 1956
- Barry Magee (NZL) bronze medalist in Rome, 1960
- Basil Heatley (GBR) silver medalist in Tokyo, 1964
- Kenji Kimihara (JPN) silver medalist in Mexico City, 1968
- Frank Shorter (USA) gold medalist in Munich, 1972, and silver medalist in Montreal, (1976)

At 1907 hours, Carlos Lopes of Portugal was the first marathon participant to enter the Coliseum, while 200 meters back were John Treacy of Ireland and Charles Spedding of Great Britain.

Lopes' winning time of 2:09.21 broke the Olympic record of 2:09.55 set in 1976 by Waldemar Cierpinski of the German Democratic Republic. Treacy finished second, while Spedding finished third. Seventy-eight runners finished the marathon, with the last runner entering the Coliseum at 1952 hours.

The medal ceremony for the marathon followed approximately 10 minutes after the conclusion of the race as IOC

President Samaranch, assisted by IAAF President Primo Nebiolo, presented the medals.

Ten minutes after the marathon medal ceremony, the medals for the equestrian individual jumping competition were presented. Presenters were IOC Honorary Life President Lord Killanin and Federation Equestre Internationale Secretary-General Fritz Widmer. The medal winners were Joe Fargis (USA), gold medal, Conrad Homfeld (USA), silver medal and Heidi Robbiani (SUI), bronze medal.

Ten minutes later, the Olympic marching band and the orchestra filed into the stadium followed by the parade of national flags and the entrance of the athletes.

The Olympic Charter stipulates that, "...six competitors of each delegation who came to participate in the Games shall march, eight or ten abreast, without distinction of nationality united only by the friendly bonds of Olympic sport." However, several days before the Closing Ceremonies, the LAOOC asked the IOC to waive that provision since thousands of competitors (many more than expected) still remained in Los Angeles. This was necessary because the LAOOC did not have enough seats reserved in the Coliseum for all the athletes who remained. Moreover, it was feared that since so many athletes remained, they would climb over the walls that separate the seating and infield areas to join their teammates. While not concerned with athletes climbing over the walls, the LAOOC was afraid that spectators would follow the rush of athletes. The IOC agreed to allow all the athletes to march in Closing Ceremonies.

The march of athletes took much longer than planned since many of the athletes broke ranks and exuberantly ran around the track waving flags and celebrating. The Coliseum announcer repeatedly asked the athletes to return to the infield but it took 28 minutes to clear the track before the rest of the program could proceed.

Finally, the flags of Greece, the United States and Korea were raised as each of the three countries' national anthem was played. The Antwerp flag exchange followed, the first time the exchange had been made during the Closing Ceremonies. IOC President Juan Antonio Samaranch, Los Angeles Mayor Tom Bradley, Seoul Mayor Bo Hyun Yum, LAOOC Chairman Paul Ziffren and LAOOC Executive Vice President/General Manager Harry Usher participated in the exchange.

33

Following the exchange, the Seoul City Dance Theatre performed a traditional Korean folk dance, "Buchae-Chum" and the Dance Theatre of Harlem performed the finale of George Balanchine's "Stars and Stripes Ballet".

The formal ceremonies neared their conclusion as LAOOC President Ueberroth, who received a long standing ovation when he was introduced, presented his closing remarks.

The following is the text from Ueberroth's speech:

"To all the Olympians who have participated here, please accept our gratitude and heartfelt thanks. At the Opening Ceremony, we said that you were the finest group of athletes ever assembled and you proved that to be true before the eyes of the world.

"More people around the world watched your efforts and your struggles than any event in the history of mankind.

"We thank you for the opportunity to host you and to be the stagehands supporting your efforts.

"On behalf of the millions of Americans who stood by the roadside and watched the torch, and on behalf of a world record number of the finest and most gracious sports fans from around the world who watched these Games in person, thank you for the chance to serve you and to offer friendship and hospitality.

"Our hope for the future is that all the athletes who have competed here will maintain their new friendships and, as your true victory lap of these Olympic Games, go forth as ambassadors of peace and goodwill throughout the world.

"If somehow we have brought the world just a little bit closer together,

then we have, indeed, staged a successful Olympic Games. And, in a small way, perhaps we have secured a better future for all the children of the world."

Ueberroth then introduced IOC President Samaranch who presented Ueberroth with the Olympic Order in Gold and then officially declared the Games of the XXIIIrd Olympiad closed.

The text of Samaranch's speech was as follows:

"In the name of the International Olympic Committee I should like to extend our deepest gratitude to President Ronald Reagan, the people of the United States of America, the State of California, the Friendly City of Los Angeles and especially to its Mayor, Tom Bradley.

"May I express our greatest appreciation to the tens of thousands of volunteers whose contribution has permitted the perfect staging of these Games.

33 A traditional Korean dance production at Closing Ceremonies honored the Games of the XXIVth Olympiad in Seoul, Korea.

34

35

34 A spaceship makes a dramatic entrance at Closing Ceremonies.

35 A spaceship hovers over the Coliseum during Closing Ceremonies.

"Our most special thanks go to the Los Angeles Olympic Organizing Committee, chaired by Paul Ziffren and presided by Peter Ueberroth. Their constant efforts, dedication and wisdom have enabled all of us to experience sixteen wonderful days of sport, peace and friendship under the Olympic flame. We also extend our thanks to the twenty-three International Olympic Sports Federations and the one hundred and forty National Olympic Committees for their unfailing support in the Los Angeles Games.

"We thank all the sports officials, the members of the mass media, the enthusiastic spectators and most of all, you, the athletes who have competed against each other with pride and brotherhood for the glory of sport.

"On behalf of the International Olympic Committee, I am very honored to

present to President Ueberroth the Olympic Order in Gold as an expression of gratitude of the entire Olympic Movement.

"I now declare the Games of the XXIIIrd Olympiad in Los Angeles closed and in accordance with our tradition, I call upon the youth of the world to assemble four years from now in Seoul, Republic of Korea, in order to celebrate with us the Games of the XXIVth Olympiad."

As the lights in the Coliseum grew dark, two spotlights highlighted the Olympic flag as it was lowered and carried out of the Coliseum through the peristyle. Actor Richard Basehart read the words of Pindar, which were written for the original Delphic Games, to an eerily hushed audience:

*Creatures of a day...
What is someone?
What is no one?
Man is merely a shadow's dream..
But when God-given glory comes upon him in victory..
A bright light shines upon us and our life is sweet..
When the end comes, the loss of flame brings darkness.
But his glory is bright forever.*

Shortly after, the Olympic flame grew smaller and then was extinguished as the audience uttered a collective cry of disappointment that the Games finally had come to a conclusion.

The disappointment was short-lived as the audience was instructed to place the blue filter in front of the bulb of their flashlights and turn them on. The Coliseum was transformed into a sea of blue, star-like, twinkling lights that caught the stunned audience by surprise. Then the sound of helicopters was heard and two appeared on the peristyle perimeter followed immediately by the sudden appearance of a large, flashing spaceship. A four-minute sequence occurred in which lights flashed from the infield stage to communicate with the spaceship. The spaceship in turn flashed its lights as if to reply. As suddenly as it appeared, the spaceship disappeared and "landed" behind the peristyle. Bright, flickering lights shone through the peristyle arches and smoke billowed out as well. A burst of light pierced the darkness as the laser lights mounted on top of the peristyle shot blue-green lights across the Coliseum. Spotlights then focused at the base of the torch and out of the darkness stepped an "alien" who proclaimed, "I've come a long way because I like what I've seen."

Within moments after the alien disappeared back into the darkness, a 30-minute fireworks display saluted the previous Olympic host cities. The fireworks and the accompanying music that captured the spirit of each of the previous host cities were coordinated through the use of a computer. The fireworks served as a prelude to more fireworks, water fountains and fog that erupted from the center stage as Lionel Richie and 300 break-dancers took the stage for a specially rewritten nine-minute version of the song "All Night Long." Many of the athletes and spectators were caught up in the enthusiasm of the performance and danced and sang along. After Richie's number, a final burst of fireworks occurred and the Games were officially over. Many athletes stayed on the infield to celebrate and dance on the stage; however, they were asked to leave the stage since it was not constructed to hold excessively large numbers of people.

Finally, the athletes and crowds began to leave the Coliseum as the city of Los Angeles said a final goodbye to the world with the words on the video scoreboards, "We'll See You in Seoul."

8.04 Award ceremonies

The Awards Department was originally a part of the Ceremonies Department which was also responsible for the production of Opening and Closing Ceremonies. However, in January 1984, a separate Awards Department was created to allow both ceremonies and awards to receive proper attention.

The Awards Department was responsible for producing 229 different awards ceremonies in 15 days at 26 different sites and training the staff members needed to produce those ceremonies. In addition, the department was responsible for coordinating the design and production of all charter-mandated Olympic, demonstration sport, exhibition event and commemorative medals as well as charter-mandated certificates and diplomas.

8.04.1 Awards protocol required by the Olympic Charter

Many of the Awards Department's duties were governed by rules set forth in the 1978 provisional edition of the Olympic Charter. The script for each venue awards ceremony was produced by the Awards Department using the following text from Rule 64 as its guideline:

"The medals shall be presented during the Games by the President of the IOC (or a member selected by him), accompanied by the President of the IF concerned, if possible immediately after the event at the place where the competition was held and in the following manner: the competitors who have been judged first, second and third take their places, in their official uniform, on a stand in the stadium facing the stand of honour, with the winner slightly above the second who is on his right, and the third who is on his left. The flag of the winner's country shall be hoisted on the central flagpole and those of the second and third on adjoining flagpoles on the right and on the left, as they face the arena. Mean while the national anthem (abbreviated) of the winner's country is played, during which the three competitors and the spectators shall face the flags."

The design and production of the medals and certificates were also guided by the 1978 provisional edition of the Olympic Charter which states:

"The prizes at the Olympic Games shall be provided by the OCOG for distribution by the IOC. They consist of medals and diplomas. In individual events the first prize shall be a silver-gilt medal and a diploma, the second prize a silver medal and a diploma, and the third prize a bronze medal and a

36

36 Cyclist medal winners during the LAOOC-sponsored 1983 cycling event.

Ceremonies

diploma. The medals must bear the name of the sport concerned and be fastened to a detachable chain or ribbon to be hung around the neck of the athlete. Diplomas but not the medals shall also be awarded for the fourth, fifth and sixth places. All participants in a tie for first, second and third places shall be entitled to receive a medal and diploma.

****Prize medals shall be at least 60 mm in diameter and mm thick. The first and second place medals shall be of silver of a fineness of at least 925/1000 and the first place medal shall be heavily gilded containing at least 6 grammes of pure gold.****

Additional pertinent parameters dictated by the charter were:

- All competitors and officials in the Games shall receive a diploma and a commemorative medal.
- Diplomas and commemorative medals shall be given to all non-competitors who are officially attached to Olympic teams and are recognized by the NOC of their country within the limits specified in Rule 40.
- The members of the IOC, the presidents and secretaries-general of the IFs recognized by the IOC who are present at the Games, as well as those officiating at the Games and officially appointed by the IOC shall also be given diplomas and commemorative medals according to scales fixed by the IOC.

8.04.2 Development of the awards program

The LAOOC originally asked Walt Disney Productions to produce all ceremonies for the Games and hired one staff member to coordinate plans and act as a liaison with Disney. In May 1983, the LAOOC hired a second person to plan the awards ceremonies for the LA83 pre-Olympic events since Disney did not have the time or the desire to produce those. In July 1983, when Disney no longer was associated with the ceremonies, it became necessary for the LAOOC to begin planning the production of the awards ceremonies.

The LA83 events were key in developing the final plans for the Games' award ceremonies. Although the LA83 events trained a staff that was in a planning rather than operational stage, the nine events, which were held from May 1983 to April 1984, allowed the awards staff to continuously modify and improve the plans for the individual sports awards ceremonies.

The awards staff began planning the Games' awards ceremonies by reading previous Olympic final reports, viewing video tapes of past Games and talking to ceremonies personnel from the Lake Placid Olympic Winter Games.

The detailed planning began in fall 1983 when the awards staff devised an awards ceremony schedule which took into consideration all the awards ceremonies produced at all the venues. This was done by going through the composite event schedule and estimating the times at which each final would conclude. Those times were sent to each sports commissioner with a request for corrections and revisions. After the schedule was revised, few changes occurred.

The Awards Department had the monumental task of verifying and securing the correct national anthems and flags for each of the participating National Olympic Committees.

The awards staff worked in conjunction with Pageantry World, the official flag consultant, to obtain the most current books that had pictures of flags displayed in them. The pictures were cut out and pasted both vertically and horizontally on a piece of paper. The appropriate display was sent to each NOC with a request that the page be returned with an approval or correction. Approximately 80 percent of the NOCs replied and the others were contacted again and encouraged to reply. Once the approved pages were returned, Pageantry World used them as examples to manufacture the flags.

To obtain the correct national anthems, the Awards Department sent a telex to each of the NOCs requesting a tape recording. However, unlike the

response for verification of the flags, the majority of NOCs did not reply. Therefore, the Awards Department relied on the U.S. Army Band, which already had a large portion of the anthems in its library, to provide the needed tapes. Those that were not in the library were obtained and verified through embassies.

Although the 1978 provisional edition of the Olympic Charter calls for abbreviated versions of anthems to be played, the LAOOC staff debated the issue throughout the planning stages. In June 1984, the LAOOC decided to play the full-length versions.

The final preparation regarding flags and anthems was the determination of the required numbers of each. The awards staff prepared a chart based upon the estimated participating countries for each sport, the maximum number of places athletes from each country could take and the number of days that award ceremonies would take place for that particular sport. The chart was used to determine the maximum number of flags needed on each day. Additional flags were ordered for a reserve. A total of 1,379 flags were produced.

37

38

37 Fencing medalists receive their awards during ceremonies.

38 Weightlifters congratulate each other on the victory stand.

Much of the rest of the planning for the awards ceremonies was done in conjunction with nine other LAOOC support departments:

- Accreditation; responsible for providing multi-venue passes for the awards pages and trumpeters. Each page or trumpeter worked from one to four venues. Reserve staff could work at as many as 26 venues.
- Architecture and Construction; responsible for working with the awards staff to provide accurate models of each venue showing processional paths, staging locations and flag and podia locations. They also were responsible for designing and constructing a flag-raising apparatus at each venue.
- Ceremonies; provided trumpeters from the Olympic marching band to play at each venue awards ceremony. They also coordinated with the U.S. Army Band to obtain recordings of each NOC's national anthem.
- Design; coordinated the design and production of the Olympic, demonstration, exhibition and commemorative medals and the certificates and diplomas. Also determined the color scheme of the awards podia, medal ribbon and flower bouquets.
- Material Logistics; delivered the awards podia to appropriate venues on specified days.
- Olympic Family Services; worked with an IOC representative to designate the replacement IOC medal presenters in the event the president of the IOC was unable to attend the awards ceremony. Each venue's protocol representative worked with the International Sports Federation to arrange for the IF presenter.
- Sports; worked with awards personnel to designate and approve the processional path and the locations for the holding area, staging area, flag-raising devices and awards podia.
- Technology; provided a sound technician for duplicating national anthems and ordered sound equipment for the venues.
- Transportation; coordinated buses to transport awards ceremony staff from awards headquarters (Main Press Center) to each of the venues. Two vans, two motorcycles and two mopeds were available for emergency transportation.

Additional pre-Games planning included securing the use of a centrally located headquarters for the Games. In February 1984, the Awards Department obtained use of a portion of the

Los Angeles Convention Center's (Main Press Center) North Hall.

The acquisition of space at the Main Press Center was key in planning the dispatch of each of the awards teams. Because the Transportation Department based its press transportation system at the MPC, it was easy to supplement the system to provide efficient transport for the awards teams to each of the venues. The MPC also provided adequate work space and easy access to the Electronic Messaging System (EMS) terminals which were important in obtaining results for the calligraphers to prepare the athlete's diplomas.

Since the awards staff planned to store the medals at the MPC and send them to the venues with the awards team, it was necessary to arrange for an alarm system and safes. Other services planned for the Games included the use of a dry cleaning service that picked-up and delivered uniforms daily and an engraver who was on-call 24 hours per day. The engraver was necessary in case of a tie and was required to engrave the appropriate medal with the sport and event with a turnaround time of 24 hours.

One of the major goals of the Awards Department was to distribute all certificates, diplomas and medallions during the Games rather than mail them after the Games. Since the medallions were not personalized, they were distributed before the start of the Games. The certificates and diplomas were personalized, however, so the awards staff decided to distribute them through each NOC's chef de mission or envoy.

The awards staff devised a plan whereby the calligraphy staff obtained final results from the EMS terminals and then personalized the approximately 4,500 first through eighth place diplomas. The calligraphy supervisor was responsible for obtaining the results and distributing them among the staff. Each of the names was checked for correct spelling using a list provided by the Sports Department as a guide. Once the diplomas were completed, they were filed by country. At the end of the day, the diplomas were boxed, marked by country and taken to each village security package drop-off center for distribution to the NOC service center. Each NOC envoy was responsible for either distributing the diplomas or giving them to the chef de mission for distribution. The awards staff felt the key to this particular distribution plan was making the athletes aware of the procedure so they would know to contact their chefs if the chefs did not contact them.

The Awards Department also offered an auto-pen service to each of the signees of the athletes' certificates.

While it is customary for IOC and OCOG presidents to personally sign all diplomas given to first through eighth place finishers, each gratefully accepted the auto-pen service. Matrixes were made for each of the four signees, IOC President Juan Antonio Samaranch, LAOOC Chairman Paul Ziffren, LAOOC President Peter V. Ueberroth and LAOOC Executive Vice President/General Manager Harry Usher. Two staff members worked approximately 80 hours on the auto-pen machines to apply the signatures.

8.04.3 Design of the physical elements of the ceremonies

Physical elements, other than medals, which were necessary for the awards ceremonies included awards podia, flagpoles and flag-raising devices, flower bouquets, medal pillows and uniforms.

The awards podia were three-foot square boxes that were 24 inches high for first place and 12 inches high for second and third places. The podia were painted using three of the LAOOC's Look colors: magenta, vermillion and chrome yellow and had the numeral 1, 2 or 3 painted on the front to designate placing. The number of podia per awards ceremony was determined figuring two people could stand on each square.

The use of either a flagpole or flag-raising device depended upon if the venue was indoors or outdoors. Indoor venues utilized a mechanical horizontal flag-raising device with bars that were long enough to accommodate more than three flags in sports where a tie possibility existed. The flags were displayed vertically.

For outdoor venues, a 35-foot flagpole was used for first place and 30-foot flagpoles were used for second and third places. The arrangement of the poles corresponded with the arrangement of the awards podia.

The flower bouquets were designed to stay within the LAOOC's Look. The Los Angeles city flower, the bird of paradise, was used as the main stem and was combined with gerbers, orchids, lactrus and greenery. An arrangement that was appropriate for all athletes, male or female, was used.

The use of flower bouquets during the awards ceremonies was dictated by tradition in each of the particular sports. Each sports commissioner was consulted to determine if flowers were appropriate, and, if so, if they were appropriate for both men and women. The LAOOC provided flowers for ceremonies as follows:

Sport	Flowers?	Recipients
Archery	yes	M and F
Athletics	yes	F only
Wheelchair	yes	M and F
Baseball	yes	
Basketball	no	
Boxing	yes	
Canoeing	yes	M and F
Cycling	yes	M and F
Equestrian	yes	M and F
Fencing	yes	M and F
Football	yes	
Gymnastics	yes	M and F
Handball	yes	F only
Hockey	yes	F only
Judo	yes	
Modern Penthalon	yes	
Rowing	yes	M and F
Shooting	yes	M and F
Swimming	yes	M and F
Diving	yes	M and F
Synchronized Swimming	yes	
Tennis	yes	F only
Volleyball	yes	F only
Water Polo	yes	
Weightlifting	yes	
Wrestling	yes	
Yachting	yes	
Boardsailing	yes	

M = male F = female

The medal pillows were produced by an LAOOC licensee, Moochie's. The 12-inch by 16-inch pillows were approximately one inch thick and covered by white velvet. A total of 60 pillows were made.

There were several types of uniforms designated for awards staff. All ceremony pages received white tailored suits with men receiving white shirts and ties and women receiving aqua shirts. Flag raisers received an additional military-style jacket.

Other equipment utilized by the awards staff included a sound system that consisted of speakers, cart machine (tape deck), mixer, cassette deck and microphone. This equipment was set up by a sound technician but supervised by an awards staff member. Tapes that were provided for the awards ceremony included anthems, the "Olympic Hymn": "Los Angeles Olympic Theme", trumpet fanfare and a sound-check tape. All tapes at venues were stored in duplicate in case of breakage, distortion or loss.

Ten emergency uniform repair kits were available to assure that the awards team presented the proper image at all times. Included in the kit were safety pins, glue, a sewing kit, bandages, facial tissues, string, spot remover, hand mirrors and tape.

39

**8.04.4
Fabrication of the medals**

The design and production of the medals was a long process that began in May 1983 and concluded with the delivery of the medals during the second week of July 1984.

In May 1983, the LAOOC signed a contract with Jostens, a leading manufacturer of commemorative rings, medallions and awards, to produce the charter-mandated medals, medallions and diplomas. Shortly thereafter, the first designs were produced for the gold, silver and bronze medals as well

as separate designs for the demonstration sports medals for baseball and tennis.

The first designs were just a prelude to a long process of designing and redesigning prototypes for approval by the LAOOC. In a December 1983 approval meeting, the LAOOC asked to have the medals redesigned. Dugald Stermer, a well-known designer and artist, was asked to take over the designing of the medals.

41

41 Women's springboard diving medalists stand at attention during the playing of the Canadian national anthem.

The medals for 1984 were an adaptation of the original design by Florentine artist Giuseppe Cassioli created for the 1928 Games in Amsterdam. The medals for the past three Olympic Games used versions of the Cassioli depiction of victory on the obverse (front) side of the medals but each had its own design on the reverse side. Stermer took into consideration the LAOOC's desire to respect as many long-standing Olympic traditions as possible, and returned to the full Cassioli design. At the 1932 Los Angeles Games, medals with both

sides depicting the Cassioli design were used and it was thought that a *Star in Motion* or stylized torch would not go well with the neo-classical Cassioli design on the front. Stermer chose the front of the 1932 medal and the back of the 1936 medal to serve as initial examples for the more refined medal he created.

The front side showed the Lady Victory with definition added to the background and more overall depth to the sculpting providing better perspective. The facial features were changed on nearly all the figures and on the design on the back of the medal, the faces and bodies were redrawn to suggest ethnic diversity and more accurate musculature.

Stermer's design required 100 hours of modeling time by Jostens' chief artist, Ray Standke, who moved his engraving table and tools home to devote his full attention to the project.

The completed medals actually exceeded the charter-mandated specifications for thickness and gilding. The medals were 60 mm in diameter and 4 mm thick. The first place medal was gilded with 6.5 grams of 24 karat gold.

Medals of a different design were created by Stermer for the top finishers in the demonstration sports of baseball and tennis and the exhibition sports of boardsailing and wheelchair competition. These medals were produced according to the same specifications as the other competition medals.

The design and production of the medal ribbon also underwent a great deal of scrutiny. Throughout most of the planning stages for the medals, the LAOOC decided to use ribbon that consisted of the five colors of the Olympic rings. However, to blend with the awards podia and the overall look of the venues, the ribbon design was changed to three of the LAOOC's festive colors; aqua, magenta and chrome yellow.

Each of the medals was stored in a blue velvet case that was protected by a cardboard enclosure box.

8.04.5 Other awards: Commemorative medals, certificates and diplomas

The LAOOC produced hundreds of thousands of certificates throughout its existence. The Awards Department was responsible for overseeing the design and production of those medals, certificates and diplomas which were charter-mandated. Those included the athletes' and officials' participation certificates, the first through eighth place diplomas and the commemorative medals.

The Awards Department established a goal of distributing each of the charter-mandated medals and certificates during the Games rather than mailing them after the Games. To accomplish its goal, the department set up a system to maintain a constant distribution system throughout the Games utilizing each NOC's chef de mission and envoy.

The commemorative medals and the certificates were produced by Jostens. The medals, which were bronze in color and encased in a blue velvet box, were delivered to the villages⁷ July 1984. A total of 12,500 medals were delivered (7,000 to the USC Village, 4,500 to the UCLA Village and 1,000 to the UCSB Village) in time to be distributed with the athletes' and officials' gift packs. Additional medals were delivered for IOC/NOC officials (1,400) and technical officials/jury members (2,000).

The participation certificates were personalized by the calligraphy staff during the weeks before the Games and during the Games. The staff used the athlete list provided by the Sports Department to verify names. Once the certificates were completed, they were boxed by country and delivered to the villages. There, the envoys and chefs de mission were requested to pick up the certificates and distribute them to the appropriate athlete.

The distribution of the first through eighth place diplomas was handled in a similar manner. Once results were available on the Electronic Messaging System, the calligraphy staff personalized the diplomas and filed them by country. They were distributed to the athletes through envoys and chefs de mission.

The approximate numbers of charter-mandated certificates and diplomas were as follows:

- First through eighth place diplomas, 4,510
- Officials commemorative certificates, 5,900; technical officials/jury members, 2,000; IOC/NOC, 1,400; team officials, 2,500
- Athlete participation certificates, 7,000

In addition to the charter-mandated certificates, the LAOOC produced numerous others to show appreciation to the thousands of participants and staff, both paid and volunteer, who were instrumental in the Games' success. A sampling of various certificates follows:

- Arts Festival; 15-inch by 15-inch certificates which read, "In recognition and appreciation for your contribution to the success of the Olympic Arts Festival Los Angeles, 1984." Beneath those words was the colorful logo of the arts festival and silver Olympic rings. The certificates were signed by LAOOC Chairman Paul Ziffren, LAOOC President Peter V. Ueberroth, LAOOC Executive Vice President/General Manager Harry Usher and Olympic Arts Festival Director Robert J. Fitzpatrick.
- Citizens Advisory Commission; 10-inch by 12-inch certificates which read, "In recognition and appreciation to (place for name) for your participation in the Citizens Advisory Commission Olympic Orientation Workshop in preparation for the Games of the XXIII Olympiad Los Angeles, 1984." Beneath those words were a silver *Star in Motion* and Olympic rings. To the left of the words was a silver pictogram of a torchbearer. The certificates were signed by Ziffren, Ueberroth and Usher.
- Greek Torch Relay; 10-inch by 12-inch certificates were produced for the participants of the Greek portion of the torch relay. However, they were never distributed. The words of appreciation were written in Greek with a red pictogram of a torchbearer over the words and a silver *Star in Motion* and Olympic rings below. The certificates were signed by Ziffren, Ueberroth and Usher.
- LA83; 10-inch by 12-inch certificates were used for most of the events to thank competitors and staff, both paid and volunteer, for their part in the LA83 events. A generalized format was followed using a *Star in Motion* and LA83 logo and the appropriate sport pictogram. The certificates were personalized by calligraphers and signed by Ziffren, Ueberroth and the appropriate sport commissioner.
- Operations Center; 10-inch by 12-inch certificates were produced as a morale booster for staff at the LAOOC's operations center which was expected to be very busy but was actually under-utilized since the Games ran so smoothly.
- Torch Relay; 10-inch by 12-inch certificates were produced for participants in the torch relay. A blue pictogram of a torchbearer and the words, "In recognition and

appreciation for your participation in the 1984 Olympic Torch Relay in support of the Games of the XXIII Olympiad Los Angeles, 1984." The words "Los Angeles Olympic Organizing Committee" were placed to the left of a silver *Star in Motion* and Olympic rings. The certificates were signed by Ziffren, Ueberroth and Usher.

- Volunteers and staff; 10-inch by 12-inch and 15-inch by 15-inch certificates were produced and distributed to each volunteer who participated in the Games from ceremonies performers to access control monitors. The larger certificates had a place for a name while the smaller ones were generic. Each had a silver *Star in Motion* and Olympic rings and the words "Los Angeles Olympic Organizing Committee." Both were signed by Ziffren, Ueberroth and Usher. The general phrasing of the certificates was, "In recognition and appreciation for your contribution to the success of the Games of the XXIII Olympiad Los Angeles, 1984."

8.04.6 Recruitment and training of the awards staff

The Awards Department recruited approximately 275 people to provide the services required during the Games period. This included a calligraphy staff of 41,210 awards pages and 26 venue ceremonies managers. Additionally, the Awards Department supervised multiple groups of six trumpeters that were provided by the Ceremonies Department.

The calligraphy staff consisted of 40 calligraphers plus one supervisor. Some of the calligraphers were recruited from Southern California calligraphy associations and they in turn recommended others. The calligraphers were located at the Main Press Center during the Games and were responsible for personalizing the certificates for each of the athletes who placed first through eighth. The calligraphy staff also personalized each of the athletes' participation certificates.

To coordinate the venue awards ceremonies, the Awards Department instituted a program whereby each sport had its own venue ceremonies manager (VCM) who was on-site to stage and manage the ceremonies. The Awards Department asked each commissioner to appoint the VCM for

42 Certificates of recognition were presented to all members of the cast and crew of Opening Ceremonies.

Ceremonies

his or her venue to ensure the VCM had a good working knowledge of the sport and a good relationship with the commissioner and venue management. VCMs were appointed as early as September 1983 and as late as June 1984.

The Awards Department also carried through a plan initiated by Disney to recruit pages for the ceremonies. In May 1983, Disney contacted 44 colleges and universities to inquire if they were interested in participating in the ceremonies pages program. The program consisted of identifying a contact at each school who in turn sent eight nominees to a presentation which was conducted by the LAOOC in fall 1983. Nominees were required to be 1984 graduates. During the presentation, the awards staff explained the pages program and invited those who were interested to sign up for interviews. The interviews were conducted at the LAOOC's Westwood staffing center by 20 interviewers designated to work with the Awards Department. The interviewers were trained by the awards staff and given a questionnaire developed by the awards staff. Eventually, 240 people were selected to participate in the pages' training program.

Training for both the VCMs and the pages was planned and conducted by the awards staff. VCMs were given written materials to study before attending a training session in March 1984. The training session consisted of viewing video tapes and slides of ceremonies and discussing the operating plans for the venues. VCMs were required to attend a second workshop which was conducted in June 1984 and to participate in on-site training sessions at their specific sport venues.

The pages were required to attend a minimum of two workshops to prepare for their role during the Games. The workshops were conducted during May and June 1984 and consisted of seminars on flag folding, flag raising, carrying the medal pillows, walking to the beat of the music, arm swing and posture and flag and anthem recognition. The pages also participated in re-enactments of actual awards presentations. An additional workshop was scheduled in July 1984 to concentrate on marching skills.

Once the training sessions were completed, the pages were divided into 10 teams and given a particular assignment to perform within the team. Those assignments were:

- Team leader (1 Male or Female); main assistant to the VCM who was responsible for support functions in all areas of the venue including briefing presenters and helping to stage the processional group.

- Public address coordinator (1 M/F); served as a liaison among the VCM, announcer and technician and was responsible for providing technician with the correct music tape and cueing public address announcer.
- Results relay (1 M/F); responsible for providing VCM with correct, official results as soon as available. The results relay was required to remain at the results area in case of any last-minute changes.
- Medal supervisor (1 M/F); responsible for the safe transport of the medals from the Main Press Center to venue. Medals were to remain in the medal supervisor's possession at all times until distributed to the medal bearers.
- Presentation supervisor (1 M/F); responsible for making sure the physical appearance of the awards team was acceptable. That included making sure no buttons were missing, shoes were tied, hair was combed and makeup was appropriate. The supervisor was responsible for the awards team's personal belongings and also distributed the flower arrangements.
- Athlete escort (1-4F); accompanied and directed the athletes from the staging area, through the processional, to the awards podia and back to the staging area. Also served as a flower bearer during large team awards ceremonies.
- Presenters escort (1F); accompanied and directed the presenters from the staging area, through the processional, to the awards podia and back to the staging area.
- Medal bearer (3-6F); carried medal pillows and, where appropriate, flower bouquets. Presented the medal pillows (and bouquets) to the presenters.
- Flag supervisor (1M); selected and distributed the appropriate flags to the flag bearers. Escorted the flag bearers to and from the flag raising device and supervised the actual ceremony to make sure flags were raised at the same time and to the maximum height.
- Flag raisers (6M); raised flags under the direction of the flag supervisor.
- Flower bearers (3F); used in the largest team events to supplement the medal bearers and athlete escorts.
- Reserve (1 M/F); assisted and filled in where needed. Was trained in all the positions.

The standard awards team size was 18. However, in team sports, an athlete escort was used for each place winner and two medal bearers were required.

Flags lowered and folded. Flag bearers march out.

8.04.7 Responsibilities of the awards group during the Games

The awards staff was responsible for producing 229 award ceremonies in 15 days at 26 different sites. On an average day, 108 awards pages were utilized to participate in 14 different ceremonies. The Awards Department was not only responsible for staffing each of the ceremonies, but also for making sure the correct flags and anthems were used, the presenters

Sound

Announcer: "Ladies and gentlemen, the victory ceremony for the (name of event) will now commence."

Taped processional music is played.

Music lowered for announcer: "Medals will be presented by (IOC representative's name) accompanied by (International Federation representative's name)." Bring up music.

Fade out music. Announcer: "Winner (country's name), Olympic champion (recipient's name)."

Announcer: "Winner of the silver medal, representing (country), (name of athlete(s))."

Announcer: "Winner of the bronze medal, representing (country), (name of athlete(s))."

Announcer: "Ladies and gentlemen, please rise for the playing of the national anthem of (name of gold medalist's country)."

Taped national anthem.

Taped Olympic theme music.

Music fades out

arrived on time, the medals were transported from the Main Press Center to the correct venue site and that teams were briefed on awards procedures.

During the Games, the Awards Department operated from a central location, the MPC, and dispatched the needed staff and materials from there. Awards teams were assigned on the basis of

the frequency of awards ceremonies at a particular venue. For example, at the athletics venue, awards ceremonies occurred frequently throughout the entire competition. Therefore, one specific awards team was assigned to the athletics venue for the duration. However, since athletics did not begin until 3 August, that particular awards team could be assigned to another venue until then.

On a day when an awards team had a ceremony to perform, the team was required to report to the MPC at least one hour prior to scheduled departure time. This was necessary to make sure all team members arrived, received clean uniforms and gathered the rest of the materiel that was necessary for their particular award ceremony. Completed scripts, including the names of the presenters, were passed out and the medals were taken from the vault and given to the medal supervisor. In venues where more than one award ceremony took place, the rest of the materiel was stored at the venue. That included anthems, flags, medal pillows and technical sound equipment.

Travel times for the awards teams were scheduled so that each team arrived at the venue at least two hours before the scheduled start of the awards ceremony. This gave the teams time to eat and relax before the start of the ceremony. It also provided enough time for the team to review any last-minute details with the venue ceremony manager.

In addition to serving as a liaison between venue management and the awards team, the venue ceremony manager was responsible for making sure all elements of the ceremony were checked prior to the ceremony. In cases where the awards podia were not permanent, that included making sure the podia were placed near the field of play where they could easily be set up after competition concluded. It also included making sure flower deliveries were made, sound equipment was on-site and tested and tapes and flags of the appropriate NOCs were

available. In the case where a scheduled presenter was unable to participate in the awards ceremony, the venue ceremony manager was also responsible for coordinating with the Protocol Department and the venue commissioner to arrange for a substitute. Where substitutions were made, the appropriate changes in the scripts were made.

8.05 ***Summary and recommendations***

The Ceremonies Department successfully achieved its goals of providing a positive, emotional and thrilling start for the Games and a technically exciting, fun-filled conclusion.

Approximately one year before Opening Ceremonies, the LAOOC formed its own production staff headed by an internationally recognized filmmaker. Within a nine-month period, the staff planned the format for both Opening and Closing ceremonies, recruited

performers, arranged for specially-written music, conducted rehearsals and produced two spectacular shows. Recruiting approximately 10,000 ceremonies staff members, gathering the technical support, conducting rehearsals and coordinating with the LAOOC's support departments was an enormous undertaking that was not without its problems. However, each of the areas was eventually handled successfully.

A dress rehearsal at the Coliseum two days before the Opening Ceremonies concluded a hectic pre-performance schedule that included 380 rehearsals and 304,000 rehearsal hours. The dress rehearsal allowed the ceremonies staff to refine the program and make several major changes. It also allowed the entire staff to simulate all portions of the Opening Ceremonies day.

43 Swimming medalists wave to the crowd.

Ceremonies

The Opening Ceremonies welcomed athletes from 140 National Olympic Committees, the most ever to attend an Olympic Games. The program featured the *"Music of America"* and performers included an 800-member marching band, 1,262 drill team performers, 1,000 Olympic Honor Choir members, 300 professional dancers, an orchestra, 85 pianists, a fanfare unit and more than 1,500 multi-national representatives sporting their native costumes.

The audience played a large role in the ceremonies program by participating in the largest card stunt in Olympic history. Each of the spectators raised a colored plastic card to form the flags of each of the participating NOCs.

The highlights of the ceremonies were the lighting of the Olympic flame by 1960 Olympic decathlon gold medalist Rafer Johnson and the rousing finale, *"Reach Out and Touch"*, where more than 90,000 people joined hands and sang along with the chorus.

The Closing Ceremonies provided a diverse program which began with the final lap of the men's marathon and ended with fireworks and break-dancers lending support to Lionel Richie's special version of his song, *"All Night Long"*. The Closing Ceremonies program was centered around the appearance of a huge, flashing spaceship which signaled to the audience and was answered by lights from the multi-level center stage. The audience participated in the program by turning on flashlights that had blue filters in front of them, turning the Coliseum into a twinkling, star-like bowl.

A 30-minute fireworks display that saluted each of the previous Olympic sites, the appearance of a larger-than-life "alien" and a laser light show were other highlights of the program.

The installation of the physical elements for the Closing Ceremonies was a tremendous undertaking and was accomplished in 16 hours between the end of the athletics competition and the entrance of spectators for the Closing Ceremonies. In total, the ceremonies construction crew laid 10 miles of electrical cable, installed more than 4,000 lighting elements, laid more than two-and-one-half acres of plywood to protect the track, installed a 180-foot multi-level stage with accompanying special effects and utilized hundreds of thousands of square feet of timber and scaffolding.

Recommendations from the ceremonies staff include:

- A different producer should be hired for Opening and Closing Ceremonies. The pressure of the approaching Opening Ceremonies caused Closing Ceremonies planning to be delayed or postponed.
- The ceremonies staff recommends that the program order followed during the Games of the XXIIIrd Olympiad be retained and that the Antwerp flag exchange continue to be held during Closing Ceremonies.
- Future organizers should try to avoid combining an athletic event with ceremonies. Spectators who are interested in a ceremonies event are not necessarily sports fans.

The Awards Department, which originally was part of Ceremonies, became a separate department to allow each area to receive more attention. During the Games, it produced 229 awards ceremonies at 26 different sites utilizing a staff of approximately 275 people.

The Awards Department was responsible for overseeing the design and production of the Olympic, demonstration sport and exhibition event medals as well as all Olympic Charter-mandated commemorative medallions, diplomas and certificates.

The Main Press Center was utilized as Awards Department headquarters during the Games and provided a centrally located area for the dispatch of the individual awards teams via already available transport. The MPC also housed the calligraphy staff which was used to personalize the thousands of award and participation certificates.

Prior to the Games, the awards staff recruited and trained the awards ceremonies staff and also obtained and verified the correct flags and national anthems for each of the participating NOCs. The awards teams were required to attend a minimum of two training sessions in addition to a dress rehearsal at the specific venue site.

Each of the awards ceremonies were performed without any major problems. No incorrect flags or national anthems were used and each ceremony was performed in English and French.

9

Corporate Relations

9.01 Characteristics of the corporate marketing program

Licensing was a fundamental component in the LAOOC's successful effort to finance the Games through the private sector. Major corporations, in participation with the LAOOC, committed to support the Games with specified amounts of money and materials in return for the right to use the Games' symbols in their advertising and marketing. The Organizing Committee separated the licensed companies into three distinct groups commonly known as sponsors, suppliers and licensees. The following general criteria were used in distinguishing among the three categories.

9.01.1 The sponsors

In most cases these firms were large, multi-national corporations which paid a minimum of \$4 million each to the LAOOC in cash, goods and services in exchange for being designated an "official" sponsor of the Games. Sponsors were granted immediate use of all LAOOC symbols in advertising and promotional activities. This included the *Star in Motion*, *Sam the Olympic Eagle* and all LAOOC sport pictograms. Additionally, sponsors were able to obtain reservations for hotel rooms reserved by the LAOOC for Olympic Family use and purchase blocks of tickets reserved outside the mail order and random selection procedures established for regular ticket sales. Approximately six percent of the tickets available for the Games were purchased by sponsors. The following 35 corporations were official sponsors of the 1984 Olympic Games:

Official sponsors	Date
ABC Radio Networks Official Host Radio Broadcaster	July 1980
ABC Television Official Television Network/ Host Broadcaster	Sept. 1979
Allied Corporation Official Sponsor	Sept. 1981
American Express Company Official Charge Card Official Travelers' Cheque	Dec. 1980
Anheuser-Busch, Inc. Official Beer	Dec. 1979
ARA Services, Inc. Official Food Service Management Company Official Athlete Transportation Management Company	Sept. 1982
Arrowhead Puritas Waters, Inc. Official Water/Drinking Water	Jan. 1980
American Telephone and Telegraph (AT&T) Official Sponsor of the 1984 Olympic Torch Relay, Official Telecommunications Sponsor	July 1983
AT&T-Teletype Corporation Official Sponsor	July 1983
Atari Official Coin-Operated Video Games Official Home Computers Official Home Video Games	Dec. 1982
Atlantic Richfield Company Official Gasoline Official Motor Oil	Oct. 1980

Official sponsors	Date
Buick Motors/GMC Trucks General Motors Corporation Official Automobile Official Truck	Aug. 1981

Fuji Photo Film Co., Ltd. Official Photographic Products and Services	Nov. 1981
International Business Machines, Inc. (IBM) Official Personal Computer Office Systems Equipment and Office Systems	Apr. 1983
Levi Strauss & Co. Official Outfitter (Levi Strauss was the supplier of LAOOC staff and athlete uniforms and the licensee for most apparel items)	Aug. 1981
McDonald's Corporation Official Fast Service Restaurant	July 1980
M & M Mars Inc. Official Snack Foods	July 1982
Motorola Communications & Electronics, Inc. Official Radio Communications Equipment/Official Pagers	June 1982
Pacific Bell Official Sponsor	July 1983
Sanyo Electric Company, Ltd. Official Video Products	Dec. 1981
Southern Pacific Company Official Sponsor	May 1983
The Southland Corporation Official Convenience Food Store and Convenience Store	Jan. 1981
Sports Illustrated "Official Olympic Souvenir Program"	Dec. 1981
The Times Mirror Company Corporate Sponsor of the Olympic Arts Festival	May 1982
Transamerica Corp. Transamerica: Official Insurance Company Budget Rent-A-Car: Official Car and Truck Rental Company	Aug. 1982
United Airlines Official Airline	Dec. 1980
Warner Communications, Inc. Official Sponsor	Dec. 1982
Westinghouse Electric Corp. Westinghouse: Official Office Furniture & Supplier Longines-Wittnauer: Official Clocks and Watches (licensee for watches and clocks) Swiss Timing: Official Timekeeper (supplier of timing and scoring equipment) Perrier: Official Mineral Water	Nov. 1982
Xerox Corporation Official Copiers and Facsimile Units	Dec. 1982
Special Designation: Dentsu, Inc. Official Marketing Agent for Japan	Mar. 1980

9.01.2 The suppliers

These were companies that provided a combination of products, services and cash needed by the LAOOC in staging the Games. Supplier contributions were usually worth in the hundreds of thousands of dollars. Suppliers were only granted the right to use the *Star in Motion* symbol in advertising and promotional activities. The following 64 companies were official suppliers of the 1984 Olympic Games:

Official suppliers	Date
Adidas Handballs and soccer balls	Feb. 1984
Allied Fibers & Plastics Carpeting	Feb. 1984
AMF American Inc./ Athletic Equipment Division Gymnastic equipment	Mar. 1982
American Medical International, Inc. Urgent health care services	Oct. 1983
Bat Taraflex Handball & volleyball flooring	May 1982
Beatrice Foods Co. (Meadowgold, Eckrich & Sons Meats) Meat & dairy products	Feb. 1984
Brother Industries, Ltd. Typewriters	Apr. 1981
Bushnell/Division of Bausch & Lomb Vision care products, binoculars, spotting scopes	Oct. 1983
Campagnolo-USA, Inc. Cycling technical assistance	Sept. 1983
Campbell-Taggart, Inc. Bakery products	Sept. 1983
Conroy's, Inc. Florists' products/services	Nov. 1983
Crown Zellerbach Corp. Distribution services	Sept. 1983
DHL Corporation/ DHL International Courier services	June 1983
Dunhill Trading, Inc. Video projectors and display screens	Sept. 1983
Ernst & Whinney Manager/operator results system	June 1982
Everlast Sporting Goods Manufacturing Co., Inc. Boxing equipment	Feb. 1983
Foster Farms Poultry products	May 1983
Garrett Metal Detectors Metal detectors	Mar. 1984
Glavsportprom of the USSR Committee for Physical Culture & Sport Visti fencing equipment	Apr. 1983
H.G.B. Backstrand Wrestling mats	Sept. 1982
Horner Flooring Co. Basketball flooring	Apr. 1984
Hughes Helicopters, Inc., Helicopters	Feb. 1983
Jeffries Banknote Company Printer for the 1984 Olympic Games	Aug. 1983
Jostens Recognition and motivation awards and products	May 1983
Judogi Judo mats	May 1982
Kimball Piano and Organ Co. Pianos	Apr. 1984

Official suppliers	Date
King Musical Instruments Sousaphones	May 1984
Levi Strauss & Co. Games outfitters	Aug. 1981
McDonnell Douglas Automation Company Results computer services	Jan. 1983
Mission Industries Textile rental service systems	Apr. 1984
Molten Corporation Basketballs	Mar. 1982
Monterey Institute of International Studies Press interpreters and translators	Sept. 1983
Musco-Sports Lighting Inc. Portable lighting systems	Apr. 1983
Muzak Programmed music services	Oct. 1983
Myojo Rubber Industry Co. Ltd. (Mikasa) Volleyballs and water polo balls	June 1982
Nutrexpa Powdered drink mix	July 1983
Pageantry World Inc. Flags, flagpoles and banners	Jan. 1982
Panasonic Industrial Co. Sound systems	Jan. 1984
Pay-Fone Systems, Inc. Payroll processing services	Nov. 1983
Physio-Control Medical equipment	Apr. 1984
Plantronics, Inc. Headsets	Apr. 1983
Porter Equipment Company Basketball equipment and football, handball, hockey and water polo goals	July 1982
Rawlings Sporting Goods Co. Baseball equipment	Jan. 1984
Rust-Oleum Corporation Paint products	Aug. 1983
Scanray Corporation X-ray screening equipment and technical services	Jan. 1984
Senoh Corp. Volleyball equipment	July 1982
Sunkist Growers, Inc. Fresh citrus fruit	Sept. 1983
Superturf International, Inc. Hockey surface	July 1982
System Parking, Inc. Parking planning and management	June 1983
Toledo Scale Weighing equipment	Apr. 1983
Toshiba Corporation Electrical appliances	Apr. 1984
Toyo Suisan Kaisha, Ltd. (Maruchan, Inc.) soup	July 1983
Turner Industries, Inc. Olympic torch	Sept. 1983
UCS, Inc. Track and field equipment	Aug. 1982
USA Suzuki Motor Corp. Motorcycles, helmets and all-terrain vehicles	Sept. 1983
Union Carbide Corporation Flashlights and batteries	Apr. 1984
F.B. Vandergriff & Co. Customhouse broker	Dec. 1982
Vidal Sassoon, Inc. Hair care consultant	Jan. 1984

Official suppliers	Date
Vons Grocery Company Food products, excluding poultry, fresh citrus fruit and baked goods	Nov. 1983
Walker Interactive Products Financial and inventory systems software	Nov. 1982
Waste Management Inc. Waste management	Apr. 1983
Western Union International (MCI Communications Corporation) Telex and international electronic message services	Jan. 1983
Windsurfing International, Inc. Sailboards	June 1983
York Barbell Company Weightlifting equipment	Dec. 1982

9.01.3 The licensees

These were companies authorized by the LAOOC to manufacture and sell a variety of souvenir products featuring all LAOOC symbols. Royalties were paid to the LAOOC on the sales of these licensed products. The standard royalty rate was 10 percent and the LAOOC required that the licensees pay a guaranteed minimum royalty, a portion of which was due at the time of signing. Eight of the following 65 licensees are Adidas sub-licensees:

Official licensees	Date
ABC Publishing, Inc. <i>Official Olympic Guide to Los Angeles</i>	July 1981
Access Press, Ltd. 96-page <i>TV Viewers Guide</i>	Sept. 1983
ACM International Lap blankets	Mar. 1984

Weatherby, Inc. 1000 limited edition custom rifles	Jan. 1984
Weingeroff Enterprises, Inc. Plastic costume jewelry	Jan. 1983
Zuni Craftsmen Cooperative Handcrafted Native American jewelry	Jan. 1984

An initial combined goal of \$116 million was established for the sponsor, supplier and licensee programs. This represented a substantial increase in licensing revenue compared with past Olympic Games. Montreal and Moscow had raised roughly \$17 million each from licensing activities. The difficult task confronting the LAOOC was to develop and implement a program which would generate as much as a ten-fold increase in revenue over the same activities in past Games.

9.02 Controls governing the use of Olympic symbols

The LAOOC copyrighted its logo, the *Star in Motion*, its mascot, *Sam the Olympic Eagle*, and its pictograms. Additionally, these symbols were registered as service marks and trademarks. Only authorized users were allowed to utilize these symbols for any purpose, including advertising, promotion or fund raising. It was the use of these symbols which was sold to the sponsors, suppliers and licensees and the Organizing Committee was obligated to protect sponsors' rights by restraining any unauthorized use. Enforcement actions against

infringers were actively pursued. Some companies were able to associate themselves with the U.S. Olympic Team but were not official LAOOC sponsors and were not allowed to use any of the LAOOC's symbols. The United States Olympic Committee established its own group of sponsors to help raise funds to finance its activities. Under a federal statute known as the Amateur Sports Act of 1978 (36. United States Code, Section 380), the USOC was granted ownership of the following words and symbols: the five interlocking rings; the words "Olympic," "Olympian, Olympiad and all other derivations; the Olympic torch; and any sign or symbol representing an association with the IOC or the USOC. No use of these words or symbols could be made without the USOC's authorization. This law enabled the USOC to raise the funds needed to support United States Olympic athletes by selling sponsorship rights to various corporations. In so doing, the value of the LAOOC licensing program was slightly diluted and some confusion arose over who was "officially" connected with the Games.

Many manufacturers were rather innovative in their attempts to market products associated with the Games which were not licensed by the LAOOC. A common example was the use of the "motion lines" borrowed from the *Star in Motion* logo. A federal court found that duplication of the motion lines or use of symbols or words which depicted an association with the Olympic Games were violations of LAOOC rights. Although some manufacturers were able to "unofficially" associate their products with the Games, the LAOOC actively pursued infringers and the licensing program was by far the most successful of any Olympic Games, despite some confusion in the marketplace.

9.03 The sponsorship program

9.03.1 Concept of the program

The value of corporate association with the Olympic Games was difficult to ascertain. A number of factors influenced corporate decision-making on the price that companies were willing to pay for involvement with the Olympics. It is these factors or determinants which were used by the Organizing Committee in its effort to "sell" the Games to potential sponsors. They included the following benefits: an improved public image; increased product name recognition; improved employee morale; and the exclusion of competitors from similarly associating themselves with the Games. No set "price" for securing a sponsor designation was established since no two sponsors derived the

2 LAOOC President Peter V. Ueberroth (right) signs an agreement with Brother Industries, Ltd. on 19 January 1981, as LAOOC Vice President Joel Rubenstein looks on.

same benefits. The value of each sponsorship was determined through negotiation, with corporate size, product type and potential benefits all influential in determining the actual contribution made by each sponsor company.

Most potential sponsors were located either in the United States or Japan. The LAOOC decided to market the program on its own in the United States but in Japan this became inefficient because of distance and presentation problems. To resolve this, Dentsu, Inc., a Japanese public relations and advertising firm, was signed as the LAOOC's marketing representative in Japan. The relationship with Dentsu resulted in the signing of the Fuji Film Company and Sanyo Electric as sponsors and many other firms as suppliers to the Games.

9.03.2 Identification of potential sponsors

Sponsor solicitation for the 1984 Games was based on the assumption that mass solicitation of sponsors, with potential agreements numbering in the hundreds, would dilute the value of the agreements, both individually and collectively. It was therefore decided that a maximum of 50 sponsors would be signed for the Games and that each sponsor would be granted product exclusivity. Prior to implementing the solicitation program, the LAOOC developed a list of products or services appropriate for a Games sponsor and identified companies appropriate for sponsorship. Two factors were critical in the decision-making: whether the product produced by the potential sponsor was an appropriate one to be identified with the Games, and, whether the company was large enough to support a sponsorship commitment. Review of corporate annual reports, the "Fortune 500" list and corporate media budgets helped narrow the field.

Solicitation of sponsors within the United States was handled entirely by the LAOOC. The ambitiousness of the sponsor program, in that its revenue goals were far higher than actual revenue in previous Games, mandated that only individuals involved in the planning process on a daily basis could effectively market the program.

In early 1979 most observers were skeptical about the Organizing Committee's ability to successfully fund the Games privately. It was the LAOOC's belief that only with the successful signing of high revenue-producing initial agreements would the program succeed in the desired manner. These agreements would serve as the milestones upon which all future agreements would be structured. In spring 1979 it was decided to focus on potential sponsors who would derive the greatest value from association with the Games. Two of the earliest candidates were soft drink manufacturers and breweries, both of which have historically been associated with sporting events around the world.

Failure to sign a lucrative first agreement would have helped focus attention on what might have then been considered an incorrect assumption in the LAOOC's financial planning. But conclusion of agreements worth together in excess of \$20 million with the Coca-Cola Company and Anheuser-Busch by the end of 1979 provided a solid foundation for the sponsorship program and served as an impetus for the idea that a privately financed Olympic Games was possible. The establishment of a benchmark value set the tone for all future negotiations.

9.03.3 Sponsor commitment to the LAOOC

Sponsor fees were paid in cash and with "in-kind" contributions; the donation of goods, services and personnel utilized in the planning and staging of the Games. The content of individual agreements varied with the anticipated needs of the LAOOC. Coca-Cola provided a large portion of its sponsorship fees in cash. In contrast, ARA, Inc. provided its entire sponsorship fee through the donation of "in-kind" services which helped the LAOOC plan and manage the Olympic Games food service and transportation programs. Many sponsors demonstrated their commitment to the Olympic movement through public information efforts which sought to communicate the history and goals of the Olympic movement. There was also substantial sponsor involvement in the LAOOC Olympic Youth Program. Sponsor participation extended beyond direct support to the LAOOC, but was in line with the LAOOC's goals for the Games as a whole. For example, many sponsors purchased spectator tickets which were donated to individuals and groups who would not normally be able to attend Olympic events.

Most sponsor agreements were negotiated between 1980 and 1982 when many LAOOC needs had not been fully assessed. Apart from the financial support provided by the sponsors was their continued flexibility in meeting the ever-changing, re-evaluated needs of the Organizing Committee. As the Games approached, each sponsor developed a greater commitment to its area of sponsorship. International Business Machines (IBM), as the official sponsor of office systems, found that donation of equipment did not completely satisfy its obligations. It also had to ensure that the equipment functioned properly and that all LAOOC staff using IBM products were properly trained. As the LAOOC placed increasing reliance on corporate in-kind donations such as office equipment supplied by IBM and copy machines supplied by Xerox, these sponsors found themselves in the

positions of ensuring the proper functioning of the products they had supplied. Failure of any equipment would have been detrimental to the sponsor's reputation, especially during the Games. Therefore, it was not uncommon for many of the sponsors to provide resources and manpower far in excess of those initially agreed to. Each company took on its area of the Games and committed its resources to make that area successful.

Sponsors also assisted in the construction of athletic facilities needed to stage the Games. The Los Angeles Memorial Coliseum, site of Opening and Closing Ceremonies and athletics, required major renovation and specific new construction was needed for a swim stadium and a velodrome. The LAOOC first sought out educational institutions which would accept the construction of these facilities and grant public use decisions and naming rights to the LAOOC.

Agreements were reached with the University of Southern California for the construction of a swim stadium and California State University at Dominguez Hills for a velodrome. The committee then sought corporations that, as a portion of their sponsorship fees, would pay for the construction of these new facilities. In addition to the benefits derived from sponsoring the Games, these companies would also have the long-term benefit of name association with the facilities. Thus the McDonald's Olympic Swim Stadium and the Southland Olympic Velodrome came into existence. Several million dollars of improvements were needed at the Coliseum. Part of the rental cost was offset by improvements to the stadium paid for by the Atlantic Richfield Corporation as a portion of its sponsorship fee.

By asking the sponsors to take full responsibility for their areas of involvement, the LAOOC received a degree of support and commitment to the Games that was truly priceless. Though the question is frequently asked, it is difficult to determine exactly how much each sponsor paid to obtain the "Official" designation. The value of each agreement must be measured in terms of cash received and also in terms of the costs budgeted by the LAOOC which the sponsors assumed through providing in-kind goods and services. The LAOOC's budgeted costs did not reflect the actual cost to the sponsor for providing these services. Therefore, real costs would not be reflected by an LAOOC determined figure which sought to estimate the total value of a sponsor's donation to the Games.

**9.03.4
LAOOC commitments to sponsors after signing**

All sponsors were granted the right to purchase spectator tickets separately from those available through sales to the public. Each sponsor was allocated tickets based on its total commitment to the LAOOC. Those corporations who contributed the most in cash, goods and services to the LAOOC were allotted the greatest number of tickets. Sponsors were also given opportunities to assume LAOOC contracts for reserved hotel rooms in Southern California and to deal directly with the hotels where their rooms were located. Once the Organizing Committee had determined the total number of tickets

a sponsor would receive, the allotment was divided among the various events and sessions available. Allotments for each event or session were based on the total number of tickets that event or session represented out of the entire ticket pool. For example, if equestrian events represented seven percent of all tickets, then seven percent of a sponsor allotment consisted of equestrian tickets. Sponsors had the option of purchasing either 100 percent, 75 percent, 50 percent or 25 percent of the tickets they were allocated.

Sponsor meetings were organized by the LAOOC and held on 10—11 March 1982, 23—25 February 1983 and 24—26 October 1983. These meetings allowed sponsors to meet with each other and to discuss LAOOC policies. A continuing concern addressed at each meeting regarded the LAOOC's policies on ticket and hotel room allocations. Sponsors' logistical planning was based on knowing in which hotels they would be placed and which tickets they could buy. Without this information they were unable to contract for transportation and other associated support services. Although it is evident that as a group sponsors were satisfied with the experience they had at the Games themselves, they were concerned about the details of hotel and ticket allocations until March 1984, when their allocations were announced. The tickets they received were in fact very good and perhaps greater than their actual needs.

Sponsors were granted no additional privileges in other areas. Accreditation privileges and parking cards were provided only to sponsor personnel involved in Games operations and were not available for company executives

and other sponsor representatives. Areas for sponsor entertaining, hospitality and promotion were not available at the venues.

**9.04
The supplier program**

Organizing Committee strategy in obtaining commitments from companies as suppliers did not differ significantly from the procedures used with the sponsors. The basic goal was to obtain resources, either product, services or equipment, that were essential to the successful operation of the Games. The primary difference between a sponsor and a supplier was the level of commitment, at least \$4 million for sponsors and significantly less for suppliers. The suppliers provided the LAOOC with a means of satisfying a significant need, such as competition equipment, which was not satisfied by a sponsor.

Although the existence of a supplier category could have potentially undermined the exclusivity of the sponsors, several factors prevented this. Product categories licensed to sponsors were exclusive and were not open to suppliers. For example, Coca-Cola's product exclusivity in the soft drink category closed that product area to suppliers and/or licensees. Further, many suppliers contributed specialized equipment which was never intended to be covered under sponsorship agreements, since most manufacturers of such items were not large enough to make a sponsor-level commitment based on a narrow product line.

3 John Fransen of the LAOOC displays photographs of billboards publicizing the LAOOC's sponsor-supported youth programs.

4 One of the world-class tracks built by ARCO, an official LAOOC sponsor.

Corporate Relations

In early 1984, suppliers were granted the right to purchase tickets and secure a limited number of hotel rooms through the LAOOC. This decision was primarily based upon the suppliers' significant participation in helping plan the Games in their areas of expertise.

9.05 The licensee program

9.05.1 Nature and goals of the licensee program

The licensee program developed by the LAOOC combined elements common to past Olympic Games with new features added because of the unique financing methods used for the 1984 Games. Common elements with past Games included licensing of product categories which have traditionally done well in association with sporting events, motion pictures and other forms of entertainment; payment of a 10 percent royalty to the LAOOC on all sales; a minimum guaranteed amount paid in advance to the LAOOC based on estimated sales projections as determined by the licensee; quarterly reporting periods for royalties; and an annual year-end audit.

Areas of the licensing program unique to the 1984 Olympic Games included a commitment to include minority and small businesses from the Los Angeles area in an effort to help establish licen-

ses through positive public relations and media opportunities associating them with the Olympics.

The initial licenses were granted during the later half of 1980. Products licensed during this period included ceramic mugs, men's neckwear and cloisonne pins (an item of considerable popularity during and after the Games). These products were initially licensed so that the LAOOC could use them as gifts. A successful retail program and royalty income was a secondary, long-term goal. Upon completion of the license granting in early 1984, the LAOOC had received approximately 8,000 license applications in about 300 product categories.

The LAOOC granted 65 licenses, including eight to Adidas sub-licensees, Forty-nine, or 77 percent, of the licensees were from California and 43 of those were Los Angeles area businesses. Twenty-six, or 40 percent, of the licensees were minority firms. Minorities included black, Hispanic, Asian-American and Native American. Although the granting of the licenses began in 1980, 50 licenses were granted after September 1982.

9.05.2 Program for receipt of proposals

The overwhelming popularity of the Olympics and the attendant benefits of being associated with it meant that by early 1980 the LAOOC was inundated with proposals submitted by licensees. Solicitation of licensee proposals was thus limited to the LAOOC's request that sponsors inform their advertisers and clients about the program and that the Mayor's Office of Small Business Administration solicit and refer a number of proposals.

By the end of 1981, the LAOOC had received thousands of proposals yet few of them had received positive responses. It was the LAOOC's philosophy that it would not be appropriate to grant licenses on a mass scale until late in 1982 since an adequate market for the licensees' goods would not develop until mid-1983. Therefore, more than 77 percent of all licenses were granted after September 1982.

9.05.3 Selection process and procedures

In the fall of 1982, a product list was generated from applications on file and from a review of items sold at past Olympics. From this list the LAOOC determined the remaining product categories it wanted to license. Product criteria included whether it had traditionally sold well at entertainment/sporting events; whether it was of a type which would be kept as a souvenir/memento of the Games; whether it attracted children's interest and attention; and whether it was in some way associated with or peculiar to the needs of the Los Angeles/Southern California area.

Upon selection of the final product categories each application on file was reviewed. The average number of applicants in any one category was 25 but varied widely depending upon the product. Hundreds of applications were received for a T-shirt license yet only five were received for a television viewers' guide.

Each applicant was reviewed by the licensing staff with the initial selections based on the following criteria: manufacturing and distribution ability; quality of the product (where a sample or pictures were included with the application); financial ability to perform; small or minority business status; recommendation of the Mayor's Office of Small Business Administration; whether the business was located in Southern California; and other intangibles such as an understanding of and commitment to the ideals of the Olympic Games.

After narrowing the field to three or four applicants, the licensing staff called business references of the company and bank officers to determine

5

5 LAOOC sponsor representatives during a business session of the October 1983 sponsor meeting.

6

6 Sponsor representatives proudly carry their banners at one of the LAOOC sponsor meetings.

7 Sponsors gather and listen to presentations at LAOOC-organized sponsor meetings.

7

the company's past business experience and likely ability to perform. Frequent meetings were held with the applicants to acquire additional information and materials.

With the decision to choose a particular applicant, a licensing report was completed and submitted to LAOOC senior management for final approval. The report set forth a variety of financial information along with details regarding the applicant's history, manufacturing facilities, distribution centers, sales force, marketing strategies and product distribution capabilities.

After selection of a licensee and execution of a contract, a "Graphic Standards Manual" was sent to the company so that work could begin on product design and artwork, subject to final LAOOC approval prior to production. Letters were sent to all other applicants in the same product category who were not chosen. Each selected licensee was encouraged to contact the LAOOC News Department if it was interested in a press announcement regarding the award of the license to the company.

9.05.4 Protection of the exclusivity granted to the licensee

The fundamental commitment made to the licensees was that the LAOOC would fight to insure the exclusivity of all LAOOC symbols. The value of a licensee's investment was directly related to the level of protection it would receive against potential infringers or counterfeiters who might produce illegal Olympic goods. Consequently, the LAOOC developed a comprehensive enforcement program to safeguard the exclusivity granted to the licensees. The program consisted of the following components:

□ Public Information; LAOOC enforcement personnel prepared written material, including copies of relevant statutes, which was sent to retailers, news media and the general public concerning the authorized use of Olympic symbols. Furthermore, staff responded on a daily basis to numerous requests regarding the use of the symbols, including information about how the Amateur Sports Act of 1978 protected all words and symbols associated with the Olympics. This federal statute granted the United States Olympic Committee exclusive rights to authorize others to use the word "Olympic" and its derivatives

and the five interlocking rings for commercial purposes. Through a cooperative working relationship with the USOC, the LAOOC was able to safeguard the use of all Olympic symbols.

□ Voluntary Compliance; letters were sent to all known infringers demanding that their unauthorized use of Olympic symbols cease and desist. The letters placed the infringers on notice as to the rights of the LAOOC concerning protection of its symbols. Infringers were furthermore required to sign a letter acknowledging that unauthorized use of words and/or symbols would cease. Voluntary compliance was high, however, and enforcement personnel worked with LAOOC attorneys to follow up in those instances where no response was received. More than 500 letters were sent to companies and individuals which illegally used Olympic symbols.

□ Customs Activities; in early 1983 the LAOOC reached agreement with the United States Customs Service regarding assistance from customs inspectors in connection with the importation of counterfeit Olympic products. Customs officials were extremely vigilant in seizing suspected merchandise and they effectively prevented the entry of illegal Olympic products into the United States, particularly in the Los Angeles/Long Beach areas.

□ Legal Actions; a benchmark of the success of the enforcement program was the LAOOC's willingness to take infringers to court. The LAOOC brought suits against a number of infringers for unauthorized use of Olympic-related words and symbols on retail merchandise. A majority of the cases were brought during the period of the Olympic Games. In every case the LAOOC obtained relief from the infringing activity. Several lawsuits were settled prior to trial and a settlement fee was paid to the LAOOC. In other cases the court ordered infringers to cease use of certain LAOOC symbols.

Most legal actions involved activities occurring during the period of the Olympic Games. The effectiveness of the enforcement program was directly dependent upon the timeliness of the relief. Therefore, in coordination with other enforcement activities, the LAOOC obtained pre-Games federal court orders authorizing off-duty law enforcement officers to seize unauthorized merchandise.

9.06 **Management of the Corporate Relations group**

By mid-1979 the Organizing Committee had a vice president responsible for licensing and merchandising. This was a one person department which solicited and negotiated corporate sponsorship proposals. By spring 1981 another staff member was added who was responsible for approval of all merchandise bearing the Olympic symbols and handling the licensing program. Through June 1982 the department focused primarily on the sponsorship program and deferred serious efforts to the development of the supplier and licensee programs until late 1982. Throughout 1982 the Corporate Relations Department consisted of a vice president and three staff members with two responsible for the licensing program and one overseeing the supplier program.

The department was most active between September 1983 and July 1984. The focus of activity was no longer upon the sponsorship program (which had been finalized by summer 1983) but instead concentrated on the conclusion of all supplier and licensee agreements along with enforcement activities which sought to protect all LAOOC symbols against improper or unauthorized uses. The staff grew to 24 with account executives established to service small groups of sponsors, suppliers and licensees. Significant time was spent during this period refining many early supplier contracts which had been concluded when the Organizing Committee was uncertain about its ultimate needs. Enforcement activities were heavy by late 1983. The LAOOC was determined to take an aggressive stand against infringers and worked closely with U.S. Customs officials to prevent the clearance of illegally produced Olympic-related merchandise. This posture was effectively commu-

icated to potential manufacturers, especially large volume producers, via multiple seizures. It was anticipated that such producers would be hesitant to risk significant capital and produce massive quantities of unauthorized goods if there was a strong possibility of confiscation of the merchandise. Once the Games began, the Corporate Relations Department became operational. Account executives worked with each of their assigned companies assisting with various logistical requirements including accommodations, hospitality, ticketing and transportation.

9.07 **Summary**

The corporate relations program was successful beyond the expectations of the Los Angeles organizers. The interest in affiliation with the Games was widespread and the LAOOC's goals in terms of fund-raising and corporate support were either met or exceeded in all areas. Licensees provided an opportunity for purchase of a large number of items, many of which were well received by consumers in the United States and abroad. Future organizers reflecting on the Los Angeles experience should note the following items:

□ The strategy of limiting the number of sponsors to an elite few and requiring a heavy commitment to the financial and operational success of the Games was a winner. Although perhaps more applicable to the 1984 Games because of the emphasis on the private sector in the United States economy, this model can be used with other events which attract wide spread interest. Both national

and multi-national companies had interest in becoming involved with the Games and careful consideration of the value of Olympic sponsorship from the view of a potential sponsor will usually lead to the compilation of a list of candidate companies.

- Sponsors, and to a lesser extent, suppliers, must be accorded benefits appropriate to their level of commitment. Proper use of Olympic and Organizing Committee marks, symbols and the like must be clearly defined and the organizers must carefully consider the complexities of protecting sponsor or supplier rights, if any, granted to them in their agreements. Policies for the reservation of accommodations, hospitality space, tickets, transportation and other items must be clear and disseminated sufficiently in advance of the Games in order to allow for subsequent logistical follow-up by the companies.
- Supplier selection was based upon the need for items or services which the LAOOC needed to provide and were either costly, required special manufacturing support to provide the large quantities necessary or required extensive technical support. Items whose connection with the Games was not obvious but which proved important included parking management for the venues, payroll processing systems for the paid employees, waste management and X-ray scanners. Organizers must consider the entire scope of services that must be provided before settling on supplier categories and looking for interested companies.
- Licensing of companies to produce goods bearing the symbols of the Games was not designed to provide a large revenue source for the LAOOC. Instead, the bulk of the corporate funding came from the

sponsor program and to a lesser extent from suppliers. The LAOOC determined that the major focus of its licensing program would be to provide quality products for public purchase through small businesses including many minority-owned businesses, primarily located in the Southern California area. In working with such smaller enterprises, the organizers must show flexibility in the payment structure to support the efforts of growing companies. Although most of the licensees received good public response to their merchandise, some did not enjoy the sales volume which they had anticipated. In these cases, the LAOOC remained flexible in its approach to the licensor's share of revenues and the level of fixed guarantees as long as was reasonably prudent.

- Enforcement of the laws protecting the symbols of the Games and of the Organizing Committee is crucial to any program of licensing. The LAOOC worked closely and successfully with customs controls in the seizure of unauthorized merchandise coming into the United States. Equally important was the strong position taken against domestic infringements and the willingness of the LAOOC to proceed with strategic legal action against uncooperative entities whose activities infringed on the rights granted to sponsors, suppliers and licensees. An Organizing Committee whose corporate marketing scheme depends upon the untiring support of its partners can do no less in the service of its benefactors from the business sector.

10

Design and the Look of the Games

10.01 Concept and goals of the design program

The primary objective of the LAOOC design program was to transform approximately 75 separate Southern California sites into a common and easily recognizable celebratory presence during the Olympic Games. This goal was not easily accomplished. Sites were as many as 150 miles apart and the transformation had to be discernable to three different audiences: television viewers, spectators attending the Games and local residents. Another objective of this program, which was called the Look of the Games, was to turn skeptical residents into active supporters by the sheer emotional pageantry of the event.

The overall Look, described as an "invasion of butterflies" or "urban confetti," succeeded in turning the streets, sites and other public areas into a constellation of ephemeral colors that brought residents a heightened sense of excitement, emotion and history. The Look was achieved through a team approach. Overall design concepts were developed through the integration of participants from numerous fields, such as architects, landscape architects, graphic and industrial designers, fabric designers and transportation system designers.

The design concepts and patterns integrated the *Star in Motion* emblem and the Olympic pictograms, which were created in 1980 and 1981, respectively. These symbols were interwoven with a color palette that replaced the traditional red, white and blue with a more festive and international scheme composed predominantly of magenta, vermillion, chrome yellow and aqua. The overall concepts were packaged into a kit of parts which were worked into a variety of configurations. Thus, the effect was an urban sprinkling of confetti over an area of roughly 4,500 square miles that served to promote a happy, festive atmosphere during the Games period.

The environmental graphics design program was complemented by a print graphics program that was equally challenging. The primary goal of the graphics program was to ensure that all Olympic-related printed material had a consistent appearance. This was not

an easy task since each of the more than 30 graphic design consultants used by the LAOOC had his or her own conception of how to create an Olympic Look. The print graphics program thus initially displayed tremendous diversity and some inconsistency. The variety of printed materials ranged from billboards, posters and signs to accreditation badges, napkins, pins, tickets, commemorative certificates and scoring forms. It was not until late 1983 that the print graphics program began to embrace the Olympic Look advocated by the environmental graphics program, creating a uniform Olympic Look program which communicated the brief yet significant nature of the Games to its audience.

1

1 Careful attention was given to television camera angles in order that the Look would appear in all broadcast coverage.

10.02

Emblem: The Star in Motion

10.02.1

Concept of the emblem and its use

International popularity of Olympic Games emblems began with the Tokyo Games in 1964 when the rising sun, Japan's national symbol, was juxtaposed against the five Olympic rings. The market value and, consequently, importance of each subsequent Olympic emblem has grown significantly since the Tokyo Games, and designers have increasingly competed for the opportunity to create the emblem. The commercial importance of the emblem, for both promotional and advertising purposes, made it essential that the LAOOC secure IOC approval as early as possible.

10.02.2

Development of the emblem

The Organizing Committee interviewed 34 design firms throughout the United States but ultimately chose to hold a competition among designers only from Los Angeles. Three design firms were chosen for the competition and, in early December 1979, they

were granted three and one-half months to prepare formal presentations. Two design criteria for the symbol were established by the LAOOC: the emblem had to work in concert with the five interlocking Olympic rings and it had to be able to function visually on its own. LAOOC senior management selected the emblem created by Robert Miles Runyan and Associates.

Design development concentrated on the creation of a dynamic, forceful emblem which would express both the national and international aspects of the Games. Red, white and blue were the proposed colors, since they were the national colors of the United States and also appeared alone and in combination with other colors in the flags of many other countries.

Roughly 4,000 design sketches were created before a rough sketch of three interlocking stars was selected. This three star theme was refined in more than 400 additional sketches before it evolved into its final configuration, the *Star in Motion*, which represented the dynamic, international qualities required for the emblem. Stars are found in the flags of more than 47 nations and the 13 motion lines gave the emblem the appearance of action and speed. As described in the LAOOC "Graphic Standards Manual":

"The star is a universal symbol of the highest aspirations of mankind, the horizontal bars portray the speed with which the contestants pursue excellence while the repetition of the star shape connotes the spirit of competition between equally outstanding physical forms. The symbol colors—blue, white and red—were in part chosen for their traditional significance in the awarding of prizes for first, second and third place."

The emblem was first submitted and approved by the IOC in Moscow on 16 July 1980, and was publicly introduced by the LAOOC on 4 August 1980. This gave corporate sponsors early use of the emblem in their advertising and promotional activities and by affixing it to their corporate products.

10.02.3

Graphic standards for use of the Games symbols

After completing the *Star in Motion*, Runyan and Associates produced a reference manual for the LAOOC. The "Graphic Standards Manual" provided guidance to sponsors, suppliers and licensees and LAOOC graphic artists in the proper use and reproduction of the official symbols, the *Star in Motion*,

mascot and pictograms associated with the Games of the XXIIIrd Olympiad. In the manual were standards for size relationships and color reproduction of the various symbols, requirements for placement of trademark and copyright symbols and the establishment of an official logotype and typeface. The official symbols were registered and fully protected by appropriate national and international laws governing copyrights, trademarks and industrial designs. Consequently, all usage of the symbols had to be authorized by the LAOOC and product samples bearing the symbols had to be submitted to the LAOOC for final written approval to ensure they conformed with the requirements as set forth in the "Graphic Standards Manual."

Marketing benefits available through association with the Olympic Games by commercial use of the symbols were restricted to LAOOC approved sponsors, suppliers and licensees.

© 1980 L.A. Olympic Committee

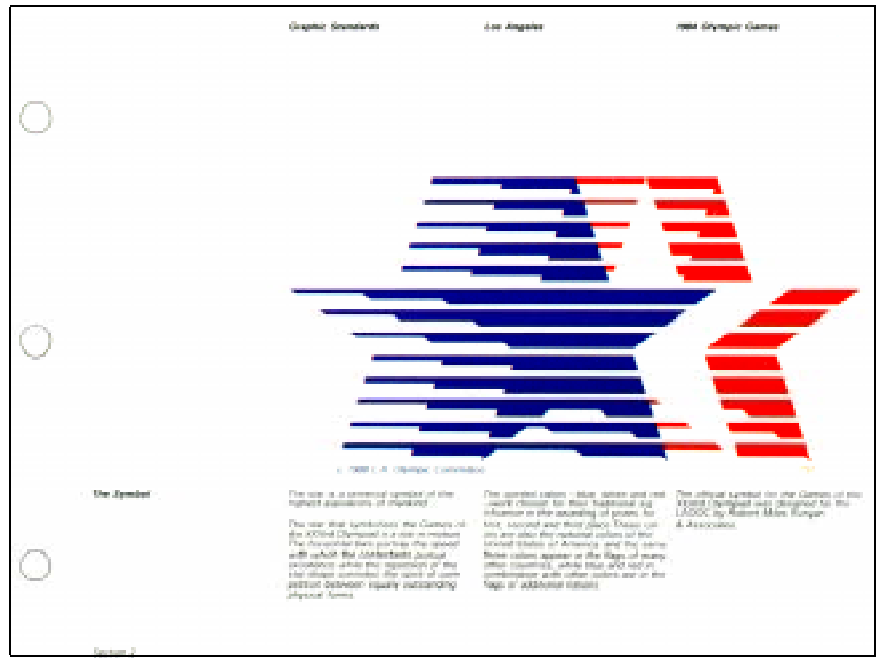

⁸ The *Star in Motion* was approved in 1980 as the official symbol of the 1984 Olympic Games. It is shown here in combination with the Olympic Rings and the copyright notice as presented in the "Graphic Standards Manual." The manual was a horizontal 12" x 9" ring binder and was tab indexed into the following chapters:

1. General Information
2. The Official Symbol
3. The Olympic Rings
4. The Official Mascot
5. The Official Logotype
6. Emblem Relationships
7. Reproduction Materials
8. The Official Pictograms

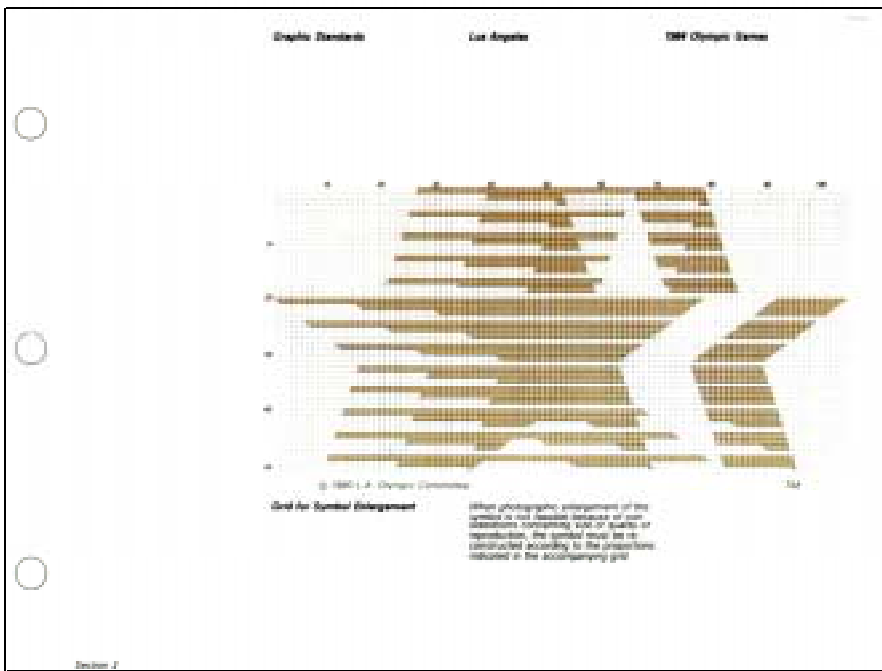

The manual was intended to guide all staff members, sponsors, suppliers and licensees in the proper use of the copyrighted graphic elements as well as the accompanying typefaces and color schemes. The colors were red, white and blue but were later changed to the more extensive palette developed in 1983 and shown later in his chapter.

10.03

Mascot: Sam the Olympic Eagle

10.03.1

Concept of the mascot and its use

Mascots have been used beginning with the 1972 Olympic Games in Munich to symbolically represent the Games they are associated with. A stylized beaver called *Amik* was used in Montreal and Moscow created a bear known as *Misha*. The mascot serves to inject a sense of personality into the Games, capturing the styles, traditions and cultures, in an animated form, of the people of the host country. The mascot also serves as a symbol to be enjoyed and understood by youth, whose inspiration is important to the Olympic movement. In addition, an attractive, animated mascot also serves as an appealing commercial item.

10.03.2

Development of the mascot

Major Southern California animation and film studios were contacted by the LAOOC regarding the design of the mascot. Walt Disney Productions was ultimately selected from among three finalists. Emphasis first focused on developing something emblematic of the Southern California area, including such possibilities as the sun, palm trees and seals. Considerations were expanded to include the state of California, whose symbol is a bear, but that idea was soon discarded since the Moscow Games had used a bear mascot. Finally, design development focused on symbols representative of the entire United States and the logical

choice was the eagle. Generally considered a rather stern and aloof bird, a warmer, more friendly eagle had to be created. A short, stubby, cuddly little eagle evolved. He had a large head, bulbous middle section and a protruding derriere accented by an array of tail feathers. Besides serving as the national bird of the host country, the eagle was also universally recognized as an incarnation of the ideals cited in the Olympic motto: "Citius, Altius, Fortius" (swifter, higher, stronger). Since the eagle would have to be shown as a competitor in the various athletic events, the wings were drawn to function as "arms" and the feathers as "fingers." The eagle was designed to work as a costumed character as well as a two-dimensional graphic symbol.

The full-sized costume was successfully used for LAOOC promotional and youth activities. Moreover, *Sam the Olympic Eagle* proved commercially successful, as a doll and on mugs, pins, T-shirts and many other products.

15 Sam the Olympic Eagle (as he appeared in the "Graphic Standards Manual") was developed by C. Robert Moore of Walt Disney Productions and was used almost exclusively by the LAOOC in conjunction with youth activities. He was never used as part of the Look which was developed later. He was, however, extensively applied in licensed products as well as by many of the sponsors and suppliers in their own promotional materials.

10.04 Pictograms and other symbols

10.04.1 Concept of the pictograms and their use

Pictograms have been part of Olympic design programs since they were first introduced at the 1964 Tokyo Games. The stylized figures easily communicate information to visitors and participants who have diverse language and cultural backgrounds. New pictograms were designed for Mexico in 1968, Munich in 1972 and Moscow in 1980. Montreal chose to use the Munich pictograms. The LAOC first inquired about the purchase rights of the pictograms used at Munich and later Montreal, but found the price to be higher than the costs of commissioning new pictograms and chose instead to sponsor a competition.

Competitors were narrowed to three Los Angeles design firms which presented three pictograms representing athletics, cycling and swimming, and a fourth of their choosing. A review committee composed of ten LAOC executives selected Keith Bright and Associates to design the full set of pictograms for the Games.

10.04.2 Development of the sports pictograms

The review committee was given a presentation which surveyed the entire design development process used by Bright and Associates in creating the pictograms. Beginning with a critique of the five previous Olympic pictograms, six criteria were isolated as essential to a successful pictogram:

- Clear communication; pictograms, by themselves, should be recognizable by people of other nations.
- Consistency; the pictograms should be identifiable as a set, through uniform treatment of scale, style and subject.
- Legibility and practicality; they should be highly visible, easy to reproduce in any scale and in positive or negative form.
- Flexibility; the pictograms should not be dependent upon a border and should work equally well in a positive or negative form.
- Design distinction; the pictograms should avoid stylistic fads or a commercial appearance and should imply to a worldwide audience that Los Angeles has a sophisticated, creative culture.
- Compatibility; they should be attractive when used with their Los Angeles Olympic design elements and typestyles.

In the development stage, Bright and Associates sought to create pictograms that would be used primarily for directional signing purposes, a critical

factor in the Los Angeles area since the events would be held at a variety of locations. Therefore, it was essential that the pictograms communicate clearly and be highly visible. During the Games, the pictograms served primarily decorative purposes rather than as signing elements, but in 1980, no one anticipated that this would be the case.

In creating the new pictograms, exploratory sketches examined the use of partial figures, realistic figure images and speed lines combined with the figures. It was concluded that partial figures and realistic figures were difficult to decipher and movement associated with the figures made them too busy and impaired legibility. A simple figure composed of 10 fundamental body parts worked well: a circle for the head, an oval for the torso and eight simple parts representing the arms and legs. This modular figure, when placed against a grid pattern, could be recreated in any desired position, effectively portraying any Olympic event.

These new pictograms met the specified criteria. They were easily seen at a distance and clearly communicated their message in a consistent manner using a system of modular forms and a common scale. The system was also practical and flexible, allowing for a variety of positions to be created with a minimal number of design modifications and permitting reproduction in a positive or negative form, with or without a panel or border. The design was distinctive, with the pure, geometric forms creating an idealized human figure which was memorable in appearance and free of stylistic fads.

10.04.3 Registration and copyright of the pictograms

The 23 official pictograms were copyrighted and registered as trademarks by the LAOC in 1981. As set forth in the *Graphic Standards Manual*, "a copyright line and trademark symbol had to appear on every item or printed material on which the pictograms were reproduced. Reproduction of the pictograms on mugs, neckties, scarves and other articles which did not permit a legible reproduction of the legal copyright and trademark symbols, mandated that the information appear on another visible portion of the article. For example, on hats and T-shirts the legal marking and information was placed on a permanent tag visible on the hat band or inside on the neck portion of the T-shirt. Reproduction of the pictograms was restricted to licensees using them on their products, and sponsors and suppliers using them in association with their advertising and promotional activities. Similar regulations were set forth in the *Graphic Standards Manual* with regard to the use of the *Star in Motion* and *Sam the Olympic Eagle*.

17 Pictograms used on the exterior of the Coliseum are in Festive Federalism colors.

Design and the Look of the Games

10.04.4 Usage program for the pictograms

As originally conceived by Bright and Associates, the pictograms were to be used primarily on directional signs on the arterial roadways leading to various Olympic venues. Unfortunately, the pictograms were inadvertently omitted from the roadway directional sign program and their primary function became decorative. At competition sites, the pictograms were used prominently at entrances with large, white, sport-

specific figures placed on a magenta field. They were also used on large banners attached to the ceilings of indoor arenas.

Pictograms were displayed frequently on sonotubes and fence fabric, serving as a decorative reminder to spectators and participants of the particular sport at each site. Pictograms were also used on a variety of Games-related merchandise. Mugs, pins, ties, and T-shirts were a few popular applications.

Design and the Look of the Games

10.05 Development of the Look— environmental graphics

10.05.1 Evolution of the Look

In conceptualizing and implementing the overall environmental design program for the 1984 Olympic Games, many architects, artists and designers were involved in creating the innovative program of decorative and symbolic elements. The coordination and organization of the Olympic design program did not commence until the fall of 1982. Prior to this, the LAOOC had taken only the initial, rudimentary steps in this direction. This was achieved through the development of the official Games symbols: the *Star in Motion*, *Sam the Olympic Eagle* and the sports pictograms. These creations helped promote the Games, functioning as symbols which were used in commercial marketing. However, these elements alone could not adequately serve as a foundation for structuring the overall Games design program.

Commencing in January 1982, the LAOOC Look organization had its early origin in an LAOOC-established design center located in downtown Los Angeles. The design center initially came under the direction of the Jerde Partnership (architects) and later, both Jerde and Sussman/Prejza & Co., Inc. (designers). The LAOOC entered into separate consulting contracts with Jerde and Sussman/Prejza, each of which in turn recruited additional firms and individuals to supplement their own staffs.

Initially the design center functioned for the most part independently of the LAOOC administrative headquarters in Culver City, but was under the management control of the Architecture and Construction Department. A creative environment was maintained to offer the designers and architects the liberty needed to experiment with a myriad of concepts in developing a festive Look which would be particular to the Los Angeles Games. The grouping of all Look participants maximized the cross-pollination of thoughts and ideas. The Jerde Partnership was assigned by the LAOOC in early 1982 to design one of two Olympic villages, to convert existing structures at UCLA and create a village with security, residential areas, a main street, entertainment

facilities, welcoming areas, transportation pick-up and drop-off areas and other assorted village functions. By mixing temporary structures with existing facilities, it was planned that the UCLA campus would take on a completely new appearance. To achieve this new Look, Jerde sought the assistance of the graphic design firm of Sussman/Prejza to develop the sign program for the UCLA Village.

Later, the designers took on the responsibility of designing an overall appearance for the Games in coordination with other design firms already employed by the LAOOC. This included John Follis Associates, which first thought of rejecting the traditional red, white and blue "Americana" colors and using instead a pastel selection based on the five colors of the Olympic rings. Follis also experimented with the use of a five-pointed star as a decorative element. In late 1982, Sussman/Prejza expanded those ideas and began working on a new eleven-color palette for the Games. Sussman/Prejza reworked the pastel colors conceived by Follis and settled on a stronger, more vibrant array.

The single most unifying element of the Look was this LAOOC color palette, which ultimately represented the Mediterranean environment of the original Greek Olympics and the festive, celebratory colors of Asia and Latin America. The colors used were: magenta, chrome yellow, aqua, vermillion, light blue, green, lavender, information yellow, pink, dark blue and violet. The colors provided a distinctive visual presence, unifying the diverse sites in the Los Angeles area and presenting the spectators and television audience with color unity from venue to venue.

At this same time, the Jerde partnership was completing a catalogue of standard physical elements to be used in outfitting venues and villages for the 1984 Games. At previous Games, architectural designs of monumental landmarks were left to remind future generations of the Olympics. The Los Angeles Games, termed spartan in cost and appearance, called for only a few permanent facilities to be built. Existing facilities were integrated by a kit of simple but repetitively applied parts in the creation of new avenues, plazas, courts, boundaries and corridors which would create new environments within already existing settings. A whole new set of shapes was created based on the predominant use of cardboard, string, tents and bailing wire.

24

24

24

24

24 Much of the design development was carried out at the Design Center, a facility that housed a number of the design and architectural consulting firms that were retained by the Organizing Committee. Designers are shown here working on sketches and models. Bottom left is a general view of one of the studio areas in the Design Center.

As the organizational concept of the design program evolved, it became apparent that a catalogue of standard construction and decorative elements should be created. These elements were adopted for use in temporary structures, landscaping, environmental graphics and ceremonies and were composed predominantly of geometric, simplified shapes which were used in combinations by designers at every site. This reduced the need for custom pieces since the kit could be applied in an endless variety of ways. The application of the kit of parts and the philosophy behind its use was set forth in a November 1982 document entitled, "Design Coordination Guidelines." It established that:

"The staging of the Games of the XXIIIrd Olympiad will present the world with a view of a series of events juxtaposed against the highly disconnected, eclectic background of Los Angeles and its environs. The number and complexity of sites dictates a design and planning process done in parts by various players. If the Games are to avoid being perceived as fragmented as Los Angeles itself, their visual presence must be powerful enough to unify the otherwise unpredictable chaos of their diverse geographical parts.

"Los Angeles today in 1982 looks exactly like (sic) it did in 1981 and like (sic) it will look in 1983. In 1984 it must look dramatically different while the Games are being staged. Everything associated with the Games must have a fresh, festive look to it that conveys the temporal qualities of the event. The whole city should look like (sic) a wonderfully colorful invasion of butterflies has descended upon it. "The notion of a 'spartan' Olympics suggests tremendous opportunities to shift the design away from the ego architecture of recent Olympics to wards a more appropriately designed environment that captures the special qualities associated with the Games. An environment whose focal point is clearly the athlete and whose architecture celebrates its temporary qualities in fanciful assemblages of colored fabric and exotic graphics."

The document continued, setting forth a statement of goals for the Look program:

"To develop a visually distinctive presence that reflects the significance, dignity and sheer joy historically associated with the Olympic Games. "To visually unify the geographically diverse sites in a way that presents the spectator and television audience with an identifiable set of elements common to all venues. "To capitalize on the notion of a 'spartan' Olympics by developing solutions that are appropriate responses to the temporary nature of the Games and that celebrate their temporal qualities."

The guidelines concluded by establishing basic design strategies:

"The single most unifying element will be the use of an LAOOC color palette. "Discreet use of both the LAOOC logo and the Olympic rings will ins till a sense of quiet dignity to the way the Games are being run. "The international qualities of both the Games and the host city will be capitalized upon in the graphics and signage whenever appropriate to help create an environment responsive to the participants and excitingly exotic to the spectators.

"Color and form will be used in an informational manner so that the environment begins to demystify itself. For example, information booths would always be tall yellow tents. "Allspace needs will attempt to be first dealt with via existing structures. If additional space is required, temporary structures will be used as necessary. "The temporary facilities (tents) that will be rented for the Games will be 'customized' to take on a physically distinctive Olympic look. This will be done by changing roof pitch, adding graphics and using solid color roof fabrics."

Design and the Look of the Games

The above concepts, goals and strategies, together with the kit of parts, provided the foundation for the creation of the Look program and it was through their application that the design of the three Olympic villages, the 30 athletic venues and the 43 cultural venues were coordinated. These concepts were first applied during January 1983 when the IOC Executive Board met with the NOCs at the Biltmore Hotel in downtown Los Angeles. The Biltmore meeting was an opportunity for Sussman/Prejza to experiment with the color palette and other graphic shapes and forms, especially the five pointed star. Given free rein to design the Look at the Biltmore for the meeting, Sussman/Prejza adapted the preliminary outdoor environmental graphics program to the complex indoor surroundings of the Biltmore. It was an opportunity to refine the color palette and its application.

The designers analyzed the color problem first. How would the colors enhance the environment? What other colors would be present in the surrounding environment? What would be the scale of the surroundings? What spirit should the colors project? A refined, subtle application of the colors and designs was produced for the Biltmore.

The color palette and its application was further polished during a number of LA83 athletic events held by the LAOOC. These events gave the Look organization the opportunity to implement some of the early concepts and designs and to determine what was practical in actual application, better paving the way for finalizing the designs of the Olympic venues.

For water polo, the first of the 1983 events, a relatively small decorative budget of \$20,000 was allocated, with explicit restrictions on the use of the color palette for fear it would lose its impact for the 1984 Games. Seeing how little \$20,000 bought, the LAOOC allocated \$125,000 for the swimming events and allowed use of a full application of the colors to test their effect. Although this budget and philosophy of application was approved just six weeks before the event, the decorative elements were designed, contracted, fabricated and installed. An interior venue, Pauley Pavilion, was subsequently decorated for \$82,000 for a gymnastics competition.

Television and photographic coverage of LA83 swimming and gymnastics events confirmed that the competition area was the focal point and that decorations should be placed consistently as a backdrop at all

venues. Therefore, great attention was paid to those design elements that would appear on-camera. Star and bar patterns on the railings behind the athletes and podium skirts which appeared in the foreground were given special attention. In all cases, the visual settings for the awards ceremonies were designed with care. Although seldom on camera, decorative banners and flags hanging from the ceiling created a festival atmosphere for the spectators.

26 The new color palette and graphics are also applied at the 1983 ANOC General Assembly held at the Los Angeles Biltmore

Design and the Look of the Games

By the time the LA83 gymnastics competition was over, the basic elements of the Look had been applied and accepted. The next task was to examine each venue and adapt the various elements to it. Canoeing/rowing and archery competitions were still to be held in 1983 so those venues had their Look designed in the weeks preceding the events. Subsequent refinement of the decorative scheme was put on hold while the venue development process proceeded during the last quarter of 1983.

The 1983 events—water polo, swimming, gymnastics, rowing/canoeing and archery—successfully tested the design of the kit of parts and the application of the color palette. Subsequent to these prototype applications, the Look was refined at the design center in downtown Los Angeles by a group known as the "Design Forum" under Jerde's direction. The Design Forum was composed of the LAOOC staff responsible for design and all contracted design consultants. It was

responsible for developing LAOOC design policies and for coordinating the work of participant designers into visually cohesive results. Jerde envisioned the design process for the Olympics as composing two fundamental parts, architecture and graphics, each with separate roles but also with some areas of overlap. Design direction was coordinated by the two directors managing the groups.

A final, unifying element for the kit of parts was the use of removable construction scaffolding for entry gates and the numerous other structures needed at the venues. The significance of this idea upon the overall Look program was best expressed by the director of the LAOOC Design Department:

"It was modular, strong, flexible, portable, easy to erect and cheap. It was available for purchase or rental in almost unlimited quantities. It was a common, off-the-rack system that perfectly fit the problem. It was the kind of answer that was so direct and yet so broad in its implications that, in retrospect, it seems obvious and simple, not much of an idea at all. But it was the essential key, the single stroke that brought the whole kit of parts for the environmental plan together. It needed to be refined, the bones needed to be beefed up and dressed for the party, but there it was. It was in absolute harmony with the ideas the design forum had, until then, only been able to put into words—a celebration of sport, a circus, a carnival of games, a medieval jousting tournament, an invasion of butterflies. 'It was the first time in Olympic history that there had been a non-monumental design concept for the Games and it fit the climate, the city and the emotive goals like a pair of trunks on Mark Spitz—obvious, practical sexy and slick as a whistle."

28 The prototype of the Look as applied in 1983 at gymnastics, archery, rowing and swimming events proved the effectiveness of the basic scheme and provided guidelines for further development.

Design and the Look of the Games

10.05.2 Guidelines for the use of the Look elements

By December 1983, the LAOOC had retained a number of architectural firms to work on the particular competition sites, villages or art festival venues. The venue architects were responsible for planning and coordinating functional modifications, e.g., the construction and mechanical work, fencing, plumbing and electrical needs; modifications to existing structures; and security and fire protection for each site. Overall appearance of each site was the responsibility of a Look coordinator who selected and

arranged all the Look elements, including tents, banners, sonotubes, fabric and overall color applications. An LAOOC staff project architect was appointed to ensure the integration of both the functional and aesthetic elements. Individual designers provided special services which included scaffolding designs, sonotube patterns and sculptural elements which were used at many of the sites.

A design guide poster was created and distributed to the numerous architects, designers and Look coordinators at each site. The poster set forth the basic elements and application of those elements which could be used in creating the Look. It began with an initial decree that: *"Every perception of the Games of the XXIIIrd Olympiad will be a complex array of temporal elements juxtaposed against the highly varied background of Los Angeles and*

its environs. The LAOOC has developed a very strong thematic philosophy for the creation of the Olympic environment that will overlay the city during the Games. An energetic montage of color and form will appear on everything from tents to tickets."

A fundamental building block of the design program was the numerous sonotubes ranging in size from two and one-half feet in diameter by three feet high to three feet in diameter by 20 feet high. As depicted in the Look poster, the tubes were used as decorative columns and frequently served as the supports for lintels and pediments

placed at the entrances to the venue seating areas. These structures exemplified the Greek Doric order with a splash of Minoan coloration and design. The columns were also fastened to the bases of the numerous specialty tents used at the venues, giving them added strength and presence. All tents were shaped and colored according to their function: yellow with a pointed witch's hat roof for information, white-topped shorter tents in various colors for refreshments and novelties and black-and-white striped columns, reflective of Florentine renaissance architecture, topped by a white pictogram on a magenta field for entrance archways. Bunting was used on the walls surrounding the field of play.

Design and the Look of the Games

Central to the design poster was the section which established the standards for the use of the color palette. The key color for the Games was a brilliant "hot" magenta, which, together with a bright vermillion, clear aqua, rich chrome yellow and a vivid green, were to represent the Southern California spirit. The lighter "Mediterranean" colors were to be used occasionally in large back-grounds. White was used frequently to serve as a dignified link for the various colors. Red, white and blue were rarely used and only when it was appropriate to emphasize nationalism instead of the traditional Olympic internationalism. The colors on the poster were arranged in order of dominance from most used in larger squares at the top to least used in smaller squares at the bottom.

The poster explained the general criteria for applications of the colors as:

"These colors work best when used in combinations of three or more. It is best to form color relationships that are warm/cool, dark/light. The width of the stripes is best when thick ones are next to thin ones and when the arrangement is put on a large field of color or a white field. Do not use light and dark combinations of the same color or the colors in a 'rainbow' arrangement. When using stripes, do not make them all the same width."

With the examples and criteria established by the design poster, hundreds of architects and designers began the task in January 1984 of creating the Los Angeles Olympic Look at more than 75 sites.

A Preview of the DESIGN

for the 1984 Olympic Games

How the Los Angeles Olympic Organizing Committee will transform the city with an exciting program of festive elements.

Every program of the Games of the XXIII Olympiad will be a complete array of integrated elements (architecture, signage, etc.) highly visible throughout Los Angeles and its environs. The LAOOC has developed a very strong thematic philosophy for the creation of the Olympic environment that will envelop the city during the Games. An energetic mixture of color and form will appear on everything from tents to tents.

These brightly painted cylindrical columns will be spotted throughout the competition area. Each of brilliant color combined in different ways produces their play. All quality.

Parade route canopies will be enriched with color and graphics to form environmental gateway, towers and walls.

A Guide to the COLOR

The key color for the 1984 Olympic Games is a brilliant "hot" magenta. This color, together with bright vermillion, clear aqua, rich chrome yellow and vivid green represent the Southern California spirit. The lighter "Mediterranean" colors are used occasionally in large back-grounds. White is used as a dignified link throughout the environment. Red, white and blue is only used on the rare occasion when it is appropriate to emphasize nationalism instead of the traditional Olympic internationalism.

For color specifications, consult LAOOC Design Department at 322-8814.

1. The colors of the poster are arranged in order of dominance from most used at the top to least used at the bottom. Purpose Marketing System (PMS) numbers are listed in table to specify these colors.

2. "Festive Federalism" is the result of combinations of color and pattern in the 1984 Olympic colors. This can be done in paper or a white field or in white, reversed out of a field of color.

3. These colors work best when used in combinations of three or more. It is best to form color relationships that are warm/cool or dark/light. The width of the stripes is best when thick ones are next to thin ones and when the arrangement is put on a large field of color or a white field.

4. The line in the poster appears in one of the 1984 Olympic colors or white on a white color in addition to the red, white and blue patterns.

30

30 Sussman/Prejza's Look Poster was the only printed guide to the Festive Federal scheme. Printed first in January of 1984 and later reprinted, it became a much sought-after and scarce memento of the Games.

Design and the Look of the Games

10.05.3

Physical applications of the colors and the kit of parts

During the LA83 events, four basic sonotube types were used to support the tents: yellow for the information tents, vermillion for hosting tents, green for souvenir tents and lavender for refreshment tents. For the Games, the sonotube types expanded to 112 different designs and were used for a variety of purposes. A separate kit of Look parts developed for the Olympic Arts Festival sites used the same color scheme but varied the scale, pattern and geometric shapes.

In addition to exterior decorations, interior kits were also developed. The kits were comprised of three-foot by nine-foot OAF banners, plain nylon banners, posters and styrene cutouts and were installed in the Mark Taper Forum, Dorothy Chandler Pavillion, Pasadena Center Conference Building, Pasadena Civic Auditorium, Royce Hall, Schoenberg Hall, MacGowan Hall, Japanese-American Cultural Center,

Television Center Studio 9, Bonaventure Hotel, Pasadena Holiday Inn, New Otani Hotel, Los Angeles City Library and Los Angeles City Hall. Kits were given to eight Los Angeles theatres for them to install. Approximately 400 miscellaneous signs were fabricated to supplement existing signs.

The venue owner approval process began 6 April 1984. Proposed designs, installation methods and schedules were presented during weekly meetings at the design center. Two to eight designs were presented at each meeting and the process was completed 23 May 1984, nine days after the first installation. OAF was responsible for getting the approval of venue owners or managers. Then the procurement, installation and maintenance of Look items for 43 Olympic Arts Festival sites began. The objective was to decorate all sites with the consistent Look theme.

By June 1984, the designs for the various venues were complete. The Olympic Arts Festival was the first public unveiling of the Look. A predominantly white field was used in conjunction with fragments of the Look elements: chunks of stars, hunks of bars, pieces sticking out of the landscape.

The athletics venue and the villages were each given a distinctive set of Look features, tailored to reflect the particular events or activities which were to occur at those sites. It was determined that a feeling of greater dignity was needed for some of the events, such as fencing, and the color silver was used with the pictograms to reflect the more formal atmosphere of the final fencing competitions. In contrast, other venues needed to demonstrate other qualities such as vitality, as with weightlifting, where a lively, complex structure, reflecting the dynamism and vigor of the sport, greeted the spectators as they arrived. The swimming, diving and water polo venues were done predominantly in white and aqua with less use of the heavier, hotter colors. This design related well to the cool, light qualities of that sport. Overall, the competition venues projected a more serious, traditional demeanor whereas, in contrast, the villages with a more playful array of colors and elements, communicated a light, frivolous nature.

More complex and refined scaffolding structures than those used at the LA83 events were created. Competition sites received magenta-colored scaffolding; USC Village, aqua; Exposition Park, UCLA and UCSB got white. New three-dimensional elements such as spheres and cubes were added and colored fabric was stretched inside the scaffolding. This brought the scaffold structures alive and eliminated the feeling that they served only as support structures for billboards or signs.

The diversity of elements and colors—tents, sonotubes, scaffolding, lintels, pediments, fabric panels, banners, balloons, flowers, and fencing—came together in a successful blossoming: warm, inviting and festive, expressing a harmony reminiscent of a spring-time burst of color.

Design and the Look of the Games

10.05.4 Procurement and installation of the Look elements at Olympic sites

Beginning in January 1984 the Look organization began to take on new dimensions as the LAOOC prepared for implementation of the design concepts. A contracts/procurement organization was established to begin locating fabricators, contractors and sources for materiel, in preparation for the major procurement tasks which would ultimately include more than 100,000 Look elements.

The first major Look contracts were executed in February 1984. Those contracts included:

- An initial order of 250,000 yards of nylon in the Look colors; many of these orders had to use special dye lots to precisely match the specified colors.

- Fabrication and installation of 600 specially designed tents to be used at the venues for concessions, information, first aid, ticketing and entries.
- Annual flowers to add color to the venues; these contracts were entered into directly with the growers and set forth the types, colors, sizes and blossom size. The Look organization was responsible for overseeing the growth of these plants to ensure maximum color and blossom at the time of the Games. Growers were required to pinch back the buds on flowers at intervals so that plants would be in full bloom when needed. Over 400,000 quarts of flowers were finally ordered and placed at the venues.
- Painting of 1,500 eight-foot sonotubes; the total number of sonotubes painted ultimately reached a figure of more than 3,500.

As the Look of the 1984 Games continued to evolve, the complexities of the logistics became more evident. Receiving, sorting, distributing, shipping and installing more than 100,000 Look elements took on ominous proportions. To handle this workload, the Architecture and Construction Department created a Look organization in May 1984 consisting of the following major sections:

- Design; responsible for the final design of all Look elements at every venue.
- Procurement/Contracts; responsible for the procurement of all Look elements and for negotiating and administering contracts for their field installation.

- Supplier Quality Expediting Network (commonly referred to as SQEN); responsible for the delivery and quality control of all Look items.
- Warehousing Operations; responsible for receiving Look materials and sorting them by venue priority. Also charged with delivering all materials to all sites on schedule.
- Support Operations; responsible for computer support of procurement, inventory and warehouse operations.
- Look Coordination; responsible for assigning coordinators to the venues to oversee installation of Look elements.

The first procurement task was to evaluate the production time to understand the constraints associated with the procurement process. Serious materiel lead times, for example, existed for the specially dyed nylon fabric required for so many of the flat

46

46

47

46 Flowers were heavily planted to give ground color at many venues

47 Olympic rings were integrated into the Look and were used extensively throughout the venues. Workman here is shown with rings roughed out of plywood.

48 A workman at the Look warehouse prepares sonotubes for delivery to sites.

48

Look elements. It was clear that the LAOOC would have to order the nylon early to ensure that it would be available when production began. However, by February 1984, design was not complete and therefore no firm estimates of required yardage could be made. A best guess estimate was made, nonetheless; orders were placed for 240,000 linear yards of 60-inch material in the Look colors.

Another challenge was finding sufficient sources to fabricate the thousands of banners and 35 miles of fence fabric. The final designs did not, in all cases, correspond to what the industry was capable of producing efficiently. As a result, the Organizing Committee was dependent on a few

firms that could modify their production facilities to accommodate the long continuous runs of fence fabric and the oversized banners, instead of distributing the work more broadly. An alternate course of action, modifying the designs to accommodate the industry's production capabilities, was not a feasible alternative due to the time constraints.

Installation of Look elements began 25 June at the UCLA and USC Villages with installation at the first competition venue (Rowing/Canoeing at Lake Casitas) starting on 5 July. Installation depended on three primary considerations: the availability of the materials on the dates needed, their timely delivery to the site and the logical installation sequence of the materials. The logistics of this task were extremely complicated because installation took place at 33 venues almost simultaneously.

Planning for this was made even more difficult by the unique nature of the Look elements and the fact that nothing had ever been attempted on this scale before. It was extremely difficult to accurately estimate time and budget money for installation because, in most cases, Look could not be installed until after construction was completed. The LAOOC was faced with an extremely short time schedule and many unknowns relative to construction. Any slip in the construction schedule adversely effected Look installation. The availability of Look materials also was unstable and changes in deliveries as against the planned items required field adjustments. Unfortunately, both construction problems and materiel

shortages affected the installation and contributed significantly to added cost. Even though much of the materiel arrived late because of inadequate production time, all Look items were installed at every venue.

In some cases, many overtime hours were needed to stay on schedule. At Santa Anita, for example, crews of 60 installers worked 24 hours a day for two days to complete the venue on time. This was seven times the original estimate. Over 100,000 installer man-hours were expended in the five-week time frame, which was nearly three times the original estimate.

49

50

49 Workman paints entry elements in Look colors.

50 Seamstress makes custom banners in licensee's workshop.

51 Large "cherry picker" crane is used to install Olympic rings..

51

Design and the Look of the Games

Many of the Look elements for the LA83 summer test events were installed by LAOOC staff members, but, for the Olympics, the many venues, the huge volume of items to be installed and the complexity of the work made it impossible for LAOOC personnel to participate other than as supervisors and managers. To accomplish the Look installation, contracts were entered into with seven local decorating companies, each with responsibility for installing specific venues. The professional expertise of most of these firms was invaluable in achieving a successful installation.

Approximately 30 coordinators were hired, each to oversee installation at one or more venues. The primary function of the coordinator was to complete the design for his venue. Also included in the Look coordinator's responsibilities were:

- Coordination with the warehouse on traffic/schedule requirements
- Verification that Look materials were available when needed
- Design of alternate plans in case of late deliveries or construction delays
- Verification of Look installers' contracts based upon the stated scope of work

The original contracts with the Look installers were based upon a fixed large sum, following a detailed proposal. However, in nearly every case, contracts were later converted to a time and material basis, because of developments that tripled original installation cost estimates. These developments included:

- The actual field installation conditions often differed dramatically from those expected.
- Many of the complexities of the installations could not be foreseen by the LAOOC or the installer companies.
- Material delays required the installers to deviate from their original schedules and to work up to seven days per week and as much as 18-20 hours per day.

- Construction problems and other difficulties caused delays.
- Changes in the scope of work after contract execution but prior to installation added additional work and disrupted schedules.
- Changes in the field requested by venue managers or sports commissioners delayed installations.
- Late delivery of signs added man-hours to installation time.

Upon completion of each venue, the Look organization assigned individuals to one or more venues to maintain and monitor the integrity of the Look during the Games.

52

52

54

The Look in abstract

- 34 Olympic sport venues, support venues and villages were decorated with Look.
- 43 Olympic Arts Festival venues were decorated.
- 20,000 street banners were fabricated.
- 10,000 street banners were installed with necessary hardware by LAOOC on the streets of Los Angeles.
- 10,000 street banners were allocated as gifts to cities other than Los Angeles.
- Approximately 2,300 Look elements were designed.
- 500 shipments from more than 50 manufacturers were received.
- 280 loaded trucks were dispatched from the Look warehouse to the 34 venues.
- More than 110,000 Look items were requisitioned.
- More than 3,000,000 square feet of fabric were used (nylon or vinyl/open weave).
- More than 11 miles (58,735 feet) of glitter strips were utilized for the decoration of scaffolds, stages, award backdrops, etc.
- More than 2,000 flags were procured.
- More than 3,500 spiral tubes (sonotubes) were procured and utilized.
- 600 specialty Look tents (LAOOC-designed) were produced and erected at nearly all venues.
- Approximately 35 miles of fence fabric (mostly open weave but some vinyl) were fabricated and installed on temporary and permanent chain link fence.
- 400,000 quarts of annual flowers were placed at venues.
- Approximately 1,500,000 cubic feet of scaffold structures were erected.
- Roughly 20,000 informational and directional signs were placed.
- 24 (13-foot) helium filled balloons were placed at venues.

Entrance theme scaffold decorations included:

- 300 three-foot stars and circles
- 120 spheres (42-inch diameter)
- 60 cubes (36-inches)
- 500 hardwood panels
- Thousands of other soft flat decorative panels
- More than 200 specially designed canopy shade structures utilized for decorative and shade purposes
- 100,000 man-hours expended to install the Look

55

55

55

55 Workmen had to work quickly to finish Look installations on very short schedules during the time venues were turned over to the Organizing Committee. A few are shown here painting rings and installing Star fragment at an Arts Festival site and scaffolding being erected.

**10.05.5
Installation and use of Look
elements at non-Olympic sites**

An important element of Look was the \$1.3 million LAOOC Street Banner Program. The objective of this program was to decorate the streets of the city of Los Angeles and other outlying cities to announce first the arrival of the Games and then that the Games had commenced.

In April 1984 the LAOOC decided to implement two distinctive banner programs. One was aimed at the city of Los Angeles and the second at other Southern California cities.

**The Los Angeles City
Banner Program**

Seven thousand fifty banners of 12 basic variations off of a three-foot by nine-foot design and two four-foot by twelve-foot designs were produced. The LAOOC provided for the installation and removal of the banners and associated hardware throughout the city. The banners were concentrated in areas approved by the Los Angeles City Council, including the airport and Westchester areas, the UCLA area, Pan Pacific Park, the Wilshire/Olympic corridor from Santa Monica to downtown, the USC/Exposition Park area, the Jefferson/Exposition Boulevard corridor, all of downtown, Dodger Stadium and the area surrounding California State University at Los Angeles.

Actual installation of the banners commenced 28 May 1984 and was scheduled to be completed no later than 14 July 1984. It took an average of five minutes to install each banner. Prior to completion of the installation, an additional 4,046 banners were produced to supplement areas already decorated and to decorate additional areas of the city (San Fernando Valley and south central Los Angeles). Two banner designs were added and three alternative companies fabricated the additional 4,046 banners.

In the original concept, the 11,096 banners and hardware were to remain the property of the LAOOC. However, following the Games, the LAOOC gave all the banners and associated hardware to the City of Los Angeles in return for the city's promise to remove them.

**Non-Los Angeles City Banner
Program**

Ten thousand banners were purchased for this program. The Community Relations Department chose six of the 12 different three-foot by nine-foot styles designed for the Los Angeles program. This program differed from the Los Angeles program in that banners allocated to other Southern California cities were to be installed and removed—hardware included—by those cities.

The design of both banner programs was directed by the LAOOC Design Department and created by Hinsche & Associates working from preliminary designs developed at the Design Center. Hinsche was also given the responsibility of surveying the Los Angeles locations to determine street standard types (300 total) involved and the sequencing of the banners. The banners were made, using a combination of seven colors (aqua, vermillion, magenta, chrome yellow, green, lavender and blue). In addition there were four three-foot by nine-foot silkscreened banners. They were:

- Stars and confetti; Olympic Arts Festival (OAF) banners used to introduce OAF sites
- LA84 banners; two variations
- *Star in Motion* banner
- Plain banner with the Olympic rings imprinted

This banner program, perhaps the largest in history, consisted of more than 21,000 banners, covering 125 miles of streets in Los Angeles alone. The LAOOC purchased 84,000 yards of special nylon for use on Los Angeles streets, 4,000 yards for Olympic Arts Festival venues and 100,000 yards for other Southern California communities. The logistics of overseeing fabrication, delivery, receipt, sorting, distribution and installation of the banners in a compressed time schedule were monumental.

The two programs were managed independently from one another after the designs had been completed under the direction of the Design Department. The fabrication of the banners for both programs was handled by the LAOOC Architecture/Construction Department. The receiving, sorting and installation of the Los Angeles city banner program was managed by the Architecture/Construction Department, while the distribution of the banners to other non-venue cities was managed by the LAOOC Community Relations Department.

Among the problems of the program were:

- The late decision to finally implement the banner program in April 1984 placed production restrictions on the program, thus allowing only one manufacturer to meet the LAOOC delivery schedule.
- Although the nylon used for the banners had an ultra-violet inhibitor chemical in the fabric, the LAOOC colors were sensitive to light and faded quickly in the bright Los Angeles sun.

56 The street flag and banner program included a variety of types which were intended to be "mixed" when hung from light standards throughout the city and environs. A sampling of banner and pennant styles are shown here.

57

57 Although planned and executed at the last possible moment in April of 1984, the Flag and Banner program was an instantaneous success as the banners went up almost overnight to the acclaim of everyone who saw them.

10.05.6

Applications of the Look to signs

An Olympic sign program was developed to direct both vehicular and pedestrian traffic, to identify destinations for both, and to instruct and inform all users of Olympic venues. The sign program needed to meet several aesthetic and practical goals: It had to be integrated with the Look, it had to be decorative as well as informative, and it had to be visually unique to avoid being confused with existing signs in and around the Olympic facilities. The colors, stars, bars and confetti that would serve as background to the messages would make them readily identifiable to the public as Olympic information.

The program needed to be flexible and modular, and required a minimum number of installation parts, which still presented some resistance to Olympic souvenir collectors. Sign colors took on the additional function of identifying major sign types:

- Automobile directional; aqua with magenta
- Pedestrian directional; information yellow with vermillion
- Pedestrian information/identification; aqua with vermillion
- Athlete bus system; violet with vermillion
- Media bus system; chrome yellow with magenta

For the athletes and Olympic Family the messages were printed in French and English—the official Olympic languages. For spectators, more than 90 percent of whom were from the United States, the messages were in English only. Two typefaces were chosen to distinguish between the two languages used—English was presented in Univers 67 and French in Univers 68 (italic). To aid communication, recognizable international pictogram symbols for “no smoking,” “first aid,” “men,” and “women” were used.

The design called for inexpensive and readily available materials and methods of manufacture. The primary material selected for sign blanks was high impact styrene, a rigid but flexible, weatherproof and washable plastic which could be easily silkscreened.

Structural supports were made of standard height hollow-core doors and fiberboard panels. Connections and installation methods were simple and the use of tamper-proof bolts and heavy concrete bases kept theft to a minimum.

Seven basic types of signs were used:

- Sonotubes were used to designate residence halls and bus stops and were often decorated with confetti or spatter.
- Fiberboard panels and hollow-core doors were used for directional signs in the villages and venues.
- Styrene signs, usually two feet by three feet in size, were the most commonly used. These signs normally displayed a functional message and were used predominantly for signing in at the athlete areas.
- Tent valances placed along the top of refreshment, information and village specialty tents carried identification nomenclature. The tents themselves were produced in a variety of coded colors.

1

2

3

4

5

6

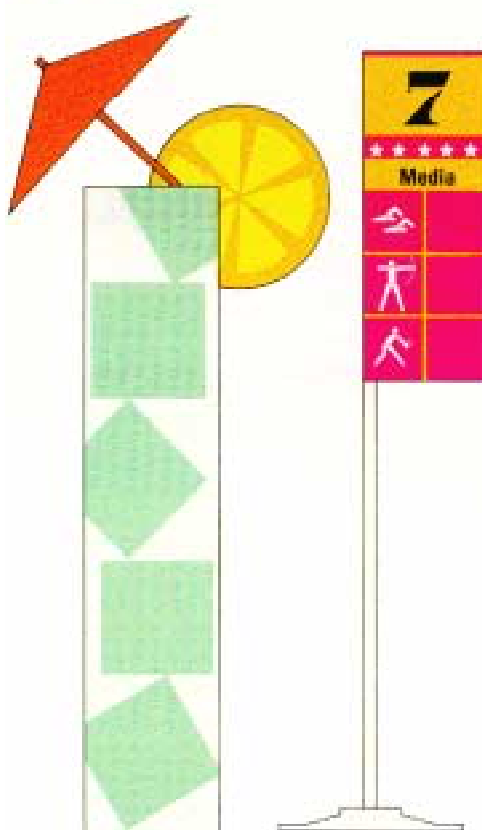

- Sandwich board signs were used predominantly for transportation.
- Pictogram signs were used in the athlete dining areas and to identify restrooms, first aid areas, etc.
- Both flat and triangular cardboard signs were used for desk-top models.

Signs

58 The kit of parts included a limited set of standard sign panels, sonotubes, etc. that were planned to meet an extremely wide range of uses.

- 1 Freeway signs are four feet high and 15 feet wide.
- 2 Hollow doors are painted in Festive Federal schemes and overlaid with pre-fabricated signs and secured by concrete feet.
- 3 An 8-foot-high pedestrian directional sign.
- 4 Eight-foot-high automobile directional signs showed the way to parking spaces.
- 5 Street signs assisted spectators on their way to individual venues.
- 6 A 6-foot-high pedestrian directional sign using pre-fabricated signs overlaid on a decorated hollow-core door.
- 7 Menu boards show the Festive Federal Look.
- 8 Fifteen-foot-high sonotubes are used for identification of specific areas within villages and venues.
- 9 These 15-foot-high sonotubes indicate bus stops at venue and village terminals.

LAOOC Design Department

The LAOOC Design Department was located in the Administrative Headquarters and was responsible for the design and production of all printed materials, as well as off-venue environmental projects, the official medals and medallions and other miscellaneous design projects.

From 12 December 1983 to the Games, the Design Department consisted of a director, department manager, senior design coordinator, eight project and design coordinators, a secretary, a clerk and three production artists. The department initiated, budgeted, planned, assigned and directed all graphic design tasks for the LAOOC. The department's production art group prepared in-house and fast turn-around jobs, while all other design work was assigned to independent consultants.

The Design Department had creative responsibility for such projects as: the design of the eight Olympic medallions;

a series of regional billboards calling for volunteers and promoting the Olympic Acts Festival; nine ticket offices, tickets and ticket brochures; award and commemorative certificates; numerous sport manuals; more than 400 sports scoring forms; posters; pins; accreditation materials and badges for participants, officials and press; the extensive street banner program; the daily results "Olympic Record" published during the Games; souvenir programs for the Opening and Closing Ceremonies; and hundreds of other design projects including package design and the layout of many advertisements.

One of the largest tasks charged to the Design Department was the design and production of approximately 450 individual sports scoring forms for use during the Games. Begun in January 1984, this project was done entirely within the department by three production artists. Every form for every sport and individual event was different; some required multi-color coding and most were multiple-part. The coordination and information gathering alone was very demanding, but the final product was found to be nearly 100 percent accurate. Total final outlay in salaries, typesetting and other costs was approximately 60 percent below the lowest proposed outside bid on the project.

Administration forms per sport

Officials	1
Total	451

*Includes swimming, diving, water polo and synchronized swimming

As previously discussed, the LAOOC was committed to an overall, consistent Look for the Games. To carry out this mandate, the Design Department used the same design elements, colors and typography that were developed for the environmental

Look in all of its print graphic design projects. As a result, Olympic visitors saw the same festive colors and graphic elements on everything from tickets to banners.

The Design Department also carried out several major non-print projects. The largest of these, done in cooperation with the Architecture and Construction Department, was the design and simultaneous installation of nine Olympic Ticket Centers. These ticket centers were in full operation in major shopping centers on 1 June 1984, only six weeks after the project was initiated. Later, a number of Ticket Faires were staged to sell tickets still available for Games events. These Faires were staged at Santa Anita and Hollywood Park Race Tracks in mid-July and the Design Department decorated the facilities, designed the signs and oversaw the installation of these projects virtually overnight.

Another major environmental project initiated by the Design Department, then passed to Architecture and Construction for production and installation, was the previously mentioned Street Banner Program. Finally, an unusual project was the design and decoration of the Mayor's Olympic Party held at Los Angeles City Hall. This task included not only the design of the invitations and gifts for the guests but also the exterior decoration of the building, the corridors and the surrounding grounds.

64

64

64 During the Games, the Look appears in many surprising and unlikely locations. Shown here are extensive decorations on City Hall including several large "fragments" at the very top of the building.

65

65

65

65

65 Olympic Ticketing Centers were designed and installed, ready to operate in less than six weeks. The nine installations, all in major shopping centers in the L.A. area, are used to sell tickets. Photos illustrate use of Look elements.

66 One Ticket Center is installed in a brightly disguised construction trailer, a shopping center parking lot.

66

Design and the Look of the Games

10.06.2 Development of the print graphics program

The print graphics program did not embrace the Olympic Look until late 1983 when a new department director joined the Committee and reorganized the Design Department. Prior to this date, most print graphics projects did not present a consistent look. Many early efforts made frequent use of LAOOC symbols: the *Star in Motion*, *Sam the Olympic Eagle* and the sport pictograms. Other early publications, such as the materials prepared for the January 1983 IOC Executive Board and NOC meeting in Los Angeles, made use of a stylized Olympic torch and a dignified gray color. Even materials produced for the LA83 events such as programs and ticket brochures did not incorporate the existing environmental Look program.

The scope of the print graphics program was very broad which made it difficult at first for many of the designers to apply the environmental Look program. Since the designers felt that the color application looked cheap when overlaid on a white background, a gray was used instead of white. Even though gray was not part of the original color palette, its application on the print graphics was accepted since it gave the pieces a more polished, professional look.

What had begun as a disorganized program, given little early attention by the LAOOC, became a well-coordinated effort adapted to the overall Olympic Look. A few print graphics pieces diverged from this Look for specific

reasons. Commemorative and award certificates, for example, were considered formal and classical, intended to exhibit an elegant and lasting quality in contrast to the ephemeral nature of the Look. The Opening and Closing Ceremony programs did not embrace the Look, since those events were perceived by their director as "different" from the other Games events. Opening Ceremonies, as a formal, proper, and stately event, suggested a very clean, orderly program to be preserved as a valued memento. A Picasso drawing on the cover echoed the theme of the ceremonies and was combined with a dignified interior format. The Closing Ceremonies program was also planned to reflect the specific mood of that event. The cover was a montage reminiscent of Hollywood, with photos of the Coliseum, the Olympic gold

medal and assorted Games graphic elements. Other than these exceptions which did not incorporate the typical colors and designs of the Look program, the overall design effort was very consistent and successful. All the department assignments were accomplished on time, under budget and the functional and aesthetic goals were achieved. The only fundamental shortcoming of the graphics program was that management attention to the program and the overall Look came so late (late 1983) that many earlier pieces were not designed within the Look format and some later design efforts became rushed in their application.

67

67

67

68

68

67 The Opening Ceremonies Program has a drawing by Picasso on the cover and is designed to be elegant and formal in keeping with the tone of the event.

68 The Closing Ceremonies Program is much more playful and is intended to convey the happy emotive quality of the celebratory event. It is the same size as the "Olympic Record."

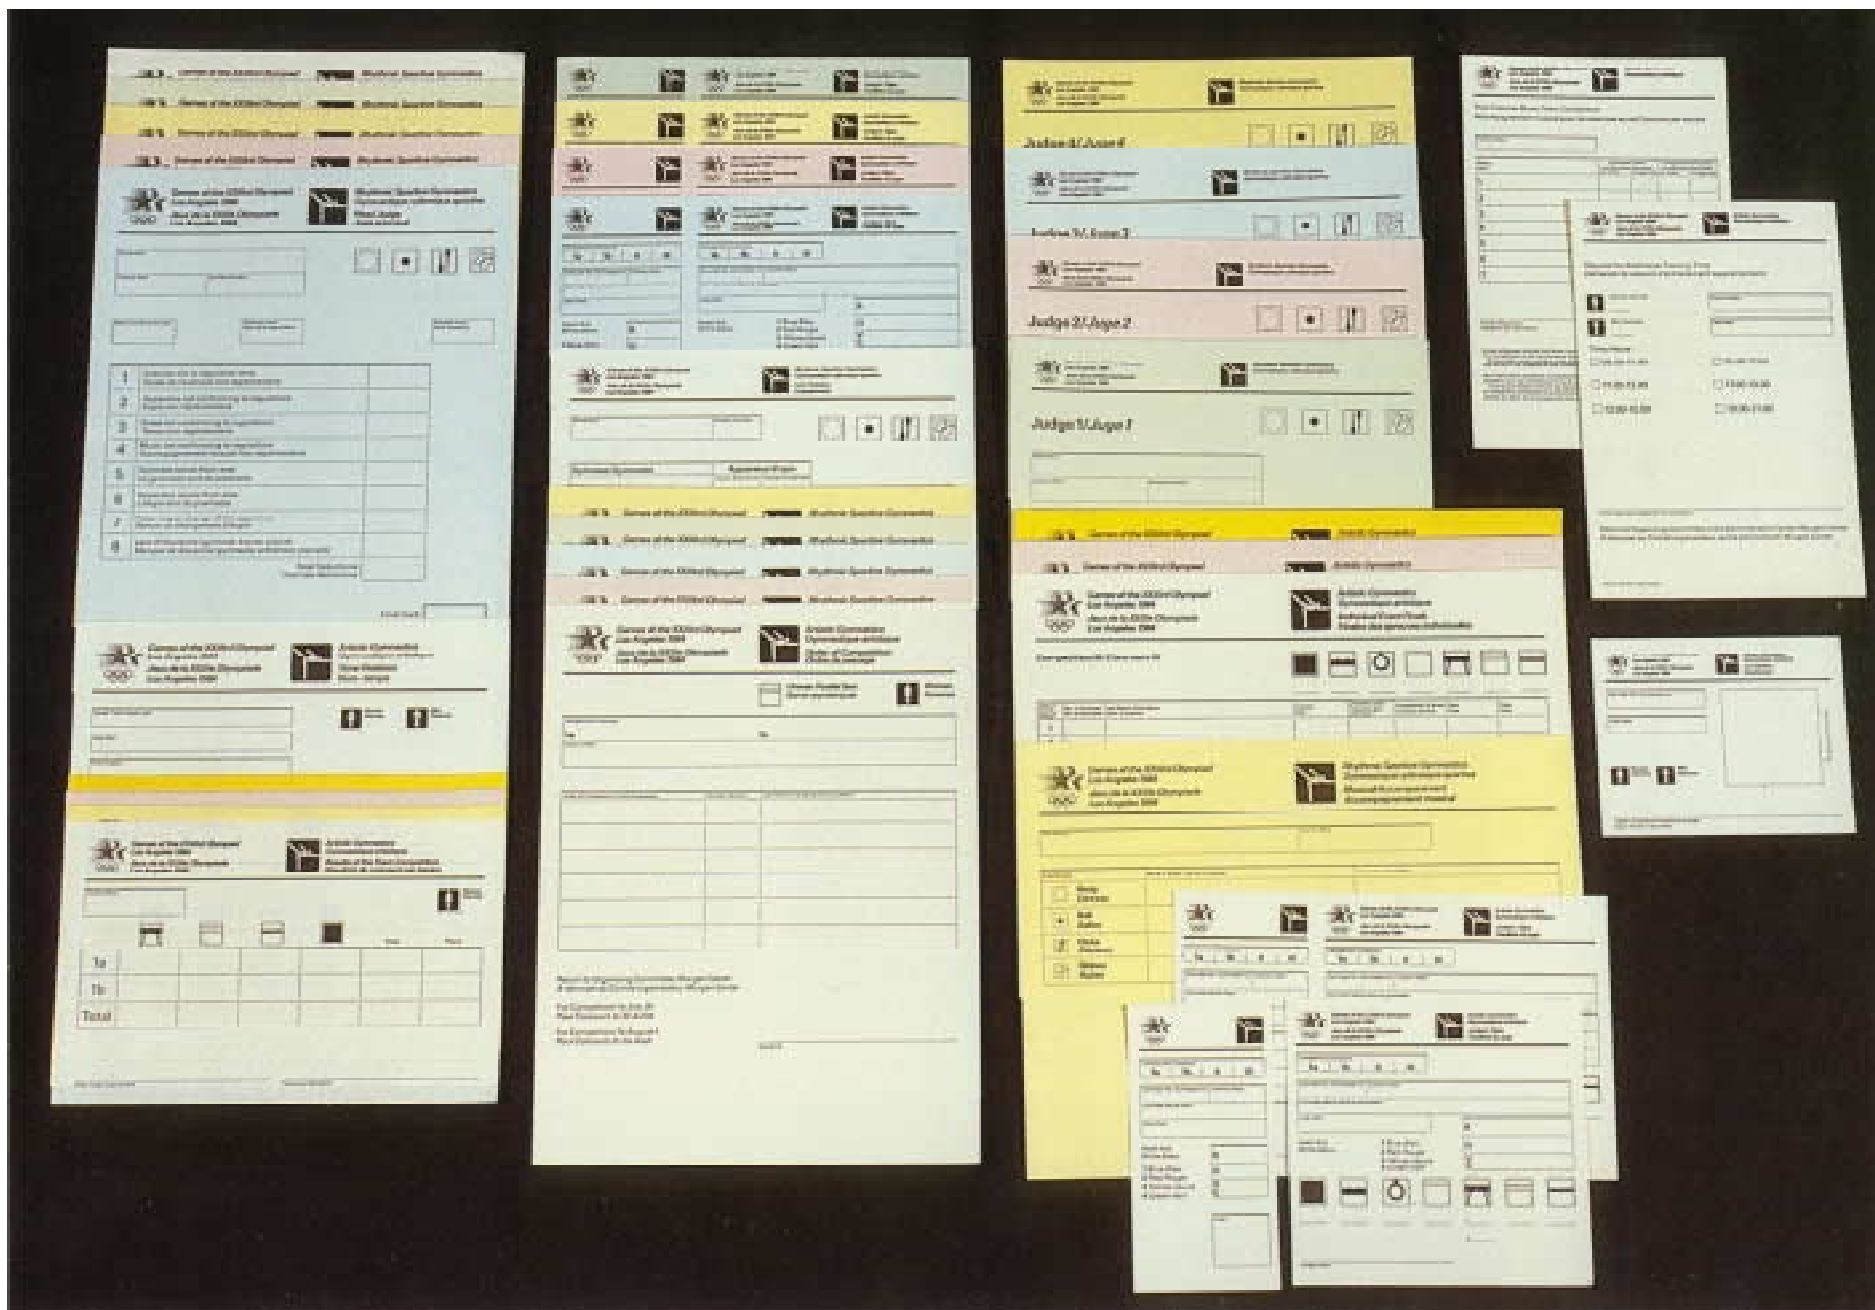

69 The Invitation to Participate uses the Olympic Motto and highlights the USA location.

69

70 "The Olympic Record" was published every day during the Games. It was produced overnight and had all the results from the previous day's events plus a schedule of the events to take place on the day of sale. It measures 10 3/4" x 15 1/2".

71

72

72

73

71 Over450 scoring forms were designed by the Design Department. This is one of the few projects done in-house by LAOC staff.

72 Sports posters designed for each sport are adapted from the explanatory brochure covers.

The day before the first Modern Olympiad in Athens in 1896, the Organizers dedicated a statue to a local businessman who made a large financial contribution towards the staging of the Games. Little did businessman Georgios Averoff know that twenty-two Olympiads later this tradition would be revived on the grandest scale ever in a unique effort undertaken by the Los Angeles Olympic Organizing Committee.

The Los Angeles Olympic Organizing Committee, however, didn't need to unveil a statue—because in the 1984 Olympic Games the sponsors who have stepped forward as equal partners to finance the Games have left a legacy behind that will stand many, many years—the numerous sports facilities and youth sports programs that will continue to serve our community.

We at the Los Angeles Olympic Organizing Committee thank our partners and share their joy as these Games that we have worked so long and hard to plan for are now a reality.

As the Games begin we ask that the world recognize our partners—for without them these Games could not have been staged.

From the Los Angeles Olympic Organizing Committee

"The important thing in the Olympic Games is not to win, but to take part"...

To the thousands of volunteers and staff working long hours with little or no pay who are driving buses, answering phones, officiating, ushering, taking tickets, serving food, directing traffic, interpreting languages, hostessing, cleaning up, painting, providing security, hanging banners, and taking it all down when it's over, —you are the backbone and the foundation of these Olympic Games. Your individual participation is an important contribution to your city, to your country, and to the world community of Olympic nations.

Some of you have given five years, and some of you five weeks. You are all taking part and playing your part in history.

Thank you.

From the Los Angeles Olympic Organizing Committee

Other Olympic design projects

10.07.1
Ernie Barnes Olympic Games sports posters

Ernie Barnes, an athlete turned artist, was commissioned by the LAOOC and the Los Angeles Area Chamber of Commerce to draw on his sports experience and knowledge to create Olympic-related art. The posters sought to portray the ethnic diversity of Los Angeles, the power and emotion of sports competition and the singleness of purpose and hope that go

into the making of athletes. Specific sports served as central themes in four of the posters, with community involvement the theme of the fifth poster. The posters were entitled: *The Rhythmic Gymnast*, *The Finish* (Track and Field), *One-on-One* (Basketball), *Winning* (Boxing) and *The Neighborhood Games*.

88 Ernie Barnes, an ex-athlete turned artist was named the "Sports Artist of the 1984 Olympic Games." Shown here are the posters he produced for the LAOOC.

Design and the Look of the Games

10.07.2 The Olympic medals and commemorative medallions

All of the 1984 Games award medals, along with 16,000 mandated commemorative medallions to be presented to all competitors, judges, referees, inspectors and sports officials, as well as 39,000 medallions to be awarded to LAOOC staff, were created by Dugald Stermer and produced by Jostens, Inc.

As established by Rule 45 of the 1978 Olympic Charter, the competition medals must be at least 60 millimeters in diameter and three millimeters thick. These requirements were followed scrupulously and were exceeded in the thickness by four millimeters. The medals were complemented by a ribbon of aqua, magenta and vermillion. The competition medals for the 1984 Games were an adaptation of the original designs by Florentine artist Giuseppe Cassioli created for the 1928 Olympics in Amsterdam. The medals for the past three Olympic Games used versions of the Cassioli depiction of victory on the obverse (front) side of the medals but had their own designs

on the reverse side. The LAOOC chose to return to the full Cassioli design for a number of reasons but most importantly, because it was the LAOOC's desire to respect as many long-standing Olympic traditions as possible. At the 1932 Los Angeles Games, medals with both sides depicting the Cassioli design were used and it was thought that a *Star in Motion* or stylized torch would not go well with the neo-classical Cassioli design on the front. Stermer chose the front of the 1932 medal and the back of the 1936 medal to serve as initial examples for the more refined medal

he created. The front side shows Victory with definition added to the background and more overall depth to the sculpting providing a better perspective. The facial features were changed on nearly all the figures and on the design representing a victorious athlete on the back of the medal, the faces and bodies were redrawn to suggest an ethnic diversity and more accurate musculature was drawn on the athletes' bodies. Medallions of a different design were created to be awarded to the top finishers in the demonstration sports of baseball and tennis and the exhibition events in boardsailing and wheelchair competition.

89 Obverse (front) of the athletes' medals awarded to first three places in each event. These were designed under Design Department direction and produced by Josten's, Inc. For reverse sides and other medals commissioned by the LAOOC, see the Ceremonies chapter.

10.07.3

The Olympic torch

A variety of designs were created for the 1984 Olympic torch before a final selection was made. Designed by Newhart, Donges, Newhart Designers, Inc. the one chosen was a discreet recreation of a traditional torch. Designed in spun aluminum, it had an antique bronze finish and leather-covered base. The Coliseum peristyle

was etched into the bowl that held the flame, and the words, "Citius, Altius, Fortius" were inscribed around the rim and were colored magenta, blue and vermillion. Initial design criteria required only that the torch weigh a maximum of three and one-half pounds, burn the flame for 55 minutes and withstand 40 mile-per-hour wind and light rain.

Design and the Look of the Games

10.07.4

Olympic signature poster series

The LAOOC commissioned an Olympic signature poster series in December of 1983. Twelve noted graphic designers were chosen from the Los Angeles area, each to depict a particular sport of the Olympic Games. The artists included: Laurie Raskin (collage); Arnold Schwartzman (cycling); Keith Bright (torch pictogram); Marvin Rubin (gymnastics); Saul Bass (swimming); John Von Hammersveld (javelin); Charles White III (weightlifting); Ken Parkhurst (shot put); Rod Dyer (wrestling); Deborah Sussman (collage); James Cross (discus); and Don Weller (athletics). The requirements were that the official Games typography be used, adherence to the color palette be maintained and that there be no duplication of sports. Photos and sketches were submitted to the LAOOC for review prior to final design of the posters.

97 "Signature Series" posters were commissioned by the Design Department from 12 outstanding Los Angeles designers.

10.07.5

Post Olympic design programs

The director of the Design Department was retained by the Organizing Committee after the Games to work on the Official Report as well as on a number of other projects.

These post-Games projects included a variety of smaller print design jobs such as graphic identity and printed matter for the Olympic Alumni Organization and the new LAOOC Amateur Athletic Foundation, as well as a number of larger three dimensional projects scheduled for completion around the time of the Games' first anniversary in late July 1985. These were the large commemorative bronze plaques honoring the champions, 60 smaller plaques commemorating the training and competition sites and two exhibitions. An additional project was a one-third scale replica of the Robert Graham "Gateway Arch" sculpture to be donated to the IOC, and 100 eight-inch miniatures of the same sculpture to be given to delegates to the 90th Session in East Berlin in early June 1985. The Coliseum plaques are in fulfillment of an IOC Charter requirement in rule 45 (Prizes) that states: "The names of all winners shall be inscribed upon the walls of the main stadium where the Games have taken place."

Large plaques from the 1932 Olympic Games are mounted on the face of the administration office building at the south end of the Los Angeles Coliseum peristyle plaza. Following a survey to identify an equally prominent location for the 1984 plaques, the ticket office building, a similar structure located directly across the plaza from the administration offices, was chosen. The two-story offices required modification to accommodate the plaques, as there were windows on both the first and second floors of the building facade. The first floor was being used for storage and the windows which were once used for ticket sales were no longer needed and therefore could be closed up. On the second floor, however, several windows provided light and ventilation for office workers; although the plaques could be mounted below, the visual result would have been

unattractive. The solution was to close all of the windows on the building's plaza facade and install roof skylights and air-conditioning to the office area. A granite facade was added to provide a suitable background for the plaques and the title heading above them.

The four cast-bronze plaques from the 1932 Games measured four feet by eight feet each, but there were many more events and names required for the 1984 plaques. The resulting design for the new plaques required a total of six bronze panels, each five feet by nine feet. The only difficulty encountered in the planning was locating a foundry with the experience and capabilities to cast these very large panels, each in a single piece. Fortunately, one of the few qualified firms in the entire country was located in the Los Angeles area. That same foundry was given the task of fabricating 60 much smaller (15 inches by 20 inches) cast plaques for the other competition and training sites.

There were two other anniversary projects planned, both to be installed in Los Angeles museums. One was the reconditioned disco/coffeehouse from the UCLA Olympic Village, which had been designed by artist Peter Shire. This large open structure, considered a work of art in itself, was planned for exhibit at the Museum of Contemporary Art.

The other project scheduled for completion in late July of 1985 was a major exhibition dealing with both the 1932 and 1984 Games at the Los Angeles County Museum of Natural History in a newly renovated 4,500 square-foot gallery. This exhibit was planned to be fully interactive with extensive audio-visual presentations, hands-on computers, laser disc recordings and a large screen multiple film and tape projection.

92 Post-Games design projects:

1. Logo and report for the LAOOC Amateur Athletic Foundation.
2. One of 60 bronze plaques to be presented to Olympic competition and training sites.
3. Mark for the Olympic Alumni Organization.

11

11.01 Acquisition of revenues

11.01.1 Analysis of past Olympic revenue sources

With the establishment of the LAOOC, a sound fiscal policy had to be developed well prior to the Games which would generate enough revenue to cover expenses and allow for planning and production of the Games to go forth unimpeded. The first step toward forming this fiscal policy was to evaluate the areas where revenue was generated in previous Olympic Games and to determine which areas would effectively serve the LAOOC in its search for revenue sources.

A review of Moscow, Montreal and Munich Olympic financing revealed that approximately 90 percent of each organizing committee's revenue was derived from governmental sources, primarily from direct government funding, national lotteries and coin and stamp programs. For an organizing committee dedicated to running an Olympics without benefit of government involvement this presented a bleak picture.

With the government playing such a large part in the funding of past Games, the exploration of non-government revenue sources had been minimal. Although the dollar value for sale of television rights had increased over the past three Games, the average percentage of total revenue was only four percent. Revenue from ticket sales was also an under-utilized source, averaging two percent of total revenue for prior Games. Interest on reinvestment of revenues was almost non-existent, as Montreal was the only organizing committee to even reflect interest in its revenue statements. The only other area of notable revenue was in the development of a supplier/sponsor/licensee program. Each of the prior three Games utilized this program as a source of revenue but only to the extent that the average share of total revenue averaged eight percent.

The LAOOC's analysis of revenue sources from prior Games accepted gross dollar amounts on a weighted basis. This meant that in addition to looking at the percentage of total revenues derived from a particular source, the source as it related to the type of country hosting the Games was reviewed. A country that did not utilize a capitalistic system could not be expected to raise large sums of money from private enterprises within its country. Likewise, a country with a

depressed economy could not expect its populace to support major ticket sales. This weight factoring led to an emphasis on the analysis of revenue statements from organizing committees whose host countries were similar in structure to that of the United States: the 1976 Montreal Games and the 1980 Olympic Winter Games in Lake Placid.

Even with the inclusion of the Lake Placid financial report, the results of this revenue source comparison were not definitive. Some pitfalls to be avoided were identified, but no clear cut alternatives to government funding were apparent. The LAOOC was in a position to try a new and untested plan for acquisition of revenue without any historical indications that it would work.

11.01.2 Concept of revenue generation

In June 1979, the LAOOC engaged Arthur Young & Company and Peat, Marwick and Mitchell to develop a five-year financial plan. Their study concluded that the Games could be conducted for a cost of \$347 million

and that the LAOOC could reasonably expect to raise \$368 million in net cash revenues. The revenue projections were as follows:

Source	Amount
Sponsorship	\$116,000,000
Television	105,000,000
Admissions	92,000,000
Reimbursement and other	55,000,000
Total	\$368,000,000

Using the past three Games for comparison, the LAOOC would have to create a six-fold increase in revenue from non-governmental sources, primarily in sponsorship programs, television sales and ticket revenue to overcome the loss of revenue from governmental sources. Keeping this in mind, the LAOOC used the early months of 1979 to research and plan for the acquisition of revenue in these areas.

The LAOOC was faced with another large problem; the immediate funding of Committee operations. Past organizing committees had struggled under the specter of insolvency early in development because none of the revenue sources were isolated early enough to create the cash flow needed to plan and run the Games in the years prior to the Games themselves. The

¹ The LAOOC's largest source of revenue is the sale of television rights.

LAOOC's solution to this problem was two-fold: first, reach agreements with sponsors as early as possible and require a large portion of the sponsorship money up front, and second, demand refundable deposits from prospective host broadcasters as a prerequisite to bidding. The latter part of the solution proved to be the most expedient method of raising funds since IOC rules didn't allow the LAOOC to announce publicly the conclusion of contracts with sponsors (an important part of the deal-making process) until the 1980 Olympic Games were over. Revenue from both of these sources was collected, however, and was placed in a strong reinvestment program, with the interest derived being used to sustain the operations of the LAOOC in its early stages of development.

11.01.3 Sales of broadcasting rights

A keystone to the LAOOC's plan to generate revenues was the aggressive marketing of the television and radio broadcast rights for the 1984 Games. Based on the analysis of non-government sources, the largest potential source of funds was from the sale of exclusive television rights in the United States and other countries.

The LAOOC began the sale of television rights immediately after the appointment of senior management in 1979. Rights sales continued through 1984 and concluded only days prior to the Opening Ceremonies. The revenue from these sales was often split between rights fees and additional payments for other assistance and services rendered by the LAOOC. In agreement with the IOC, one-third of all fees paid for television rights were remitted to the IOC with two-thirds retained by the LAOOC. All monies paid by broadcast entities for assistance, services and items other than rights were retained by the LAOOC.

Since the LAOOC was in dire need of revenue to cover operating expenses in its first few years, the LAOOC's Television Advisory Commission decided to establish a domestic television rights bidding process which required the deposit of \$500,000 as a gesture of good faith by companies wishing to bid on the domestic rights. These deposits were refunded, without interest, after the selection of the U.S. rights holder. An initial deposit of \$500,000 was required to show serious interest in mid-April 1979 and another \$250,000 to qualify entities for the actual bidding in September 1979. Five companies posted the required deposits and were allowed to proceed into the bidding process. These five deposits provided the LAOOC with \$2.5 million in much-needed start-up cash.

The LAOOC attempted to structure the payment schedule of each separate sale of broadcast rights so it would receive large cash payments early. This

money could then be placed in the reinvestment program and subsequently make the actual dollar figure received from broadcast sales larger than the contractual amount.

The American Broadcasting Company's (ABC) bid of \$100 million for rights and \$125 million for production and supportive services was the winning bid for domestic rights. The IOC and the LAOOC agreed that the IOC's share of the rights fee amounted to \$33,500,000. This share was weighted in front and was considered non-refundable.

In all, 156 nations paid just over \$286 million for broadcasts rights to the Games—almost three times the amount collected in 1980.

The following is a list of broadcasters and the amount they paid for Games rights:

Broadcast revenues

Broadcaster	Cash commitment
ABC Radio Network	\$ 500,000
ABC Television	225,000,000
Arab States Broadcasting Union	350,000
Asian-Pacific Broadcasting Union	125,000
Bermudez/Westwood One	100,000
Consortium of Canadian Broadcasters	3,000,000
Caribbean Broadcasting Union	99,000
China Central Television People's Republic of China	200,000
Chinese Television Service (Chinese Taipei)	300,000
European Broadcasting Union	19,800,000
Broadcasting Corporation of New Zealand	450,000
Kanlaon Broadcasting System	400,000
Korean Television Pool	2,000,000
Los Angeles Olympic Japan Pool	18,500,000
OIRT	2,500,000
Organization de la Television Iberoamericana	2,155,000
Riden International	60,000
Sistem Television Malaysia Berhad	190,000
Television Broadcast Limited, Hong Kong	325,000
Network Ten, Australia	10,600,000
URTNA	110,000
Total	\$286,764,000

Broadcast revenues collected by the LAOOC by year through the end of the third quarter of 1984:

Broadcast revenue (in millions)

Year	Amount
1979	40.0
1980	8.0
1981	11.01
1982	32.617
1983	31.781
1984	163.356

11.01.4 Sponsorship and suppliership programs

The primary components of the LAOOC commercial licensing program were sponsorships and supplierships. Major corporations, in participation with the LAOOC, committed to support the Games with specified amounts of money and materiel in return for the right to use the Games' symbols in their advertising and marketing. In keeping with the revenue acquisition plan conceived by the LAOOC, this program was to be the most ambitious in Olympic history. The goal of the program was to raise \$116 million (from sponsors, suppliers and product licensees), six times the amount raised by similar programs used in the prior two Games.

In most cases, sponsors were large multi-national corporations which paid a minimum of four million dollars to the LAOOC in cash, goods and/or services in exchange for the designation, "official" sponsor of the Games. This designation granted sponsors immediate use of all LAOOC symbols in advertising and promotional activities. Additionally, official sponsors were guaranteed an allotment of hotel rooms through the LAOOC's official hotel program and access to a block of tickets available for purchase.

The LAOOC, in its efforts to promote the sponsor program, detailed the following benefits to potential sponsors: an improved public image, increased product name recognition, improved employee morale and the exclusion of competitors from similarly associating themselves with the Games. No set price for securing a sponsor designation was established since no two sponsors would derive the same benefits. The value of each sponsorship was determined through negotiations; with corporate size, product type and potential benefits all factors in determining the contract price.

By the end of 1979, the LAOOC had signed its first two sponsor contracts with the Coca-Cola Company and Anheuser Busch, Inc. for cash, goods and services in excess of \$20 million. These agreements served as benchmarks for future sponsor negotiations.

The following is a list of sponsors and the year in which they signed contracts with the LAOOC:

Official sponsors (by contract year)

1979	Coca Cola ABC Television Anheuser-Busch
1980	Arrowhead Puritas Dentsu Canon ABC Radio McDonald's Atlantic Richfield American Express United Airlines
1981	First Interstate Bank Southland Corp. Coca Cola/Foods Div. Buick/GMC Levi Strauss Allied Corp. Converse Fuji Sanyo Sports Illustrated
1982	Times Mirror Motorola M&M Mars Transamerica ARA Westinghouse Atari Warner Communications Xerox
1983	IBM Southern Pacific AT&T Pacific Bell

Some sponsor agreements also included "in-kind" contributions—the donation of goods, services and personnel utilized in the planning and staging of the Games. The content of individual agreements varied with the anticipated needs of the LAOOC. Some companies paid entirely in cash while others paid entirely in goods and services.

Sponsor minimum commitments

Minimum cash	Minimum in-kind
\$96,670,600	\$35,792,617

The LAOOC's strategy in obtaining commitments from suppliers did not differ significantly from the procedures used with the sponsors. The basic goal was still to obtain resources, either product, services or equipment, that were essential to the successful operation of the Games. The primary difference between the two programs was the level of commitment required—hundreds of thousands of dollars from a supplier compared to millions of dollars from a sponsor. Suppliers filled the need of the LAOOC for goods and services that were not provided by the sponsors.

Finance

The promotional rights granted to suppliers were substantially more limited than those granted to the sponsors, but the suppliers also were given the right to purchase tickets and secure a limited number of hotel rooms through the LAOOC.

The suppliership program began more than a year after the signing of the first sponsor, but by April 1984, 64 corporations had become official suppliers of the 1984 Games. They were:

Official suppliers

Adidas
 Allied Fibers & Plastics
 AMF American Inc.
 American Medical International
 Bat Taraflex
 Beatrice Foods
 Brother Industries
 Bushnell
 Campagnolo-USA

Supplier commitments

Minimum cash	Minimum in-kind
\$9,288,500	\$8,246,512

In the same way that the broadcast rights were set up to generate working capital early in the operation of the LAOOC, the sponsor and supplier contracts were structured to provide large first payments to the Organizing Committee with small but regular payments to follow.

Revenues generated by the sponsorship, suppliership and licensing programs by year through the end of the third quarter of 1984 were:

Sponsor, supplier & licensing

Date	Revenue (in millions)
1979	4.0
1980	9.62
1981	19.778
1982	28.724
1983	28.445
1984	32.624

11.01.5

Sales of admission tickets

The primary assumption made on the marketing of Olympic ticket sales was that a large demand existed in the United States. Consequently, the LAOOC's objective was to make the order by mail system as available as possible throughout the United States. Little advertising was done since the the press and electronic media did an excellent job of notifying the general public of the procedures for ordering Olympic tickets. A press conference was held on 13 June 1983 announcing the ticket ordering procedures, events available and prices.

Ticket sales to foreign countries and NOCs were handled by the Ticketing Department's special sales division. Tickets were sold in each country through its National Olympic Committee or its agents. Mail orders with a foreign return address received through the United States Postal Service order operation were rejected and sent back to the person with a referral to the NOC for tickets. The special sales division also managed ticket sales to LAOOC sponsors and suppliers, foreign broadcasters and ABC Television/Radio. These groups were allowed to purchase tickets following the same general guidelines and procedures as the NOCs.

2

2 Major corporations were designated as official sponsors in exchange for cash, goods and/or services. These sponsors were allowed to use the Games symbols in their advertising and marketing. The Coca-Cola Company and Anheuser Busch, Inc., were the first two corporations to sign sponsorship agreements with the LAOOC. The Converse agreement was signed in 1981.

Special sales division ticket sales

Organization	No. of tickets
Foreign broadcasters	9,000
Sponsors (LAOOC)	585,700
Suppliers (LAOOC)	14,300
Official Olympic Hotels	65,000
Total	674,000

Ticket orders for the 1984 Games were processed through a centralized computer located at a LAOOC facility in downtown Los Angeles. Order brochures were available at approximately 3,300 outlets of Sears Roebuck and Co., as well as at 200 branches of First Interstate Bank in Southern California and Manufacturer's Hanover in New York City.

Ticket orders were accepted through the mail order system beginning in June 1983 and continuing through April 1984. Approximately 33 1,000 mail orders were received from the United States general public. Additionally, special ticket orders from NOCs, sponsors, official hotels and other special sales groups were processed through the LAOOC computer center. Ticket revenue in excess of \$98 million was generated from mail orderticket sales.

Ticket prices ranged from \$3 to \$95 for sporting events and were \$50, \$100 and \$200 for Opening and Closing Ceremonies. The average ticket price for a sporting event was \$17. Approximately 50 percent of the 7.7 million available tickets were priced at \$10 or less. The objectives in pricing in this manner were two-fold: to make the Games affordable to everyone by having tickets priced at \$10 or less for each sport and to generate sufficient revenues to support the operating cost of the Games. On every mail order, a six percent Los Angeles city 1984 Olympic Games distribution tax was added. In addition, a \$1 non-refundable handling charge for each first choice ticket (or season ticket) was charged.

With the cessation of the mail order process on 1 May 1984, a large quantity of tickets remained unsold. On 7 June, nine remote ticket and information sites were opened throughout Southern California. There were approximately one million tickets available for sale over-the-counter at these centers. By the close of these sites on 10 August, in excess of 400,000 tickets representing more than \$6 million in revenue were sold.

In July 1984, the LAOOC had more than 100,000 tickets to high-demand and premium Olympic events were still unsold primarily as a result of canceled or modified special sales ticket allocations. These tickets were made available to the general public through

two Olympic ticket faires. The first ticket faire was held 20-24 July at Santa Anita Park in Arcadia, California. The second ticket faire was conducted 31 July through 2 August at Hollywood Park, in Inglewood, California. At Santa Anita Park, almost 30,000 people attended and purchased tickets valued at \$3.7 million. At Hollywood Park, \$1.8 million worth of tickets were sold. Between the two ticket faires, the public purchased a total of 110,000 tickets.

A patron program was established whereby 100,000 youth, senior citizens and physically challenged persons, who might otherwise be unable to attend the Games attended as guests of the LAOOC Amateur Athletics Foundation. The program was also designed to provide the best available seat on a guaranteed basis to those persons joining the patron program. Revenue from this area of ticketing exceeded \$1.7 million.

Revenue from ticket sales cannot be shown over time in the same manner as other sources of revenue since money the LAOOC received from ticket sales was treated as deposit on ticket orders in the liability/deferred amounts section of the financial statements and not as revenue until the third quarter of 1984. Ticket sales at remote ticket sites and ticket faires were treated as direct revenue on the financial statements but did not show up until the third quarter of 1984.

The results of ticket sales were unprecedented. Revenue generated from this source exceeded \$155 million. By comparison, the average revenue from ticket sales for the Moscow, Montreal and Munich Games was \$20 million. In light of the original projection that ticket revenues would not exceed \$92 million, ticket sales were an unqualified success,

Ticket revenue summary (in millions)

Source	Revenue amount
Mail order	\$100.67
Remote ticket centers	6.58
Ticket faires	5.69
Special sales	34.86
Remote football sites	2.65
Venue operations	3.26
Patron	2.03
Other	.12
Total	\$155.86*

*This ticket total of \$155.86 million reflects actual ticket dollars plus handling and taxes. Actual ticket revenues amounted to \$139.834 million of the total.

11.01.6

Sales of commemorative coins

Commemorative coin programs have been part of the Olympic Games since 1952, and since 1964 every Games has issued coins commemorating the current Games. The organizing committees of Munich, Montreal and Moscow all used the sale of commemorative coins as a major source of revenue. With these historical precedents and a report issued by the (U.S.) President's Commission on Olympic Sports stating that revenue from issuance of Olympic commemorative coins could net \$500 million, the LAOOC conceptualized a worldwide coin program that would feature legal tender coins. The coins were to be marketed by the private sector and the goal set was to generate more than over \$200 million for the Games.

The LAOOC solicited private marketers for the coin program and selected a group composed of Lazard Freres of Paris, Occidental Petroleum and the Franklin Mint. This group advanced the LAOOC \$5 million and guaranteed an additional \$50 million for the Olympics. The group also took responsibility for lobbying efforts necessary to move the Olympic coin program through Congress and purchasing the coins from the U.S. Treasury Department for cash.

The bill authorizing production of the Olympic coins passed the U.S. Senate but failed on the floor of the House. A substitute motion was presented in the House calling for the production of three silver coins (two silver, one gold) instead of the original proposal of 29 coins. The motion also called for the U.S. Mint to strike up to 50 million silver coins and two million gold coins, with the Secretary of the Treasury to determine the designs. Sale of the coins would include a surcharge of \$10 for each silver coin and \$50 for each gold coin sold. The proceeds from the surcharge would be split evenly between the USOC and the LAOOC. The manufacturing and marketing would be the responsibility of the U.S. Treasury. This motion passed both the Senate and the Congress giving the LAOOC a commemorative coin program quite different from its original concept. The LAOOC had no role in the Olympic coin program except to receive a check from the Treasury every month.

The retail price of the coins was set at \$32.00 for the silver coin and \$352.00 for the gold coin. The face value of the silver coin was \$1 each and \$10 for the gold coin.

The obligation of the LAOOC to not utilize government funds remained intact with this new coin program: the Secretary of the Treasury ran the coin program at no net cost to the United States Government.

In its early stages, the progress of the coin program was impeded by disagreements over designs, selection of the U.S. marketer, proposed media

budgets for advertising and the establishment of retail outlets. Four wholesale dealers were established to service retail coin outlets but the immediate response was slow due to low profit possibilities for coin dealers accustomed to high unit profits.

By the end of 1982, U.S. marketing was underway and the Treasury began the selection process for official marketers outside of the United States. Lazard Freres of Paris, part of the original group planning the coin program, who was selected as foreign marketer, estimated that foreign sales would account for 25 percent of total commemorative coin sales.

The coin program picked up more momentum in 1983 as D'Arcy-MacManus and Masius, the advertising agency in charge of the U.S. marketing program, had its suggested program accepted by the Treasury. Later in the year, a task force was established by the Treasury Department to increase coin sales.

Sales continued to increase in 1984 and skyrocketed during the torch relay and television coverage of the Games. Because of continuing interest, the program was extended through 18 January 1985 to take advantage of potential Christmas gift sales.

After January 1985, all coin dies were destroyed and silver and gold inventories melted down. Revenue from the coin program stood at \$29.707 million per the 1984 third quarter financial statement with the conservative expectation that an additional several million dollars was to be garnered from the program before its cessation.

11.01.7

Licensing program

The licensing program played a smaller but no less important role than the sponsorship and suppliership programs in generating revenues for the Games. Whereas the sponsors and suppliers were large companies providing cash, goods and services to the Organizing Committee, the licensees represented smaller companies contracted to place Olympic-oriented items in the consumer marketplace.

Licensees were authorized by the LAOOC to manufacture and sell a variety of souvenir products featuring LAOOC symbols. Royalties were paid to the LAOOC on the sale of these licensed products at the standard royalty rate of 10 percent. The LAOOC required the licensee to pay a guaranteed minimum royalty based on estimated sales projections, a portion of which was due at the time of signing. The licensee was required to submit quarterly royalty reports and a year-end audit.

Finance

These elements of the licensing program had been used in previous Games as a strong source of non-government revenue. Areas of the licensing program unique to the 1984 Games included a commitment to include minority and small Los Angeles area businesses and to allow licensees to bid on the manufacture of sponsor and supplier promotional items to develop long-lasting beneficial relationships among Olympic partners.

Initial licenses were granted in the second half of 1980. These licenses went to companies producing items that could be used as gifts by the LAOOC. A successful retail program and royalty income was a secondary, long-term goal. Upon completion of the licensing process in early 1984, the LAOOC had received approximately 8,000 license applications in about 300 product categories.

The LAOOC granted 65 licenses, including eight to Adidas sub-licensees. Of the total, 77 percent of the licensed businesses were from California and 40 percent were minority-operated firms. The success of the program was mixed, as 17 licensees failed to meet the minimum guaranteed payment to the LAOOC based upon initial sales projections. Total licensing revenue through the end of the third quarter of 1984 had surpassed \$13 million with approximately \$2 million in additional revenue expected by the beginning of 1985. This is in positive contrast to the \$11.36 million in minimum commitments originally expected from the licensees.

11.01.8

Other revenue sources

While revenue from other various sources was well over \$90 million, very few of these sources had an impact on the overall financial picture. A total of 35 areas comprised other revenue in the LAOOC financial report. Accommodations, \$15.5 million for villages and \$5 million for hotels, accounted for 21 percent of the total. In-kind commitment revenue, \$30.485 million, accounted for 31 percent.

Services provided to the NOCs, special ticket charges, novelty concessions and parking fees all contributed revenue. Money received in the form of grants to the LAOOC and to the Amateur Athletic Foundation was also classified as other revenue sources.

In general, these sources were anticipated in the original summary financial projection and fell into the reimbursements category. Although no concentrated effort was made to exploit this particular area of revenue, by the end of the third quarter of 1984, total revenue was almost double to the original projection.

11.01.9

Use of investment programs

and effect of interest

Since the LAOOC did not benefit from governmental funding, every effort was made to identify and solicit funding from other revenue sources soon after the formation of the Organizing Committee. The two largest sources of revenue in the early years of the LAOOC proved to be the sale of broadcasting rights and

sponsorship fees. In 1984, ticket revenue became the second largest source.

The investment policy of the LAOOC through 1982 was to finance committee operations from interest income. LAOOC executive management restricted this program to interest-bearing government securities since this type of investment was deemed to have a low risk factor.

Subsequent to 1982, LAOOC expenditures increased rapidly. Revenues were still invested in government securities, but instruments with shorter maturity terms were selected as the Games drew closer. Shorter maturities allowed more immediate access to LAOOC funds.

This investment policy proved successful. Investment results were comparable with the results of other investment firms over the five-year period (1979–1984), an average of approximately 12 percent per year.

INVEST, a software package which operated on an IBM personal computer, was selected to track the investment transactions of the LAOOC. Reports were printed from the INVEST system including investment listings, interest due and maturity schedules, gain/loss reports and portfolio yield reports.

Interest revenue (in millions)

Year	Amount
1979	1.1
1980	4.19
1981	7.059
1982	12.489
1983	26.384
1984	17.139

11.01.10 Revenue and the operating surplus

Without any doubt, the LAOOC will be remembered for the large operating surplus generated by tight fiscal controls as well as its very effective management and production of the Games. Major expenditures for construction of Olympic-oriented facilities had always eaten into the revenue generated for operations. The LAOOC, using past Games as reference points, established a two-part fiscal policy: 1) that the cost of new construction would be minimized through the use of pre-existing structures and corporate sponsorship of new facilities, and 2) that the LAOOC would exercise strong control of general expenditures at every level in an attempt to maximize its chances of running the Games at a surplus.

A conservative attitude was clearly evident in the LAOOC's estimation of revenue generated from the available sources. Even with revenue exceeding expectations in hand, the LAOOC continued to stage the Games in a fiscally conservative and prudent manner, knowing that problems could arise that would alter its fiscal picture.

This fiscal prudence was not intended to detract from the Games. On the contrary, the LAOOC was intent upon following the plan it felt certain would lead to a successful Games.

With the formula for the disposition of any surplus contractually decided by contract with the United States Olympic Committee, the LAOOC moved forward to produce a most successful Games from the perspective of both participants and athletes alike. The surplus generated by these Games—\$215 million, with the possibility of a \$250 million surplus by the time the LAOOC dissolves—is the largest in Olympic history, and proved that an organizing committee could stage a successful Games without government monies and with no detrimental effects on the host community. The legacy of these Games will be a positive and lasting one.

11.02 Budgeting and control of expenses

11.02.1 Concept and goals

As with any business venture, the LAOOC placed as much importance on budgeting and control of expenses as it did on the acquisition of revenue. If excessive spending was not controlled, no amount of revenue would overcome this drain on the operating capital of the LAOOC. Accurate budgeting, giving consideration to anticipated revenues and potential problem areas, and strict controls on expenditures were essential elements to a financially successful production of the Games. The preparation of the budget for the 1984 Olympic Games was a monumental task. Use of prior Games' budgets was next to worthless since time, resources, location and physical layout of the Games were radically different.

Budgets were developed and prepared for all the 1983 pre-Olympic events, an initial 1984 Games budget, a revised 1984 Games budget and an Orientation Day budget. Additional budgeting sub-systems were developed in the areas of permanent staffing, construction and private security.

11.02.2 initial budgeting 1979–1983

The first budget, which included the time period from May 1983 through the Games and subsequent liquidation of assets, was prepared in April 1983. The operational philosophy behind this, and every, budget was that total expenses for all departments (inclusive of venues) would be less than the minimum forecasted revenue less \$15 million. Anticipating minimum revenue and maximum expense due to such

problems as the inability to recruit volunteers and contractor price inflation, the initial budget, following the complete production of the Games, showed a \$15 million surplus.

The budget format was developed by the Budgeting Department of Finance, which consisted of three LAOOC staff members in April 1983, along with a consultation team from Arthur Young & Company. Each department was designated as a project cost center. Budget forms were designed and distributed to all department heads for completion. Completed forms were returned to the Budget Department for review and identification of omissions and overlaps.

The compiled information was reviewed in budgeting sessions with the LAOOC executive vice president/general manager, followed by subsequent reviews to examine changes implemented after discussion in initial sessions. All budgets were provisional in that any expenditure greater than \$1,000 required approval of the executive vice president/general manager even though it was contained within the budget.

11.02.3 Final budget 1984

During March 1984, the final budget was prepared. The initial budget, completed in April 1983, was no longer accurate since new budget-related information had been developed from the recently completed venue development plans and the commissioner's mandate. This mandate outlined the commissioner's responsibility with respect to the venue expenses.

Financial controls were placed at the beginning of the budgeting process. Approval for expenditures, for example, was required before purchase orders were drafted and commitments signed. All contracts and purchase orders were reviewed before they were signed by financial control managers for budget validation. Budget changes consisted of reallocation of budget amounts only. Dollar amounts were moved from one cost category to another but the total dollars in the budget remained unchanged.

Substantial contingency accounts were contained in the overall budget. These accounts were either for a specific item, such as extra security forces, or allocated to management officers, such as group vice presidents, for general purposes. In most cases, costs that had the potential to affect these contingency accounts failed to materialize. Thus, 90 to 95 percent of the contingency amounts went unused.

Security over budget information was extremely tight. Each project manager received the information for his department only. Information regarding the number and amount of contingency accounts was not circulated. This policy contributed to effective control over the budget even as some project managers grumbled over the loss of flexibility in the budget process.

11.02.4 Pre-Games budget exercises

Manual budgets were developed for the 1983 pre-Olympic events. These events, and the budgets developed for them, served as tests of several budget formats and cost tracking systems. In addition, a separate budget was developed for the 2 June 1984 orientation. This orientation budget was developed and tracked over a very short period of time and proved to be a successful dry run before the Games.

11.02.5 The budgeting system

The Games budgeting system was programmed and operated on an IBM personal computer. The system compiled budgeted amounts for over 5,000 individual line items. This system contained budget amounts only. No actual costs were tracked, which allowed for quick turnaround on budget revisions as new budget reports could be run as needed.

The budgeting system information was entered into a separate general ledger system by diskette. Similarly, purchase order commitments and payments from the purchase order/accounts payable system were entered into the general ledger system by tape and from the payroll system by manual journal entries. Since this data was entered by three different devices, reporting turnaround time was slow.

A permanent staff budgeting system was also developed and operated on an IBM personal computer. The format included a line item for each staff position. The staff budget was compiled by the Budgeting Department and approved in total by the executive vice president/general manager of the LAOOC. However, the executive vice president/general manager had to approve each requisition for a new staff member, even though the position was contained in the previously approved staffing budget. Approximately 25 percent of the requisitions were rejected in this review process. Because of this, all of the departments' permanent staff costs came in under the budgeted amounts. On a short-term basis, this was a good example of strong financial control on expenditures.

A construction budgeting sub-system was prepared on the personal computer. Contract parts lists and where-used lists were entered into the system. Then, when a price change for a part was reported, the financial impact of the change was assessed quickly.

A private security budgeting system was developed on the personal computer. Security costs were detailed by venue, by day and by shift and any change in security operations was quickly calculated.

See notes to combined financial statements in section 11.09.

*Second quarter financial statements were not issued.

**11.02.6
Commitment reports**

A commitment report was produced from the data contained in the general ledger. This report listed, by line item for each project, the budgeted amount, open purchase orders, actual cost and variance between original budget and estimated final cost. The report was run monthly in 1983, biweekly in 1984 and daily commencing six weeks prior to the Games. Unfortunately, these reports were often outdated due to integration time lags between the purchase order, accounts payable, payroll and general ledger systems. From this report, during the second week of the Games, it was apparent that expenses were not going to spiral out of control. A decision was made to discontinue this daily commitment report and allocate the manpower to other financial areas.

Each project manager received the commitment report for his project. Group vice presidents and senior management received summary level reports. A manual commitment report was prepared every two weeks, starting in May 1984. This was a time-phase report designed to determine if commitments were being made early enough to ensure completion of the project in time for the start of the Games. The initial reports showed that spending was behind schedule. With further investigation, it was found in many cases that a portion of the expense would not be realized and that the project would be completed on time and at substantially less than the budgeted amount.

**11.02.7
Budgeting staff**

The Budgeting Department was established in March 1983 with a director of budgeting and two budget managers. Additional budget managers were added in the next few months, each responsible for the budgeting activities of either two to three sports or four to five functional departments. In April 1983, each budget manager responsible for sports took on the dual role of budget manager and financial control manager. The financial control manager reported to the director of budgeting for budget control purposes and to the controller for venue operations. The seven functional department budget managers reported solely to the director of budgeting. Additionally, a

coordinator of systems and reports was responsible for the operations of the budgeting computer system.

**11.02.8
Expenses and the operating surplus**

The ability of the LAOOC to successfully exploit different revenue sources was matched by its ability to project and then manage the amount of money it required to produce the Games. By constantly keeping in mind the possibility of major problems forcing costs upward, the LAOOC exhibited an extremely cautious approach to spending. Every opportunity was given to departments and venues to re-evaluate and cut their budgets without jeopardizing the quality of the Games. Review by senior management prior to financial commitment kept spending in check during the pre-Games period. Having displayed early this strong desire to minimize excess spending, senior management stressed the importance of keeping within agreed-to budgets to department heads and venue management.

The result of these controls was exhibited in the reconciliation of the final 1984 budget with actual expenditures. Two-thirds of the major project centers spent less than budgeted. Overall, expenditures were more than 13 percent under the 1984 budget, a dollar equivalent in excess of \$63 million.

**11.03
Economic impact of the Games**

**11.03.1
Overview**

Economic Research Associates (ERA) was hired in 1982 to conduct a study of the potential economic impact of the Games on the Southern California area and to forecast the effects the Games might have on various segments of the local and regional economies. Its first report, forecasting the expected economic impact, was developed in October 1982 and made public by the LAOOC at the end of that same month. ERA's second report, utilizing hard data from the Games, was issued in September 1984. Only the aspects of economic impact that could be measured quantitatively were included in the ERA study. The information contained within this section is derived from the second and final report from ERA.

The impact of the Games, although spread out over a number of years, was concentrated in the calendar year 1984. The total impact—a remarkable \$3.29 billion is significant in the context of the Southern California economy. For example, the total impact of \$3.29 billion represents roughly 1.6 percent of the current

year's total gross product in Los Angeles County. By comparison, world's fairs of the magnitude of Seattle's 1962 or Knoxville's 1982 World's Fair which ran for a six-month period generated \$1.0 to \$1.5 billion in total impact.

Total economic impact of the Games occurred on two levels: primary and induced, with primary impact referring to the initial first round expenditures directly associated with the event, while induced impact referring to the subsequent respending of the initial (primary) income. This induced impact had a substantial effect on an economy as large and diversified as that of Southern California. The final factor affecting economic impact was displacement, whereby normal tourism and resident expenditure patterns were adversely altered by the occurrence of the event.

**11.03.2
Primary impact**

Primary economic impact consisted of the following components:

- Pre-Olympic visitation and business activities relating to Olympic Committee officials, sponsors, media, Olympic licensees and contractors
- Major communications, electronic media, and other capital improvements
- Incremental sponsorship advertising
- Cultural events, exhibits and activities
- Related pre-Olympic sporting events
- Olympic venue and village operations
- Out-of-town visitor expenditures
- Local resident Olympic-related expenditures
- Olympic souvenir and merchandise sales
- Governmental revenue
- Long-term benefits accruing to the local community

Gross primary expenditures, based on the listed components, were estimated to be \$1.2419 billion. The value added to the local economy by these expenditures was estimated to be \$1.097 billion. Neither of these figures reflected the \$50 million share of television revenues sent to the International Olympic Committee or the \$90 million share of surplus revenue anticipated for the United States Olympic Committee.

Employment, expressed in terms of manpower years, totaled 25,000 with corresponding earnings of \$494 million. Given the short term nature of

the peak Olympic Games period, it was estimated that most of the employment opportunities were of four month duration or less, meaning that some 37,500 new jobs were created and another 37,500 existing employees received additional income. These figures did not include the 27,700 LAOOC volunteers who were not compensated with wages.

**11.03.3
Induced impact**

The induced impact of the Games is derived from the primary impact dollar total multiplied by a factor developed by the U.S. Department of Commerce Bureau of Economic Analysis. For a regional area such as Southern California, a factor of three was determined to accurately reflect respending and induced total economic impact. Working backwards from this total economic impact figure, the difference between the dollar value of the primary economic impact and the displacement value is one half of the induced impact dollar value.

Induced total economic impact from the 1984 Olympic Games

	<i>Economic impact</i>
Gross value-added primary economic impact	\$1,097,109,000
Less displacement	-331,084,000
Net primary economic impact	766,025,000
Induced impact (3.0 times the net primary economic impact less the net economic impact)	1,532,050,000
Total	\$2,298,075,000

**11.03.4
Displacement**

Displacement in the Southern California area was high during the Games and was attributed to the event itself by the media, whereas the ERA study showed numerous factors, not all of them directly attributable to the Games, as part of the problem. Among the factors were:

- Regional summer tourism in the United States and in Southern California did not rebound to the record 1982 levels.
- The highly valued U.S. dollar had been a disincentive to foreign tourists on the one hand, and had meant a surge of U.S. tourists to foreign destinations (instead of the U.S. and Southern California) on the other hand.
- Widespread national media reporting of potential congestion at the Games, and of potentially exorbitant visitor travel and accommodation pricing in early 1984 had negative effects on potential summer tourists and visitors.

- The Games, having been known to be scheduled for Los Angeles for six years, resulted in alternative vacation and visitation planning by out-of-town tourists and by regional residents, and some postponement of business trips.
- Regional residents spent substantial sums on participation in the 1984 Games they would otherwise have spent on other recreational activities in Southern California or outside the region.

ERA estimated that the potential worst case displacement value might be \$331 million, based upon both a slow tourist summer nationally and in Southern California as well as displacement caused by the Games. The worst case displacement value is composed of \$168 million of regional resident expenditures at the Games and \$163 million of lost out-of-region visitor/tourist expenditures which did not occur in Southern California for reasons described previously. Even if this worst case displacement is taken into consideration, the Games economic impact easily overcame the displacement and provided enormous benefit to the Southern California region.

11.03.5 Economic impact on government

The economic activity created by hosting the Games produced substantial government revenues at all levels. The city of Los Angeles was expected to receive \$33.5 million in revenues and payments for services as a result of the Olympic Games. The special Olympic ticket distribution tax and special transient occupancy tax surcharge accounted for \$17.7 million of the total. Revenues accruing to the county of Los Angeles were estimated at \$192,000. This lower level principally resulted from a relative scarcity of visitor services that existed in the unincorporated county area. However, several countywide agencies received substantial revenues as a result of Olympic related activities. For example, the Los Angeles County Transportation Commission received \$1.739 million generated by the mass transit 0.5 percent sales tax levy and SB 325 sales tax allocation. Furthermore, incremental revenues accruing to other local political jurisdictions as a result of hosting the Games were estimated in the range of \$12.5 million, including payments by the LAOOC for law enforcement cost reimbursement contracts. The state of California was

Summary of gross primary economic impact by component (thousands)

Gross primary impact activity	Gross expenditures	Value added component
Pre-Olympic visitation and business activities	\$ 4,532	\$ 4,532
Communications, electronic media, and other related capital expenditures	100,000	80,000
Additional sponsorship advertising	4,000	4,000
LAOOC sponsors, LAOOC suppliers, and other corporate entertainment/representation expenditures	5,000	5,000
Cultural activities		
Events	11,500	9,200
Related expenditures	6,858	6,858
Related pre-Olympic sporting events		
Events	2,300	1,840
Related expenditures	1,000	1,000
Olympic Games and village operations	454,500	420,413
Licensed sponsors and suppliers goods and services to LAOOC	47,350	47,350
Out-of-town visitor expenditures		
Visitors in commercial accommodations	264,243	251,031
Visitors with friends/relatives	174,664	165,931
Local resident expenditures	19,847	18,855
Local souvenirs and merchandise	45,000	20,000
Non-local souvenirs and merchandise	50,000	10,000
Village resident expenditures	2,775	2,775
Local government revenues	48,324	48,324
Gross expenditure subtotal	1,241,893	1,097,109
Future value economic impact of LAOOC Amateur Athletic Foundation (minimum)	50,000	50,000
Total	1,291,893	1,147,109

expected to receive \$48.9 million in tax revenues attributable to the Games, with individual and corporate income tax accounting for 75 percent of the total. The value of new construction on government and university properties by the LAOOC and its donors and sponsors had been calculated to be roughly \$28 million. This value, when added to the estimated \$96.9 million in local and state governmental revenues generated by primary impact expenditures in Southern California, comprised a total of \$124.9 million in immediate revenues and long-term benefits.

11.03.6 Potential benefits to the community

A future benefit for all Southern California will be generated by the LAOOC Amateur Athletic Foundation which will receive in excess of \$50 million from the 1984 Games operating surplus. As these funds and their interest earnings are expended in the region, additional positive economic impact will occur. The benefits will uniquely flow to the youth of the region for many years to come.

Among the other benefits to the communities in Southern California:

- The Games were located throughout Southern California, dispersing expenditures into many communities and governmental jurisdictions.

- Visitor capture investments (hotel/motel rooms, dining, etc.) were made earlier than normal, for the Games, and also because of increased regional business expectations.
- Cultural facilities were opened prior to the Games and enjoyed enhanced visitation. The new museums and exhibitions at Exposition Park recorded 1.5 million visitors during the Games, with substantial attendance increments continuing since the Games.
- Increased "host capacity" of the Southern California region is evident in the development of large numbers of new hotel rooms inventories—more than 12,000 since 1982.
- Southern California venue cities have become recognized national venue names and will gain enhanced business over the long run.
- Although there was a relatively modest amount of new permanent facility construction which took place for the 1984 Games, there nonetheless was an estimated \$28 million in facilities which remained in the community for future use.

11.04 Government financial involvement

Two important events occurred early in the history of the LAOOC that made it imperative for it to hold an Olympic Games free of government financial involvement. On 7 November 1978, the voters of the city of Los Angeles passed a charter amendment prohibiting any capital expenditures by the city on the Olympics that would not, by binding legal commitment, be paid back. As a consequence of this amendment, the LAOOC had to be self-financing without reliance upon local government grants or loans.

Also during these early years the LAOOC made an attempt to procure a federal grant for \$200 million toward the funding of the Games. When the difficulty of securing this grant became apparent to the Organizing Committee, the principle of no local government funding was extended to no governmental funding of any sort.

Services provided by all levels of government—local, state or federal—were paid for by the LAOOC following the pattern established by the city of Los Angeles and the passage of the charter amendment. The straightforward business approach to dealings with the government did not mean that the LAOOC sacrificed the goodwill needed to operate this enormous international event. On the contrary, this new approach to financing the Games allowed the various governments to focus their efforts on providing needed social services without having to fear that they would not be compensated for their efforts.

Even without the government's actual involvement in the financial operations of the Games, revenue from the organization of the Games did flow back to the various state and local governments in amounts in excess of \$90 million. The federal government operated the Olympic commemorative coin program with an obligation to run it at no cost to the government or the taxpayers.

The effect of the absence of government funding of the Games was less than minimal. Non-government sources were approached and asked to make up the revenue difference and their response was far beyond the LAOOC's greatest expectations. The LAOOC raised \$651 million from non-governmental sources compared with \$72 million raised by the Montreal organizers.

**11.05
Procedures for financial control and operations**

**11.05.1
Accounts payable**

The accounts payable function consisted of processing and payment of vendor invoices, contractual obligations and expense reports as well as the financial report of these activities. The LAOOC operated on a cash basis with respect to its obligations. The goal was to remit payments as quickly as possible in order to build confidence in the LAOOC as a viable entity in the business community. During 1984, the LAOOC's peak activity year, the LAOOC did business with over 12,000 vendors, processing more than 55,000 invoices and preparing approximately 33,000 checks.

The financial system software was provided to the LAOOC by Walker Interactive Products. This system was selected in October 1982 by the Technology Department. The accounts payable, purchase order and materiel management applications were installed on IBM hardware located in downtown Los Angeles at the offices of LAOOC sponsor Transamerica. Thirty IBM terminals were installed at the administrative headquarters in Culver City for data input.

The Walker System was on-line, real-time and interactive, permitting communications across the applications. The system required a three-way match of the invoice with the purchase order and receiver before payment could be generated. This system was quite complex and the implementation period for the software was quite lengthy. Technology and Finance staff, along with Walker and Transamerica personnel, spent more than six months implementing and testing the software for errors. Eventually, a computer programmer was hired by the LAOOC to program

and install fixes for the major software problems encountered. "Work-around" procedures were devised for software difficulties that could not be fixed on a timely basis. Thorough system procedures were prepared by the Technology Department to aid in familiarizing staff with the system.

Daily reports were run overnight at Transamerica and delivered to the administrative headquarters in Culver City by courier each morning. Reports included the transaction, daily invoice and check registers. Monthly reports included a cumulative check register and an account distribution which was posted to the general ledger to provide purchase order commitment reporting.

Payment of an invoice consisted of the following steps:

- Invoice received from vendor and date stamped
- Invoice logged into in-processing book
- Invoice sent out to originating department for approval and general ledger coding
- Invoice received from department and date stamped
- Invoice logged out of in-processing book
- Invoice batched and input to system
- Check printed overnight
- Check mailed
- Backup sent to vendor file

Rush checks were processed as follows:

- Manual check typed, signed and delivered
- Invoice and check details entered into system on next day
- Backup sent to vendor file

The Accounts Payable Department staff consisted of a department manager, supervisor and seven accounts payable clerks in December 1983. Prior to the Games in 1984, 23 additional clerks were hired and trained. However, during the Games, only eight clerks were left in the department, as the other clerks were sent to venue finance offices. The system was in use 14 hours a day, six days a week through June 1984. In July, system usage was increased to 15 hours a day, seven days a week and remained at that level through September. System use was then cut back to pre-Games levels through the end of 1984.

**11.05.2
Accounts receivable**

The responsibilities of the accounts receivable area were to obtain receivables information from the various departments involved, record

Projected primary impact employment generated by 1984 Olympic Games

	<i>Earnings (in millions)</i>	<i>Employment Man- years</i>
Olympic operations (sports venues, villages, administration, security, etc.)	\$172.266	8,720
Construction activities	38.170	1,930
Cultural activities and youth programs	4.140	210
Visitor and local resident participant services	203.770	10,310
Merchandise manufacture and distribution	13.500	680
Other	62.154	3,150
Total	\$494.000	25,000

the obligations in the general ledger, type and send invoices and record payments received by the Treasury Department. Nine receivables accounts were used. They were: licensees, sponsors, royalties, broadcasters, suppliers, honorariums, premiums, employees and miscellaneous receivables.

An IBM software product operating on an IBM personal computer was used to manage the accounts receivable function. The accounts receivable needs were not complex and, therefore, a small software package with a few extras was adequate.

The obligation was initially debited to the proper account in the system upon receipt of documentation from the originating department. Invoices were manually typed and mailed according to the payment schedule. Cash receipts, received from the Treasury Department, were credited to the various accounts. Journal entries were prepared to record the activity in the general ledger. Debit memos were issued and signed by the treasurer or vice president of Finance to write off a debt or correct an error.

Reports, which consisted of an invoice register, revenue collection journal and customer file, were produced weekly. At the end of the month, these reports plus an accounts receivable ledger and aged trial balance were run. An accrual journal entry was also submitted to the general ledger at this time.

The accounts receivable system input and processing was completed by a single accounts receivable clerk. The work was then reviewed by the senior manager of financial operations.

Although this system worked well, minor modifications to both accounts receivable (A/R) policy and software would have been of benefit. Receivables software that interfaced with the general ledger and accounts payables would have alleviated the number of manual journal entries and discovered discrepancies between cash receipts and the general ledger. Management should have been more strict with enforcing the use of the A/R system within all departments, should have given collection responsibilities to the A/R area to increase collections

efficiency and should have required cross-checking of employee terminations with the employee receivables account to increase the collection ability on outstanding employee receivables.

**11.05.3
Contract administration**

Contract administration was a major function of the Treasury Department. The LAOOC entered into more than 3,000 contracts, including sponsors, licensee, supplier, premium, consultant, construction, cultural, hotel, concession and venue agreements.

An IBM Displaywriter and Reportpack software were used to manage the details of the contracts. After a contract was received by the contract administration area, an extract of important points and dates was written and the payment schedule was noted using Reportpack software. In this manner, the contracts could be sorted by date.

A memo was generated and sent to the originating department as payments became due. The memo requested confirmation of fulfillment of the obligation by the contractor. Upon confirmation, a check request was issued and a check generated by the accounts payable area of the Controller's Department.

The administration function was staffed by a group consisting of a manager, an attorney and four staff members.

**11.05.4
Insurance**

Important in the planning stages of the Games was the negotiation of the LAOOC insurance program. The two components of the program were comprehensive general liability and medical insurance policies.

The general liability policy was secured in 1982. It proved invaluable in negotiations with the cities and venues where events were to be held, as it

provided protection to the entities. The scope of the program was comprehensive and included property damage, automobile and general liability coverage.

The medical insurance policy was secured in 1983. Prior organizers had provided a standard travel accident plan for the athletes and press. The LAOOC policy was innovative in that it covered the entire Olympic Family and provided for all emergency medical care. This plan alleviated the administrative burden of American hospitals dealing with foreign insurance companies and guaranteed payment for American hospitals.

The LAOOC reviewed several insurance companies before selecting Transamerica Insurance Co. as its carrier. Transamerica, which became an official sponsor of the Games, offered the best policies at competitive premiums.

The medical policy covered members of the IOC, athletes and officials. Additionally, members of the press could purchase insurance coverage. The policy premium was \$30 per participant for coverage up to \$20,000 in medical bills. The LAOOC paid the premiums for all the Olympic Family members with the exception of the IOC members and their guests. These premiums were paid by the IOC.

The medical policy was unique in that it provided profit-sharing upon expiration. If the policy resulted in a profit after deduction of all medical expenses, the excess premium funds would be split equally between the LAOOC and Transamerica. Any losses would be borne by Transamerica.

The insurance program was monitored by the treasurer, an insurance manager and one insurance clerk. During the Games, the Treasury Department manned a 24-hour insurance problem-solving telephone line.

11.05.5 Payroll

The payroll function was split into two major categories: permanent payroll and Games payroll. Permanent payroll consisted of approximately 1,500 employees at its peak and included all employees hired prior to 2 June 1984. The Games payroll encompassed approximately 10,000 in-processing, Olympic Arts Festival, transportation, sports venue and village employees hired on or subsequent to 2 June 1984. The two payrolls, although handled by the same software system, had separate procedures.

The payroll processing and reporting needs of the LAOOC were handled by an outside service, Automatic Data Processing (ADP), through November 1983. Manual input was prepared by the LAOOC Payroll Department and submitted to ADP for computer input and processing. In late 1983, a change

to another outside service, Pay-Fone, was made. This decision was based primarily on Pay-Fone's offer to donate all services to the LAOOC.

Pay-Fone operated on an IBM mainframe computer at Pay-Fone headquarters in North Hollywood. Payroll data was entered into 10 IBM personal computers located in the Payroll Department at the administrative headquarters. Each personal computer was equipped with a 10 mega-byte hard disk drive for volume storage purposes. The payroll data was transferred from the personal computer via modem and telephone data line to the Pay-Fone host computer for processing and production of paychecks and related reports.

Permanent payroll was transferred from ADP to Pay-Fone in November 1983. Employee master files for existing employees were established by Pay-Fone at the Pay-Fone headquarters. New employees were set up on the personal computers at the LAOOC administrative headquarters, based on data received from the Human Resources Department, and transmitted to Pay-Fone's host computer. Detailed operating procedures for use of the Pay-Fone system were written by the Technology Department. The Payroll Department was responsible for weekly data entry for the regular bi-weekly payroll.

A bonus payment payroll was input and run subsequent to the Games. Also, each permanent employee was entitled to a severance payment, amounts of which were calculated manually by the Payroll Department. Each permanent employee then received a severance paycheck on his termination date.

Hand distribution of pay checks became increasingly more difficult as permanent employees moved out from the administrative headquarters to their Games positions. The United States Postal Service was first used, but a delivery period of three days for local mail was encountered. Thereafter, pay checks were delivered to the site by the Games payroll coordinator or picked up at the administrative headquarters by the employee.

The Games payroll consisted of those employees hired on a temporary basis to staff the Games. The Games Staffing System (GSS), an in-house system, was developed to handle job placements

for the temporary employees. The system matched job applicants with job requisitions submitted by various departments. These employees reported to work at over 100 locations.

The GSS contained all information necessary for the payroll employee master files including name, address and pay rate. The Pay-Fone employee master files were created by a tape download from GSS (resident on an IBM System/38) to the Pay-Fone host computer in June 1984. Pay-Fone transmitted the files to the personal computers at the administrative headquarters. This file creation process guarded against data entry errors. The link between GSS and Pay-Fone was maintained for budgetary control (in GSS) over the number of Games employees and corresponding pay rates. However, GSS was not maintained on a timely enough basis to allow payroll to be dependent on it; employees were hired and not input to GSS and pay rates were changed after employees were downloaded to Pay-Fone. These and other similar problems caused the link between the two systems to break down just prior to the Games. Employees were then entered into the payroll system manually, based on information received from personnel coordinators and others.

The Pay-Fone System required the entry of hours worked for all employees, including exempt (salaried) employees. Also, the system did not allow pre-programming of employee start dates and termination dates. Each employee had to be manually activated and terminated in the proper pay periods. Pay-Fone created weekly time sheets for manual recording of start dates and hours worked. Completion of a time sheet triggered payroll processing and payment of a Games payroll employee for that time period. Similarly, if a time sheet was not submitted (time sheet required signature approval by the employee's manager), it was assumed that the employee did not work that week or the scheduled termination date had passed. Payroll processing problems were encountered due to the failure of managers at the various Games locations to properly complete and submit the weekly time sheets to the payroll coordinator assigned to each location.

A payroll coordinator, whose duties included the distribution, collection and review of department time sheets as well as paycheck distribution, was designated from the Finance staff at each venue. This position proved important; however, venue finance was staffed with volunteers whose first day of work commenced with the opening day of the Games. Training for payroll duties was limited due to this restriction.

Games payroll procedures were written by the controller's department covering the entire payroll process from time sheet preparation to check distribution. The appropriate sections of this manual were sent to all commissioners, venue directors, managers, finance staff and Games payroll employees, with cover memos explaining their role in the Games payroll.

A payroll command center was established at the LAOOC's administrative headquarters during the Games. The center was staffed from 0800 to 2000 hours, seven days a week, for approximately six weeks during and after the Games. This liaison role between the sites and the Payroll Department was very effective in solving the payroll processing problems.

11.05.6 Purchasing

Once a determination had been made that a particular item was needed, whether it was anticipated or not, the originating party completed a requisition form. This form detailed the specific item by cost and vendor and included budgetary information. The completed requisition was the secondary source document (the first being the original materiel item list) for the materiel management system. Information from the requisition was used to update item, vendor, venue and warehouse materiel reports.

To complete the requisition, the requesting party had to do some initial research on vendor availability because of the relatively small size of the central purchasing staff. The purchasing staff would seek a vendor only if one was not identified on the requisition.

For the requisition to become valid, the information contained on the form had to be correct and complete and include appropriate authorizing signatures. A requisition which requested materiel with an estimated total cost under \$250 did not require completion of the purchase order/purchasing process. With the approval of the department manager, a requisition for this amount could be processed using an open purchase order for the department. No requisition was submitted to purchasing and when the invoice was received from the vendor by accounts payable, it was approved and signed-off by the department manager.

After 1 June 1984, requisition forms which requested materiel with an estimated total cost of \$250-\$1,000 required the signature of the originator, the department head and the budget manager for the department. Requisitions which totaled between \$1,000-\$5,000 also required the signature of the vice president of Finance, in addition to the first three signatures. Requisitions with a total of more than \$5,000 also required the signature of the executive vice president/general manager of the LAOOC. This authorization and purchasing procedure remained in effect during the Games for those departments operating out of the administrative headquarters in Culver City. Personnel based at venues were not required to use the same authorizing process since each venue was operating in an autonomous atmosphere. The restriction upon this autonomous system was that any expenditure over \$20,000 required approval of the Operations Center during the Games.

The completed, authorized requisition was returned to the supply coordinator for review. Part of the review process was to identify a materiel item identification number (if none existed previously), identify a vendor number, establish a materiel/vendor relationship (what kind of materiel does this vendor supply?) and identify the materiel/venue relationship (what and how much materiel is going to which venue?) in the materiel management system. All of this information was entered into the computer system for management and inventory control purposes.

Once verified as accurate, the requisition was given a purchase order number from the purchase order log. The purchasing staff verified the availability of materiel with the vendor, terms of the purchase and the expected date and manner of delivery. A formal purchase order was completed, the information was entered into the materiel management computer system and the purchase order was sent to the vendor. At the same time, by computer, the Material Distribution Center was notified to expect delivery.

These purchasing procedures were carried out from January 1980 through January 1984 by the purchasing section of the Material Logistics Department. In February, the purchasing function was removed from the responsibilities of Material Logistics and made a separate function in the Finance Department.

By the close of the Games on 12 August 1984, the materiel management system contained almost 12,000 vendors, a majority of whom conducted business in Southern California. Material Logistics processed approximately 35,000 requisitions with more than 8,000 different line items, and 7,200 purchase orders were written and approved with a dollar value in excess of \$74,000,000. The 5: 1 ratio of requisitions to purchase orders was caused by the merging of several requisitions for a particular item to improve purchasing power and the ability to purchase more than one item from a vendor. Countless other orders for materiel were not included in these totals since they were for amounts less than \$250 and placed on open purchase orders or paid for with petty cash.

11.05.7 In-processing

The in-processing function entailed the processing of visiting members of the Olympic Family, including registration for accommodations, collection of monies owed and issuance of photo identification access credentials. Accreditation of Olympic Family members was the issuance of rights of access, at varying levels, to Olympic Games sites. Thus, the finance in-processing function certified that accommodations for Olympic Family members were paid in full prior to issuance of accreditation credentials.

An IBM hotel accounting software package was selected to track the Olympic Family financial information. This package was customized for in-processing use by the Technology Department. The accommodation package was run on an IBM System/38 located at the LAOOC's administrative headquarters with computer terminals located at each of the three in-processing centers and the administrative headquarters.

In-processing finance staff accessed the system to verify remitted deposits, to calculate balances due and to post payments received at the in-processing centers from Olympic Family members. Small problems in report generation on the system sometimes forced the staff to revert to a manual backup system to calculate balances due.

11.05.8 Internal audit

The LAOOC was a unique enterprise whose objectives did not parallel those of a traditional on going concern. By its nature, the LAOOC was designed to cease operations once the Games were completed. Moreover, several years of planning were necessary for the approximately four-week operating period of the Games. The planning process was constantly reacting to fast-paced changes in criteria for conducting the Games. In this environment, the internal audit function

was to ensure that the organization's evolution was monitored within management guidelines.

The general role of internal audit was to evaluate the plan of organization, and all related methods and measures used within the organization to safeguard its assets, check the accuracy and reliability of its accounting data, promote organizational efficiency and encourage adherence to management policies and procedures. Internal auditing was an independent appraisal function charged with examining, evaluating and reporting on the adequacy and effectiveness of managerial and financial control systems for all LAOOC operations. To fulfill this function, the internal audit staff had unrestricted access to all LAOOC functions, records, property and personnel.

The internal audit function was established with a limited staff, only one year prior to the Games. Therefore, many functions were either not reviewed or merely given cursory attention. In some instances, activities were already in place and a cost-versus-benefit approach for changing certain operational systems at that point was not economically justifiable. Within this limited scope, internal audit's general responsibilities included:

- Conducting audits to evaluate the effectiveness of the LAOOC's system of internal control and compliance with established policies and procedures
- Recommending to management, on the basis of audits and investigations conducted, improvements in accounting, financial and operating controls and appropriate action to be initiated and implemented by the manager responsible for the function of operations audited or investigated
- Appraising the adequacy of management's plans or actions to resolve deficient conditions identified during audits and investigations
- Coordinating activities with those of the LAOOC's external auditors, Arthur Young and Company, to minimize duplication of effort and build confidence in the reliability of the Department's results

11.06 Venue finance procedures

Venue finance was responsible for the financial planning and operations of 27 sports venues. Nine regional financial control managers (RFCMS) managed two to three venues each and reported to an assistant controller. The staff

was augmented by 27 volunteer venue finance managers and approximately 175 volunteer venue accountants.

The venue finance duties consisted of administering the venue budgets, contracts, petty cash, payroll, rush checks and other banking activities. Venue finance also assumed a limited role with respect to ticket sales, parking sales, per diem payments and attendance verification.

11.06.1 Budgets

Sports venue budgets were prepared by the RFCMs during February 1984. The individual line item amounts were based on input from the commissioner and sports manager for each venue. The RFCMs were responsible for budget updates and revisions. Additionally, they coded all venue-related charges to the proper general ledger accounts, after ensuring that the charges were legitimate and included in the budget.

Commitment reports reflecting budgeted versus actual expenditures were produced by the Budgeting Department. The commissioners relied on the RFCMs for current budget information. Because the RFCMs had to obtain the information from budgeting, it was often outdated when received. To provide timely information to sports venue management, the RFCMs actually needed an on-line inquiry capability into the budgeting system.

11.06.2 Contracts

The majority of venue-related contracts were premise leases, equipment rentals and concession agreements. All contracts were controlled by the contract administration area of the Treasury Department. After a contract was signed, an extract was written, the original contract filed and the payment plan initiated.

The RFCMs were not involved in the contract process. The RFCMs needed access to contract administration files to research and provide answers to venue management's inquiries concerning the financial ramifications of specific contracts. Concession contracts were the exception to this process. The Spectator Services Department, which was responsible for monitoring concession activities, communicated the necessary financial information to the RFCMs.

Subsequent to the Games, the RFCMs were given responsibility for closing out all venue contracts directly with the contractors. This consisted of confirmation of completion of contract and, in some cases, calculation of final payment. In some cases, contracts had been renegotiated by venue management and contract administration without venue finance knowledge, making the close-out process more difficult. Venue finance should have been advised of all contractual updates and revisions for a smoother contract close-out process.

11.06.3 Operations

At the time the sports venues were staffed by LAOOC personnel, the Organizing Committee's banking relationship was decentralized. Each venue had an assigned bank branch in close proximity. The RFCM was appointed the bank contact at the venue and was responsible for visiting the branch and explaining the types of transactions that were to take place. During venue operations, a daily visit to the bank was necessary, sometimes prior to normal banking hours. Venue finance was responsible for maintaining adequate supplies of deposit bags, currency straps, deposit slips and endorsement stamps in the finance office at each sport venue. Additionally, a petty cash box, safe or file cabinet and the local branch's night drop keys were located at the venue finance office. Venue finance prepared deposits of ticketing and parking revenues and delivered the deposits to an armored car or the branch bank's night drop.

RFCMs developed a cash flow analysis for each venue forecasting the cash necessary to maintain adequate reserves. Post-dated checks based on the forecasts were kept in the finance offices and cashed locally as needed. This procedure expedited the cash process and reduced the number of trips to administrative headquarters. Some check-cashing difficulties were encountered, as letters authorized by the Treasury Department were not always honored. However, once a relationship was established by the RFCM, the cash procedure worked smoothly.

The RFCMs determined the appropriate petty cash level for each sports venue based on forecasted activity levels. The average petty cash fund was approximately \$5,000. Petty cash transactions required approval by either the venue finance manager, a department head, venue director or commissioner, depending on the transaction amount. The procedure for replenishing petty cash varied, from the use of a pre-signed check, armored car cash deliveries or check pickup at the Treasury Department at administrative headquarters.

A rush check procedure was operable for urgent expenditures at the sports venues. First, pertinent information was called into the accounts payable area at the administrative headquarters by a venue finance staff member. Then, following approval of the transaction, a check was prepared and delivered to the venue by special courier. It was the responsibility of venue finance to control, safekeep, issue and reconcile these disbursements.

An alternative method was the use of a pre-signed check which was available at each venue in the custody of the RFCM. Each venue was given five pre-signed, blank checks that did not exceed \$1,000. When a rush check was needed, the RFCM or venue finance manager could issue one of these checks to a vendor for payment. This procedure was utilized if the vendor was waiting at the site or would pick up payment the same day.

Venue finance was responsible for coordinating payroll activities at the venues where a venue accountant was appointed payroll coordinator. This payroll coordinator supervised the payroll activities at the venue and served as the liaison to the payroll command center at LAOOC administrative headquarters. Payroll coordinator duties included distribution of weekly time sheets and biweekly paychecks to department heads, review of completed time sheets, getting the venue director's approval of the time sheet package, delivery of time sheets to the payroll command center and coordination of employee payroll data changes.

RFCMs acted as payroll coordinators from 1 July 1984 until the volunteer venue accountants assumed the duties on 28 July. The RFCMs covered more than one location which made daily payroll duties during this period difficult. In many cases, venue management completed the weekly time sheets at the last minute, causing payroll coordinators numerous problems in completing their payroll duties on a timely basis.

A finance command center was established at the administrative headquarters during the two weeks of the Games. The center was staffed from 0700 through 2400 hours daily. The assistant controller and all RFCMs possessed display pagers and telephone numbers for all venue finance staff (work and home phone numbers). In effect, the managers were on-call 24 hours a day. The finance command center staff was trained and became familiar with financial operations at the venues. The center helped to ensure that venue finance was performing its duties.

Venue finance assumed a limited role at certain venues concerning ticket sales, parking revenues, per diem payments and attendance verification.

Seven sports venues sold event tickets on-site. Venue finance issued, collected and reconciled the Ticketing Department's change fund for each work shift. Venue finance also prepared bank deposits and daily journal entries reflecting the ticketing transactions. The same activities were performed by venue finance for parking operations at eight venues. Parking at other venues was subcontracted to professional parking management companies.

Venue finance also disbursed daily per diem cash payments to qualifying federation and technical officials and

3

maintained log and signature sheets for each payment. A list of eligible officials was obtained from each sport's competition director. The per diem fund was reconciled daily and journal entries for the general ledger were prepared upon close out of the fund.

The attendance verification was performed through review of turnstile reports submitted by the Spectator Services Department. The reports were also tested for mathematical accuracy. Ticket stubs were gathered and shipped to the administrative headquarters for safekeeping. Several contracts with venues were based on a percentage of ticket revenue at the sites and the stubs were kept for possible use during contract closeout computations.

11.07 Village finance

Village finance was responsible for the financial planning and operations of three Olympic villages located at the University of California, Los Angeles, the University of Southern California and the University of California, Santa Barbara. A senior financial control manager, who reported to the controller, directed financial activities for the three villages. Each village had a financial control manager, assistant finance manager and a staff of village accountants.

Village finance had two centers of activity located in each village: the village administration office and the NOC service center. The finance duties at the village administration office consisted of administering the village budgets, petty cash, payroll and

³ The potential economic impact of the Games on Southern California was forecast by Economic Research Associates in 1982.

accounts payable transactions. At the NOC service center, village finance dealt with NOC financial transactions, deposits, accreditation charges and sales of meal tickets, services and equipment to NOCs.

11.07.1 Budgets

Village budgets were prepared by the Budgeting Department in conjunction with village administration. The finance control managers were responsible for budget updates, and they assigned all village-related charges to the general ledger accounts.

Contracts with the three universities made up the major portion of each village budget. Commitment reports reflecting the budgeted versus actual expenditures were produced by the Budgeting Department. As it was with venue finance, reports were often outdated when they were received by village finance. Therefore, the village finance staff often tracked the budget information themselves to ensure possession of current information. All three villages concluded operations well below the budgeted expenditure amounts.

11.07.2 Village administration office

Each village had approximately \$3,000 in petty cash funds. Generally, petty cash was used for payments of less than \$100. Replenishment was done either by use of a pre-signed check or by check pickup at the administration headquarters.

Two rush check procedures were planned for urgent expenditures at the village: rush checks from the LAOOC's administrative headquarters and pre-signed checks. For rush checks from the administrative headquarters, source documentation was sent by telecopier to the accounts payable area at the headquarters and the check was prepared and sent to the village by courier. Unfortunately, telecopiers proved unreliable and in practice this method of obtaining checks was used only by the village at UCSB.

Each village had pre-signed blank checks, none of which exceeded \$1,000. When a rush check was needed, the village finance manager could issue one of these checks to a vendor for payment. This was the more practical method for meeting immediate payment needs.

Village finance staff spent inordinate amounts of time at the administrative headquarters expediting payments. This was often because payments were delayed in processing, or because payment amounts exceeded the pre-signed check limitation. The ability to prepare routine checks at the villages would have greatly improved village finance efficiency.

Village finance was also responsible for coordinating payroll activities at the villages. A village accountant was appointed payroll coordinator to supervise payroll activities there and serve as the liaison to the payroll command center at the administration headquarters. The coordinator's duties included distribution of daily time sheets and biweekly paychecks to department heads, review of completed time sheets, transfer of daily information to weekly time sheets, getting the village director's approval of the time sheet package, delivery of time sheets to the payroll command center, research of payroll problems and coordination of employee payroll data changes.

Because of the numerous village departments, village finance staff distributed daily time sheets and then transferred the data to the weekly computer-generated time sheets. Since the personnel scheduling system originally designed to verify reported work hours never became operational, supervisor authorization was used as verification of hours worked.

11.07.3 NOC service center

NOCs were assessed daily accreditation charges based on the actual number of athletes and officials accredited each day. NOCs were required to remit deposits of \$700 per athlete and registered official (for a stay of 20 days) and \$1,240 per extra "Fx" official. Deposits were due prior to the issuance of accreditation badges. Most deposits were received at the administrative headquarters or at the Olympic Arrival Center, but payments could also be remitted at the NOC Service Center and the Biltmore Hotel.

The arrival information necessary to levy the daily accreditation charges was obtained from the Accreditation Department at the Olympic Arrival Center. The daily accreditation charge commenced when the accreditation badge was issued. The accreditation information was to have been sent to village finance via an on-line computer system, but, in June 1984, this portion of the accreditation system was cancelled. Due to this late change, two village liaisons were hired to prepare manual lists of badges issued at the Olympic Arrival Center and to send the lists to village finance by courier. The arrival dates on the lists were then used for assessment of accreditation charges.

In addition to accreditation charges, NOCs could purchase guest meal tickets, typing or translation services or rent equipment at the NOC service center. An NOC approaching a debit balance in its deposit account was placed on a cash-only basis, and an additional deposit was requested. Credit problems proved to be minimal, though, as only 12 NOCs left debit balances exceeding \$1,000.

Periodic NOC statements were prepared by village finance and issued

to the NOCs. However, based on the poor arrival date and deposit information received from the Olympic Arrival Center, the statements were frequently incorrect. It was often necessary to change entries after review by NOC officials.

11.07.4 Accommodations satellites

In addition to the three villages, five satellite hotels housed federation officials, sponsor employees and other Olympic Family members. Although accommodation charges were collected in advance, village finance supervised payroll, petty cash, meal allowance and revenue collection functions at these satellite housing sites. Housing department staff performed the daily duties, and a village accountant visited the satellites weekly to replenish petty cash and review transaction documentation.

11.08 Olympic Arts Festival finance

The Olympic Arts Festival (OAF) was designed to anticipate and complement the Olympic Games. Events began eight weeks before Opening Ceremonies and the final performances were scheduled for the final day of athletic competition. The \$12 million Festival featured 10 weeks of events: 424 performances, 45 venues, 1500 artists, 145 performing companies, 306,000 tickets sold and 600 staff members.

The role of Finance in the OAF was to plan, administer and control the financial activities of the Festival. The staff, reporting to an assistant controller, was directed by four financial control managers (FCMS). Each FCM was responsible for a Festival discipline (theatre, music, dance or exhibitions). Six full-time venue accountants were assisted by 50 volunteers in controlling the 10 weeks of venue activities. A payroll coordinator was responsible for processing the festival payroll for administrative headquarters, theatre, transportation and orchestra personnel.

The role of OAF Finance varied considerably from its Games counterparts at the venues and villages. The Festival required extensive venue and administrative headquarters support for its entire 10 weeks. Finance played an active role in contract administration, cash disbursement and payroll administration. In addition, the role of the volunteers was limited, due to the length of the festival and the abundance of evening and weekend events. OAF Finance, as a result, utilized a greater number of paid venue accountants than was used for the Games.

11.08.1 Budget

The OAF Finance organization reported to the controller and assumed budget responsibility in March 1984. The OAF budget was developed and approved during the period when budget managers reported to the director of budgets and prior to the development of an OAF Finance staff. When budget responsibility was shifted to FCMS, one FCM was assigned responsibility for revising and tracking the OAF budget at the direction of the director of budgets.

The FCM worked closely with OAF department personnel assigned to purchasing and financial-related tasks. The festival had requirements that necessitated additional departmental personnel performing budget-related tasks, such as requisition tracking, purchase order maintenance and additional financial reporting.

The FCM was responsible for budget updates and revisions, budget commitment reports, cash expenditure flow analyses, assignment of accounts for all OAF expenditures and journal entries. The budget role continued throughout the festival and the subsequent close-down.

11.08.2 Contracts

Unlike venue operations, the Olympic Arts Festival was based on a series of performances provided by paid performers. The LAOOC entered into contractual agreements with every performing group that detailed fees, housing and per diem payments, production-related costs, etc. OAF Finance was responsible for abstracting and monitoring the contracts and approving and issuing all payments.

The LAOOC provided partial funding for festival events to artistic organizations under cultural service contracts. One such event was the Los Angeles County Museum of Art's exhibition, "A Day in the Country." Cultural service contracts also contained payment schedules. OAF Finance worked with accounts payable to establish a check disbursement schedule. Final payments were not available until all the contract provisions were met and a check disbursement was authorized by OAF Finance.

The LAOOC entered into consultant agreements with organizations and individuals providing a service to the Festival, such as co-producers and designers. The contracts either provided for a straight fee schedule or a fee plus expenses. Straight fee schedule payments were arranged with the accounts payable department. Payments of expense requests were reviewed by the OAF Department and authorized by OAF Finance.

The LAOOC contracted with five major venues for production space for the majority of the festival events. All of the contracts included a rental fee plus fees for services provided. In addition, one venue provided for a share of novelty concession revenue. Rental payment schedules were developed

with the accounts payable department and checks were routinely distributed. In addition, the OAF Finance staff was required to administer contracts for food and beverage, parking, programs, novelties and record contracts for various venues and artists.

11.08.3 Ticket sales

OAF tickets were distributed through four channels: mail order, Ticketmaster (a decentralized ticket sales service), box office (on-site sales) and contract/press/in-house agreements. OAF Finance had no role in the sale or collection of monies from mail order sales. This activity was monitored by the Ticketing Department. Because of the manner in which Ticketmaster remitted to the LAOOC (weekly sales), it was decided to reconcile sales at the conclusion of the Festival. OAF Finance was responsible for the reconciliation of tickets sold by performance. Venue box office ticket sales were handled by box office personnel (either venue or OAF employees). However, the FCM was responsible for reconciling the box office statement regarding ticket totals and their disposition at OAF-run venues (all major venues except Hollywood Bowl and the Music Center). At all venues, OAF venue accountants managed ticket sales accounting completion of consignment reports, reconciliation of sales and unsold consigned tickets, preparation of the bank deposit and supporting journal entries. OAF Finance prepared weekly ticket sales reports for OAF management based upon box office statement detail. FCMs deposited nightly box office receipts at the conclusion of the

evening's performances. Complimentary OAF tickets were also dispensed to press and artists. OAF Finance developed procedures to control these sales and provided banking and reporting assistance.

11.08.4 Parking and concessions

Parking was sold by the LAOOC at only one OAF venue. The venue accountant was responsible for opening, reconciling and closing the change fund and preparing a sales report, bank deposit and journal entry. The FCM deposited parking revenue with ticket revenue at the end of each performance.

OAF received a percentage of concession (food and beverage) revenue at three venues and all novelty revenue at venues with the exception of one where such revenues were shared. The internal audit group in the Finance Department controlled novelty sales, performing spot checks on concession stand reports and reviewing inventory procedures. OAF Finance developed supporting documentation for the final reconciliation and settlement.

11.08.5 Payroll administration

OAF developed a unique personnel and payroll system, called festival staffing. This system with 600 employees was administered by a OAF Finance payroll

coordinator. OAF staff interviewed and made offers of employment to prospective employees. Upon acceptance of the offer or during the first week of employment, the employee completed the festival staffing Terms and Conditions Agreement, employee application form and U.S. Internal Revenue Service form W-4. The W-4 was given to LAOOC payroll; the other data was maintained by the payroll coordinator. The payroll coordinator processed employee add forms through payroll; these required department and budget approval prior to the acceptance of the employee by payroll. The work week was Saturday through Friday. Employees completed and signed time cards every Friday. A weekly payroll was processed and checks were delivered, by the payroll coordinator and venue accountants, to all theatre and office venues every Friday. All OAF payroll-related questions were handled by the OAF payroll coordinators.

Festival staffing contained employees with unique payroll requirements, e.g., different rates for rehearsals and performances, cartage payments, union reporting, etc. The OAF payroll coordinator evaluated the requirements and developed mechanisms to process these activities through the LAOOC payroll system.

11.08.6 Petty cash

Arts organizations traditionally purchase a significant amount of goods and services using on-hand cash controlled by either the technical director or line producer. Thus, the OAF

petty cash procedure had to be responsive to an environment that was not purchase-order oriented and required large amounts of available cash.

OAF Finance developed a bank concept where the assistant controller was responsible for a petty cash bank that contained \$20,000, and individuals were custodians for funds between \$250 and \$1,000. The bank concept permitted daily replenishment of individual funds without processing multiple checks through the Treasury Department.

11.08.7 Asset control and disposition

Generally, OAF theatres were rented on a "four walls" basis where OAF provided manpower and equipment. Equipment provided by OAF included major items, such as sets, lighting, sound, dance floors, etc. It also included saws, hairdryers, and other disposables. Generally, major equipment items were rented, and disposable items were purchased through petty cash.

OAF designated the theatre technical directors and line producers as responsible for asset control at the venues. OAF material logistics personnel assumed responsibility for all venue office equipment, such as telephones, Xerox copiers and

4 Games-time venue finance needs are supervised by venue finance managers, volunteer venue accountants and regional financial control managers.

personal computers. OAF Finance assumed a controlling role in the asset disposition process. It compiled asset lists and designated where items were to be disposed, and the technical directors assumed responsibility for actual disposal.

11.09 Report of LAOOC financial results 1979-1984

Los Angeles Olympic Organizing Committee and LAOOC Amateur Athletics Foundation

Notes to combined financial statements September 30, 1984

Organization

"The Los Angeles Olympic Organizing Committee ("Committee"), a California nonprofit corporation, was formed to conduct the XXIIIrd Summer Olympiad ("Games") in Los Angeles in 1984 pursuant to agreements among the Committee, the United States Olympic Committee ("USOC"), the International Olympic Committee ("IOC") and the City of Los Angeles, dated March 1, 1979. The LAOOC Amateur Athletics Foundation ("AAF"), a California nonprofit corporation, was formed on November 1, 1982 to promote the Games and provide support to amateur sports programs in the Southern California area. The Committee commenced financial activities on June 15, 1978. The Committee is to be dissolved subsequent to the Games under a plan of disposition of net assets adopted September 19, 1984. The Committee's remaining net liquid assets will be distributed as follows: 40 percent to the USOC, 20 percent to the USOC for distribution to the United States national governing bodies for sports in the Pan American and Olympic Games and 40 percent to the AAF for sports in Southern California. Pursuant to the disposition plan, the Committee made an interim transfer of cash and government securities to a segregated account totalling \$75,000,000 for ultimate distribution to the USOC and transferred \$31,605,154 to the AAF to increase AAF's current liquid assets to

\$50,000,000 as of September 4, 1984. Subsequent to September 30, 1984, the Committee distributed \$12,500,000 of the segregated fund to the USOC for redistribution to the national governing bodies. The AAF, the USOC and national governing bodies will be asked to acknowledge their potential obligation to any of the Committee's creditors whose debts or claims are not paid or adequately provided for in the course of the Committee's winding up and dissolution.

Summary of significant accounting policies

Basis of presentation

The accompanying combined financial statements include the accounts of the Committee and the AAF through 30 September 1984. Additional revenues will be received and expenses will be incurred by the Committee until its ultimate dissolution. The financial statements have been combined as a result of common management and control. Transactions between the Committee and the AAF have been eliminated. The accompanying combined financial statements do not include the accounts of the LAOOC Torch Relay Foundation. As of 30 September 1984, the substantial portion of the net assets of the Torch Relay Foundation, approximating \$11,000,000 had been distributed to various youth groups, pursuant to pre-existing written contracts. The Committee incurred \$1,449,000 of expenses for the administration of the torch relay programs, which were not reimbursed.

Nonmonetary contributions

The estimated fair value of nonmonetary contributions (other than donated personal services) amounting

to approximately \$44,000,000 is included in revenues and expenses in the accompanying combined statement of operations.

Income taxes

The Committee is exempt under Section 501 (c)(4) of the Internal Revenue Code and Section 23701 d of the California Revenue and Taxation Code. The AAF is exempt under section 501 (c)(3) of the Internal Revenue Code and Section 23701 d of the California Revenue and Taxation Code. Accordingly, no provision for income taxes has been included in the accompanying financial statements.

Short-term investments

Short-term investments, aggregating approximately \$250,000,000, consist principally of government securities and repurchase agreements. Such investments are carried at cost, adjusting for the amortization or accretion of any premiums or discounts, which approximates market.

Revenues

Sponsorship and licensing revenues represent amounts received or due the Committee through 30 September 1984 pursuant to the terms of agreements between the Committee and various companies which have been named official sponsors, suppliers or licensees of the Games. Certain sponsorship agreements provided that a portion of these revenues be used to construct or improve certain athletic facilities which were used prior to and during the Games. In addition to certain minimum guarantees, the licensing agreements call for the Committee to receive royalties equal to a percentage of the receipts from the sale of products under license.

On 22 July 1982 the Olympic Commemorative Coin Act (the "Act") was enacted into law authorizing the United States Treasury to mint and issue silver and gold coins commemorating the Games. The silver and gold coins issued shall not exceed

50 million and two million coins, respectively. The price of the coins includes a surcharge of not less than \$10 on each silver coin, and not less than \$50 on each gold coin. Through 31 March 1985, 50 percent of the amount of all surcharges on coins sold will be remitted to the Committee and 50 percent will be remitted to the USOC. On 31 March 1985 the Committee may be required to remit to the USOC a portion of the proceeds from the coin program (as defined by the Act).

Other revenue consists primarily of nonmonetary contributions, donations to the AAF, revenue from accommodations for Olympic Family members and other groups and ticket handling charges.

Contingencies

Various legal actions, governmental proceedings and other claims are pending against the Committee. Amounts claimed under certain of these matters are material. The Committee anticipated that additional actions may be initiated. The Committee believes that it has meritorious defenses for these actions and in some cases has made or will make, counterclaims for damages. The Committee has provided for settlement of certain of these actions and claims in amounts it believes are adequate. While the ultimate outcome of litigation, proceedings and other actions cannot be predicted with accuracy, the Committee and its counsel, based upon current knowledge, believe that the ultimate resolution of these matters will not have a material adverse effect on the accompanying financial statements."

12

Food Services

12.01 Areas of responsibility for food service

The Food Service Department of the LAOOC was responsible for providing food to athletes, dignitaries and guests, committee staff, sponsor and supplier employees, media and spectators. In meeting that responsibility, the Food Service Department developed menus, established specifications, negotiated contracts, coordinated procurement of products and supervised the food service operations of more than 650,000 athlete meals and 475,000 staff meals. LAOOC food service personnel supervised the operations of hospitality suites and numerous receptions and parties at a variety of locations throughout Southern California, Stanford, Harvard and Annapolis. Food service was also provided for spectators at every competition site including the "Exposition Park Food Bazaar" located adjacent to the Coliseum and Sports Arena.

LAOOC food service personnel coordinated the implementation of sponsor agreements with all of the food and food-related companies including Vons, Arrowhead, Anheuser-Busch, Foster Farms, ARA Services, Coca-Cola, M&M Mars and many more. This required, in most cases, the final establishment of commitments which had been generally agreed to months prior to the Games. In some instances it was necessary to modify contractual

understandings to meet actual Food Service Department needs and to monitor the performance of sponsors in the fulfillment of their commitments.

It was the goal of the LAOOC and its food sponsors to provide the highest levels of service to every category of visitor involved in or attending the XXIIIrd Olympiad and to ensure that the priority of all food service related activities was the health of the consumers.

A sponsorship agreement with ARA services was concluded in June 1983. ARA's role was to manage, plan and ultimately operate the food service program for the LAOOC's feeding of athletes in the villages and venues, staff at all sites and special hospitality requirements.

The Food Service Department worked in conjunction with ARA Services on many of the food service areas and projects, but was responsible for the overall management of the project and many additional areas of service. The pre-Games permanent staff included nine professionals with 27 venue and village food service personnel added as management during the time of the Games. ARA Services staff also worked in the LAOOC administrative headquarters, directly with the Food Services staff, through the period of operations.

12.02 Food service for athletes and team officials

12.02.1 Concept and goals

It was the intention of the LAOOC to provide a pleasant and protected environment for the athletes and team officials in which they could enjoy the wide array of food products offered. From the outset, the selection of food items accommodated the varied tastes and dietary habits of athletes from more than 140 countries. Product specifications were high, supply sources were secure and reliable preparation techniques were simplified to accommodate staff working a relatively short period of time. Facilities were adapted to serve purposes different from their originally designed functions. The LAOOC and its sponsors understood that Olympic food service operations would be maintained for a brief, intensive period of time ending within a week of the close of the Games.

International foods were offered on the daily menu, which met not only the dietary needs of persons from more than 140 countries but also those of athletes with diverse nutritional requirements.

Heavy security measures helped to control the flow of personnel into dining halls where an attractive assortment of expensive food items was readily available and where athletes and team officials could relax,

away from the pressures of the media, the public and even their own country's sports officials.

Food service was provided 24 hours a day throughout the Games period. The varied menu allowed athletes to consume complete and nutritious meals regardless of competition schedules and training periods.

The underlying objective of the program was to make it as compatible and flexible as possible so that athletes would not be hindered or distracted while preparing for competition.

12.02.2 Food service sites

Food service for the athletes and team officials was provided in three Olympic villages located at the University of Southern California (USC), the University of California, Los Angeles (UCLA) and the University of California, Santa Barbara (UCSB). Food service operations in these villages provided 24-hour availability of complete menus from 14 July through 15 August. The village food service program was supplemented by food service provided at sports venues which were not directly adjacent to a village. This venue food service program was limited to box lunches produced in a central location and delivered daily to the sites.

¹ Particular attention is paid to tasteful presentation of food for the athletes.

1

The dining areas in each village were generally located in existing food service areas in the campus residence halls. In addition to the eating areas, most of the residence halls had adjacent kitchen and food preparation facilities, allowing on-site meal preparation and processing. Additional facilities for dining were required at the USC village because it lacked sufficient capacity. The LAOOC built a dining hall between the Webb Tower and Troy Hall residence complexes and donated it to the university after the Games as a gift. This new dining facility seated 963 persons, including 76 outdoor seats, and had a complete food preparation and kitchen facility as well. A temporary eating area named "Baron's Bistro," (after Baron Pierre de Coubertin) was added in an existing parking lot on the campus by erecting 19 tents (20-foot square). Seating was available for a total of 1,016 persons.

Food service was provided at the following village sites with box lunches available for athletes at the venues listed below:

Food sites

Village	Dining areas	Seating capacity
USC	Webb Dining Hall	963
	Baron's Bistro	1,016
	EVK Hall	752
	Trojan Hall	476
Total meals served:		354,123
UCLA	Dykstra Hall	480
	Hedrick Hall	504
	Sproul Hall	386
	Rieber Hall	506
Total meals served:		249,448
UCSB	De La Guerra Annex	530
Total meals served:		49,954

Weightlifting	Loyola Marymount University
	Anaheim Convention Center
Wrestling	Anaheim Convention Center
Yachting	Long Beach Marina

12.02.3 Preparation of food for village consumption

Food used in the villages was ordered from LAOOC-approved suppliers by ARA Services, the LAOOC's sponsor for food service management, according to a prearranged system of purchase orders and order specifications. These specifications helped to determine the quantities to be ordered and necessary lead time. Orders for certain items were based on:

- The LAOOC's estimate of athlete population in the village for that date
- The anticipated team arrival and departure dates
- The projected menus developed by ARA
- The quantities on hand of any particular item with the suppliers at the time of order
- The perishability of the food to be ordered
- The capacity for storage at the delivery sites

Orders were placed daily, and the food suppliers loaded trucks at their warehouses under the observation of ARA personnel. Trucks were inspected by LAOOC security and the seal numbers were verified upon arrival at the off-loading point at the appropriate village. A receiving clerk then matched the delivery documents against the approved purchase order, the product was unloaded and checked into the warehouse against the accompanying invoice. Food was transferred between sites within a village and between villages, if necessary. A three-part, prenumbered inventory transfer form was used to track all such transfer transactions.

Deliveries were made during periods of reduced traffic from 2400 to 0600 daily. Circulation routes to all food preparation areas in each village were predetermined to allow for maximum efficiency in unloading.

Food to be consumed by the athletes was prepared or heated on site in the village in which it was served. At UCLA and UCSB, the food was prepared in kitchens that were a part of the dining

2

3 Korean delegates place food orders at the Baron's Bistro, a temporary eating facility at USC named after the founder of the modern Olympic Movement, Baron Pierre de Coubertin.

Food Services

area of each residence complex. Food preparation at USC was accomplished in a much different manner because of the physical constraints of existing kitchen facilities.

The kitchens at UCLA and UCSB were fully equipped institutional facilities designed to handle the volumes of food needed during the Games. Some food products, most notably soups and casserole-type entrees, were purchased prepared and frozen and merely reheated and garnished in the on-site kitchen. Other food products such as meat, poultry and seafood were cooked in the kitchens on site, as was the preparation of vegetables and starches. Desserts were purchased from several outside sources and were plated and garnished in the kitchen facilities immediately before serving.

While the components of the food service program were the same at USC, the physical constraints of the on-site kitchens made some central production necessary. The main floor of the Shrine Auditorium, a convention

facility directly adjacent to the USC campus, provided expanded kitchen facilities for food preparation. Most of the food products were heated at the Shrine and transferred, shortly before serving, to the kitchen facilities in the dining halls. At these locations, the food products were heated to final serving temperature and kept warm until used. Most of the meat, poultry and seafood was prepared in this manner. Steaks and fish filets were cooked in the dining hall kitchens on grills and broilers and at Baron's Bistro using barbeque grills and charcoal since no provision had been made in advance for on-site broilers.

Although most of the food service preparation facilities were fully-equipped, additional equipment was required in some areas, especially at the Shrine food preparation facility. Necessary equipment was ordered, procured, modified, warehoused, delivered and installed by a major equipment supply company. Buyers were sought for this equipment after the Games and those who purchased equipment were asked to remove it from the site. Remaining equipment was taken to the LAOOC's Materiel Distribution Center. Smallwares (cooking utensils) were supplied by

another company which agreed to buy back those items that were returned in good condition.

In all three village locations, the food was displayed and served cafeteria style. Hot items were displayed in steam table pans and served upon request in unlimited quantities. Other food items including cheeses, fruits, salads, desserts and beverages were set on counters and tables and made available for self-service.

Beverage service in the villages included coffee, various types of juices and milk, soft drinks, tea, mineral and spring waters and isotonic drinks. Beverage service in non-food service locations consisted of stations for soft drinks as provided by Coca-Cola and dispensers for spring water from Arrowhead Puritas. Five soft drink stations, each with four dispenser units, were prepared at UCLA, along with water dispensers in 23 different locations (55 individual dispensers in all). At UCSB, there were two soft drink kiosks and 27 locations for water

dispensers. The USC Village had three soft drink areas and 30 separate locations for water dispensers with a total deployment of 154 individual dispenser machines.

The actual preparation and serving of food in the villages required the services of approximately 3,000 employees. Most of these individuals were employed and brought on staff less than one month prior to the opening of the dining halls. Attempts were made to hire university personnel currently working in the various locations, although the nature of the Olympic food service program was complex enough to require four to six weeks of specialized training for individual job assignments.

The LAOOC's food service management team at the villages included a village food service manager, an assistant food service manager and a village food service coordinator. Volunteer food service personnel worked under the direction of the LAOOC's food service management team. The major areas of concentration for the LAOOC staff included the monitoring of ARA Services, catering and hospitality areas, deliveries, food security, scheduling and training of food service staff, staff feeding and the

maintenance and sale of equipment and supplies at the end of operations. Volunteers worked primarily in the areas of staff feeding, deliveries of sponsor products such as soft drinks and water and assisted in the cleaning and maintenance of the staff dining areas.

12.02.4

Preparation of food for out-of-village consumption

The preparation of food served to athletes and team officials away from the villages was controlled from the Shrine Auditorium. A temporary facility was established at the Shrine to accommodate the assembly of component food products into a 3,000-calorie (2.75-3.5 pound) meal constituting the box lunch which was provided to athletes and team officials whose competition or training required their absence from the village for longer than four hours.

Box lunches were available at all competition sites except those located adjacent to a village (athletics, boxing, gymnastics, swimming and tennis). Box lunches were not available at training sites since training sessions were almost never scheduled for longer than four hours at a time.

It should be noted that the box lunch program was designed for athletes (and team officials) actually competing

(or coaching) and needing food service during their competition day. Non-competing or spectating athletes and officials at all sites were required to use the public concession stands. Food service for working competition officials (related to the management of the competition itself rather than to any team) consisted of bulk lunches, in the same manner as provided to LAOOC staff members. These competition officials ate their meals in the staff lounge or, in some cases, in a designated official's lounge or dining area. Non-working competition officials were expected to utilize public concession areas.

By 1000 hours each day, venue food service managers at designated locations placed orders as part of a daily comprehensive venue service report for the number of meals needed at that location the following day. The orders were placed via the Electronic Messaging System (EMS) to Food Service Department headquarters at the LAOOC headquarters. Confirmed orders were then forwarded to the Shrine where the box meals were assembled and loaded on trucks for distribution to various locations.

The main course of the box meals consisted of sandwiches prepared under contract by a delicatessen located in central Los Angeles. The ingredients used in making the sandwiches were sent to the delicatessen where the sandwiches were assembled and wrapped. The completed sandwiches were shipped in bulk cartons to the Shrine to be inserted into the box lunch. All other food components of the box lunch were shipped directly to the Shrine for storage, until used.

At 0400 hours each day, box lunch items for the next day were staged along a conveyor for assembly. Boxes were set up at the beginning of the conveyor line and the security inserts were placed at the bottom of the box. As the boxes traveled down the line, the various food components were added. Checkers at the end of the line inspected each box. Once the contents were verified, a security seal was affixed to the closure flap of the box. The box was date-stamped to identify the day of production. These boxes were placed in master cases in units of twelve and transported immediately to refrigerator storage where they remained until ready for distribution to the various sites. The distribution system began at the Shrine Auditorium at 2400 hours. Meals were delivered to the various locations by 0600 hours.

Each site was especially equipped for the receipt and storage of the box lunches for athletes and the bulk lunches prepared for competition officials and LAOOC staff. Refrigerator containers or trailers were installed at each site which did not already have adequate food storage space. These units were generally eight feet in height and width and 20 feet in depth. They required 220-volt, three-phase power circuits with a load capacity of 40 amperes. Eighteen such units were provided at the following venues:

- Archery
- Athletics (two)
- Boxing
- Canoeing/Rowing (two)
- Cycling
- Fencing/Volleyball (two)
- Gymnastics/Tennis
- Hockey
- Shooting
- Swimming
- Water Polo (two)
- Weightlifting
- Yachting (two)

In all, 45,252 box lunches for athletes were produced and delivered to the sites. The largest number of box lunches were produced from 28 July through 3 August; the fewest number produced on any one day during that period was 2,100 and the most was 3,348.

Beverage services included soft drinks supplied by Coca-Cola and fresh spring water by Arrowhead Puritas Waters. Soft drinks were typically served from "pre-mix dispensers" which drew the drinks from prefilled containers

through a cooler and finally through a dispensing spout. These units required 110-volt electricity. Electrically-powered coolers for soft drinks in cans were also available in specific areas. A typical venue received three pre-mix dispenser units and two coolers. Suggested placement for the pre-mix dispensers was in the athlete area, press sub-center and staff lounge; coolers were usually placed in the office area of the International Federation on the site and in the Olympic Family lounge. Larger venues such as the Coliseum (athletics) were allocated additional units.

Arrowhead's non-carbonated fresh spring water was dispensed from units which held ten or 25 gallons of water, depending on the model, and from electrically-powered (110 volt current) coolers which could deliver heated or cooled water at the rate of one gallon per hour and had a ten gallon capacity. Typical venue allocations of these dispensers included two of the electrically-powered hot/cold coolers (for the Olympic Family lounge and sports medicine station), two of the 25 gallon dispensers (for the field of play area and the staff lounge) and nine of the ten-gallon dispensers. The latter were placed in the accreditation and staff entry area, athlete preparation area, competition officials check-in station, first aid station, International Federation office, venue management area, venue security command post and two in or on the field of play.

Beverage dispensing equipment was delivered to all sites between 1-27 July. Allocations of the beverages themselves were made prior to the Games and any beverages ordered in excess of the total allocation were approved by the venue management, rather than by the central food service department. Deliveries were made constantly during the Games period, at times arranged by the venue food service manager with the companies involved. The majority of the delivered products were stored outside of the refrigerated containers of trailers, although there was usually enough room for storing the current and next day's supply in the refrigerated areas. This was particularly beneficial for venues where many drinks were consumed because of the warm weather. Venue food service managers were encouraged to store pre-mixed cannisters and water bottles and put them around the venue to allow for easy and quick replenishment of dispensing units which were also spread around the site. Care was taken to be sure that the beverages were not stored in direct sunlight.

7 A Vons truck brings food to the athletes.

8 A venue hospitality area at the yachting competition.

9 Volunteer food service personnel get instructions from a member of the LAOOC food management team.

Food service was not provided at the training sites, although bottled water and isotonic beverages were available at each training location. During the course of the Games, some teams requested food and they were accommodated through a procedure that allowed them to take non-perishable foodstuffs from the village dining areas.

12.02.5 Provision of foodstuffs: Sources

The official sponsors and suppliers of the LAOOC assumed the basic responsibility for providing food for the Games of the XXIIIrd Olympiad. They included:

- Vons, a large grocery chain in Southern California, was the major food supplier to the Games. It provided or assisted in providing the majority of food products utilized in both the villages and venues for consumption by athletes, officials, dignitaries, visitors and staff.
- The Jerseymaid Milk Products Company was the official supplier of dairy products for the Games, providing milk, ice cream and assorted other dairy products. Jerseymaid was also used as the frozen and refrigerated distribution source for deliveries to the villages.
- Foster Farms was the official supplier of poultry products for the LAOOC, providing chicken, turkey and related poultry items for use in the villages and venues.
- Coca-Cola USA was the official soft drink supplier and was responsible for providing all carbonated soft drink products for athletes, dignitaries, official visitors and staff through its local bottler. It also supplied the equipment needed to dispense the carbonated drinks products as required.
- Campbell-Taggart was the official bread supplier to the Games, supplying all the bread and bakery products used in the villages and venues. Certain specialty bakery products, however, were purchased from various outside sources.
- M&M Mars was the official sponsor of snack food, providing 800,000 units of M&M candies and Snickers bars for use by the LAOOC.
- Arrowhead Puritas was the official sponsor of bottled water for the Games, providing bottled water and dispensing equipment at all locations. Arrowhead Puritas also installed water purification systems at all three villages.
- Perrier was the supplier of mineral water for the Games. This product was made available at all villages and to the hosting areas in the venues.

See following pages for quantities and specifications.

Quantities and types of selected food items served in the villages

Food group/type	Number and units(s)	Food group/type	Number and units(s)	Food group/type	Number and units(s)
Beverages					
Carbonated beverage–Coca-Cola	800 tanks (5-gallon)	Milk (included chocolate, homogenized, and low-fat types)	67,429 gallons	Peaches	347,415 peaches
Carbonated beverage–Diet Coke	220 tanks (5-gallon)	Prepared entrees	1,113 cases	Peach halves in cans	40 cases
Carbonated beverage-Sprite	555 tanks (5-gallon)	Puddings (butterscotch, chocolate, vanilla and tapioca flavors)	42,880 (4-oz) cups	Pears	23 1,325 pears
Chocolate beverage mixes	795 cases	Sour Cream	1,980 pounds	Persian Melons	2,460 melons
Coffees	387 cases	Yogurt (included natural, cherry, peach, strawberry and raspberry flavors)	204,000 individual cups	Pineapples	6,170 pineapples
Juices-frozen fruit (apple, grape, grapefruit and orange)	6,338 cases	Eggs and related products			
Juices-Tomato	145,968 (5-oz) cans	Eggs	138,600 Grade AA eggs	Pineapple pieces and slices in cans	30 cases
Mineral water-Perrier	201,888 (200 ml) bottles	Prepared Omelets (included cheese, garden, mushroom and western omelets)	1,198 cases	Plums	32,748 lugs
Teas (13 varieties)	309 cases	Prepared Quiches (included bacon/mushroom and garden varieties)	857 cases	Raisins	810 pounds
Condiments and Sauces					
Barbeque sauce	400 gallons	Prepared Scrambled Eggs	1,540 cases	Strawberries	13,224 pounds
Catsup-individual servings	250,000 (1/3-oz) servings	Fats and Oils			
Chutney	288 pounds	Butter-in individual pats	380 cases	Grains and related products	
Cocktail sauce	660 gallons	Margarine-in bricks and pats	1,057 cases	Baklava	686 dozen
Cooking sherry	80 gallons	Mayonnaise-in bulk	240 gallons	Breads (included multiple varieties of black, buttermilk, french, pumpernickel, raisin, rye, sourdough and wheat breads)	20,073 loaves
Horseradish-in bulk	100 gallons	Mayonnaise-individual servings	40,000 servings	Brownies	1,520 dozen
Horseradish-individual servings	24,000 (1-oz) servings	Oil-olive	112 gallons	Buns-hamburger and hot dog	2,835 dozen
Mustard-individual servings	250,000 (1/5-oz) servings	Oil-salad	375 gallons	Cakes	3,345 cakes
Olives-black	61 cases	Salad Dressing-in bulk	480 gallons	Cannoli	695 dozen
Olives-green	1,600 pounds	Salad Dressings -individual servings (included bleu cheese, french, italian and thousand island types)	606,000 (1-oz) servings	Cereal-in bulk (four varieties)	10,738 pounds
Pickles-chips	5,888 pounds	Shortening-liquid	1,350 gallons	Cereal-individual servings (four varieties)	198,144 servings
Pickles-relish-individual servings	129,918 servings	Shortening-solid	25,236 pounds	Crackers, croutons and bread crumbs	1,078 cases
Pickles-spears	18,400 spears	Fruit and related products			
Soup bases and gravies	3,112 pounds	Apples	957,880 apples	Doughnuts	1,101 dozen
Soy sauce	139 gallons	Apple rings and Crabapples in cans	32 cases	Flour	2,160 pounds
Steak sauces	194 gallons	Applesauce in cans	95 cases	Muffins, sweet breads and sweet rolls	6.5 12 trays
Tabasco sauce	4 gallons	Apricots	1,161 cases	Noodles and Pasta	21,190 pounds
Tartar sauce-individual servings	155,000 (1-oz) servings	Bananas	3,886 cases	Pies (included apple, blueberry, cherry, cherry cheese, coconut custard, peach, pecan and sweet potato varieties)	6,906 pies
Teriyaki glaze	500 gallons	Blueberries	948 cases	Rice	21,915 pounds
Vinegars	242 gallons	Canary Melons	2,380 melons	Rolls (included dinner, french, onion, pumpernickel, rye, sesame and whole wheat rolls)	42,200 dozen
Other sauces (included espanole, hot pepper, picka peppa, worcestershire and others)	234 gallons	Cantaloupe	4,086 cantaloupes	Tarts-strawberry rhubarb	1,685 tarts
Dairy Products					
Cheeses (included 16 varieties: bleu, brie, camembert, cheddar, chevre-roll, edam, feta, gorgonzola, gaiskasli, gouda, monterey jack, parmesan, romano, stilton, swiss and american)	62,128 pounds	Cherries	1,664 cases	Wheat	1,230 pounds
Cottage Cheese	6,512 pounds	Crenshaw Melons	3,100 melons	Meats, poultry and seafood	
Cream Cheese	4,438 pounds	Dates	100 pounds	Beef (included brisket, hamburger, liver, roast beef, steak, wieners)	234,314 pounds
Dairy Coffee Creamer	268,000 (3/8-oz) servings	Figs	76,537 pounds	Lamb	39,922 pounds
Ice Cream (included vanilla, chocolate and strawberry flavors)	69,362 (5-oz) cups	Grapefruit	184,480 grapefruits	Pork (included bacon, hams, pork chops and loins and sausages)	52,613 pounds
		Grapes	4,029 cases	Poultry (included chicken, cornish game hens and turkey)	147,477 pounds
		Honeydew Melons	3,390 melons	Prepared entrees-beef	50 cases
		Lemons	63,000 lemons		
		Lemon Juice	2,400 (32-oz) bottles		
		Mangos	166,416 mangos		
		Mixed fruit compote	6,000 gallons		
		Nectarines	305,080 nectarines		
		Oranges	596,728 oranges		
		Papayas	16,980 papayas

				Utensils-knives	1,240,000 knives
				Utensils-soup spoons	310,000 spoons
				Utensils-teaspoons	1,856,000 spoons

12.02.6 Summary of menus

See following pages.

12.02.7 Summary of operations in food preparation areas

Food served to the athletes and team officials was prepared either in institutional kitchens located in the villages or in the central assembly area at the Shrine Auditorium.

The village food services were operational 24 hours a day. Baron's Bistro (USC-1,016 seats), Sproul Hall (UCLA-386 seats) and De La Guerra Annex (UCSB-530 seats), were 24 hour dining facilities that had complete kitchen operations and staff to provide for the continuous flow of customers, replenish storage areas, accomplish major clean up tasks and prepare for succeeding meals.

Operations in the other dining halls typified standard institutional kitchens. Frozen food products required proper thawing, heating and reconstitution before serving.

12.02.8 Summary of operations in food consumption areas

Food was served in the villages cafeteria-style. Guests entered the dining halls through single-entry points where identification was checked. They proceeded to an area where trays, napkins, knives, forks and spoons were available and then continued to the steam tables where hot food was displayed and served, at the request of the customer, by uniformed service personnel. The guests then proceeded to areas where salads, desserts, fruit, cheese and beverages were available. There was a wide selection of condiments. The food lines arranged for self-service, though uniformed personnel were available to answer questions or provide assistance.

Personnel located throughout the dining rooms cleared trays to a central disposal point after diners had concluded their meals.

Food was identified in both English and French with pictograms used wherever possible. All eating utensils, plates and cups were disposable, reducing the risk of illness because of improper washing practices. Service personnel were stationed throughout the dining halls to answer questions or assist, if necessary.

During the course of village operations a total of 646,525 meals were served in the dining halls. The breakdown by village was as follows:

Village	Meals served	Percent of total
USC	354,123	54.8
UCLA	249,448	38.6
UCSB	42,954	6.6

The most meals served on any given day occurred on 28 July when a total of 32,132 individuals were fed. The average number of meals served between 14 July and 15 August was 19,592 per day.

Village food service hours were standardized except for UCSB. At both UCLA and USC, all dining areas were open from 0600-1000 for breakfast, from 1100-1500 for lunch and from 1700-2300 for dinner service. Food service on a 24-hour basis was available at the Baron's Bistro at USC and at Sproul Hall at UCLA. Because of early morning competition schedules for canoeing and rowing (competitions usually began at 0730 or 0800), breakfast hours at UCSB in the De La Guerra Dining Hall were from 0400-1000 with lunch hours from 1100-1500 and dinner from 1700-2100. Around-the-clock service was available in the De La Guerra Commons dining hall annex.

12.02.9 Analysis of athlete and team food service

The task of feeding the thousands of village residents was immense. Almost 650,000 meals were served and all three villages had dining facilities operating around the clock. Special food preparation facilities had to be arranged to support the box lunch program for athlete feeding outside of the villages as well as to increase the food preparation capacity for the USC village. The LAOOC also added nearly 2,000 additional seats for dining at USC with the gift of a new, permanent dining hall and kitchen facility seating 963 persons and the temporary erection of the Baron's Bistro with seating for 1,016. In addition to the village food service area, soft drinks and water were available at multiple points within each village and were replenished often.

In retrospect, the following points should be noted:

- The overall level of satisfaction with athlete and officials dining areas was high. All needs were met and there were no reported cases of dietary upset or food-induced illness among village residents. In a few instances, athletes, especially runners and swimmers, were concerned over the lack of some food items such as raw and steamed vegetables, poached fish, non-fat milk, low-fat cottage cheese and yogurt but generally found the accommodations satisfactory.

- The sponsorship agreement by which ARA Services became responsible for much of the food service budgeting, planning and operations did not alleviate the LAOOC's responsibilities in the food service area. A staff was still required to work with ARA, to provide supervision and to define policies and procedures in many areas of food service, only some of which ARA was responsible for, such as the distribution of soft drinks and water, catering procedures for special functions and the box lunch delivery and distribution program. Future organizers may wish to include specialists in diet, equipment/facilities and purchasing as well as general management in any food service department that works with an outside food service management or planning firm.
- Careful planning must be done when determining the size of facilities needed to store ordered products. There were instances where food was spoiled because insufficient storage space was available.
- Venue food service operations for athletes worked relatively smoothly. The EMS allowed for concise, swift ordering and reporting procedures that could be centrally controlled. This was very important since the box lunch elements were ordered from several sources and assembled at a single point.
- Food supplies came from corporations which were official sponsors or suppliers for the Games. Each of the sponsors performed very well and were cooperative when needs exceeded estimated requirements. However, it is important that the organizer accurately prepare for its needs in advance of such agreements. Furthermore, each agreement must contain provisions relating to quality control on delivered products which will clearly state the expectations of the organizers and the responsibilities of the sponsor or supplier. At Los Angeles, almost all of the sponsors and suppliers in the food service area did an excellent job in providing food and beverage products and were responsive to the LAOOC's needs. In particular, the use of a large grocery company as the major food purchasing agent was successful and could have completely eliminated all concerns about the return of unused products had a satisfactory system been worked out early enough.

12.03 Food services for dignitaries, sports officials and guests

12.03.1 Concept and goals

It was the intention of the LAOOC to provide dignitaries, sports officials and important guests the kind of hospitality consistent with their positions in the world sports community while, at the same time, providing the food and service typical of the United States in general and Southern California in particular. Hosting areas were established at all the venues and at Exposition Park. Numerous receptions were held in locations of interest throughout the area.

12.03.2 Food service support at the Biltmore Hotel

The Biltmore Hotel was the headquarters for the International Olympic Committee during its 88th Session immediately preceding the Games as well as during the Games of the XXIIIrd Olympiad. As such, the LAOOC was responsible for providing food service suitable to the needs of the delegates accommodated at the Biltmore. In addition to the two restaurants within the Biltmore, a special room for Olympic Family food service was set up.

The Renaissance Room was established as the Olympic Family dining area and served breakfast, lunch and dinner. Admittance to this area was by meal tickets which were printed in advance. This special dining area was in operation from 15 July through 13 August. The most popular meal was breakfast, as most of the delegates moved out to the sites during the day and evening. The original breakfast menu was expanded to eventually include a variety of breakfast breads and toast, eggs, fruits, juices, meats and beverages.

A private dining room was operated for the members of the IOC Secretariat for lunch and dinner only.

A number of receptions were held in the Biltmore, and food service was arranged through the hotel catering department on each occasion.

12.03.3 Food service support for guests not staying at the Biltmore Hotel

Aside from receptions and other functions, the LAOOC did not arrange for food service at any other hotels or facilities for the convenience of delegates, guests and others not staying at the Biltmore Hotel.

It should be noted that a number of International Federations made extensive food service arrangements at hotels at which they were headquartered. IFs that held their congresses in Los Angeles in LAOOC-designated congress hotels were not

Food Services

11 An aerial view of the concession area at the rowing and canoeing competition at Lake Castas.

10

11

charged for rental of needed meeting rooms if a designated number of meal functions were held at the hotel. The number and type of such meal functions was negotiated between the IF concerned and the hotel.

12.03.4 Food service at the competition and training sites

The sports commissioners were charged with providing food service at their respective venues for dignitaries, sports officials and guests. Each venue hospitality area consisted of a hosting room located within the venue. It was appropriately decorated and used by invitation only.

The hours of operation and level of service varied widely, depending upon the sport and the desires of the commissioner of that sport. In some cases, outside caterers were used and elaborate buffets and on going cocktail parties were provided for guests. Other commissioners chose to offer less formal hosting and provided areas to which visitors could go and relax away from the crowds and the congestion.

All of these locations served sponsor products, including: beverages, coffee, tea, assorted nuts, chips, cheeses and other hors d'oeuvres as appropriate. The only hosting areas controlled and supervised directly by the LAOOC Food Service Department were at Exposition Park and in the press box of the Los Angeles Memorial Coliseum.

These two sites were judged to be especially important in view of their location at the main stadium for the Games. Both the Opening and Closing Ceremonies were held at the Coliseum as were 15 sessions of athletics from 3–11 August and 26 sessions of boxing in the Los Angeles Memorial Sports Arena from 29 July–11 August. The Olympic Family lounge at Exposition Park served the athletics and boxing venues (boxing was held at the Los Angeles Memorial Sports Arena, adjacent to the Coliseum), while the press box of the Coliseum was open only to a restricted number of guests specially invited by the senior management of the LAOOC.

The Olympic Family lounge in Exposition Park included a food preparation and staging area and encompassed about 18,000 square feet with picnic and umbrella-shaded tables and seating for approximately 540 persons. Food and beverage service was provided and included:

Opening Ceremonies—
first service; 1300–1600 hours
(1,300 guests)

- Canapes
- Cheeses, both imported and domestic, with breads and crackers
- Finger sandwiches
- Fresh fruits and melons

Opening Ceremonies—
second service: 1900–2200 hours
(1,300 guests)

- Fresh vegetables with dips
- Mixed nuts and bar snacks

The menu in the Olympic Family lounge was the same for the Closing Ceremonies, which had two service periods from 1600–1800 hours (1,500 guests) and from 2200–0130 hours (1,500 guests), except for the addition of a caviar bar and pastries.

The Olympic Family lounge menu during the competition period (29 July–11 August) included breakfast, lunch and an evening buffet service and was available from 0700 to 2200 hours daily. Breakfast service included juices, coffee, tea and pastries, croissants, crackers, cheeses and fruit. Lunches generally included breads and pastries, cheeses, cold meats (usually roasted beef or chicken and chicken salad), four different salads and beverages. The buffet service usually included cheeses and crackers, fruits, melons and fruit salads, meats including beef or turkey, relishes, salad greens and sliced tomatoes and desserts.

A wide variety of beverages was available including coffee, juices, mineral and spring water, soft drinks and tea. In addition, a special permit was issued by the Alcoholic Beverage Control Board of the State of California to allow the service of beer, champagne and wines in this area.

All food service except for sponsor beverage products was handled through an outside caterer selected to cater at this location only. An orientation session was held on 26 July and a training program on the following day. The response to the Olympic Family lounge at Exposition Park was excellent and the guests enjoyed an uncrowded, garden-like atmosphere in contrast to the busy stadium located a few steps away. The lounge was fenced and tented, and the fences were covered with fabric to ensure privacy for the guests.

The Coliseum press box was the site of a special hospitality service provided for guests invited by the LAOOC's senior management. An admittance list was kept at the base of the elevator to the press box and names were checked prior to guests boarding the elevator. Although used for working press at many Coliseum events, the Coliseum press box was not large enough to handle the number of media covering the Games. Thus, it became available for other purposes. Working media were placed in a specially modified section of the Coliseum seats, with space for almost 1,900 journalists and broadcast commentators.

12

Athletics competition control, results and timing functions, security and scoreboard control were all placed into the existing press areas and radio and television commentary booths. Sufficient space was left over to be used for VIP hosting for approximately 200 persons. Catering arrangements were made with a local delicatessen in coordination with the Food Services Department, according to the requirements developed by the LAOOC President's office.

12.03.5 Hospitality arrangements in the villages

Special care was taken to ensure a proper level of hospitality in the villages. Because of their great visibility, especially during the two weeks prior to the beginning of competition, it was determined that hosting areas should be arranged for the village mayors and a separate lounge area for team chefs de mission be made available for catering special functions.

A "Mayor's Suite" in each village was equipped to provide special food services each morning and afternoon. Croissants, muffins, pastries and fruit were available in the mornings, served with coffee, juices and tea. Afternoon service included fruit and cheese platters with crackers and breads and beverages including coffee, juices, mineral water, soft drinks and tea. These arrangements were well received.

A "Chef's Lounge" was also set up and offered a similar menu. These areas, though used infrequently, were enjoyed by those who visited them. More traffic would have been generated had information about the

12 Spectators line up at refreshment stands outside the weightlifting venue.

Food Services

area had been disseminated to team leaders before the Games. Special catering was available to interested NOCs, but was lightly utilized. It is possible that many NOCs were not aware of these services and would have used them more had they had been better informed.

Welcoming ceremonies for the teams were held in both morning and afternoon sessions. Light snacks and non-alcoholic beverages were served by village hosts and hostesses along with champagne served after each ceremony in accord with the limited license for the service of alcoholic beverages granted by the Alcoholic Beverages Control Board. Ceremonies required one server per 25 persons with a maximum of 10 servers for groups of 250 people and more.

12.04 **Food services for the press, radio and television**

12.04.1 **Concept and goals**

It was the intention of the LAOOC to make food service available to the members of the news media in a manner that would facilitate their ability to perform their main function—the reporting of the events of the XXIIIrd Olympiad. It was not the objective of the Organizing Committee to provide free food to the press, but rather, assure availability of a variety of food that would meet the dietary patterns of individuals from countries around the world who were operating on an almost continual schedule over which they had little control.

12.04.2 **Food service at the Main Press Center**

The central location for members of the print media was located in the Main Press Center (MPC). It was at the MPC that coverage facilities were available for members of the written press assigned to any location or sport.

The food service at the MPC was, by contract with the Convention Center, under the control of Ogden Food Service (Ogden). Ogden retained and exercised the exclusive right to provide all food service within the area of the Convention Center.

Initially, the food service provided at the MPC consisted of the restaurant—L.A. Pub—which was open from 0800–1800 hours from 14 July through 27 July and 0800–1500 hours and 1600–0200 hours from 28 July through 14 August. This restaurant seated 220 and served a limited variety of hot and cold meal items, as well as offering a full bar. Additionally, a concession stand located immediately outside the main floor of the Convention Center was open from 0800–1800 hours from 5-14 July and 0800–0200 hours from 15 July on. All food and beverages were paid for by the individuals using the facilities.

Shortly after operations began, it became apparent that a greater amount of service was needed. Ogden agreed to open an additional concession stand inside the main floor and keep one of the concession stands open 24 hours a day. Ogden also provided one item at no charge every day to the working press. This consisted of coffee and donuts, ice cream and the like. Additionally, the LAOOC agreed to pay Ogden for the provision of Coca-Cola products at no charge to the press with every meal ordered in the L.A. Pub. An average of 230 meals per day were eaten by the press in the restaurant at the MPC. Ogden also offered “room service” to news agencies with private offices in the Main Press Center.

Additional food service was provided to members of the press in the Windsor Room of the Holiday Inn located one block from the Convention Center. Initially conceived as space for lunch service to LAOOC staff working at the MPC, it evolved into a major food service location for press from the MPC. The room was divided to separate the staff from the press area. Free coffee was provided courtesy of 7-Eleven Stores. A full bar was set up in the press area where members of the media could buy beverages. Sponsor beverages, with the exception of beer, were provided at no charge. From 14-20 July this area was open from 1200-2100 hours for beverage service. Snacks were also available, consisting of chips, pretzels and nuts at no charge. Use of the facility during this period was light. From 21-28 July the area was open from 1200-1600 hours for a cold buffet, 1600-1800 hours for cocktails and snacks, 1800–2200 hours for a hot buffet and 2200–2400 hours for snacks which included hot and cold hors d'oeuvres and small sandwiches. Approximately 3,867 persons were served at the cold buffet and 2,283 were served the hot buffet

during this time. From 28 July through 14 August, the area was open from 1200-2100 hours for cocktails and snacks and 2100-0200 hours for a cold buffet. Approximately 6,763 individuals were served at the cold buffet or an average of 422 per night. All of this service was provided by the Holiday Inn and was paid for by the LAOOC, with the exception of alcoholic beverages.

12.04.3 **Food service at the International Broadcast Center**

The services provided to the broadcast media at the International Broadcast Center (IBC) were arranged by the host broadcaster, the American Broadcasting Corporation (ABC). The food service at the IBC, which was located at the Sunset/Gower Studios, in Hollywood was provided under contract by Manask and Carl, Inc. It consisted of a restaurant created on Stage 79 of the studio. This restaurant operated from 16 July through 12 August and was open from 0700-2300 daily.

The menu featured typical Southern California foods consisting of a fresh fruit and salad bar, delicatessen-style hot and cold sandwiches, tostadas grandes, homemade soup and chili, daily hot entree specials and full breakfast service. Service was buffet style and there were 300 seats available inside and an additional 100 outside. A Baskin-Robbins ice cream store was located in a portion of the studio-restaurant area. Full bar service was available.

12.04.4 **Food service at the competition and training sites**

The provision of food service for news media at competition and training sites was limited. Sponsor beverages, Coca-Cola and Arrowhead products were available at all times, but food was not provided by the LAOOC. In many cases, especially with broadcast personnel, food services were provided by employers or contractors. The LAOOC made no attempt to control or monitor this food service. Other members of the press utilized the concessions available to the general public. At some venues, separate lines were available for press at public concession stands. At Exposition Park, a separate food service area with seating for 100 was set up.

12.05 **Food services for the spectator**

12.05.1 **Concept and goals**

Food service played an important role in spectator satisfaction. The LAOOC was committed to providing food and beverage service at all locations consistent with that which is normally provided at sports activities. In addition, the Exposition Park Food Bazaar was conceived as a way to provide food service to individuals who did not have tickets but came to the Exposition Park area to be a part of the Olympic experience.

12.05.2 **Food service at the competition sites**

The services provided to spectators at the various sports venues were controlled by the Spectator Services Department of the LAOOC. In most cases, the food and beverage service was made available through concessionaires who had existing contracts to service the facilities.

No attempts were made to circumvent contracts with existing concessionaires. Rather, every effort was made to work with these companies and assist them in offering the best products and services possible. Care was taken to see that physical facilities looked new, graphics were compatible with the Look of Festive Federalism and prices were kept at realistic levels.

The Spectator Services Department worked in two main areas of spectator food service. First, and most important, was to assure that a competent concessionaire was in place at every competition site. This was more difficult than originally imagined, since some of the sites did not have any concessionaire in place, and, in others, the agreement between the site and the LAOOC placed the responsibility for providing concession services on the Organizing Committee. Second, the LAOOC desired to incorporate some food items which were not ordinarily sold at sporting events into a basic menu to constitute a minimum standard to be available at all sites. Products of sponsor food companies such as Coca-Cola and M&M Mars were also included if not already part of existing concession menus.

Concessionaires were located for all sites. Existing concession arrangements were in place at sites for 15 sports and temporary arrangements were made for those serving eight sports as well as the water polo

discipline of swimming. The overall quality of service was good and the 5.8 million spectators generated more than \$11,000,000 in food and beverage sales.

The LAOOC felt it was important to diversify concession menus with items that were more health-oriented than some standard items and with several types of cold sandwiches. Although existing concessionaires offered additional items, the following menu was generally available at most sites:

Concessioners' general menu

Ham and Cheese	\$3.00
Hot Dog	1.50
Roast Beef	3.00
Submarine	3.00
Turkey	3.00
Vegetarian Pita	2.50

Snack items

Chocolate Chip	\$1.50
Ice Cream Sandwiches	
Fresh Fruit Cups	1.50
Frozen Fruit Bars	1.00
M&Ms or Snickers	1.00
Potato Chips	.75
Yogurt	1.00

The ham and cheese, roast beef, submarine and turkey sandwiches all included four ounces of meat and were served with lettuce on a kaiser roll, except for the submarine sandwich, which was served on a five-inch long Italian-style roll. The hot dogs were each one-sixth pound all-meat wieners. Available condiments included catsup, mayonnaise, mustard and sweet pickle relish. Snack item specifications required ice cream sandwiches of three-ounce weight, fruit bars of 3.5-4 ounces, fruit cups of 5-6 ounces and yogurt in eight-ounce cups. Potato chips were sold in bags weighing 1.25 ounces each, M&Ms were sold in the 3.03-ounce bag size and four-ounce Snickers candy bars were available.

12.05.3 Spectator food service at Exposition Park

Thousands of people were expected to visit Exposition Park in addition to those spectators holding tickets for athletics, boxing and the ceremonies events. The LAOOC set up special food service stands, including a massive food bazaar, to provide concession service and improve the quality of their experience.

In all, some 60 tent kiosks in 17 different locations were set up in addition to the food bazaar in the Exposition Park area. An abbreviated version of the standard LAOOC concession menu was available at all points except at the food bazaar, which was designed as a high volume food service area with a very limited menu.

The bazaar area was projected to serve 6,000 people per hour. Menu choices were limited to five different cold platters, chips and soft drinks. All of the cold platters were prepared off-site and delivered directly to the bazaar area which was made up of three 40-foot square tents (total area of 4,800 square feet) with a 110-foot square tower on top. The LAOOC added a seating area adjacent to the bazaar for 2,000 people and distributed an additional 400 concrete benches throughout the Park. Concession business was as brisk as expected and the only obvious improvement might have been restricting some service lines for beverages only. An LAOOC staff of nine persons managed contracted concession personnel numbering almost 1,000.

12.05.4 Analysis of spectator food services

The food service program for the spectators was successful. Most of the concessionaires at the sites performed well and the variety of products served and restrained pricing was well received. In the future, other organizers may wish to consider the following points:

- The variety of items which were introduced by the LAOOC were generally well received by the public. The extended menu was different enough from the standard fare available at most sporting events so that the public was encouraged to try new items.
- The ability of concessionaires to operate enthusiastically and proficiently is dependent on the data provided to them regarding stadium seating capacities and ticket sales. Based on these figures, concessionaires can better forecast personnel and concession requirements. It is vitally important to provide the most accurate figures possible at the earliest possible date. The best circumstances would allow for detailed information to be made available to bidders in any competitive situation for concession service.
- As mentioned, beverage-only counters would have been helpful in some of the outdoor stadiums and especially in Exposition Park. The LAOOC policy regarding alcoholic beverages was to allow sales of these kinds of beverages only where

13

14

13 Volunteers are served at a staff food service area.

14 Staff eat meals in dining areas reserved for that use only.

Food Services

there was a current license and a history of previous sales at the particular site. This limited the number of sites where beer was sold, and spectators missed it, especially at the outdoor sites and because it is almost universally sold at professional sporting events in the United States. Beer sales were very strong at the Velodrome because of the warm weather and there were no problems attributed to its consumption.

- The LAOOC also decided against the use of wandering food vendors in the spectator seating areas. This proved unfortunate since seating arrangements at some sites were inconvenient for spectators to exit and re-enter. In these situations, the spectators generally stayed in their seat throughout the competition session.

12.06 **Food services for the staff**

12.06.1 **Concept and goals**

The LAOOC provided special food service at its administrative headquarters from mid-I 982 through the Games and provided food service for the thousands of staff who worked at venues during the Games. While the administrative headquarters food service is profiled in chapter six (Administration), the massive task of providing food service to Games staff is discussed below.

The LAOOC was motivated by several factors to provide food service to the staff. One was recognition that much of the staff personnel were volunteers and the availability of food at work locations would serve as a valuable morale boost. Venue security was a major concern and from a security standpoint, it was desirable that staff members remain at their assigned work locations for the duration of their shifts. High concession prices were feared and adequate storage space for food brought by staff members from their homes did not exist at most locations. Also, staff parking was not available in close proximity to most work locations, making it inconvenient and time-consuming for staff to travel to an outside eating location.

The goal of the staff food service program was to offer a basic assortment of foods that were nutritious and easy to prepare. It was also important that the food be easy to transport and store.

12.06.2 **Responsibility assumed by the LAOOC**

The LAOOC assumed all responsibility for the ordering, receipt, storage and distribution of meals and meal components at locations where LAOOC staff was located. Each of these sites had a venue food service manager, most of whom were selected by the venue or site management. Some, however, were filled with personnel provided by the LAOOC Food Service Department.

The venue food service managers placed an order, via EMS, on a daily basis by 1000 hours for meals required at the venue the following day. They kept inventories of soft drinks, water and associated supplies and reordered from designated suppliers, as needed. At meal times designated by venue management, the venue food service manager supervised the distribution of meals to the staff. In some cases, these managers were also called upon to assist with the hosting and entertainment activities established by the commissioners and venue management.

Each venue food service manager was assigned assistants to accomplish the various tasks. The LAOOC Food Services determined the number of assistants using the following criteria: the number of days the location was to be operational, the number of staff assigned to the site, the number of hours that staff would be required to work each area and the overall complexity of the venue/support location.

12.06.3 **Menus and provisions for staff food service**

See attached menus.

12.06.4 **Staff food service operations**

Once the decision was made to feed LAOOC staff members, an immense set of logistical problems was set into motion. Not only did meals have to be ordered and produced, but they had to be distributed and replenished daily at more than 30 sites including the competition venues, villages and major support sites, such as the Main Press Center.

It was established that the LAOOC Food Service Department was responsible for providing meals to sites at which 144 or more staff members were present. Staff members were entitled to one meal after four hours of work on a single day and to a second meal if they worked more than ten hours during a single shift. At all sites that consisted of a staff population of less than 144, a \$3 cash subsidy was distributed. In the event that an insufficient amount of food was delivered to a site where staff meals were provided, those who did not receive meals were also given a \$3 subsidy.

The elements of the staff meals were identical to those used for the athlete box lunches, although the number of items included was fewer. The sandwiches, fruit, pudding, cookies and candy were not packed into individual boxes, however, but were shipped in bulk containers to each site and were arranged in the staff eating areas for assembly-line pick-up.

Almost all sites had a discreet area for staff dining and relaxation known as the staff lounge. These areas were usually equipped with a refrigerated container or trailer for food storage (refrigerated space was shared with the athlete lunches), picnic tables and benches or chairs, tables for distribution of food, condiments, paper supplies and drinks, beverage dispensers, trash receptacles, toilets and one or more television sets for staff entertainment. The venue food service staff was responsible for the maintenance and operations of this area.

The bulk meal program menus were designed on a five-day menu cycle. Menu items were changed on 28 or 29 July in response to disapproval from staff at the villages and Main Press Center who had been consuming staff meals since 14 July and had completed three menu cycles. As August began, new items were provided which were welcomed by staff as a change from prior provisions. A chicken with cheese and submarine-type sandwich were added, higher grades of roast beef were used and the turkey sandwiches

were discontinued. Bagels and cheese were added as alternatives to the sandwiches and various kinds of chips, soft cookies, trail mix (nuts and raisins) and yogurt were added to the overall menu along with more fruit. Staff disenchantment continued after a few July days because of the continued repetitiveness of the entrees, inconsistent packaging of the sandwiches and salads and shortages of many of the newly included items such as yogurt which had been expected to satisfy staff needs for more variety. In addition, many of the management staff chose to eat in the Olympic Family lounge, or in the athlete's dining halls in the villages. This had a negative effect on staff morale regarding the quality of food, as most staff members were not allowed in the venue Olympic Family lounges or village dining halls.

Staff beverage service usually included coffee and tea, along with bottled mineral water, fresh spring water from dispensers and soft drinks (including diet drinks) from an electrically cooled multi-line dispenser.

12.06.5 **Reflections on the staff food service program**

The LAOOC's concept of providing staff food service was extremely sound. It provided an opportunity for staff to relax at the site and not worry about waiting in line at nearby restaurants with the attendant traffic and parking concerns. It was also a way for all staff members at a site to meet and to broaden their Olympic experiences. There, management and lower-level volunteer workers met on an equal footing. Where this occurred, an increase in staff morale was noticed.

In all, some 427,420 bulk meals were prepared and shipped to various locations for staff consumption. The highest production total for any one day came on 2 August, when 23,616 meals were prepared. The heaviest concentration of meal preparation came in the 11 -day period from 29 July-8 August, when an average of 20,679 meals daily were prepared.

A number of recommendations were made regarding food service, by the Food Service Department, as well as by staff members:

- The best program would have allowed for a hot meal once per eight-hour shift. This could have been arranged with minimal difficulty in the village dining areas and a separate area set aside at certain

times for staff. The varied, hot menu provided in the villages, for example, would have made even the best quality cold meal program available unattractive by comparison.

- Assuming that a cold meal program is mandatory under the circumstances, a number of suggestions were made, such as extending the menu cycle from five to seven days and providing portable hot food warmers, grills, hot plates and microwave ovens for a limited hot food service. At the Main Press Center, for example, management purchased a microwave oven for the staff dining area which helped the food presentation markedly as individuals could heat the cold sandwiches and other items as they wished. Packaging could be standardized and of high quality since opened sandwiches and leaking salad cups led to excessive discard of otherwise properly prepared food.
- A strong interest in ice cream and other frozen confections was expressed by the staff. Ice cream freezers could also have been used for storage of meals brought by staff from their own homes and would have been welcomed by staff members. Refrigerated storage available for the venue for athlete box lunches and the bulk lunches and beverages was never available for staff lunch storage and was inaccessible to many of them in any case.
- Regardless of the program decided upon, however, it is imperative that all of the staff participate. The dissatisfaction of staff at several venues rose considerably when it became apparent that LAOOC management at the site did not eat with the staff, opting for the Olympic Family lounge instead, and did not appear to be concerned about the staff dining area or the quality of food served there.

Village meal menus

Breakfast Day One

Juices	Orange Tomato Apple
Fruits	Fresh Fruit Compote Honeydew Melon Wedge Papaya Strawberries
Cereals	Cornflakes Crispy Rice Granola Raisin Bran Cream of Wheat
Soup	Split Pea with Ham

Government Relations

13.01 Concept of the role of government relations

No previous Olympic Games Organizing Committee had ever needed a department specifically directed to act as a liaison with government as did the LAOOC. But because the 1984 Olympic Games was staged without direct government involvement, some sort of liaison between the LAOOC and the United States federal government, the California state government and the Los Angeles area city and county governments was obviously necessary. To that end, an LAOOC staff member with previous experience as an attorney and U.S. Congressional staff member assumed governmental relations duties as part of his original assignment with the Organizing Committee in 1979. The exact nature of that role was undefined at that time because LAOOC senior management was unsure how it would evolve.

Two concepts guided the work and formalized the continually evolving role of the Government Relations Department in dealing with its two major client groups. The department had to be responsible to its internal constituency, the Organizing Committee staff and its departments, by keeping the various governments, officials and agencies from interfering with the efforts of those departments while at the same time helping to secure the numerous licenses, permits and other types of assistance that the LAOOC needed. Government relations also had to deal with its external constituency, the elected and appointed officials and the various agencies, bureaus and departments of the federal, state, county and local governments. The Government Relations Department was responsible for keeping government officials informed about the Games and, if possible, to obtain their support of the organizing effort while ensuring that actions were not taken which were detrimental to the efforts at the LAOOC.

The overall role of the department, therefore, was to coordinate the LAOOC's relationships with all elected and appointed governmental officials, including those from foreign

governments to the extent that the Organizing Committee had dealings with them rather than with National Olympic Committees. The department also had to develop and strengthen those relationships; to identify resources and key staff liaison personnel at all levels of government; to enlist the support, understanding and cooperation of all public officials, both elected and appointed; and to ease the relationship between the LAOOC and all levels of government so that maximum cooperation and assistance could be achieved over an extended period of time.

That role continued during the period of the Games, but also included a role at the Biltmore Hotel/IOC headquarters and at the Los Angeles International Airport (LAX), where the department found positive solutions to such problems as customs and Olympic Identity Card procedures, as well as helping to trace missing cargo or documents for Olympic Family members. During the Games, the department

stayed in close communication with the diplomatic/consular corps in Los Angeles and with the protocol offices of the U.S. State Department and the city of Los Angeles, with a view toward assisting very important non-accredited persons, especially high-ranking government officials who had not been accredited as Olympic Family members.

Since the Government Relations Department always worked toward anticipating problems before they developed, it established liaisons at each venue to deal with governmental issues or problems and instructed them to contact Government Relations management staff at the Biltmore Hotel when delicate problems could not be resolved on-site.

The post-Games stage called for the department to send acknowledgments and certificates to all governmental officials who had assisted the LAOOC, to prepare for any public hearings which might have resulted from the staging of the Games, and to assist in wrapping up various LAOOC contracts with government agencies.

3 From left, LAOOC Aquatics Commissioner Jay Flood makes a point to LAOOC President Peter V. Ueberroth and PRC delegation during a 1982 venue tour.

13.01.1

Composition of the department

The Government Relations Department grew from a staff of one director (who also had other duties with the LAOOC) in July 1979 to a staff, including personnel in Washington, D.C., of 19 by the time of the Games in July 1984. Ultimately, the department staff included a vice president for government relations; an associate vice president for international relations who had many years of experience as a diplomat with the U.S. State Department; the director of the LAOOC's Washington, D.C. office, an associate vice president who had previously worked for the White House as a member of the Reagan Administration; an associate vice president specializing in city and county government; and specialists who dealt specifically with federal agencies, the LAOOC's coin and stamp programs, the government of the state of California, and East Coast operations. The department also consisted of three government relations coordinators and administrative assistants, and secretarial support.

13.01.2

Scope of liaison duties

The scope of Government Relations liaison duties was coordinating Games operations and planning with all agencies except those dealing with security issues, which were addressed directly by the LAOOC Security Department.

On the federal level, liaison was accomplished with:

- U.S. Customs Service; procedures at Los Angeles International Airport (LAX) and in other cities serving as sites for Olympic venues, development and publication of the customs manual for the Olympic Family and liaison with F.B. Vandegrift and Co., the official customhouse broker
 - U.S. State Department; Olympic Identity Card and visa procedures and foreign relations in general
 - Federal Communications Commission; special frequencies for the Games, with direct liaison handled by LAOOC sponsor Motorola Communications & Electronics
 - Immigration and Naturalization Service; Olympic Identity Card for Olympic Family members and visa processing of all other visitors;
 - National Weather Service; weather forecasts for each venue during the Games period
 - U.S. Department of Labor; work permits
 - U.S. Department of Agriculture; procedures for importing horses, foods, plant products and other such controlled or restricted items
 - Bureau of Alcohol, Tobacco and Firearms; importation of competition firearms and firearms products
 - Office of Management and Budget; coordination of all federal agency expenditures
 - U.S. Coast Guard; assistance at yachting competition, in coordination with the LAOOC Security Department and the yachting commissioner
 - U.S. Postal Service; commemorative stamps, venue postal installations for retail sales, postal service for the villages, assignment of unique ZIP codes, assistance with the LAOOC daily mail and the philatelic portion of LAOOC cultural program
 - Coin Program; monitoring of U.S. Treasury Department's handling of this program
- On the state level, Government Relations dealt with the following agencies:
- Employment Development Department; for work permits
 - State Athletic Commission; for boxing issues, since this commission governs the sport in California
 - State and Consumer Services Agency: which oversaw the Museum of Science and Industry, an important part of the LAOOC's Exposition Park plan
 - California Highway Patrol and the California Department of Transportation; for traffic and security planning, with LAOOC Security and Transportation departments directly responsible
 - UCLA and the State University System; for use of facilities at various campuses, with the Sports and Villages departments having primary liaison responsibility
 - Coliseum Commission; for use of facilities at the Los Angeles Memorial Coliseum and Exposition Park, with the athletics commissioner and the LAOOC manager for Exposition Park having primary responsibility
 - California Coastal Commission (CCC); for permits which were required at several coastal venues. The CCC regulates all construction on the coast of California
- Government Relations also had to maintain strong working relationships with elected and appointed officials and legislatures. These groups included officials from:
- The City of Los Angeles; particularly the mayor, the 15 members of the City Council, and the City Task Force chaired by the city administrative officer and representing all city departments
 - Los Angeles County; including the five county supervisors, the chief administrative officer, and departments
 - Venue cities and counties outside Los Angeles; including officials from these areas who dealt directly with the sports commissioners at the time of the Games
 - The California Legislature; including the governor of California and members of both the Assembly and the Senate in Sacramento
 - The U.S. Congress; including 100 senators and 435 members of the House of Representatives as necessary, but with primary focus on those senators and congressmen whose states or districts included venues or were otherwise important to the LAOOC
 - The White House; including President Ronald Reagan and other members of his staff who had been assigned specific responsibilities for dealing with the LAOOC

The greatest need with the elected and appointed officials was to maintain communications between the LAOOC and the officials. Government Relations helped provide answers to constituent inquiries regarding general information about the Games, ticket requests and job and business opportunities. It also was responsible for inviting officials to LAOOC or Olympic events and generally keeping them informed about the Games, particularly as to how various facets affected their particular states, districts or constituencies.

Other functions within the scope of Government Relations included:

- Identifying the need, forming strategy and urging the passage of necessary legislation as well as monitoring all other bills, laws and regulations effecting the Games
- Developing working relationships with consular corps and foreign embassies to resolve visa and customs problems
- Seeking government permits and approvals, for needs identified by the Sports and Architecture departments such as conditional use permits, zoning requirements, street closures, approvals for out-of-stadium routes and parade permits
- Establishing a Washington, D.C. office for direct liaison with federal agency and congressional and White House contacts as well as to oversee the governmental aspects of the remote football sites at Harvard and Annapolis

- Maintaining protocol as it affected government officials attending the Games
- Developing a brief training program for government officials to better acquaint them with the Olympic Movement and the LAOOC
- Responding to government inquiries for public hearings on the LAOOC or the Olympic Games in Los Angeles

Within the LAOOC, Government Relations closely coordinated its operations with two other departments, Security and News. The three units' respective responsibilities made day-to-day coordination of efforts critically important. For example, various agreements concluded with law enforcement had to be approved by elected officials and thus had headline-making potential.

13.01.3

Use of Washington, D.C. office

By late 1982, White House and federal involvement with Olympic planning had increased to the point that a permanent, official Organizing Committee presence in the U.S. capital was necessary. A former White House staff member in the Office of Private Sector Initiatives who had worked closely with President Reagan's chief Olympic liaison was hired by the Organizing Committee in January 1983 to head the office. After a three-month planning and orientation period at the Organizing Committee offices in Los Angeles, he opened the LAOOC Washington, D.C., office and immediately began work on the following major projects:

- Since the LAOOC had decided to hold preliminary football competition at Harvard University in Cambridge, Massachusetts, and at the U.S. Naval Academy in Annapolis, Maryland, much planning and preparation had yet to be accomplished with officials and organizers at those sites.
- Meetings had to be held with steering committees in various East Coast cities to prepare for the Olympic Torch Relay, which would be starting less than 16 months from the time the Washington office opened.
- Further, the Washington D.C. office coordinated all relations with federal government departments and agencies in the capital, dealing with members of the U.S. Senate and the U.S. House of Representatives, acting as the key local liaison with the White House and dealing with foreign embassies located in Washington to ease any concerns or answer questions regarding the LAOOC or the U.S. government as related to the Games.

- The office was also responsible for monitoring legislation pending in Congress that would affect the Organizing Committee and the staging of the Olympic Games. Finally, the Washington office became a "little LAOOC" and handled many public relations requests and general questions rather than forwarding them to the Los Angeles offices.

Major areas of concentration for the Washington office were the White House and the federal agencies. During the 16 months preceding the Games, the office dealt with the White House on many fronts, ranging from securing a letter from the President for the Opening Ceremonies program to arranging emergency meetings surrounding the decision of some nations to boycott the Games. Some difficulties between the LAOOC and White House staffs developed over logistics involving the Olympic Torch Relay and the president's Opening Ceremonies visit, as well as the U.S. government's response to the requests made by the NOC of the Soviet Union for an Olympic attache, berthing of a ship and chartered airline flights.

After federal agency and department budgets for Olympic-related activities were approved by the White House in September 1983, most of the work focused on logistical and operational concerns and was handled in Los Angeles by the LAOOC's Government Relations staff and the appropriate public agency. However, government policy and political developments continued to be closely monitored by the Washington office.

At one time or another, the Washington office dealt with more than 20 federal departments or agencies, most frequently with the Customs Service, the State and Defense departments and the U.S. Information Agency.

The LAOOC worked with the White House, the Customs Service and the Senate Finance Committee for six months to change existing Customs legislation to provide the Olympic Family with duty-free importation of Olympic material and equipment.

Six months of negotiations with the State Department resulted in an agreement that satisfactorily met Olympic Charter and U.S. government requirements for distributing Olympic Family identity cards and allowed the unimpeded entry (without visas) of all accredited Olympic Family members into the United States.

From March 1983 through May 1984, LAOOC representatives met almost daily with State Department officials regarding political issues relating to possible boycotts of the Games.

Other federal agencies with which the Washington office was involved included but were not limited to: the United States Postal Service, regarding publicity for outlying football sites and sale of Olympic commemorative coins in post offices; the United States Information Agency, regarding press accreditation issues, projects to help African athletes and for television broadcasts to Third World nations; the Treasury Department and the U.S. Internal Revenue Service regarding expanded marketing opportunities for the Olympic coin; the Department of Agriculture, regarding quarantine issues for Olympic horses; the Department of Commerce, regarding National Weather Service monitoring and apparatus; the Department of Transportation, regarding Federal Aviation Administration regulations and restrictions on the USSR airline Aeroflot; the Federal Communications Commission, regarding identification of radio frequencies for the Olympic communications network; the Department of Health and Human Services, regarding food and drug importation issues and disease control in the villages; the General Services Administration, regarding availability of government storage space; the Department of the Interior, regarding national parks and the permit to train an American bald eagle for the Opening Ceremonies; and the Veterans' Administration, regarding parking rental at their Los Angeles facility.

The Washington office director also met in the spring of 1983 with every member of Congress whose District contained an Olympic venue. The purpose of these visits was to prevent the Congressmen or their staffs from calling the Los Angeles office with questions and requests for up-to-date information regarding Olympic preparations. Pressure for tickets and special treatment never materialized because public officials were briefed in advance on LAOOC ticket policy.

From 2 June through 14 July 1984 the Washington office staff personally visited more than 50 embassies, many from African nations, to reassure each nation's representative about the conditions in Los Angeles and the status of preparations for the Games. This tactic proved extremely successful in generating goodwill toward the Organizing Committee and helping to prevent any possible spread of the Eastern Bloc boycott. The director was joined in the fall of 1983 by a director of operations who also had a White House administrative background; each of them had an assistant. Other full-time staff members included secretarial support and some staff

members who in spring 1984 moved to their Games-time positions at Harvard and Annapolis. At its peak, the Washington office included eight full-time employees as well as volunteers and interns on a semi-regular basis.

The Washington office staff, while primarily concerned with government relations, had to become experts on nearly every aspect of the Games, able to field questions and explain policies on a wide variety of Olympic-related subjects.

13.02 Liaison with the federal government

The Government Relations Department served as a liaison between the LAOOC and two of the three branches of the United States federal government, the executive branch, consisting of the White House and the Office of the President and all federal departments and agencies, and the legislative branch, consisting of the United States Senate and the House of Representatives. The major focus of the LAOOC was on the Organizing Committee's relations with the White House and federal departments and agencies. Involvement with the U.S. Congress was generally limited to contacts with those senators or representatives whose states or districts contained Olympic venues or who were involved with legislation that could affect the Games.

13.02.1 President of the United States

The Government Relations staff worked with two U.S. presidential administrations—Jimmy Carter's, from the LAOOC's inception in 1979 to the end of his term, and Ronald Reagan's, from 20 January 1981 through the Games period.

Carter's relationship with the LAOOC was limited, since the President expressed little interest in the efforts of the Organizing Committee, mostly because the Games were five years in the future. It should be noted that when Los Angeles Mayor Tom Bradley and John Argue, then chairman of the Organizing Committee, visited the White House in October 1978 to take part in the official ceremony awarding the Games to Los Angeles, Carter failed to appear for even a ceremonial picture and instead sent an aide to represent him. The relationship with the Organizing Committee was further depressed when the administration failed to support a proposal for \$141 million in federal aid for the

Games. Carter's greatest disservice to the 1984 Games, in the view of the LAOOC, came in early January 1980 when he proposed that the United States boycott the 1980 Olympic Games in retaliation for the USSR invasion of Afghanistan. While the LAOOC officially supported Carter, LAOOC President Peter V. Ueberroth had several meetings with the president and his staff pointing out the implications and ramifications that the U.S.-led boycott would have on the 1984 Games in Los Angeles. The LAOOC president was unsuccessful as were other U.S. sports leaders.

Those days in 1980 were trying ones for the fledgling LAOOC staff, (which then numbered less than 20 persons), because of fears over the effects the U.S.-led boycott would have on the Games they were organizing. However, the staff's collective mood changed when Ronald Reagan assumed office in January 1981 and early in his term indicated his strong support for the Games, most notably by agreeing, after a meeting with Ueberroth and IOC President Juan Antonio Samaranch, to officially open the Games in Los Angeles in July 1984. His commitment to open the Games—making him the first U.S. President to do so—was very important to the LAOOC in that it sent a message to the world sports community that the U.S. government was supportive of the Organizing Committee and the efforts in Los Angeles.

Major assistance came from the Office of the President with the creation of the White House Task Force on the Olympic Games, a concept which the Organizing Committee persuaded the White House to adopt. President Reagan named a White House deputy chief of staff to chair the Task Force, which brought together top-level people from each federal agency and cabinet-level departments having a role in the Games or with the Organizing Committee. Since the impetus for the formation of the Task Force was provided by the President, the importance that Reagan placed upon the Games and federal government cooperation with the Organizing Committee was thus conveyed to those appointed, and helped ensure government cooperation with the LAOOC. The Task Force was charged with defining the roles various federal departments and agencies would have in staging the Games. The purpose of the Task Force was to help the LAOOC, not by circumventing existing laws or regulations but by eliminating unnecessary obstacles.

Agencies represented on the White House Olympic Task Force included the departments of Agriculture, Commerce, Defense, Health and Human Services, Justice, Labor, State,

Transportation and Treasury, the Federal Aviation Administration, the Federal Bureau of Investigation, the Federal Communications Commission, the Federal Emergency Management Agency, the Food and Drug Administration, the General Services Administration, the Immigration and Naturalization Service, the National Park Service, the U.S. Coast Guard, the U.S. Customs Service, the U.S. Secret Service, and, from the White House itself, representatives of the Office of the President and the Office of Management and Budget.

13.02.2

Congress of the United States

Aside from the issues surrounding the passage of the Olympic commemorative coin which are described in the chapter on Numismatic and Philatelic program, Organizing Committee involvement with the U.S. Congress was minimal.

A large part of the Government Relations Department's congressional liaison activities was with senators from states that had Olympic venues (California, Maryland and Massachusetts) and with members of the House of Representatives who had Olympic venues in their districts. The LAOOC dealt with other members of Congress primarily as a courtesy, to help them become better informed about the Olympics, to answer constituents' questions about the Games and, in the cases of committee chairmen and ranking minority members of committees, to understand the LAOOC point of view on bills or legislation relating to the Olympic Games. By establishing effective communications with Congress, the LAOOC had an effective impact on the legislative process regarding bills that could have had a negative impact on the Games.

13.02.3

Agencies of the federal government

The Government Relations Department dealt with all agencies except those involved exclusively in security issues. All security matters were addressed directly by the LAOOC Security Department. Government security agencies such as the Federal Bureau of Investigation and the U.S. Secret Service, however, were represented on the White House Olympic Task Force.

At the federal level, there were only a few issues which required a large expenditure of time and energy to resolve.

"Customs and Shipping Information Manual" produced by the LAOOC represented one such issue. While the various federal agencies and departments agreed to publish an all-encompassing document detailing U.S. importation procedures and regulations, the LAOOC could not locate material from one single source. Rather, the Government Relations Department had to gather the necessary information on importation of foodstuffs, alcohol, tobacco, firearms, horses, etc. from eight different agency or department publications and then re write the information to the satisfaction of eight government agencies involved. At the same time, the publication had to be comprehensible to the Olympic Family. The rewriting and approval process consumed more than 12 months. A draft version of the manual was distributed in January 1983 and the final version was published at LAOOC expense in the fall of 1983.

The Olympic Identity Card posed another concern. The LAOOC had to get a ruling from the United States Justice and State Departments stating that use of the Olympic Identity Card for entry into the United States was acceptable in lieu of a visa. The Organizing Committee was, in fact, prepared to ask for an executive order from the President requiring the State Department to accept the cards from Olympic Family members. Ultimately, the United States government decided to accept Olympic Family lists prepared by the IOC, IFs, NOCs and others certifying that bearers of the Olympic Family Identity Card were legitimate members of that delegation.

Another issue which took an inordinate amount of time to resolve was the importation of horses. A U.S. Department of Agriculture regulation, designed to protect crops and animals in the United States from potential disease-bearing animals, required a 60-day quarantine on horses being brought into the United States from Africa, while a seven-day quarantine was the maximum required on horses from most other nations. The applicable regulations were passed in detail to members of the Olympic Family who intended to bring horses to Los Angeles. A suitable quarantine facility was arranged when the USDA approved the use of a portion of the giant stable area at Santa Anita Park, main venue for the Olympic equestrian events. Through the cooperation of the USDA, special blood tests were conducted on all horses and the needs of both the USDA and the Olympic Family were adequately met.

The Bureau of Alcohol, Tobacco and Firearms agreed, following much negotiation, to allow the importation of alcoholic beverages the United States

by various delegations providing a document was presented stating exactly what was being brought in and for whom consumption was intended. In the case of very big quantities, government regulations required the collection of a small tax.

The U.S. Postal Service also agreed to allow the LAOOC use of a special ZIP code (90084) for its administrative headquarters in Los Angeles, thus speeding the delivery of important mail to the Organizing Committee from around the world. From 1981 forward, the LAOOC kept the same address, ensuring continuity in mail delivery despite the many changes in offices occupied by the Organizing Committee.

The National Weather Service was extremely cooperative over an extended period of time and aided the LAOOC greatly in developing the schedules for various competitions. The Weather Service provided the Organizing Committee with the hour-by-hour, day-by-day weather history at every venue for every possible day of competition, allowing LAOOC schedulers to plan for optimal weather conditions conducive to peak performances.

The LAOOC had a former U.S. Foreign Service officer on its Government Relations staff and he dealt with the U.S. State Department and U.S. embassies abroad. One of his long-range tasks was strengthening LAOOC ties with the consular corps in Los Angeles and San Francisco, with the diplomatic corps in Washington, D.C. and at the United Nations. He also advised various LAOOC departments on sensitive political and protocol matters, and coordinated media and sports exchange programs with the U.S. Information Agency and the State Department. His efforts centered on various Third World and Socialist Bloc countries and nations having no diplomatic relations with the United States (of whom approximately 15 were eligible to participate in the Games).

Government Relations was particularly effective in dealing with the State Department on the issue of Olympic Family Lists and Identity Cards. Although 2 June 1984 was the deadline for the arrival of Olympic Family Lists at appropriate U.S. embassies or consulates, in fact as of 11 June 1984 some 60 Olympic organizations had not yet responded. Had it not been for the unstinting cooperation by the Office of Consular Affairs of the State Department, which made accelerated demands on other agencies for rapid processing and was willing to accept time zone differences,

the Identity Card system might have failed. There might have been numerous embarrassments and delays, perhaps even denial of entry into the U.S. of some Olympic Family members.

LAOOC relations with the U.S. Department of Agriculture (USDA) helped create a temporary quarantine station for foreign horses at Santa Anita Park. The support of the USDA representative on the White House Olympic Task Force was crucial in helping achieve a workable, timely agreement among the USDA, the LAOOC and the Los Angeles Turf Club. The agreement included a provision that the LAOOC would reimburse the USDA expenses for supervision of the Olympic horses. One advantage of the temporary facility was that foreign horses and grooms were able to settle directly into the Olympic accommodations at Santa Anita, rather than into temporary housing that would have been both inconvenient and more costly. Also, it would not have allowed horses as much time to become acclimated to new surroundings. The LAOOC received valuable support in this endeavor from foreign agricultural attaches stationed at U.S. embassies who provided follow-up and liaison with NOCs to ensure a smooth operation. The official LAOOC customhouse broker, F.B. Vandegrift and Co., also provided invaluable preparatory and operational assistance to the LAOOC and to the NOCs.

The LAOOC, working through the Olympic Task Force, encouraged the State Department to appoint a liaison system which would respond quickly and effectively to the needs of the Organizing Committee. As a result, the State Department created an Olympic contact officer system at every U.S. Embassy and at selected consulates, and ensured 24-hour communication at each post. The department operated an office in Los Angeles from 20 July through 13 August, staffed by watch officers from the Office of Protocol and from the Bureau of Eastern European affairs. Since the office was staffed 10-12 hours a day and any of the staff could be reached by telephone at any time, response time to problems was fast.

The Government Relations Department was also charged with working with the U.S. Information Agency (USIA) to keep the focus of the agency on sports training programs, media training programs and private sector programs which would enhance the overall success of the Games. One of its programs was a year-long media training program for Third World journalists who attended the program at monthly intervals in Los Angeles. A broad training program was developed for Third World coaches, trainers, and

4

government officials in selected countries. The private sector role was demonstrated in Lagos, Nigeria, through an Olympic boxing training camp for all qualified African boxers, and later through a second training camp in Atlanta for Latin American and African athletes during the three weeks prior to the opening of the Olympic villages in Los Angeles. Private corporate support funded the Nigerian camp while local fund-raising drives and some USIA funds paid for the Atlanta training session. USIA had not budgeted for sports activities in 1984, but pressure from foreign service posts, the LAOOC, the White House, Congress and from the private sector caused the USIA to establish its own Olympic task force which diverted agency funds from other projects to those which would increase the effectiveness of sports in foreign countries. Activities promoted and organized by the agency included but were not limited to: technical coaching assistance in athletics, basketball, boxing, swimming, tennis and volleyball; teaching aids such as sports films, textbooks and training manuals; sports leadership courses in administration and supervision; tours of United States teams in athletics, basketball, boxing, football and tennis teams for demonstration, competition and coaching purposes; sponsorship of sports medicine courses; and the organization and management of sports contests and training camps on local, regional and international levels.

**13.03
Liaison with the government of the state of California**

**13.03.1
Governor of the State**

As it did with the executive branch of the federal government, the LAOOC also had to work with two state of California gubernatorial administrations in laying the groundwork for the bid for the Games as well as organizing and staging the Games.

Edmund G. Brown, Jr. was the governor of California from 1975-1983 and personally supported the fledgling Organizing Committee when it made its presentation at Colorado Springs, Colorado, in September 1977, seeking the endorsement of the U.S. Olympic Committee as the United States candidate city for the 1984 Games. Brown's emotional speech helped Los Angeles win the bid over New York. Brown did make it clear, however, that he was opposed to any aid from the state for the operation and administration of the Games.

George Deukmejian, who assumed the governorship in early 1983, was supportive of the LAOOC and early in his term named three key aides to serve as liaisons to the Organizing Committee.

Deukmejian also named a task force on the Olympic Games similar to that established by President Reagan at the federal level. The Governor's Olympic Task Force included representatives

from the California departments of Corrections, General Services, Parks and Recreation, Alcoholic Beverage Control, Justice, Transportation, Motor Vehicles, Health and Welfare, and Business, Transportation and Housing, as well as from the Committee on Peace Officer Standards and Training, Office of Emergency Services, State and Consumer Services Agency, the California State University system, the Office of the State Fire Marshall, the California Highway Patrol, the Office of Tourism, Caltrans, the Office of Economic and Business Development, the State Athletic Commission, the Labor Commission and the Office of the Governor.

As was the case at the federal level, the governor's liaison officers made it clear to the various state departments and agencies that their cooperation was expected in dealing with and assisting the Organizing Committee. However, some state agency officials wanted to assume a larger, more visible role in the Games, a position that the Task Force leaders helped moderate.

**13.03.2
State legislature**

The Government Relations Department utilized its contacts with various state legislative leaders and with those sympathetic to the Organizing Committee and its goals to approve legislation necessary to the operation and staging of the Games or the Organizing Committee and at the same time, scuttle legislation the Organizing Committee considered detrimental.

Among the bills passed that aided the LAOOC were:

- A resolution welcoming all nations to the Games regardless of political systems or status of relations with the United States of America
- The Olympic license plate bill, which created revenue for Los Angeles County through the sale of special commemorative Olympic license plates at \$100 per set
- A bill that allowed the California Highway Patrol to negotiate a contract with the Organizing Committee for supplementary services beyond their ordinary course of duty
- A bill that allowed foreign team physicians to practice medicine in California during the Games period
- A bill that permitted background checks on LAOOC employees, volunteers and contract employees for past criminal convictions as a part of

the overall security preparations for the Games

- A bill that closed the nuclear reactor at the University of California, Los Angeles, during the Games
- A bill that exempted the LAOOC from filing an environmental impact statement or report as is ordinarily required
- A bill that permitted night beer deliveries during the Games period, thus reducing truck traffic during daylight hours

The LAOOC also had to be aware of bills pending and bills about to be introduced that were potentially harmful to the Organizing Committee and the Games effort. The LAOOC often was successful in preventing such legislation by informing legislators of the negative ramifications it would have on the Games and on the international scene.

13.03.3

State agencies

State agencies were generally subject to legislative fiat or to the direct executive orders of the governor. The LAOOC dealt with them on an as-needed basis, but more often focused on agencies' representatives on the governor's Olympic Task Force for solutions to problems.

One agency with which the LAOOC had particular difficulty was the state Athletic Commission, which, among other responsibilities, administers boxing in California. It was the only state agency directly involved with an Olympic sport, and it took many months of negotiations before the commission agreed to sanction the use of Olympic rules for the Olympic boxing tournament.

13.04

Liaison with local government entities

13.04.1

City of Los Angeles

Mayor Tom Bradley's pivotal role in bringing the Games to Los Angeles augured well for the LAOOC's relationship with Los Angeles city government. Bradley and his key liaisons to the LAOOC worked closely with the Organizing Committee to make the Games work, and demanded no special courtesies or favors in return.

The mayor was extremely supportive of the LAOOC from the start and was unafraid to take political risks in support of the Organizing Committee. Although some people called for Bradley to back away from his support of the Olympic bid group in 1978, he did not waver in his support because he felt that the Olympic Games would be good for Los Angeles.

The LAOOC also dealt with three different presidents of the City Council and the chairman of an Ad Hoc Committee on the Olympic Games, the latter intended as a channel for all Olympic-related items. Among LAOOC agreements made with the city council during the year prior to the Games were contracts for security/police services, for the Olympic Arts Festival and for the flag and banner program. LAOOC discussions with the Council concerned basic service levels provided by city agencies, jobs for constituents of council members, the Games' effect on individual districts, the placement of banners, the economic impact of the Games on the Coliseum area and on the Games' effect on traffic.

A City Charter amendment passed by voters on 7 November 1978 forbade any capital expenditures by the city on the Games that would not, by binding legal commitment, be paid back. An agreement for city services which met this requirement was signed on 28 October 1982, providing reimbursement for all city services at the LAOOC's expense. The terms provided that all Olympic-related costs of the city (then estimated at \$19.3 million) would be paid from the Olympic Trust Fund, and to the extent that the fund is inadequate, by the LAOOC. In addition, the LAOOC provided a \$2.75 million contingency fund for extraordinary police services and agreed to bear directly the costs of police services it requested inside Olympic venues, villages and transit vehicles. The Olympic Trust Fund was made up of revenues gathered from a half-cent (\$0.005) add-on to the city's existing Transient Occupancy (hotel bed) Tax during the pre-Games period from 1979-1984 and a six percent municipal tax on Olympic admission tickets. City services provided under the agreement came principally in the areas of police and fire protection, public works, street maintenance and transportation planning.

The city also established a task force consisting of the city's chief administrative officer, the deputy mayor and the city's chief legislative analyst that met monthly at first, and then weekly to discuss a broad range of Olympic-related issues. Since Los Angeles city departments and agencies were relatively independent, the Task Force was effective in coordinating city actions regarding the Games and was a decisive forum for the settling of issues, since the meetings also included representatives of the LAOOC Government Relations Department.

The LAOOC dealt with the gamut of city agencies, from the Department of Water and Power to the Los Angeles Police Department to the Department of Building and Safety. The relationships generally were very good, helped in no small measure by the efforts of both the City Council and the City Task Force.

7 LAOOC Executive Vice President/General Manager Harry L. Usher (second from left) and Los Angeles Mayor Tom Bradley (third from left) jointly cut a ribbon signifying the opening of the LAOOC's Exposition Park Office.

13.04.2

County of Los Angeles

Los Angeles County represented the largest local governmental unit with which the Organizing Committee had to negotiate, representing as it did over eight million citizens. The county is administered by a board of five supervisors. One of its members is elected by his peers as chairman of the board, a position similar to that of president of the City Council. Although the county did not have a formal liaison system with the LAOOC, the supervisors and the County Chief Administrative Officer met periodically with the senior management of the Organizing Committee.

The LAOOC did negotiate with some county offices, most notably for security services provided by the Los Angeles County Sheriff's Department. During the Games, the County Host Committee, a privately financed protocol arm of the County, performed a valuable service by hosting many important private visitors to Los Angeles. Since these visitors were not members of the Olympic Family, they were not provided for by the LAOOC. After the Games and in recognition of other general support from the county, the LAOOC donated \$700,000 worth of supplies and equipment to county adult and juvenile detention facilities, hospitals and other health care facilities and programs for the homeless when it disposed of its assets following the Games. The sheriff's department received 33 all-terrain vehicles at that time, also in recognition of its cooperation.

13.04.3

Independent government entities

The Government Relations Department was very active in dealing with other municipalities and counties affected by the Games. The cooperation of each governmental unit was vital to the success of the Games, and to that end, the LAOOC took the initiative to ensure that cooperation. For example, LAOOC senior management representatives spoke to civic leaders throughout Southern California, urging cooperation with and enthusiasm for the Olympic effort. Among the outlying areas the LAOOC dealt with were Orange, Santa Barbara, San Diego, San Bernardino and Ventura counties and the cities of Long Beach, Irvine, Inglewood, Mission Viejo, Carson, Arcadia, Pasadena, Fullerton, Monterey Park, Chino, San Diego, Santa Monica, Culver City and various other cities. Eventually the various LAOOC Sports Commissioners took over the responsibility for relations with government officials in these venue areas. Formal agreements were

entered into between the LAOOC and each of the jurisdictions for services rendered at the request of the Organizing Committee.

The Government Relations Department also sent monthly newsletters to local leaders in the aforementioned cities and counties beginning in early-1983. Personal letters to each of more than 200 officials were added later to ensure that the newsletters were being read.

13.05

Other areas of concentration

13.05.1

Coin sales program

Because commemorative coins were major sources of revenue to recent Games organizers, the LAOOC sought such a program for the Games of the XXIIIrd Olympiad, even though the United States government had not produced commemorative coins since the 1950s. The Organizing Committee worked with the U.S. Congress and the U.S. Treasury Department to establish the Olympic coin program.

From its inception, the coin program faced delays in its implementation. Since the United States Senate had approved a bill providing 17 coins of varying designs, the LAOOC assumed it would easily pass through the U.S. House of Representatives. However, other interests arose and a substitute bill was passed, thus halting the financing and marketing of Olympic coins by the LAOOC. Ultimately, the Olympic coin program consisted of three coins—a 1983 silver dollar, a 1984 silver dollar and a 1984 gold eagle, worth \$10.

LAOOC's revenues from the program exceeded \$30 million, with an equal amount given to the United States Olympic Committee.

13.05.2

Customs regulations

The LAOOC's Government Relations Department published the official customs and entry procedures for the Games. These procedures applied to accredited individuals belonging to delegations of the IOC, the IFs and the NOCs and became operative upon presentation of Olympic Identity Cards at the United States port of entry.

The "Customs and Shipping Information Manual" of the 1984 Games described all procedures in effect for the Games related to accompanied baggage and equipment; unaccompanied shipments by air; ocean and truck shipments; food products and plants; food items in Olympic villages; money; alcoholic beverages, cigars, cigarettes and tobacco; pharmaceuticals; competition firearms and ammunition; boats (waterborne craft) and other equipment; horses and fodder and the import and export of same; exportation of articles other than accompanied baggage; and immunization and health guidelines.

NOCs from each participating country were invited to submit written requests concerning their requirements for special foods and beverages in advance to the LAOOC so that proper approvals could be obtained and adequate village storage areas provided.

13.05.3

Disposition of assets

At the close of the Games, the Organizing Committee was faced with countless requests from many agencies and organizations, from both the public and private sectors, for disposable materiel and assets. These goods belonged to the LAOOC through direct purchase or through corporate sponsorship.

The LAOOC refused to honor unsolicited requests because it could not fairly evaluate them or make an equitable distribution. Instead, the Organizing Committee elected to sell the majority of its assets at public and private sales as described in the chapter on Materiel Acquisition and Distribution.

The LAOOC did, however, donate materiel to six public entities that had been major partners of the Organizing Committee in the staging and operation of the Games and had made significant contributions to their success.

Citing the invaluable cooperation of Los Angeles County, the LAOOC donated approximately \$700,000 worth of supplies and equipment to the county for use in county adult and juvenile detention facilities, hospitals and other health care facilities and programs for the homeless. The items included storage and file cabinets, steel shelving, picnic tables, park benches, patio chairs and tables, fire extinguishers, umbrellas and bases, drafting tables, ironing boards, fans, desk lamps, medical supplies, lockers, coolers, beds, mattresses, blankets, pillows, carpeting, superturf, laundry soap, laundry carts and hand trucks.

The Organizing Committee donated numerous items to the Los Angeles Unified School District and cited the district for its cooperation in providing district school buses and numerous school facilities for use as Olympic training sites. The donated items included typewriters, refrigerators, file cabinets, window air conditioners, chairs, safes and various kinds of classroom, office, janitorial and maintenance supplies.

To show its appreciation for the work of the Los Angeles Police Department during the Games, the LAOOC donated more than \$1 million in Motorola radio equipment and Suzuki motorcycles to the department. The radio equipment included 175 voice-privacy radios, 40 convertible (car or hand-held) radios and 10 car radios along with several receivers, repeaters and consoles. The donated motorcycles included 28 motorcycles (650cc), 45 motorcycles (300cc), 62 motorcycles (250cc) and 27 motorcycles (50cc).

Thirty-three Suzuki all-terrain vehicles were donated to the Los Angeles County Sheriff's Department and a smaller number to the Orange County Sheriff's Department.

Finally, the LAOOC donated \$400,000 in equipment to the University of California, Santa Barbara, site of one of the three Olympic villages. All Olympic articles and apparatus used at the canoeing and rowing venue at Lake Casitas in Ventura County were held in trust by the UCSB Foundation, which administered all LAOOC gifts to the university. Among the items donated were canoes, kayaks, shells, tents, megaphones, buoys, rafts and miles of underwater cable as well as the flagpoles and flags of the competitors who lived in the UCSB Village.

13.05.4

Government funding matters

The Government Relations Department, as part of its liaison duties with federal agencies, dealt with the Office of Management and Budget, which monitored all federal agency expenditures.

13.05.5

Permits for construction and use

Once the Sports and Architecture departments identified needs for permits and approvals from governmental units, Government Relations was responsible for obtaining them. Among the permits and approvals required were conditional use permits, zoning requirements, street closures, approval for out-of-stadium event routes and parade permits.

The LAOOC street banner program required the procurement of governmental permits for the city of Los Angeles and another for cities other than Los Angeles. The Los Angeles Street Maintenance Department worked closely with the LAOOC to determine which streets would be reserved for Olympic decorations. The LAOOC was the only organization to install decorations with the exception of several city groups that installed "welcome" banners in several neighborhoods.

Outside Los Angeles, the role of Government Relations was to answer questions and disseminate information to local governments interested in decorating their public streets. Government Relations obtained two permits in connection with this program, one from the California Department of Transportation (Caltrans) with help from the governor's office, permitting decorations on the right-of-way of state highways. The second was from Southern California Edison, permitting the attachment of flags to Edison-owned poles.

Government Relations also submitted standard encroachment permit applications for the men's and women's marathons, the cycling 100 km team time trial and cycling practice. To obtain these permits, the LAOOC had to provide certificates of insurance to Caltrans.

13.05.6 Security matters

The LAOOC Security Department dealt directly with governmental units concerned with security, including: the Los Angeles Police Department, the Los Angeles Sheriff's Department, other Southern California police and sheriff's departments, the Federal Bureau of Investigation and the United States Secret Service. However, the Government Relations Department had a close working relationship with the Security Department and was aware of security issues and problems. Because federal security representatives sat on the White House Task Force on the Games, security issues were thus seen in the larger context of general Games preparations.

13.05.7 Stamps sales programs

The LAOOC and the United States Postal Service reached an agreement in 1983 that included the following provisions regarding sales of stamps and other postal-related services during the Games period:

- The U.S. Postal Service would issue 24 commemorative Olympic stamps depicting all the athletic events plus other related postal stationary items
- The Postal Service would provide special cancellations
- A full-time administration office and staff would be established solely to provide support to the LAOOC and to plan for complete Postal Service involvement during the Games

- Thirty specially designed mobile postal service units would be installed at each Olympic venue and at the Olympic villages
- Modular postal units would be installed at the remote football sites at Stanford, Annapolis and Cambridge (Harvard)
- Unique numerical suffixes (ZIP codes) would be assigned to each visiting National Olympic Committee

A special Olympic philatelic exhibition (featuring the collection of IOC President Juan Antonio Samaranch) would be available for viewing at the Pasadena Convention Center.

The Postal Service also sold Olympic commemorative coins to the public and Olympic Family at the mobile postal units and at selected post offices, and it provided the Organizing Committee with continuous advice and guidance on a wide range of postal issues throughout the Olympic period.

13.05.8 Visa assistance

It took 12 months of negotiation between the Organizing Committee and the U.S. State Department to settle entry procedures of Olympic Family members (except media) according to Olympic Charter and U.S. Government regulations.

The Olympic Identity Card, as specified in the Olympic Charter, establishes the identity of its holder and constitutes the document authorizing entry into the country in which the Games are held. It allows the holder to stay and to carry out his Olympic duties for a period not exceeding one month before and one month after the Games.

The Charter also specifies that the OCOG, with prior approval by the IOC, may request that the Olympic Identity Card be countersigned on behalf of the government of the country of the holder confirming the holder's nationality and his right to travel to the country of the Games and to return to his own country. In the absence of such a countersignature, the holder of an Olympic Identity Card must have in his possession an official document confirming his identity and nationality.

The United States eventually accepted Olympic Family lists certifying that the bearers from a particular nation carrying the Olympic Family Identity Card were legitimate members of that delegation. The Organizing Committee had been prepared to ask the President for an executive order telling the U.S. State Department to accept the cards, but a ruling from the United States Department of Justice assured the State Department that use of the Olympic Identity Card for entry into the U.S. was acceptable.

The Olympic Arts Festival, held from 1 June through 12 August 1984, constituted the cultural phase of the 1984 Games and featured artists in dance, music, theatre, visual arts and film. To facilitate the entry into the United States of foreign artists, most of whom required visas, the Government Relations Department cooperated with the Immigration and Naturalization Service and the U.S. Department of State in expeditiously processing nearly 900 individuals in 28 performing companies. A high level of cooperation fostered over a number of years helped make this process a trouble-free one.

13.05.9 National Weather Service liaison

The National Weather Service, a division of the U.S. Commerce Department's National Oceanic and Atmospheric Administration, provided all necessary weather support to the Games as part of its statutory authority and responsibility to issue weather forecasts and warnings for the protection of life and property and the general well-being of the nation. The Los Angeles office of that agency provided its services augmented by a team of meteorologists, oceanographers and technicians. It installed automated forecasting equipment at 15 outdoor venues.

The primary means of disseminating weather information to the Olympic community was through the National Oceanic and Atmospheric Administration (NOAA) Weather Wire Service (NWS) and an additional NOAA Weather Radio (NWR) dedicated to Olympic support. The data was sent by computer to the LAOOC Press Operations Department headquarters at the Main Press Center where it was for transmitted to venues and the media through the Electronic Messaging System.

The National Weather Service was extremely cooperative over an extended period of time and aided the LAOOC greatly in developing the schedules for various competitions. The Weather Service provided the Organizing Committee with the hour-by-hour, day-by-day weather history at every venue for every possible day of competition, allowing LAOOC schedulers to plan for optimal weather conditions conducive to peak performances.

13.06 Reflections on the role of the Government Relations Department

The Government Relations Department had responsibilities the likes of which no department at any previous Organizing Committee had ever had. Because the 1984 Olympic Games were privately funded and apart from governmental control, Organizing Committee senior management saw a need for a department that would serve as liaison between itself and the government on the federal, state and local levels.

The role of the department was undefined when it was formed, but the basic premise was constant: to coordinate the LAOOC's relationships with all elected and appointed governmental officials, to strengthen and develop those relationships, to identify government resources and key staff people at all levels, to enlist the support, cooperation and understanding of all government officials and to ease the relationship between the LAOOC and all levels of government so that maximum cooperation and assistance could be rendered by government.

The department evolved over time into one that dealt with entry and customs procedures, quarantine of horses, postal services, commemorative coins, street banners, the Olympic Torch Relay, foreign embassies and consulates in the U.S. and U.S. embassies abroad, labor permits, communications regulations and procedures, traffic control, weather forecasts, protocol, special youth programs, legislation and ordinances and boycotts.

To help achieve its goals and make the U.S. federal government in Washington, D.C. more responsive to LAOOC inquiries, the Organizing Committee set up an East Coast liaison office in Washington by mid-1983. This office was in close communication with government officials, particularly with members of the White House Olympic Task Force.

Establishing the office was fortuitous in that its presence in Washington coincided with a time when the federal government was beginning to focus more heavily upon its role preceding and during the Games.

On the state level, the LAOOC had the strong support of both the California Governor and the Speaker of the State Assembly, the top legislative leader in the state. At the local level, Los Angeles Mayor Tom Bradley was a prime mover in bringing the Games to

8

8 LAOOC President Peter K Ueberroth (head of table) meets with representatives of the Moscow Olympic Organizing Committee in Los Angeles before the 1980 Moscow Games.

Los Angeles and was supportive throughout the existence of the Organizing Committee. The Los Angeles City Council, Los Angeles Police Department and the Los Angeles Sheriff's Department provided support despite occasional disagreements over LAOOC's finances and objectives in operating and securing the Games.

By any measurable standard, the Government Relations Department did its job most successfully, achieving its goals with minimum expenditures on the part of the LAOOC for government help and with a maximum of goodwill and cooperation on the part of the various governments.

Making a large contribution to this success was a staff that included people who had spent part or all of their careers in government service and knew how government and its bureaucracy operated and were not afraid to deal with it and make LAOOC positions and policies clear.

13.07 Review of actions affecting participation of the NOCs

The 1984 boycott of the Olympic Games by the Soviet Union and its Eastern Bloc allies proved once again that athletes are the only ones who suffer from political incursions into sport.

These were the third consecutive Games that were boycotted for political reasons. In 1976, the black African nations walked out of Montreal just prior to the start of the Games as a protest against South Africa's policy of apartheid; and four years later, the United States and more than 60 nations boycotted because of the USSR's invasion of Afghanistan. The Los Angeles Games were boycotted by a total of 16 countries, ostensibly because the host country could not properly secure their athletes. The LAOOC felt, however, that it was due to the U.S.-led boycott of the Moscow Games as well as to the then-icy relations between the host countries of the Games of the XXIInd and XXIIIrd Olympiads.

As it turned out, the key contacts affecting NOC participation in Los Angeles were between the LAOOC and the National Olympic Committee (NOC) of the Soviet Union (USSR). From the very beginning of the organizing efforts in Los Angeles, the LAOOC attempted to develop a strong relationship with the NOC of the USSR. However, these efforts met with little success after the Moscow Games and eventual disappointment in the non-participation by the USSR NOC despite the lack of demonstrable shortcomings in the organization and preparation of the Games by the LAOOC in particular and the host nation in general.

13.07.1 Early contacts with the NOC of the USSR

The initial contact between the LAOOC and the National Olympic Committee (NOC) of the USSR came in mid-1979, when the Organizing Committee of the Games of the XXIInd Olympiad invited the president of the LAOOC to come to Moscow for the All-People's Spartakiad.

In the midst of the U.S. government-led decision not to attend the Moscow Games, the LAOOC's Board of Directors passed a resolution in February 1980 supporting whatever decision was made regarding attendance at the Games by the United States Olympic Committee (USOC). A four-person delegation from the Moscow Organizing Committee visited Los Angeles in April of the same year. Although the primary areas of discussion regarded cooperation between the organizing committees, there was considerable interest in any ability that the LAOOC might have in influencing the USOC's decision to accept the invitation to attend the Games.

The LAOOC sent a seven-person delegation to Moscow to report to the 83rd Session of the International Olympic Committee. However, the LAOOC left Moscow prior to the opening of the Games, in accord with the wishes of the administration of U.S. President Jimmy Carter. Since the Carter Administration made it clear that the United States flag should not be raised during the Closing Ceremonies of the Games of the XXIInd Olympiad, the IOC and LAOOC agreed to use the flag of the city of Los Angeles as a compromise. The LAOOC arranged for the shipment of the flag from Los Angeles to Moscow during the Games and in time for the ceremony.

Many additional contacts between the LAOOC and USSR NOC ensued in the period from 1980-1983. Members of both groups met at meetings of the IOC Executive Board and during Sessions of the IOC, at the XIth Olympic Congress in Baden-Baden, F.R. Germany in 1981 and during a meeting of the Association of European NOCs (ENOC) in Moscow in 1982. The latter visit came at the invitation of the Soviets to answer questions posed by ENOC-member nations. Members of the LAOOC's senior management also visited a number of eastern European nations, including the German Democratic Republic, Poland and the USSR in May 1982, prior to the 85th Session of the IOC in Rome.

The Soviet NOC delegation which attended the meeting of the IOC Executive Board with the NOCs in January 1983 was interviewed (as were all NOCs present) by the LAOOC's government relations and village staffs in order to ascertain their key needs and requirements. No specific responses were made during the interview session and information which had been promised by the Soviet delegates for delivery after the meeting unfortunately never came.

These informal meetings preceded the lengthy visit of a large Soviet delegation to Los Angeles in December 1983.

13.07.2

Formal visit of the USSR NOC to Los Angeles in December 1983

A 14-person delegation came to Los Angeles for eight days in December 1983 to examine all facets of the LAOOC's preparations for the Games and to discuss the requirements of the USSR NOC for housing, training and other facilities,

Frank discussions on various issues were conducted during the visit, and the delegation toured several venue sites as well as the University of California, Los Angeles (UCLA) Olympic village site, which it eventually requested for its team housing assignment.

The meeting resulted in the signing of a protocol accord in which the Organizing Committee and the USSR NOC agreed to the following:

- The USSR NOC would forward a final decision regarding participation on 2 June 1984, in accordance with the Olympic Charter.
- The USSR NOC would appoint its attache, who would take residence in Los Angeles by 1 March 1984.
- The LAOOC would agree to take into consideration the USSR NOC's request for assignment of the USSR delegation to the UCLA Village.
- The final agreement for the number and types of vehicles for the USSR NOC delegation was made.
- The LAOOC agreed to procedures for financial arrangements which would be transacted through First Interstate Bank.
- The LAOOC agreed to process applications with appropriate government agencies for 25 special round-trip Aeroflot charter flights to Los Angeles and to make all preparations for the handling and processing of these flights.
- The Organizing Committee agreed to process the necessary documentation with appropriate government agencies for the acceptance of a cruise ship into the Los Angeles or Long Beach harbors during the Games.
- The Organizing Committee made certain commitments regarding training of athletes for the USSR NOC
- Other points of agreement included medical service, officials, security and other pertinent matters.

At a news conference at which the protocol agreement was announced, NOC President Marat Gramov told reporters that he saw no reasons that the Soviet Union would not participate in the Games, but, in response to another question, Gramov said that the sports movement and the Olympic movement do not exist in a sort of vacuum and that it was quite natural for all political actions to be reflected in sports.

⁹ Los Angeles City Hall is the backdrop for the news conference introducing the Olympic mascot Sam the Eagle and the Olympic logo Star in Motion.

Gramov talked of his warm meeting with Los Angeles Mayor Tom Bradley but noted that there had been an anti-Soviet petition drive and that there existed factions in Los Angeles that would not welcome Soviet participation. He did, however, reiterate his position that the Olympic Games were a youthful festival in which everyone should take part.

13.07.3 Government response to Soviet requests

The LAOOC had taken the responsibility in the December 1983 meeting with the Soviets to process their applications for various permits through the appropriate channels of the United States government. This included the requests for appointment of an Olympic attache to live in the Los Angeles area and permission for the berthing of a Soviet cruise ship in a Southern California harbor and the landing of Aeroflot charter flights.

Indications from the government prior to the 1984 Olympic Winter Games in Sarajevo, Yugoslavia were favorable regarding the Soviet requests, although a formal response had not been made by the time LAOOC observation teams left to attend the Games. Further discussions regarding the Soviet requests took place in Sarajevo, but no official response was received until 1 March 1984.

On that date, the LAOOC was informed that while the U.S. Government agreed to allow the Soviet NOC's Olympic attache to live in the Los Angeles area, it would not agree to the specific individual selected by the USSR NOC. The complete and formal response to the USSR NOC's requests came on 20 March:

- The U.S. government affirmed its concurrence in having a Soviet Olympic attache present in the Los Angeles during the pre-Games period of March-August 1984. No special status would be given to this individual by the government, other than that available to a member of the consular corps.
- Permission was granted for the berthing of the Soviet cruise ship Gruzia at Pier 2, Berth 53 in the Long Beach Harbor from 15 July-15 August 1984. The Gruzia was classified as a commercial Soviet special interest vessel and would be required to comply with all applicable laws of the U.S., and the U.S. government agreed to assure security of the vessel to the full extent permitted by U.S. laws.
- Permission was granted for a reasonable number of charter flights by Aeroflot civil aircraft between the USSR and Los Angeles during the period of 1 July-30 August 1984. Such flights were to be solely for the purpose of transporting members of the accredited Soviet Olympic team and related officials, other accredited members of the Olympic family from the USSR and Soviet spectators coming to the Games. Specifics were also announced regarding accommodations, customs, fueling, landing arrangements and maintenance agreements for the flights.
- All Soviet Olympic visitors to the U.S., other than those individuals holding Olympic Identity Cards, had to obtain visas in the normal manner, by application to the U.S. Embassy in the USSR or in their country of residence. Holders of Olympic Identity Cards (except media) were allowed multiple entry privileges into the United States for one month prior to and after the Games. They were required to present only their Olympic Identity Cards and a valid passport in order to enter the United States. All media were required to obtain passports.
- As almost all Soviet requests had been granted, the LAOOC encouraged the Soviet NOC to continue their planning and training efforts and to nominate another attache as soon as possible. The LAOOC's senior management pledged to obtain a faster response to such a nomination from the government. However, communications between the LAOOC and USSR NOC fell silent during the next several weeks, adding to the unease of the Los Angeles organizers.

13.07.4 Meeting between the IOC, LAOOC and USSR NOC in April 1984

After three-plus weeks of non-communication between the LAOOC and USSR NOC, concerns were high throughout the Olympic movement regarding Soviet participation in the Games. As a result of these concerns and a desire to have the parties speak to each other directly, IOC President Juan Antonio Samaranch convened a meeting in Lausanne, Switzerland on 24 April 1984. Present were Samaranch, the three vice presidents of the IOC, the IOC Director and delegations from the LAOOC and the USSR NOC.

The discussions centered around the concerns of the Soviet delegation, including:

Entry into the United States

The USSR NOC claimed that the procedure for use of the Olympic Identity Cards, which involved the presentation of Olympic Family Lists to the U.S. Embassy in their country, was in violation of the Olympic Charter. It was noted, however, that the procedure had been approved by the IOC. In

order to be helpful, the LAOOC agreed to receive the Olympic Family Lists directly from the USSR NOC, thus eliminating any dealing with the U.S. Embassy.

Security

The USSR NOC asked for assurances that they would not be discriminated against in Los Angeles and the LAOOC assured them that they would receive the same treatment as all other NOCs. The USSR NOC was also concerned about groups based in the United States which, according to news reports, had pledged to "infiltrate" the Soviet delegation or cause physical harm to delegation members while at the Games. In the Soviet's view, these groups would harass their team and place great psychological pressure on the delegation members. The LAOOC read a statement from the U.S. Department of State disavowing any government encouragement or support of these groups and noted that no demonstrations of a political or other nature would be allowed on the Olympic sites themselves. It was further noted that only supporters of the USSR team would be in contact with it in Los Angeles and that the LAOOC's envoy to the Soviet NOC would help to facilitate this.

USSR delegation and media access to the Olympic sites

The USSR NOC cited news reports which questioned whether Soviet athletes and journalists would have sufficient access for competition/training and reporting on the Games, respectively. The LAOOC stated that all NOC delegations would have access to all Olympic competition and training sites and villages. All journalists would be treated alike with respect to access to facilities to all sites. In response to the request of the USSR NOC, the LAOOC promised that an explanation of this policy would be forthcoming in writing.

Use of Aeroflot charter flights

While the U.S. government had approved "a reasonable number" of flights, the USSR NOC was concerned that this might not cover all 25 flights requested. Noting that only a small number of tickets had been purchased for Soviet spectators, the LAOOC questioned whether enough people would be coming from the USSR to justify 25 flights. Informed that the USSR NOC might wish to bring teams of other NOCs on such flights, it was stated that the Aeroflot charters could only bring Soviet citizens and that non-Soviet passengers would not be

allowed on such flights. Landing conditions had been decided by the U.S. Government and were not subject to change by the LAOOC.

Use of the cruise ship Gruzia

The USSR NOC asked for the application of international regulations to the ship and was assured by the LAOOC that any doubts that existed were due only to a difficulty in communications and that international law would be respected. Further, the LAOOC agreed to pay for any security costs involved with the stay of the Gruzia in the Long Beach harbor. However, when the Soviet NOC indicated that USSR athletes (as opposed to extra coaches, doctors and staff) might stay on the ship, the LAOOC pointed out that this request had never been made before and a study of the implications of such a use of the Gruzia would have to be explored. The USSR NOC was asked to submit its request in writing.

Regarding the appearance of the mayor of Moscow for the ceremonies in Los Angeles, the USSR NOC noted that he was ready to come to Los Angeles, but wanted assurances for his security. The LAOOC produced a letter from the mayor of the city of Los Angeles providing such assurances.

The parties also discussed other minor matters and agreed that all matters regarding the participation of any NOC could be resolved through dealing directly with the LAOOC only, if so desired by the NOC concerned. In addition, the USSR NOC stated that it intended to participate in the Games of the XXIIIrd Olympiad in Los Angeles under the condition that the Olympic Charter is enforced. Both the LAOOC and the USSR NOC agreed to communicate more often in the future. Following the meeting, the LAOOC sent daily telexes to the USSR NOC for several days, but received no response. Although the meeting itself had been encouraging, the lack of response by the USSR NOC to these messages was a clear cause for worry.

13.07.5 Non-participation announced: 8 May 1984

In a surprise announcement that followed the start of the LAOOC's cross-country Torch Relay by only two hours, a commentator on the evening news program from Moscow read from the text of a statement issued by the USSR NOC. After reciting a familiar list of complaints aimed mostly at the U.S. government, the statement concluded that "in these conditions, the National Olympic Committee of the USSR is compelled to declare that participation of the Soviet sportsmen in the Games is impossible."

Little embellishment of the Soviet NOC's statement was forthcoming until a news conference held in Moscow on 14 May 1984. At this news conference, Soviet Olympic officials repeated their

criticisms of the organization of the Games and the conditions which led to their decision of non-participation. Chief among the problems cited were anti-Soviet activities in the U.S. that allegedly would pose a threat to the delegation at the Games. The USSR NOC president called the decision "irrevocable."

The reaction from the LAOOC was swift and unequivocal. President Peter V. Ueberroth stated that *"anything they can come forward with that's a serious objection or even comes close to being a violation of the Olympic Charter, or could be interpreted by anybody from any direction as being close to a violation, we'll be pleased to talk about. But, there haven't been any."*

The U.S. State Department, reacting to Soviet charges that the U.S. government had aided anti-Soviet groups and otherwise made the Soviet's Olympic participation difficult, stated that the facts as presented at the USSR NOC's news conference were "tendentious and distorted." The State Department spokesman also noted despite Soviet comments to the contrary:

- That the IOC and LAOOC did not recognize any of the demands made by the USSR NOC at the 24 April meeting in Lausanne as well-founded.
- The Reagan Administration had informed an anti-Soviet group that athletes from all countries would be welcome and that the Olympic Charter would be respected.
- That the U.S. government had made an extraordinary effort to prevent attempts by terrorist or extremist organizations to disrupt the Games.

The State Department's reply also noted that it *"believe(d) that Soviet charges that the U.S. Government is violating the Olympic Charter or attempting to gain political capital out of the Olympic Games do a great disservice to the Games. Responsibility for any damage done by these charges rests solely on the Soviet side."*

"However, we cannot let spurious charges involving this government go unanswered."

"We have pledged full cooperation with the LAOOC and support of its activities, with the aim of making a complete success of the Games for all participants."

"I wish to reiterate, directly and officially, that the U.S. Government wishes to facilitate participation of all Olympic participants, including those from the USSR on a fair and equitable basis."

"We are, moreover, prepared to guarantee Soviet Olympic participants and spectators, including Soviet officials resident in the U.S., full access to all venues."

"The U.S. takes very seriously its obligations to protect all Olympic participants. Every reasonable measure has been taken and will be taken to provide security to everyone concerned, including Soviet citizens."

"Emigre and other groups that may be planning to conduct demonstrations and other activities against Soviet participants have no U.S. Government support whatsoever."

13.07.6 Reaction following the boycott announcement

Although an expected Soviet campaign against participation quickly materialized in the aftermath of their announcement, it was effectively limited to those nations already politically aligned with the USSR.

In the days following 8 May, 13 nations joined the Soviets in the boycott. National Olympic Committees from Afghanistan, Bulgaria, Cuba, Czechoslovakia, Ethiopia, the German Democratic Republic, Hungary, DPR

Korea, Laos, Mongolia, Poland, Vietnam and the Yemen Democratic Republic all announced that they would not participate in Los Angeles.

A meeting of the IOC Executive Board was held on 18-19 May in Lausanne, with both the LAOOC and officials from the USSR NOC. In addition, the Commission for the Olympic Movement, representing the IOC, IFs, NOCs and athletes was also convened. The Soviets gave no specific reasons other than the broad charges previously stated for their non-participation and refused to specify any conditions under which they would come to Los Angeles for the Games. The Soviet officials, did, however, pledge not to interfere with the decisions of other NOCs on participation in the Games.

The president of the IOC noted during a news conference that he found no merit in the charges against the LAOOC or against the the U.S. government.

The Commission for the Olympic Movement expressed a strong view as well, stating that it *"appreciates the efforts of the Los Angeles Olympic Organizing Committee in the preparation of the Games in the best conditions and considers that the Olympic Charter is respected."*

Following the meetings in Lausanne, the president of the IOC and other members of the IOC attended a meeting

¹⁰ LAOOC President Peter V. Ueberroth (center) answers questions during a press conference staged for the USSR National Olympic Committee delegation in December 1983.

of the sports ministers of socialist nations held in Prague on 24 May 1984. The decision of non-participation was reconfirmed there by those nations which had announced their intention not to send a team to Los Angeles.

In view of the security guarantees made by the United States government, the disinterest or inability of the USSR NOC or other non-participating NOCs to identify specific conditions which made their participation impossible, was curious. Since the composition of the boycotting nations was limited to those already politically aligned with the Soviet Union, it was not surprising that many analysts concluded that the major motives behind the decision not to participate in Los Angeles included retribution for the U.S.-led boycott of the 1980 Olympic Games held in Moscow and Soviet dissatisfaction with the policies of the United States government at the time. It was noted that Soviet Olympic officials drew distinctions between their dissatisfaction with the United States government in general and their opinion of the work of the LAOOC.

13.07.7 Response of the NOCs to the invitation to participate

In the meantime, the LAOOC mounted its own quiet campaign to secure the largest number of NOCs ever to participate in the Games by 2 June, the

deadline for acceptance of the invitation to attend the Games. At the time of the announcement of the Soviet boycott, only a handful of nations had sent formal notices of acceptance of the invitation, even though they had been sent out fully one year prior to the Games.

After the Soviet boycott announcement, hundreds of telephone calls and telex messages emanated from the LAOOC's administrative headquarters to NOCs, requesting their immediate formal acceptance of the invitation to attend the Games. Bilingual members of the LAOOC staff placed calls to Olympic officials around the world. The mayor of the city of Los Angeles, Tom Bradley, sent telex messages to each of the NOCs in Africa, urging their acceptances of the invitations as well. In addition, members of the LAOOC's Government Relations Department in Washington, D.C. visited more than 50 embassies, primarily from smaller nations to assure them of the LAOOC's good intentions and to reiterate the LAOOC's desire to have their NOCs accept the invitations to participate in the Games.

By the 2 June 1984 deadline, a record 142 NOCs had accepted the LAOOC's invitation. The previous high had been 122 NOCs at the Games of the XXth Olympiad in Munich in 1972; in contrast, 95 NOCs participated in the Montreal Games and 80 actually participated in Moscow. The favorable reaction of the NOCs was a positive statement for the Olympic movement and ensured the overall success of the Los Angeles Games as a meaningful festival for the youth of nations from around the world.

The notices of acceptance carried messages of support and, in a few cases, permission to enlarge the teams being prepared for the Games. Several NOCs asked if their team sizes could be expanded to take advantage of new opportunities for competition in the absence of those who chose not to participate. Notable confirmations were received from the NOC of the People's Republic of China, accepting the invitation to return to the city where Chinese participation in the Games began in 1932 and from Romania, which announced its acceptance of the invitation during the meeting of sports ministers from socialist nations in Prague on 24 May.

The president of the LAOOC visited Cuban premier Fidel Castro in an unsuccessful attempt to reverse the decision of the Cuban NOC. Even so, however, the Cuban premier made it clear that the decision against participation in Los Angeles was made in the interests of solidarity with other socialist nations and not because of any fears over athlete or delegation security in Los Angeles. In late June, the NOC of Angola sent word that it would not be able to participate in the Games, but stated no reasons. Two other NOCs, those of Albania and Iran, had indicated well prior to the Soviet announcement of non-participation that they had no interest in participating in the Games in Los Angeles. They rarely, if ever, had engaged in communications with the LAOOC.

13.07.8 Transport arrangements to assist NOCs

Although the LAOOC fully expected all of the nations which had accepted the invitation to participate in Los Angeles to come to the Games, it also was aware of the logistical difficulties faced by many nations in bringing their athletes from thousands of miles away. In recognition of the particular difficulties faced by some of the NOCs and at the request of the Supreme Council for Sports in Africa, the LAOOC chartered an airplane at its own cost for the round-trip transportation of athletes and officials from 21 nations to Los Angeles.

The assembly point for the athletes and the departure point from the African continent was at Rabat, Morocco, the site of the all-African championships in athletics during the week of 14 July 1984. The plane left with 130 athletes from 21 nations, accompanied by three LAOOC staff members on 16 July for Los Angeles.

The return flight departed from Los Angeles on 14 August and included 169 passengers from 14 nations, plus two LAOOC staff members. The flight terminated in Casablanca, Morocco, due to the more favorable airline connection possibilities to the rest of the continent there.

The LAOOC also helped to arrange for the landing of charter aircraft arranged by other National Olympic Committees for their teams at the Los Angeles International Airport and with processing through the Olympic Arrival Center at LAX on their way to their assigned villages.

14

14.01 Areas of responsibility

The Olympic Health Services Department (OHS) was charged with establishing health services for the Olympic Family, providing emergency care to spectators and carrying out the medical controls required by the IOC. The objectives of the department included the following:

- To provide health care of the highest quality which exemplified the best medical care available in the United States
- To maintain or restore the good health of the Olympic village population during the period of the Olympic Games
- To provide accessible, quality health services at no cost to the athletes, delegates and officials

The scope and breadth of the Health Services program included:

- Sports medicine, doping control and spectator care at 23 venues
- Sports medicine and athletic training services at 33 training sites
- Urgent care polyclinics at three Olympic villages
- Medical aid stations at the IOC/NOC headquarters, Main Press Center and International Broadcast Center
- Emergency care and hospitalization services at 16 hospitals
- Medical Command Center operations

The planning phase of the Olympic Health Services included the establishment of the Medical Advisory Commission consisting of 150 doctors, nurses, athletic trainers and other health care professionals. Subcommissions were also formed to contribute to the planning effort necessary to provide a wide range of health care services.

Medical Subcommissions and objectives included:

- Dental; to provide recommendations in the planning, implementation and operation of three dental facilities
- Doping Control; to provide recommendations and advise on doping control and gender verification programs
- Emergency medical systems; to provide recommendations on the operation of emergency medical services and establish criteria for the selection of an "Official Hospital" for each venue and polyclinic
- Eye care; to provide recommendations on the operation of eye services in the polyclinics
- Health records; to provide recommendations concerning the Olympic health records system and policies/procedures for health records administration at the polyclinics and venues

- Pharmacy and therapeutics; to review formulary items and recommend policies and procedures for writing prescriptions, "flagging" IOC banned drugs, monitoring medication availability during pharmacy off-hours and obtaining non-formulary medications
- Athletic training and physical therapy; to provide a recruitment plan for athletic trainers and physical therapists and recommend equipment and supplies modalities to be used at the polyclinics. To develop patient flow policies and procedures for the polyclinic physical therapy areas

The preparations for providing the array of health services began in 1979. These preparations included detailed planning for the variety of needed medical supplies, equipment and pharmaceuticals; designing and securing necessary air and ground emergency transport services; and the coordination of emergency medical services with local community agencies. Central to this effort was the careful recruitment, orientation and training of more than 2,000 volunteer health professionals.

Health care delivery in the United States has traditionally relied on volunteers. To ensure the availability of the highest level of health care professionals, OHS called upon the volunteer support of the entire health care community who applied in far greater numbers than could be utilized.

In identifying and selecting volunteers, the LAOOC gave priority to residents of Southern California and required that all medical personnel be licensed or certified in accordance with regulations adopted by the state of California. Preference was given to individuals who were personally known to the chief medical officers or other health services personnel.

As a further effort to encourage volunteer participation and to ensure appropriate accountability, an agreement was reached with the Los Angeles Chapter of the American Red Cross (ARC) to incorporate the concept of first aid walking teams into the overall pattern of medical care. The ARC also undertook a careful selection and training process for its personnel.

The LAOOC had to develop sound working relationships with many governmental and community agencies and organizations which provided health care in Southern California. The community agencies were surprised and not always pleased to find that the LAOOC had the overall responsibility for planning and implementing a health care program for all competitors and spectators. Although many sporting events take place regularly in Southern California, there is no common managerial link uniting such activities. Considerable dialogue with agencies such as the Los Angeles County Public Health Department was necessary to ensure recognition of the management role of the LAOOC.

14.01.1 Role of the corporate sector

The level of medical services provided at the Games reflected current state-of-the-art medical technology. This was made possible by the generosity of many corporate sponsors.

The LAOOC entered into an agreement with American Medical International, Inc. (AMI), an international health service company which owns and operates hospitals throughout the world, to staff, equip, supply and manage the village polyclinics at USC, UCLA and UCSB. AMI furnished the OHS with the following personnel and services:

- Highly qualified personnel who implemented OHS management policies and program directions
- Specialized consultants in the areas of pharmacy planning, materiel logistics management, architectural planning and medical records management
- Medical equipment and supplies for all three polyclinics, including highly specialized training equipment
- Support staff such as skilled clinic administrators, nurses, laboratory and radiology technicians and pharmacists

Physio-Control, Inc. loaned 120 cardiac monitor-defibrillator units to the LAOOC for the period of the Games. This essential element in the provision of advanced cardiac life support (ACLS) is recognized as the most significant life saving device in cardiac arrest situations.

The donation provided an adequate level of ACLS capability at every venue, including the ability to transport a patient by upgraded basic life support ambulances. The units were priced from \$8,000 to \$9,000 each, so the value to the LAOOC was almost \$1.25 million. Physio-Control also provided training and maintenance for the units.

Nichols Laboratory provided high quality gender verification and cytogenetic services at a cost-effective price.

Ambulance service in Southern California was provided by a large number of small companies, none of whom could afford to support the LAOOC by donating services. OHS was able to obtain adequate levels of service at all sites at a reasonable price.

The principal contractor for ambulance service was Infield, Inc., a local operator specializing in special event services. Infield coordinated the overall provision of ambulance services. In addition, a dozen local companies contributed up to three ambulances each. The LAOOC was able to double the available ambulance services in the community in a cost-effective manner without leaving the existing service load uncovered.

Contracted air ambulance service was provided at Lake Casitas, Coto de Caza and Fairbanks Ranch. An air ambulance was also provided in central Los Angeles for possible use at the Coliseum in case traffic problems in that area resulted in delayed ground transportation.

Partners in Life Flight met the LAOOC's air ambulance needs through the competitive bid process and transported two patients during the Games.

14.02 Doping control

14.02.1 Controls required by the Olympic Charter

Rule 29 of the Olympic Charter states the general guidelines for doping control for all Olympic Games. A summary of the IOC Medical Code is as follows:

- Doping is forbidden.
- Any Olympic competitor may be excluded if he refuses to submit to a medical control or examination or if found guilty of doping.
- Female competitors must submit to the prescribed tests for gender verification.
- A medal may be withdrawn by order of the IOC Executive Board on recommendation of the IOC Medical Commission.

The IOC Medical Commission has compiled a list of drug classifications that have been considered to improve athletic performance. To minimize the abuse of drugs in sport, the Commission developed procedural guidelines for doping control which were first introduced in 1968 at the Xth Olympic Winter Games in Grenoble, France.

14.02.2 Development of the laboratory facility

On 9 March 1982, the LAOOC and UCLA announced the establishment of the Paul Ziffren Olympic Analytical Laboratory, housed at the Louis Factor Health Sciences Building at the UCLA Center for the Health Sciences.

The establishment of a laboratory in Los Angeles was necessary because the only other accredited facility in North America was in Montreal, Canada. The Organizing Committee took bids from several laboratories in Southern California before LAOOC senior management decided that UCLA could best meet the needs of the doping control program. The laboratory remained at UCLA as a legacy of the Olympics.

The IOC Medical Commission accredited the laboratory for testing on 30 November 1983, making it the first laboratory in the United States to be so designated.

The LAOOC worked closely with laboratory personnel from the time the laboratory was accredited to the time of the Games to ensure quality control. Each step in the doping control analysis process was carefully checked and rechecked by technicians so that

1

6 Portable radios play a vital role in communications between on-field medical personnel and the venue medical control center.

6

testing would be flawless. The laboratory was equipped with purchased and rented equipment.

14.02.3 Development of the testing plan

The development of the doping control testing plan involved determining the number of tests to be taken and finalizing the collection procedure.

The number of doping control tests to be taken was not finalized until the late spring of 1984 after the IOC Medical Commission and the LAOOC spent months negotiating. The IOC wanted 2,000 doping control tests to be taken, but the LAOOC insisted upon and eventually tested only 1,500 athletes. The controversy surrounded the number of athletes to be tested at random in each sport. It had previously been determined by the IOC Medical Commission that the top four finishers in each sport would be tested immediately following competition.

Although the LAOOC did not know until late spring the number of athletes that would be tested, the facilities were planned and equipment was ordered based on information from the Montreal and Moscow Games.

Once the final number of random athletes to be tested was agreed upon, the LAOOC determined the number of athletes per sport per day to be tested, finalized the procedures for the collection of the samples and selected and trained the staff to work at each venue.

The doping control collection procedures used by the LAOOC had never been used in previous Games. Developed by the LAOOC in conjunction with the IOC Medical Commission, the simple procedure called for putting the sealed samples in a blue bag and closing the bag with a special clip that could only be used once. The procedure was tested extensively during the 1983 summer events hosted by the LAOOC and proved very satisfactory. Previous Olympic Games collection procedures called for using sealing wax to seal the individual collection bottles. The new procedure proved to be easy and safe from tampering and was approved by the IOC Medical Commission in November 1983.

14.02.4 Dissemination of the list of banned substances

The LAOOC was responsible for implementing all the doping control regulations as stipulated by the IOC Medical Commission. Once the Commission developed the list of banned substances, the LAOOC was responsible for providing information to all agencies or individuals who wished it.

The IOC "Medical Controls" brochure, officially listing banned substances and collection procedures, was mailed to the NOCs, IFs and the IOC in spring 1984.

14.02.5 Procedures for the collection of the samples

The sample-taking procedure used by the LAOOC was designed to be convenient for the athlete while maintaining the integrity of the sample. The basic steps in the collection procedure were as follows:

- Immediately after the contest, the competitor selected for a doping check was handed a testing notification by a doping control escort who accompanied him to the doping control station.
- Each testing notification had the competitor's starting number and a statement that an attendant (team official, coach or doctor) could be present when the competitor reported to give a sample. It also pointed out the possible consequences if an athlete failed to report within a given time. Part of the notification was a detachable stub which signified the competitor's number and was used to confirm that the competitor had been notified.
- The competitor signed the confirmation stub after the time had been entered.
- The stub was passed on to the doping control station.
- If the competitor failed to report within the time limit, that fact was noted on the records, signed by the doping control coordinator and delivered immediately to the IOC Medical Commission. The commission then decided what further procedures would be followed.
- Upon arrival at the doping control station, the staff checked the competitor's identity through his accreditation card and starting number.
- In addition to the competitor and the accompanying person, only the following persons were present: the official in charge of the station; a medical technician whose duties included keeping the records; a representative of the particular International Sports Federation concerned; a member of the IOC Medical Commission, or the Commission's designated representative; the official in charge of taking samples; and an interpreter.
- After the time and personal data of the competitor was recorded, the competitor selected an unused urine collector in a sealed bag.
- The competitor urinated into this collector under the supervision of the person taking the sample.
- If the competitor refused to give a sample, he was advised of the consequences. If he still refused, the fact was noted on the records. The record was signed by the competitor, the official in charge of the station, the medical technician, the representative of the International Federation and the accompanying person. The record was sent immediately through the chairman of the Doping Control Committee to the chairman of the IOC Medical Commission.

- If the competitor was unable to give an ample urine quantity after a fair period of time, the procedure decided by the Medical Commission of the IOC was then followed.
- After the sample had been taken, the competitor or the athlete poured an equal amount of urine into two bottles and closed them securely.
- The bottles were coded and noted in the records in full view of the athlete and the accompanying person.
- The competitor, the accompanying person and the official in charge of the station signed the records certifying that there had been no irregularities. The records were sealed in separate envelopes.
- The original copy was sent through the chairman of the Doping Control Committee to the chairman of the IOC Medical Commission and the duplicate copy was kept sealed in a safe.
- The two samples were placed in separate containers and sealed immediately.
- All sealed containers, each holding a sealed bottle, were placed in a special box which itself was sealed in the presence of witnesses who signed the records annexed to the box before it was transported to the laboratory.
- After the courier delivered the box to the laboratory, receipt of the box was acknowledged.

14.02.6 Procedures for testing of the samples

The analysis of the doping control samples were completed as soon as possible after their arrival at the Paul Ziffren Laboratory at UCLA. In addition to the head of the laboratory and the laboratory staff, only the following persons were admitted to the laboratory during analysis:

- Members of the IOC Medical Commission
- Persons with special authorization from the IOC Medical Commission
- The chairman of the Doping Control Committee

The LAOOC, the Paul Ziffren Laboratory and the IOC agreed that the gas chromatography and gas chromatography mass spectrometry (GCMS) methodologies would be used to analyze the doping control samples. This type of instrumentation was selected because it is the most sophisticated and technical in detecting anabolic steroids.

Preliminary testing for non-anabolic steroids was done by the Gc method. Non-anabolic steroid confirmation was done by the GCMS method. Testing for anabolic steroids in both preliminary and final stages was done by the GCMS methodology.

The steps in the testing of the samples were as follows:

- The analysis was carried out according to well-established methods which had been approved by the IOC Medical Commission.
- If the analysis was positive, the head of the laboratory immediately informed the chairman of the IOC Medical Commission or his representative.
- The chairman of the IOC Medical Commission or his representative wrote to the chef de mission of the delegation to which the competitor belonged to inform him that analysis of the first sample had proved positive.
- The chef de mission was informed when the second sample would be analyzed.
- The analysis of the duplicate sample was carried out in the same laboratory but by different persons and was supervised by a member of the IOC Medical Commission. The delegation in question was allowed to send a maximum of three representatives to the laboratory. The member of the IOC Medical Commission informed the chairman of the Commission the result of the second analysis.
- If the result was positive, the chairman of the IOC Medical Commission called a meeting of the IOC Medical Commission with the following persons invited: a representative of the delegation concerned; a representative from the International Federation concerned; chairman of the Doping Control Committee; and the athlete.
- The chairman of the IOC Medical Commission then passed the recommendation of the IOC Medical Commission to the president of the IOC, who took the necessary action. The head of the delegation to which the competitor belonged was also informed.
- The result of the second analysis was final.

14.02.7 Role of the IOC Medical Commission during the Games

The IOC Medical Commission was extremely busy during the Games. During each day of competition, members were assigned to monitor various collection sites. When an IOC Medical Commission member was present at a site, he observed the operation, answered all questions relating to collection procedures and made the final decision on any discrepancies.

During each evening, members convened at the IOC headquarters to review the day's collection procedures. If any problems arose that would affect the next day of operation, they were communicated to the LAOOC medical director for immediate action.

The Medical Commission also spent a great amount of time dealing with the procedure for positive test results involving the athlete, a representative from the International Federation, the chairman of the Doping Control Committee and a representative of the delegation concerned.

14.02.8

Test results of the doping control program

During the 15 days of operation, 1,502 athletes were tested by the doping control staff. Selections were made either on the basis of random samples or competition results. The greatest number of competitors (157) were tested on 11 August, the day before competition ended. Athletics had the most athletes tested (190), followed by swimming (122), basketball (120), handball (114) and wrestling (102).

Eleven positive test results were recorded during the testing program. Two of the athletes were medal winners and as a result, had their medals withdrawn.

14.02.9

Doping control summary

General

- The doping control station (a secure facility) size was determined by the number of specimens to be collected in that sport.
- The doping control coordinator reported directly to the chief medical officer and was responsible for dealing with International Federation officials, team officials and the IOC Medical Commission.
- Commissioners and venue directors were made aware of the high visibility and volatility of the doping control program.
- Extensive training in policies and procedures of specimen collection was given to all staff.

Staffing criteria

- Doping control coordinator; one per station
- Doping control technician; three per station, if up to 10 athletes were handled at one time and more were added based on the number of additional athletes
- Doping Control Escorts; one per athlete selected simultaneously

Physical configuration

Minimum of 500 sq. ft. including:

- Waiting area
- Processing area
- Toilet facilities
- Waiting area had to be large and comfortable since an athlete could bring up to four persons with him
- Each toilet area had to be large enough for two persons
- Two refrigerators
- Television
- Hand-washing facilities

14.03

Gender verification

14.03.1

Controls required by the Olympic Charter

The Medical Commission of the International Olympic Committee attempted to protect women against unfair competition. The control attempted to confirm an athlete's gender with minimal interference with the dignity of the individual.

Doping control specimen collection by venue

*Note: The specimen collecting occurred only on the days of competition. The zeros indicate that although there was competition that day, no specimens were collected.

Rule 29 of the Olympic Charter states that female competitors must comply with the prescribed tests for gender verification.

14.03.2

Development of the collection and testing plan

Basic gender verification collection and testing guidelines were developed by the IOC Medical Commission. The LAOOC took the guidelines and refined them for implementation at the USC, UCLA and UCSB village polyclinics.

Guidelines for testing gender verification were not as severe as doping. A buccal smear from the mouth could be taken at any time during the athlete's stay, provided it was done before she started competition. Drug testing was done on a very rigid timetable following competition to detect immediately performance-enhancing drugs.

The security of samples and the anonymity of the athletes were of utmost importance. Unlike the doping control procedures, the IOC Medical Commission did not have to approve the gender verification procedures as long as the general guidelines were followed.

The LAOOC contracted with Nichols Institute to provide gender verification services. Nichols was responsible for staffing the collection sites within each polyclinic, transporting the samples to its laboratory and analyzing the

samples. The results had to be provided within 24 hours of the sample's arrival at the laboratory.

One of the major concerns in the development phase of the gender verification program was to plan effectively for the ingress of female athletes should the majority arrive all at once for the individual testing. The LAOOC realized that most athletes would wait until the last minute before their competition to be tested. The unavailability of the registration lists identifying names of athletes until the Games began further complicated the matter.

Once the polyclinics opened on 14 July, there was a tremendous effort to contact envoys and chefs de mission to encourage their female athletes to make appointments for testing. Despite the effort, approximately 60 percent of the athletes came into the gender verification office on a walk-in basis as opposed to a scheduled appointment.

**14.03.3
Procedures used in collection and testing**

The basic procedures used for collection and testing gender verification were as follows:

- All competitors in the women's sporting events had their gender verified.
- The results of the examination were not made public.
- Competitors who registered as females were required to report to the gender verification office or forfeit the right to participate in the Games.
- A member of the IOC Medical Commission supervised the testing.

- The gender verification office notified each chef de mission of the day and time of the test for his team.
- The delegation representative was responsible for making sure all women competitors and appropriate identity cards were present during the day and time appointed.
- Female competitors presenting a valid certificate of femininity issued by the IOC Medical Commission were exempt from another examination.
- Each female competitor's identity was determined by an identity card with a photograph, weight, height and accreditation number listed.
- A buccal mucous membrane smear determined the X and Y chromatin.
- If the test was inconclusive, the competitor had to undergo further tests by the IOC Medical Commission.
- The results of the examination were reported to the chairman of the Medical Commission.
- If the results of those tests were inconclusive, the chairman called a meeting of the Medical Commission, at which a physician from the team and a representative of the International Federation concerned could attend and following which a physical examination was prescribed and performed by a gynecologist who was a member of or was accepted by the Medical Commission.
- The Medical Commission issued a gender certificate to those female competitors whose test results were conclusive.

Total tests 1,610

14.03.4 Report of results on the tests

During the period 14 July-7 August, 1,610 women athletes from 92 countries received a gender verification test. The majority (81 percent) of all exams were completed prior to the beginning of competition because of the efforts of gender verification staff in scheduling appointments in advance. The proportion of athletes tested by date corresponded directly to the proportion of athletes in the villages, demonstrating a strong correlation between the arrival dates of delegations and gender verification activity. USC generated the most activity, testing 53 percent of all women athletes, followed by UCLA with 33 percent and UCSB with 14 percent. The number tested represented 88 percent of the total number of women athletes attending the Games since 12 percent already had femininity certificates.

The most significant accomplishment of the program was that less than one percent (far below the average) of the collected samples required repeat collection because of poor collection technique.

14.04 Official hospital program

14.04.1 Concept

The LAOOC designated 17 hospitals as "Official Hospitals for the 1984 Olympic Games." The innovative program named a hospital near each venue and village, with each providing equipment, supplies, personnel and resources for venues and hospitalization for Olympic Family from venues and villages.

One specific purpose of establishing the official hospital program was to provide hospitalization for Olympic officials, athletes and staff, each of whom was covered by a medical insurance policy which included professional and hospital fees. The provision for hospitalization for spectators followed each hospital's customary procedure for any member of the public. The LAOOC did not provide medical insurance coverage nor was it liable for hospitalization for spectators.

The basic concept behind designating official Olympic hospitals was cost effectiveness. In addition to goods and services, each hospital also provided financial support for medical transportation and other emergency medical services. The hospitals furnished this support with no expectation of recouping the cost through patient care.

14.04.2 Characteristics of institutions chosen

Each hospital in the official Olympic hospital program was selected for excellence in medical care and the ability to address special needs of Olympic athletes, officials and spectators.

All hospitals interested in the program were evaluated using the following criteria:

- Each hospital had to designate a person to act on behalf of the hospital during planning, implementation and operational phases.
- A written commitment had to be signed by the hospital and medical staff for emergency treatment of any Olympic-related visitor regardless of source of payment.
- Each hospital had to make a commitment to coordinate all press-related activities through the LAOOC medical press officer.
- The hospital had to provide special security provisions for members of the Olympic Family which the LAOOC could upgrade as deemed necessary.
- The hospital had to agree to upgrade any services in which deficiencies were noted to a level acceptable to the LAOOC for the period designated.
- The chief of medical staff and medical executive committee had to provide a written commitment to abide with the criteria of the official hospital services agreement when executed.

The desire of the LAOOC was to designate general acute care hospitals which provided an excellent level of medical care across-the-board. It was expected that individuals with special problems requiring advanced capability (e.g., burn victims) would be transported directly to the appropriate facility or transferred in accordance with local arrangements.

Hospitals which agreed to meet the aforementioned commitments were evaluated further based upon additional criteria:

- The hospitals had to have an emergency department which had a special services permit to operate at the "stand by" level. Institutions licensed at less than the "basic" level were required to upgrade staffing to a level prescribed by the LAOOC.
- The hospital had to have a special service permit to operate an intensive care unit and be able to receive additional patients in the intensive care unit.
- Trained and qualified nursing personnel had to be available at a 1:2 ratio with the capability of upgrading to 1:1 based on patient acuity.
- An operating suite and post anesthetic room with appropriate staffing had to be immediately available during competition periods.
- Radiology, pharmacy, clinical laboratory services and a comprehensive in-house blood bank had to be available 24 hours per day during the period of the agreement.
- Eligible hospitals within a five-mile radius of a venue were considered for designation.
- The hospital had to be able to accept an additional patient load during the agreement period without having to inconvenience its normal patient population.
- Each hospital had to commit itself to the provision of a U.S. Federal Aviation Administration licensed helipad or the willingness to obtain necessary approvals for a temporary helipad during the Olympic period, as deemed necessary.

Other general characteristics which were evaluated consisted of available bilingual services, hospital amenities which could be made available to members of the Olympic Family, availability of conference rooms and access to food service or other areas for OHS volunteers.

14.04.3 Nature of the agreement for inclusion in the program

Each agreement stipulated that during the Olympic period (1 July to 15 August 1984) each hospital would provide all ordinary and usual hospital-based medical and ancillary services to athletes, Olympic officials and spectators at the specific venues serviced by it.

Each hospital agreed to meet all basic criteria for Olympic hospital designation as well as all supplemental conditions set forth by the LAOOC. All hospitals appointed an administrative liaison and agreed to provide temporary staff privileges to the chief medical officer for each sport.

Each hospital was required to furnish medical equipment and supplies for the venues it served. All medical equipment deemed necessary by the LAOOC was provided on a loan basis without charge for use at each venue during the Olympic period. Each hospital ensured that the equipment was working properly upon installation at each venue. At the conclusion of the Olympic period, the LAOOC made the equipment available for pick up in the same condition in which it was received. Each hospital had ten days to determine whether the LAOOC returned equipment in the same condition in which it was received.

Each hospital provided the LAOOC with the supplies necessary to utilize the equipment and treat individuals at the venues. The hospital was responsible for restocking consumed supplies and the LAOOC returned all unused supplies at the conclusion of the Games. Each hospital coordinated the delivery and pick up of all equipment and supplies.

The LAOOC assumed the responsibility for obtaining licensed personnel required for the proper use of the equipment and supplies. The LAOOC was also responsible for obtaining, at its own expense, medical insurance with a \$50,000 coverage limitation for each athlete and certain officials.

Each hospital provided worker's compensation insurance for its employees as required by law and provided medical malpractice and comprehensive general liability insurance with minimum limits of \$10,000 per occurrence.

Within ten days after execution of each agreement, each hospital paid the LAOOC a modest sum to help defray the costs of private ambulance service and other costs of emergency medical services relating to the Games.

Each hospital was designated as an "Official Hospital for the 1984 Olympic Games" and had the authority to use the designation in its advertising and promotional materials.

14.04.4 Results of the program during the Games

All venues were provided with necessary medical equipment and supplies in a timely manner through the contractual agreements between the official hospitals and the LAOOC. The program successfully covered all Olympic Family hospitalization costs through Olympic health insurance and the cost of medical transportation and other emergency medical service needs was covered through hospital contributions. The delivery and pick up of equipment and supplies was accomplished efficiently and the equipment provided was of high quality.

A minor problem was that hospitals that made late contractual agreements found it difficult to gather all the required equipment. Supply needs were sometimes heavier than had been anticipated.

The participation of the hospital community was a critical element in the Olympic health services program. In addition to the services provided, the official Olympic hospital contributed greatly as a positive force in enhancing the public image of the Games.

Less than two percent of the reported 11,715 encounters resulted in hospital referrals. The reported referrals in turn resulted in 140 hospital admissions. Fifty-seven patients were treated on an outpatient basis and released. Athletes accounted for 45 percent of hospital referrals, followed by 21 percent for coaches and officials, 12 percent for LAOOC staff and eight percent for spectators.

Minor orthopedic problems, such as broken bones, sprains or strained ligaments were the major causes of referrals accounting for 36 percent of hospital transport. Potential myocardial infarctions, chest pains, appendicitis and possible hepatitis were the other frequent diagnosis-generated referrals.

Seven NOCs had at least five individuals referred to hospitals. The Federal Republic of Germany generated the most referrals, followed by Egypt, Peru and the USA.

14.05 Venue programs: Chief medical officers

14.05.1 Concept and goals of the CMO program

Medical services for the Games were planned by the LAOOC to provide physician-managed medical care for athletes, officials, staff and spectators. Under the direction of the medical director, a cadre of chief medical officers was recruited, each of whom had responsibility for all medical activities at the venue to which he was assigned.

The chief medical officer (CMO) directed and was medically and legally responsible for a medical team of physician specialists, athletic trainers, emergency nurses and first aid/ Emergency Medical Technician-I (EMT-I) personnel, as well as the doping control personnel and operation at the venue. The CMO was on-site during training hours at the competition site.

The Olympic Health Services Department developed the concept of a centrally established standard of service delivery administered in a decentralized mode by a cadre of carefully trained physicians, administrators and professional support staff. The medical director felt it was extremely important to recruit CMOs who could represent U.S. medicine at the highest levels to all concerned.

At the onset, the LAOOC learned from the Montreal Games that there had been problems with volunteer health care personnel maintaining the appropriate level of service. The LAOOC decided, however, to choose volunteer CMOs and make them part of a peer group medical team similar to a hospital medical staff.

The concept of the CMO program was to place the burden of managing a team of volunteer health professionals on the CMO. The CMO was encouraged to select a staff he had personal involvement with, although some allegations of favoritism were raised. By virtue of this personalized process, a level of personal accountability was introduced which successfully took the place of the unusual employer-employee relationship. The staff's relationships were thus based somewhat on personal relationships which would endure after the Games. Consequently, there were very few problems with attrition of CMOs or their staff.

14.05.2 Staffing and training of the venue teams

Staffing of the venue teams involved recruiting three distinct types of volunteer health professionals. Each CMO directly supervised a doping control coordinator, a sports medicine coordinator and a spectator first aid coordinator. The concept behind the structure of the venue medical teams was to break down the responsibilities into small groups for effective communication. The number of staff at each venue was proportional to the number of participants and spectators.

The first in a series of recruitment priorities included the appointment of the CMOs and athletic training coordinators. It was through this process that the general volunteer recruitment process was greatly augmented. The criteria for key management was based on the following:

- Chief medical officer; local licensed physician with interest or background in the assigned venue or polyclinic whose preferred specialty was family practice, emergency, internal or orthopedic medicine. Was geographically close to the venue and willing to devote a 30-day period as well as attend monthly pre-Games meetings.
- Athletic training coordinators; local certified athletic trainer with strong management skills and previous event experience who was willing to attend monthly OHS and venue meetings and available during the 30-day Games period. Ability to recruit effectively and retain personnel was also important.

Doping control coordinator; local physicians were preferred who were technically skilled in laboratory procedures and protocol, had strong management skills and the ability to effectively recruit, train and retain personnel as well as the willingness to devote time for the duration of venue and attend several pre-Games monthly meetings.

For all positions, the key element was the degree of flexibility of each volunteer. As training and orientation progressed, attendance records were maintained and individuals unable to keep pace were asked to withdraw.

A careful selection process was developed for the remainder of the staff to maximize the enthusiasm and dedication of the individual volunteer, ensure his professional competence and minimize the numbers of personnel needed. Selection criteria included the following:

- Medical specialty with current California license or certificate
- Willingness to make a time commitment of at least five consecutive days or equivalent shifts
- Professional liability insurance
- Proximity of individual's home or place of employment to venue or village

Training of the venue medical teams was approached in two different ways. The OHS Department organized training by divisions of staff to enable all personnel within the same job classification to receive the same information. Training sessions were also organized by venue so the CMO could establish procedures specific to the site and develop camaraderie among all of the medical personnel. The horizontal and vertical types of training proved invaluable, as all personnel were thoroughly introduced to the specifics of their job and then applied their knowledge to the environment of their specific venues.

The OHS Department started the training period for CMOs in fall 1983. As the other personnel were progressively appointed and brought in for training, the department fostered a unique team approach which proved quite new in the field of sports medicine. In order to make the venue teams as effective as possible, the department sought to integrate medical professionals who were not accustomed to working together. In U.S. sports medicine, physicians and athletic trainers worked together, but did not often work with nurses, first aiders or hospital EMT-1s. The LAOOC was concerned about working relationships between the nurses and trainers, the trainers and the first aiders and the nurses and first aiders. As a result, OHS devoted a lot of energy developing rapport among all personnel and establishing protocol which enabled each group to work in accordance with its legal scope of practice.

The training periods were long and arduous and some medical personnel

withdrew from the teams. The department was extremely confident, however, that the people who survived were truly committed to providing the best medical service possible.

14.06 Venue programs: Spectator first aid and sports medicine program

14.06.1 Concept and design of the spectator medical program

The fundamental approach of the spectator medical program was to provide care for urgent problems, with the primary goal of the program—the return of the spectator to the spectator area or referral to a more appropriate facility.

Medical care provided to spectators was always directed by a physician. The level of care provided was physician-managed advanced life support which is the optimum level of care available other than at a hospital. All spectator aid stations met full outpatient facility standards.

The difference between the level of service provided at the Olympic Games and other spectator events was that the spectator care was managed by physicians and nurses who were able to diagnose medical problems rapidly and appropriately to determine the patient's needs. Historically, spectator events have been serviced by emergency medical technicians or paramedics who were only used for acute care cases and crisis level intervention.

At venues with a seating capacity or expected attendance of less than 10,000 spectators, an emergency care nurse and first aiders were under physician's "standing orders" to perform appropriate medical care, with the understanding that a physician from the sports medicine station was immediately available if needed.

Physician specialists, emergency care nurses and first aiders staffed stations at venues with a seating capacity or expected attendance of 10,000 or more spectators. In the event of a major emergency, the medical staff, under physician direction, rendered life saving care and arranged for transportation to the appropriate hospital.

The spectator aid stations were located in highly visible areas, clearly identified by name and the Red Cross symbol. There were also appropriate directional signs to the nearest spectator aid station within the venue.

At venues with large numbers of spectators and particularly where the event occurred in the open air, first aid personnel patrolled the spectator area to manage minor problems and direct

more seriously ill or injured spectators to the aid stations. This concept had not been universally used, but it proved advantageous in dealing with large groups of people. The walking teams were able to keep the crowds comfortable and calm by treating small first aid problems on the spot and recognizing more serious problems. General use of the walking teams prevented the first aid stations from becoming overcrowded.

The results of the program were extraordinary: out of a total of almost six million spectators, there were no deaths or full cardiac arrests during the 30-day period and only 200 to 250 people were transported to hospitals. There were approximately 3,800 physician-managed cases and 10,000 extended visits to the spectator aid stations. The spectator aid teams coped very effectively with various situations and were able to identify major problems quickly. The vast majority of spectators (50,000) were treated by first aiders and returned to their seats.

14.06.2 Integration of the American Red Cross with the venue medical teams

The American Red Cross played an important part in the provision of spectator first aid through its trained staff from its Southern California chapters. The personnel became part of the spectator aid teams reporting to the chief medical officer at each venue. The American Red Cross did not manage the spectator care program, but was designated as "Coordinator of Spectator First Aid Services" for the 1984 Olympic Games. The LAOOC's

concept was for spectator aid to be physician-managed, a service which the American Red Cross could not provide since its training extends only as far as advanced first aid.

The personnel selected from the American Red Cross were accustomed to managing spectator aid at large events. Their expertise in logistics, staffing, discipline and management of volunteer concepts necessary for successful first aid delivery to large crowds was invaluable to the chief medical officers.

An experienced American Red Cross first aid coordinator was chosen as the administrative manager at each spectator aid station, while clinical decisions were made by doctors and nurses. Each first aid coordinator was only responsible for the administrative aspects of the aid station.

The spectator aid program successfully integrated the experience of the American Red Cross staff with an advanced level of medical care. This unique multi-disciplinary approach was effective in both prevention of the escalation of problems and treatment of severe cases.

Spectator care summary General

- Responsible for spectators and staff.
- Focus was to provide emergency medical intervention so that spectators could return to watching the Games or be stabilized prior to transport to hospital.

- Level of care provided was physician-managed service including advanced cardiac life support.
- Each venue had at least one spectator aid station; larger venues had more than one.
- Walking teams of first aid personnel patrolled crowds, managed minor problems and assisted with more significant medical problems.

Staffing criteria

- Physician; one per site with 3,000 or more spectators and two per site with more than one aid station
- Emergency care nurse; one per station
- First aid coordinator; one per site
- First aid personnel; one team of two persons for up to 8,000 spectators, one additional team for each additional 8,000 spectators

Physical configuration

Minimum of 400 sq. ft. per spectator aid station including:

- Registration/waiting area
- Treatment area
- Observation area with four cots
- Air conditioned
- Toilet and hand-washing facilities
- Refrigerator
- Television
- Locking storage cabinet

14.06.3 Development of the sports medicine program for competitors, officials and the Olympic Family

Both emergency and non-emergency care for athletes was provided by physicians and athletic trainers with expertise in the field of sports medicine. The health care teams consisted of physician specialists,

certified athletic trainers, emergency care nurses and the chief medical officer (CMO) who supervised and coordinated all medical care provided to athletes.

The sports medicine stations at each venue were always located in the secured athlete compound. The stations provided medical care to competition staff and Olympic Family members who urgently required it. Each CMO, in conjunction with the medical director and director of athletic training, developed standards of medical service for the specific sports medicine stations depending upon the sport.

Each sports medicine station was equipped and supplied to enable the medical staff to render an array of medical services. Medical personnel diagnosed and treated illnesses and injuries, while athletic trainers provided taping, massaging and various muscle stimulant modalities. Training services were limited to athletes and team officials only.

In addition to health services at each of the venues, 24-hour medical coverage was provided for the IOC/NOC headquarters at the Biltmore Hotel (same location as the medical command center), Main Press Center and International Broadcast Center. These services were directed by a CMO with the assistance of emergency care nurses and first aid staff. Ambulance and hospital services were available when needed.

7

7 The American Red Cross provides a large number of personnel trained in advanced first aid to fill spectator first aid needs.

8 Fully-equipped first aid stations are available at all venues to assist members of the Olympic Family as well as the spectating public.

9 Urgent medical care is provided for competition staff and Olympic Family members at the sports medicine stations at each venue.

8

9

Health Services and IOC Medical Control

The sports medicine program also included medical care during the pre- and post-preparation of the athletes at various training sites throughout Southern California. The goal of the sports medicine program at the training sites was to provide injury prevention services and care for injuries that occurred with the objective of returning the athlete to competition as soon as possible. A basic level of medical service with certified athletic trainers was available at each of the 33 training sites beginning 14 July. Medical protocol was established with an on-call system for the chief medical officer who coordinated major medical emergency procedures. Each site was equipped and supplied with massage tables, first aid supplies and a full complement of athletic training supplies.

The training sites were located at various universities, junior colleges, high schools and the USC and UCLA Villages. Each site was almost exclusively dedicated to one particular sport and staffed according to the number of athletes anticipated for that site.

The basic daily activity routine for the sports medicine stations was as follows:

- Trainers arrive one and one-half to two hours before competition begins to set up ice and other supplies for field of play and or treatments
- Physicians and nurses arrive to discuss previous day's activity and special preparation for that day's activity
- Staff enter field of play to treat injuries, tape or transport as necessary
- Post game treatments
- Clean sports medicine stations
- Leave approximately one hour after competition

14.06.4 Operations during the Games period

The operations of spectator first aid during the Games period provided physician-managed advanced life support at 28 sites. The American Red Cross recruited, screened, trained and placed 361 first aid positions while the LAOOC recruited physicians and emergency nurses. A flying squad of first aiders was successful in providing backup and relief services for 14 of the 23 venues so that staffing level was at 100 percent at all times.

The only multi-casualty event was a small one at team handball where a railing on the bleachers collapsed. The first aid team and the chief medical officer handled the situation quickly and professionally. First aid teams were responsible for moving victims from the stands and broken railings. However, a concern that was not anticipated was the lack of experience in carrying patients from the stands.

The visibility of the medical staff was enormous. At venues and villages, the treatment given patients was observed not only by spectators but other emergency medical service agencies. For this reason, in addition to the obvious one of providing a high level of medical service, it was vital that the quality of care provided was correct, not only in the stations but in the field where the care was so highly observed. This reinforced the importance of the Red Cross screening workshops and skills reviews that were conducted by the first aid coordinators for their teams.

During the pre-Games period, the time involved in signing the American Red Cross contract prevented the staff from being hired earlier. Although the American Red Cross coordinator felt she should have been brought on one and one-half years prior to the Games, allowing each venue coordinator to be selected much earlier, the American Red Cross accomplished nearly everything it wanted to with volunteers, but not in as much depth as it would have liked. There was little time for interdisciplinary training and medical records management,

The operation of the sports medicine program during the time of the Games was very successful. Staff, equipment and supplies were abundant and provided for rapid, efficient transport of those with acute injuries and the treatment and triage of injured athletes, enabling them to return to competition as quickly as possible. The only problem that occurred was when venue management and commissioners were forced to identify a specific vehicle and driver to facilitate the transport of non-emergent athletes back to the villages. This part of the transportation link had not been planned for during the pre-Games period.

An unexpected success at some venues was the availability of mini-ambulances. These golf cart-type vehicles were costly but invaluable because they facilitated maneuverability at large outdoor venues such as the Coliseum, Rose Bowl and Santa Anita because they were not as dangerous as ambulances in crowded spectator areas.

The operations at the training sites proved less predictable. The training sites were operated on a 24-hour reservation system which was dependent upon individual coaches in each sport signing up for training times. Consequently, the training site usage was uneven and changes occurred frequently. Training site managers failed to keep the sports medicine staff informed of changes which meant some trainers showed up at the wrong times and others spent time at sites which were never used.

Complications also arose because some LAOOC supplies had not arrived in the warehouse by the specified delivery date. Supplies had to be

delivered during the entire month of operations and, in some cases, coordinators used supplies from the universities and clinics where they worked.

Despite the minor problems, athletes were cared for in a professional manner which was well received and appreciated. Some countries brought their own medical personnel whom LAOOC athletic trainers assisted.

Olympic Health Services recorded three kinds of encounters which required medical services: significant encounters which required treatment of a specific problem or follow-up care and generated a medical record; a second level of encounters, which included many physical therapy services, bandage wrapping, etc., and did not require a medical work-up or generate medical records but were noted onto a registration log; and a third type of encounter which included dispensing of bandages, aspirin, etc. and often was not recorded because of time constraints.

Approximately 11,715 medical records were generated between the polyclinics and venues and, including the registration log encounters, an estimated 24,258 medical visits were made.

The total number of medical encounters generated at venues is estimated at 15,672 or approximately five times greater than the reported number of medical records. Based upon a comparison of medical registration logs (which reported all patient contacts) with the actual number of medical records, the following assumptions were made:

- At outdoor venues, four patient contacts were made for every medical record generated.
- At indoor venues, 6.7 patient contacts were made for every medical record generated.
- For venues where a complete registration log was obtained, the actual number of contacts was reported.

The highest number of reported encounters (413) was generated at Loyola Marymount University (weightlifting). The second highest reported activity (366) occurred at the Los Angeles Memorial Coliseum (athletics) followed by the Long Beach

Marina (yachting) with 299 encounters and Lake Casitas (rowing and canoeing) with 239. Santa Anita (equestrian) generated 233 encounters.

Venue patient mix was significantly different from the patient mix at the village polyclinics. While athletes generated 68 percent of health service encounters at the village, they were only the third highest utilizers of venue services, generating 26 percent of venue medical encounters. Highest utilizers of venue services were LAOOC staff (33 percent), followed by spectators (30 percent) and then athletes. Officials generated five percent of venue encounters.

Sports medicine summary
General

- Responsible for medical care for athletes, officials and competition staff including injury prevention and treatment and advanced life support medical capability
- Medical personnel required on or near field of play to provide rapid medical assistance
- Medical care provided for athletes before, during and after competition
- Limited training modalities (massage and taping) available at venues; more extensive modalities at villages

12

10 "Mini-ambulances" in the form of golf cart-type vehicles provide excellent maneuverability at the large outdoor venues.

11 A wide range of health services are available to athletes and team officials at no cost at the polyclinics.

12 Special needs for medical services are met by the mobile sports medicine stations shown here.

Health Services and IOC Medical Control

Health service activity by venue

Venue	Encounter forms	Encounters
Anaheim Con. Ctr. (wrestling)	78	445
Biltmore Hotel (IOC headquarters)	264	1,769
CSU Dominguez Hills (cycling)	38	255
CSU Fullerton (handball)	45	302
CSU Los Angeles (judo)	22	147
Coto de Caza (modern pentathlon)	85	340
Dodger Stadium (baseball)	2	340
East L.A. College (hockey)	110	625
El Dorado Park (archery)	7	180
Fairbanks Ranch (equestrian)	30	120
Forum (basketball)	99	633
International Broadcast Center	105	704
Lake Casitas (rowing and canoeing)	239	956
Long Beach Convention Ctr. (fencing)	679	627
Long Beach Marina (yachting)	299	543
Long Beach Arena (volleyball)	74	496
L.A. Coliseum (athletics)	366	1,464
L.A. Sports Arena (boxing)	155	1,038
Loyola Marymount Univ. (weightlifting)	413	825
Pepperdine University (water polo)	9	300
Prado Recreation Area (shooting)	45	180
Rose Bowl (football)	25	100
Santa Anita Park (equestrian)	233	932
UCLA (gymnastics)	90	603
UCLA (tennis)	1	379
USC (swimming)	112	915
Mission Viejo (cycling)	20	80
Stanford (football)	75	300
L.A. Conv. Ctr. (Main Press Center)	11	74
Total	3,731	15,672

Staffing criteria

- Physician; one per 300 athletes, two per 300-600 athletes, three per 600-900 athletes
- Emergency care nurse; one per station plus one additional with five or more medical doctors
- Athletic training coordinator; one per sport
- Athletic trainers: one per 75 athletes; two per 75-150 athletes, three per 150-225 athletes, four per 225-325 athletes, one per 200 athletes more than 325

Physical configuration

Minimum of 400 sq. ft. per sports medicine station including:

- Registration/waiting area
- Treatment area
- Physical therapy and taping area
- Hand washing and toilet facilities
- Refrigerator
- Television set
- Locking storage cabinet

14.07

Venue programs: Medical command center

14.07.1

Concept of the medical command center

The medical command center (MCC) was located at the IOC headquarters at the Biltmore Hotel. It was operational 24 hours a day from 14 July to 15 August 1984. The basic concept behind the organization of the MCC was to provide a central resource for the solution of problems which could not be solved at the venue or village level. The medical team at each site was

capable of dealing with all its problems, but the command center was necessary to direct the medical care for the LAOOC after the venues closed and for incidents that happened outside the venues.

The medical command center also existed to provide central management of medical information on a daily basis and to provide staff support to the IOC Medical Commission. The concept of locating the medical command center at the headquarters hotel of the IOC proved valuable.

The combined concept allowed the LAOOC to centralize the medical information released to the press. During the planning phase, no one had realized how much press attention would be focused on the medical issues or how visible the medical services would be.

The medical press officer proved invaluable in managing all aspects of available information and helping to reduce the sensationalism of the medical incidents that occurred.

One of the most important aspects of the medical command center was the capability to deploy resources in case of an emergency and to manage any kind of multi-casualty situation from a central location in conjunction with the LAOOC senior management.

14.07.2

MCC location and staffing

The medical command center in the Biltmore Hotel was allocated a connecting sleeping room and parlor to serve as the IOC Medical Commission headquarters and two additional sleeping rooms which served as a massage room and a treatment room. The IOC Medical Commission space was 1,100 square feet and the massage and treatment rooms were 400 square feet each.

The senior management of the MCC consisted of the medical director and the chief administrator. Both were allocated room at the hotel and were on call 24 hours per day.

The administrative staff consisted of four health service administrators, two of whom were on duty at any one time. The team split the 24-hour duty daily for the duration of operations. A small cadre of support staff worked an average of 18 hours per day.

The MCC was understaffed given that the operation ran on a 24-hour basis for 33 days. Administrators worked through mealtime quite often and, although shifts were assigned, everyone worked long hours. The responsibilities of the four administrative staffers would better have been divided among six people.

The medical director and chief administrator were on duty at all times and constantly needed to make decisions on all aspects of Olympic health care. It was extremely advantageous, therefore, to have the MCC located at the same hotel as the IOC headquarters.

14.07.3

Operations during the Games period

The medical command center was much busier than anticipated. The IOC Medical Commission had the responsibility of overseeing the doping control operation and making recommendations based on the positive test results. The doping control reports often were not delivered until 0100 or 0200, after which the Commission would discuss the day's activity. The medical command center staff, as a result, would remain on duty until the Commission adjourned each night.

The MCC staff was responsible for preparing daily reports regarding previous day's activity and sending them to the operations center. A typical day at the MCC included the following:

- 0700; shift change
- 0800; report to operations center
- 0800; IOC Medical Commission meeting
- 0900; venues operational, all four phone lines busy, transportation schedule for the IOC Medical Commission prepared
- 0900-2400; press activity all day
- 0900-2200; heavy telephone use from venues regarding equipment, supplies, forms and access control
- 2230; IOC Medical Commission evening meeting

Overall, there were a few unanticipated occurrences at the Medical Command Center during the Games period.

The heavy phone utilization, primarily by ambulance dispatch personnel, prompted the LAOOC to install two additional rotary lines to increase the capacity of the Command Center to four telephone lines and instruments on rotary.

The tremendous press interest in medical issues and pressure placed on the medical press staff prompted unauthorized release of some information without the prior senior management approval. The Medical Director later established policy that all press releases were to be approved by him.

Despite the crowded physical layout and the long hours for the staff, the Medical Command Center successfully managed the full range of medical care during the Games. Speculation on medical issues in the media were held to a minimum and the flow of information to management and the IOC was continuous, succinct and complete.

14.08

Village polyclinic programs

14.08.1

Concept of the polyclinics

The polyclinics, the center of all Olympic health services, were available at no cost to the Olympic team members, NOC delegations and Olympic officials. The polyclinic, meaning "many clinics," provided an array of medical services and initiated referrals to the designated Olympic hospitals.

The LAOOC entered into an agreement with American Medical International, Inc. (AMI), an international health service company which owns and operates hospitals throughout the world, to staff, equip, supply and manage the village polyclinics at USC, UCLA and UCSB. These multi-faceted health-care centers provided sports and family medicine, emergency/trauma care, physical therapy, dental and eye care and ancillary services of pharmacy, radiology and laboratory. Secondary services such as dermatology, podiatry, cardiology, gynecology, neurology and ophthalmology were available on a consultation basis with physician specialists.

Each polyclinic was managed by a chief medical officer (CMO) who was a physician working at each respective campus. The clinic administrators were AMI employees. The CMO ensured that the highest quality of health care was provided to all patients of the polyclinic and served as a liaison with the NOC physicians. The CMOs had ultimate jurisdiction over all village medical issues and the clinic administrators were responsible for the administrative issues at the polyclinics.

The sports and family medicine services at the polyclinics provided treatment to patients based upon the severity of the illness or injury and the proximity of the athlete's competition time. The types of services provided included the following:

- Diagnosis and treatment of routine medical problems
- Minor trauma requiring suturing and bandaging
- Diagnosis and treatment of uncomplicated musculoskeletal problems
- Treatment of complicated medical problems by a consulting physician and transport of the patient to the official hospital if necessary

The dental services at each polyclinic were provided 16 hours per day on an emergency basis only. Dentists were on call during the balance of each day. Any dental problem which hindered the performance of an athlete was treated or referred. No preventive or cosmetic dentistry was performed with the exception of dental hygiene as a follow up to emergency dental care. Services that were provided were:

- Fillings
- Replacement of caps
- Limited oral surgery
- Treatment of broken or injured teeth

More complicated procedures involving root canals, complex oral surgery and jaw reconstruction were referred out of the polyclinic.

Eye care was available on an emergency basis only. Optometrists were on duty 14 hours per day and ophthalmologists were on call. The eye care services included:

- Replacement of eye glasses and contact lenses
- Initial diagnosis and treatment of eye diseases and injuries

The physical therapy area within each polyclinic was staffed with licensed and certified physical therapists and equipped with massage and treatment tables, hydroculators, ultrasound, full and partial body hydrotherapy tanks, high frequency electrogalvanic stimulators, transcutaneous electrical nerve stimulators (TENS units) and low frequency faradic muscle stimulators. Services were available 18 hours per day to village residents with treatment orders generated from a polyclinic, venue or NOC team physician.

For the support and convenience of the athletes, each village had a massage therapy area. The massage therapist did not treat injuries but referred injuries to the polyclinics for evaluation and treatment.

Pharmacy services were available for dispensing medications 18 hours per day. Medications available at the pharmacy were identified in the pharmacy formulary which was prepared and distributed by each NOC

team physician. Prescribed drugs were dispensed by a licensed pharmacist at each polyclinic. A specific protocol existed for prescribing most medications to individual team members by the team physician. All controlled substances identified on the formulary had to be approved and countersigned by a polyclinic physician, as required by California law.

Radiology services were available on a 24-hour basis. Radiologic services were prescribed as required upon an athlete's clinic visit and consultation with a polyclinic physician. Services included only simple, plain film examinations.

Limited laboratory services consisting of a complete blood count (CBC), urinalysis, glucose and blood urea nitrogen (BUN) tests were available 24 hours per day. In addition, the polyclinics had the capability of collecting blood, urine and feces for other examinations. More complicated procedures were taken care of at the nearest official Olympic hospitals.

A uniform health records system was designed to provide rapid accumulation and manipulation of data for daily statistical reports on patient activity for distribution to the IOC Medical Commission during and after the Games. Olympic Family medical records were kept in confidentiality, as required by California law.

Each village also had a health services manager who provided a liaison service. The role of the manager was to advise, consult and collaborate with team physicians and/or chefs de mission of teams without physicians in answering questions and to serve as a link between the NOCs and the polyclinic. The manager supervised the massage/sauna program in each village and the emergency medical technicians who patrolled the village for patient incidents and accidents.

In addition, the managers assisted interested NOC team physicians with orientations, special hospital tours and seminars on the latest U.S. advances and technological achievements in medical care.

14.08.2 Development of the polyclinics: Contract elements

American Medical International, Inc. (AMI) entered into a supplier agreement with the LAOOC in October 1983 and was designated the "Provider of Urgent Health Care Services for the Athletes of the 1984 Olympic Games." The general provisions of the contract are described in the following paragraphs.

AMI was charged with providing, at its expense, day-to-day management services at the three urgent care facilities for athletes located on the campuses of USC, UCLA and UCSB. AMI provided the administrative staff for each polyclinic which included a medical director, an administrator and the necessary support staff such as receptionists, clerks and secretaries for the period 14 July through 15 August 1984. AMI was also committed to providing necessary nurses,

pharmacists, pharmacy technicians, laboratory and radiology technicians and other ancillary and support personnel. AMI agreed to provide a management team composed of professionals to plan all phases of the polyclinic program beginning in September 1983 and continuing through the Games. Their aggregate time committed was required to equal at least three full-time positions.

AMI provided, at its expense, the staff, supplies and equipment necessary for the following services available within each polyclinic as previously mentioned:

- Laboratory service
- Simple, plain film X-ray capabilities
- Dental service consistent with that found in a general practice dentist's office
- Out-patient pharmacy service
- Optometric services
- Physical therapy services
- On-line medical records system

The expenses of specialized treatment for Olympic Family members in each of the aforementioned areas were covered for the most part by the Transamerica Health Insurance Plan.

The LAOOC purchased from AMI all medical supplies and equipment, including pharmaceuticals, necessary to stock the sports medicine and spectator first aid stations at each venue. Such supplies and equipment were provided to the LAOOC at the price paid by AMI, without any mark-up. AMI also agreed to repurchase equipment and any supplies returned by the LAOOC.

All regulatory and licensing requirements applicable to the establishment and operation of the polyclinics were complied with by AMI, which obtained all required licenses at its own expense.

AMI agreed to provide, at its expense, architectural consulting services in connection with facilities planning and design for the polyclinics. The LAOOC retained ultimate authority in determining the location, space requirements, design and budget for each facility.

The LAOOC was responsible for determining staffing requirements for health professionals at each polyclinic and for securing volunteers to meet such requirements. AMI was responsible for scheduling of the health professionals, all of whom were subject to the LAOOC's personnel policies and procedures.

AMI agreed to provide workers' compensation insurance covering AMI employees and comprehensive general liability insurance with minimum limits of \$20,000,000 per occurrence or AMI's standard insurance policy limits, whichever was greater. AMI also designated the LAOOC as an additional insured under the general liability insurance policy.

AMI was also granted "Official Supplier" status and the rights to use the LAOOC logo to develop a form of employee identification and an official pin, the opportunity to rent a number of LAOOC-reserved hotel rooms and purchase a number of tickets.

14.08.3 Operations of the polyclinics during the Games

There were many positive aspects of the polyclinic operations. The creation of the excellent facilities, although temporary in nature, met the exacting standards of the state of California for permanent clinics and was a major achievement in accordance with AMI's international reputation. The provision of primary care, trauma, and sports medicine services in each of the three clinics was successfully accomplished. There were in excess of 8,500 visits to the three polyclinics and provision of care with continuity among the venues, the polyclinics and the official hospitals was accomplished in a smooth manner. In the few instances where "unofficial" hospitals were used, continuity was more difficult to accomplish because the hospitals were not as familiar with the LAOOC program and the LAOOC staff was unfamiliar with the hospital's key staff.

A positive image was maintained throughout the Games, including favorable print and electronic media coverage during the period of operation. A lack of issues requiring the intervention of the medical command center contributed to that success.

The appropriate numbers of volunteer staff were recruited and trained. Few people were able to commit to the entire 33 days, however, which meant orientation of new staff was an ongoing issue. The only staffing problem existed at USC where a significant number of physicians dropped out the week prior to and during the first week of operations. However, additional physicians were recruited and scheduled to maintain a complete staff.

A typical day of operation in the polyclinics included heavy use of the physical therapy and primary care/trauma areas in the mid morning, late afternoon and late evening. The patterns coincided with treatment prior to competition or training, after competition or training and in the evening when all competition was complete.

Dental services and eye care services were more heavily utilized than expected. It had been anticipated that athletes and officials from developing nations would primarily utilize these services, but they were used heavily by all non-North American countries. Laboratory services, particularly those of a more sophisticated reference nature, were also more heavily utilized than anticipated.

Utilization of the UCLA and UCSB polyclinics was less than expected. UCLA had a total of 2,952 visits compared to 5,010 at USC although the UCLA village was two-thirds the size of USC. Because the UCLA polyclinic was not in the heart of the village, but

Health Services and IOC Medical Control

rather, off to the side, LAOOC security and the Los Angeles Police Department considered the polyclinic outside the village and set up additional access control at the location. The polyclinic operated with impeded access which interfered with patient flow and consequently reduced utilization.

The UCSB polyclinic handled only 622 patient visits of which 258 were for physical therapy. The clinic was successfully operated from the standpoint of management and medical care, but from a cost effective perspective its operation was not justified. The cost of setting up and operating the clinic was disproportionate to the population served.

A reported 8,584 encounters were generated at the village polyclinics. All polyclinic encounters generated medical records. Approximately 68 percent of village encounters were generated by athletes, 17 percent by staff and 13 percent by officials.

Medical services were the highest utilized village polyclinic service, accounting for 50 percent of all visits. Physical therapy was utilized 35 percent of the time.

14.09 Summary

The Department of Olympic Health Services was charged with implementing and operating the medical services for the Games of the XXIIIrd Olympiad. The Olympic Health Services Department realized the highest quality of medical care at minimal expense by seeking maximum use of volunteers, acquiring corporate health services sponsors and negotiating favorable health services contracts.

The accomplishments of the department were many. The LAOOC established a fully accredited doping control laboratory at UCLA, only the second one of its kind in North America. Testing of the athletes went smoothly because of the excellent training of staff and a new procedure implemented to ensure the security of the samples. A total of 12 athletes were disqualified for drug violations.

The gender verification testing went according to plan. The Olympic Health Services Department was concerned about the last-minute rush of the female athletes to the polyclinics for testing just before the beginning of competition. Despite efforts to contact chefs de mission and coaches beforehand to arrange appointments, the polyclinics were still able to accommodate the 60 percent of the female athletes who were tested without prior appointments. The most significant accomplishment was that fewer than one percent of those tested required repeat collection because of poor collection technique.

One of the most innovative and cost effective programs of the Olympic Health Services Department was the official hospital program, designed to designate hospitals in close proximity to each of the villages and venues for advanced medical treatment for Olympic officials, athletes and staff. The hospitals also provided equipment, supplies, personnel and resources to each respective venue or village. The program proved extremely successful with the only problem being late contractual agreements with a few hospitals which made it difficult for them to gather all of the required equipment.

Despite the problems Montreal organizers had with volunteer medical personnel, the LAOOC decided to designate volunteer chief medical officers to direct and be medically responsible for a team of physician specialists, athletic trainers, emergency nurses and first aid/EMT-I personnel. All medical services at the

Games were physician-managed. The CMOs also had responsibility for the doping control operations at their respective venues and all venue-specific training for the medical team. The CMO program proved outstanding as the athletes, officials, staff and spectators were treated to some of the finest medical care and facilities in the history of the Games.

The LAOOC contracted with the American Red Cross to assist in providing spectator first aid. The OHS Department was able to provide an optimum level of care for all spectators with a comprehensive spectator medical plan consisting of an aid station at each venue and teams of first aiders patrolling the public areas. The concept of the roving first aid teams was eagerly accepted as many minor spectator problems were taken care of in a timely and convenient manner.

Care to athletes was provided by physicians and athletic trainers at the sports medicine stations at each venue. Located in the secured athletes compound, the stations also provided care to competition staff and Olympic Family members who required immediate medical care. Each specific station was developed with strict and specific standards depending upon the particular sport at that venue.

The sports medicine program also successfully rendered medical support at 33 training sites.

The Medical Command Center was established to coordinate medical care for problems arising outside the venues or after the venues had closed. The MCC, located at the IOC headquarters hotel, also provided central management of medical information and staff support for the IOC Medical

Commission. Locating the MCC at the same hotel as the IOC headquarters and the LAOOC executive management proved valuable from a logistical standpoint because of the frequent interaction among the three and the sensitivity of medical issues.

The village polyclinics were staffed, equipped, supplied and managed by American Medical International, Inc. The multi-faceted health care facilities were open at no cost to Olympic team members, NOC delegations, and Olympic officials. Although the three clinics were temporary facilities in existing campus structures, they met the standards of the state of California for permanent clinics which was a major achievement. All three clinics ran smoothly and without incident and utilization of the UCLA and UCSB polyclinics was less than expected. In the early stages, the clinic at USC had a shortage of physicians, but the situation was remedied and services were not affected.

Given the tremendous scope of medical coverage throughout the Games, the OHS Department was not without its problems, however. The department failed to plan for efficient transportation of the IOC Medical Commission and had problems with non-emergent patient transport to hospitals and villages. The delivery of medical training supplies was inconsistent and forced some last-minute shuffling before the sites opened.

After the Games there was not enough emphasis placed on tear down of the medical areas within the venues and consequently, some supplies were lost due to poor inventory controls.

After two years of planning and actual operations, the OHS Department left behind standards in health care which are unsurpassed in Olympic history. High standards were established in the areas of appropriate medical levels of care, staffing criteria, the uniform computerized medical records system and the innovative doping control collection procedure.

15

Housing of Olympic Athletes and Team Officials (Villages)

15.01

Concept of the villages

Participants in the Olympic Games of antiquity gathered in the "sacred precincts" of Elis roughly 35 miles from Olympia. There they prepared for competition and were entertained by cultural performers, thus achieving a balance between their physical and mental powers. Participants arrived at Elis at least 30 days prior to competition. Just before the Games began, the athletes and officials moved to Olympia where they pitched tents or built modest huts. These facilities served as the Olympic villages.

The first Olympic village of the modern era was introduced at the 1932 Games in Los Angeles. A modest village accommodating 1,400 male participants was constructed in the Baldwin Hills area of Los Angeles. The selected tract consisted of 250 acres of rolling terrain. Almost every country had its own kitchen and eating area and careful attention was paid to the dining tastes of each delegation. A hospital and an open air theater with seating for 2,000 were also located within the village. The roughly 100 female participants were housed in The Chapman Park Hotel in the Wilshire district of Los Angeles.

For the 1984 Olympic Games, participants were housed in villages located on the campuses of three of Southern California's best-known universities: the University of Southern California (USC) in central Los Angeles; the University of California, Los Angeles (UCLA) in West Los Angeles; and the University of California, Santa Barbara (UCSB), located 125 miles north of downtown Los Angeles in Santa Barbara.

The three Olympic villages provided an atmosphere where participants could find privacy off the field of competition and intermingle with other residents in a relaxed and friendly environment. They also provided participants with a home away from home and included services ranging from food, mail and bank services to health, entertainment and language services. LAOOC efforts focused on planning for the safety and comfort of the athletes as well as for adequate training and team administration facilities.

15.01.1

Need for three villages

One of the basic tenets of the Los Angeles bid for the Games was that existing facilities would be used wherever possible in order to reduce the massive construction costs usually associated with the staging of the Olympic Games. The use of the two campus facilities—UCLA and USC—as villages appeared in the original bid documents submitted by the city in 1978. The May 1978 "Responses to Questionnaires from international

Olympic Committee and International Sports Federations" stated that "athletes and support staff will be housed at the student residences at the University of Southern California and the University of California, Los Angeles." Both campuses were needed for use as villages, since neither had enough on-campus rooms to hold the expected 12,000 athletes and team officials. Both, however, had thousands of rooms for resident students and were hosts to numerous athletic events and conferences during the summer period.

Because of the use of Lake Casitas for the canoeing and rowing events, it was determined that the travel time between the UCLA and USC villages was too long and that a different solution for housing athletes competing in those sports had to be found. The University of California, Santa Barbara campus was much closer and provided a good site for athlete accommodations while competition took place at Lake Casitas.

15.01.2

Use of existing campus facilities

The USC Olympic Village was created on 49 acres of the campus of the University of Southern California. Almost 6,000 athletes and officials were housed in permanent residence hall and apartment-style student accommodations. Two 500-seat dining halls were used to feed athletes and the LAOOC constructed a new two-story dining facility with seating for an additional 900 persons. The UCLA village was created on a 65-acre site. Housing facilities included four residence halls and two residential suites for up to 4,400 athletes and officials. Dining rooms existed in each of the four halls with a combined capacity of more than 2,000. The UCSB village covered 20 acres and included three residential units. A total of 850 rowing and canoeing/kayaking participants were accommodated at UCSB. Food services were centralized in one dining hall that had a capacity of 550. In most cases, additional facilities for the athletes such as saunas, weight training, swimming and recreational areas were in existence as a regular component of the university environment.

Basic contractual agreements for the use of the campus facilities were signed in February 1981 for UCLA, June 1981 for USC and March 1982 for UCSB. These contracts set forth basic terms and conditions for use of the campuses including: 40-day exclusive use periods for USC and UCLA (a 35-day exclusive use period was agreed to for UCSB); identification of all residential,

recreational, sports and training facilities to be used by the LAOOC; general conditions for use of the property; provisions for payment and provisions for future amendments or changes to the contracts.

15.02

Design of the campuses for village use

The villages served three primary purposes: as homes for the participants, as training centers for the athletes and as administrative centers for the National Olympic Committees (NOCs). Although existing facilities provided a foundation for the establishment of the three villages, many temporary structures were added to fulfill additional functional requirements.

In previous Games, one Olympic village was constructed for all participants. Men and women were housed in separate buildings with an international zone or "mixed zone" just outside the village grounds where reporters and athletes could meet. For the 1984 Games, co-educational residences were approved by the IOC at its May 1982 meeting in Rome. Entire delegations were thus housed in the same building but on different floors or wings, facilitating team administration. For 1984, no international zone was planned. Instead, a village square at USC and UCSB and a village main street at UCLA were located inside the villages with restricted press and guest access. On Main Street, athletes were able to enjoy amenities such as a convenience store, coffee house, bank, post office, telephone center, cinema, disco and hair salon.

15.02.1

Determination of the physical alterations

At the USC Village, design criteria focused on provisions for athlete safety, housing and food, human services, athlete training and team services. This was accomplished by organizing the existing and necessary temporary facilities into activity clusters connected by the Look. There were six distinct housing areas, or pods, a transportation center, an administrative center and an area identified as "Village Square" that included most of the services and recreational facilities for the athletes and officials.

Most of the housing and office requirements at the village were satisfied through the use of existing facilities. Other facilities, such as staff and guest entries, outdoor rest areas, additional kitchen and dining facilities, a wrestling training site and a transportation center, were constructed.

The village layout allowed for movement without congestion and was designed for pedestrian use. The only vehicles allowed in the village were athlete shuttle buses, maintenance vehicles and the administration's electric carts.

The housing pods were located on the perimeter of the village. Each pod consisted of one or more existing residence halls and had one pedestrian entry point, denoted by a special tent that housed a guard station and magnetometer. A survey of room and suite size and allowable densities showed that the contracted rooms could hold 8,549 occupants. During the Games, the village accommodated roughly 6,000 athletes and officials. All cooking facilities were disconnected to allow the suites' living rooms to be used for sleeping quarters, thus providing a higher occupancy level.

The food service staff prepared precooked meals in a central location and served them buffet style in the four dining areas. Peak usage was planned for 6,800 meals in a three-hour period. To accommodate this, the nearby Shrine Auditorium was transformed into a food preparation and distribution center. Two existing USC dining facilities were located in housing pods. Additional tables and chairs were added where allowable to increase seating capacity. Storage containers were placed outside the kitchens to hold food and service products. A new dining facility, adjacent to Webb Hall, was equipped for Olympic use in a similar fashion as the other dining halls. Built by the LAOOC, it was a separate two-story building servicing two other housing pods. Athletes were allowed to dine in any location they chose.

Athletic services were available in existing and temporary facilities. The Physical Education Building contained gymnastic training and swimming facilities. Cromwell Field was a training and competition warm-up site for athletics. The basement of Heritage Hall had an expanded weight room and modified hydrotherapy area. The wrestling training area was built on three tennis courts. A plywood deck was covered by canvas stretched over scaffolding, forming nine wrestling mat areas.

NOC administrative services were provided in the lobby of Annenberg Hall. Its upper stories, the second level of Taper and the bungalow area of the village—adjacent 32nd Street School housed individual NOC offices and meeting rooms. Generally, with the addition of movable partitions, telephones and EMS terminals, the rooms worked well as team office space.

Transportation services were provided for all athletes and team officials to and from all venues, training sites, villages and the airport. Included in the program were NOC fleet vehicles that parked in village perimeter and other remote lots. A portion of the 32nd Street

5 The track at UCLA's Drake Stadium with the village in the background.

School playground housed the transportation information and waiting plaza and the adjacent Shrine Auditorium parking lot contained 36 bus loading areas. A large reader board indicated which buses and loading stations to use. The entire operation was guided from a 42-foot high scaffold transportation tower. Athletes going to the Sports Arena and Coliseum used a special shuttle system located just southwest of the village boundary. Press arrived from the Main Press Center via another shuttle system.

UCLA's residential facilities are segregated from the rest of the university in the northwest section of the campus. Therefore, it was relatively simple to build a fence around this sector and isolate the Olympic village from the rest of the campus. It was also easy to enclose the athletic facilities of Drake Stadium, the intramural field and the new Wooden Center to include them in the village. What the village lacked were buildings to house NOC offices and common areas such as a disco, coffee house and a main street. Also, a parking lot for use as a bus depot and a ceremonial entry had to be identified.

A suitable entry was found by extending the village to include the James West Center which is situated in a prominent position at the end of Westwood Boulevard. The lack of NOC office space was solved by bringing in temporary office trailers for two countries and locating the other offices in extra space in the residence halls. Locating a place for the common areas or Main Street was solved by using the concourse at the top of Drake Stadium which had a 40-foot wide concrete walk suitable for a pedestrian street. Scaffolding was installed over Drake's seating area to form a platform and tents were erected for temporary use. The Main Street location was highly visible and served as the visual and social focal point of the village.

The only place where a large bus depot could be created was on the intramural field where a 25-stop depot was placed. As part of the complex, a 35-foot-high transportation tower was built with scaffolding. At the pedestrian waiting area, scaffolding again was used for decorative purposes.

Gymnastics warm-up was planned for the Wooden Center which was located within the village. Competition was held in Pauley Pavilion directly to the south and outside the village. To get from one building to the other, athletes used a scaffold bridge which was built to allow gymnasts to cross over the pedestrian thoroughfare without being distracted or disturbed. The bridge was covered with white fabric to shield

the athletes from view and was decorated with Olympic rings and colorful panels. To pedestrians entering the village and passing under the gymnasts' bridge, it was seen as a ceremonial archway.

The existing housing and food facilities met all requirements. Housing pods included four high rise buildings and two-story apartment complexes. One of the high rise buildings also included office spaces for the majority of NOCs housed at UCLA. Accommodations within the high rise buildings consisted of rooms housing two or three athletes with bathrooms located on either end of each floor. The two-story apartments were designed to hold as many as eight athletes with a separate toilet facility for each apartment. Each apartment was also equipped with a living room.

The 20-acre Olympic village at Santa Barbara housed approximately 850 team officials and rowing and canoeing/kayaking athletes. The rowing and canoeing venue, Lake Casitas, was located 30 miles from the village. UCSB provided services and entertainment equivalent to the villages in Los Angeles although it was frequently referred to as satellite housing. Residents began arriving 14 July 1984 and occupancy peaked on 5 August. When rowing competition ended, two residence halls, Santa Rosa and Anacapa, were returned to the university the morning of 6 August and all rowing participants were required to move out. Prior to the village opening, internal fences were installed that allowed the village perimeter to shrink. An eight-foot-high double chain link fence, between eight and twenty feet apart, was installed around the village.

The village was located in the southeastern corner of the UCSB campus and bounded by UCEN Road on the north, the Pacific Ocean on the east, a lagoon on the south and by Channel Islands Road on the west. Six buildings were utilized. They included three two-story residence halls: De La Guerra Dining Commons; University House, which was used for LAOOC administration and VIP hosting; and Centennial House, which was used as an ecumenical center. In addition to the permanent structures, tents were used for the main entry, staff entry, Main Street, cinema, disco/coffeehouse, sauna/massage/weightroom, staff dining, press interview area, NOC service center and supplemental space for the polyclinic functions in one of the residence halls. Trailers were used for NOC offices, equipment storage, press sub-center and to supplement the administrative offices.

The village had three main entrances: the bus entry, the pedestrian entry and the staff/service entry. There was also a controlled gate located at the south end of Lagoon Road for university employees who required access to the

marine biology laboratory. Those employees were shuttled by an LAOOC-provided bus through the village to the lab via Lagoon Road. The bus entry was considered the "theme" entry because it accommodated the athlete buses during their departure and arrival. A security tent was located at this gate to limit access to athlete buses. A parking lot outside the village was used for bus staging, transportation operations and parking for guests and Olympic Family. The pedestrian gate was used by athletes when traveling by foot as well as athlete guests and press, although athlete circulation was separated from both guests and press. The third main gate, the staff and service entry, was located in the southwest corner of the village. In the southern portion of the village a parking lot was used to store trash containers and house the staff dining area and restrooms.

15.02.2 Liaison with the campuses in the pre-Games period

In June 1981, basic agreements with USC and UCLA had been signed and the LAOOC hired one staff member to begin conceptual planning for village operations. By January 1982, a number of scenarios had been drafted that detailed the various functional areas of the villages; a second staff member was then added to plan village operations. The planning scenarios gave a general description of the activities for each area of village operations and examined anticipated policies, operational procedures, staffing levels and service levels needed. Additional needs at the campuses were also identified including extra facilities, parking lots, ticketing areas and equipment. The LAOOC then began detailed negotiations with the campuses in September 1982 for additional facilities and approval for construction and alterations to existing structures. The final amended agreements were not concluded until June 1984.

During December 1982, administrative teams within the Villages Department were established for each village. Teams consisted of one administrator and two staff members, all under the supervision of a vice president for villages. The Villages Department structure remained the same through September 1983, when a number of formal staff positions and responsibilities were established. The structure at each village included: an administrator with overall operational responsibility, directors of programs, operations and administration and personnel managers to recruit and train the large numbers of Games staff.

6

Negotiations with the campuses were coordinated by the Villages Department vice president and the village administrators. Each campus appointed a liaison to the LAOOC who reported directly to a senior-level university vice chancellor or vice president. Discussions were frequent by late 1983 through May 1984 and included: use of university personnel for housekeeping, health services, food services, maintenance and security; use of additional university facilities and approval of the installations of additional facilities for offices, Main Street, ceremonies and dining. Other village personnel interacted with the university housekeeping and maintenance management staff in tailoring their operations to meet LAOOC needs.

By April 1984, the village staff ranged from 50 who were finalizing the planning for USC to 20 who were working on the UCSB Village. By June, the village staff members were moved from the LAOOC administration headquarters to offices at their respective sites. Final village staff totals were 5,850 at USC, 4,000 at UCLA and 2,500 at UCSB. The totals included contracted staff for housekeeping, maintenance, security, transportation and food service.

15.03 Village administration and operations

From September 1983 until May 1984 the Olympic villages at USC, UCLA and UCSB were under the direction of an LAOOC group vice president, who was assisted by village administrators in charge of detailed planning. In May 1984, the Village Department was split into three separate operations following the appointment of mayors for each village. During the Games, the

6 UCLA Village Mayor Jim Easton takes Los Angeles Mayor Tom Bradley on a walking tour of the campus.

Housing of Olympic Athletes and Team Officials (Villages)

mayors at USC and UCLA reported directly to the LAOOC executive vice president/general manager; and the mayor at UCSB reported to the LAOOC vice president for northern operations. During village operations from 14 July through 15 August, the mayors were most actively involved in protocol, ceremonies, government relations and NOC relations with the village administrators responsible for all other operations under the mayors' general direction.

15.03.1 Administrative organization

Though each village had its own particular administrative organization, the overall concept was similar. The mayors were responsible for overall operations of each village. Village administrators served as acting mayor in the mayor's absence. Village directors reported to the village administrator or managing director and were assigned the following functional duties:

- Director of administration; access control, finance, personnel and technology
- Director of operations; custodial services, facilities maintenance, housekeeping, groundskeeping, health services and food services
- Director of programs; Main Street, sports services (training), entertainment and recreational facilities

Assorted managers were responsible for the various other village functions including: NOC relations, NOC services, security, personnel, protocol, construction and media. Assignments were based on the abilities of individuals to fill the tasks and each director selected specific managers who functioned in their absence. This redundancy proved to be an important factor in guaranteeing a sustained high level of performance from all management staff throughout the 33-day operation of the villages.

15.03.2 Mayor's office

The mayor's offices were located in a central area at each village. Working with the mayor were one or two executive assistants, three deputy mayors for USC and UCLA, a director of protocol, a welcoming ceremonies coordinator and a government liaison. Also assisting the mayor's office were hosts and hostesses, guest escorts and assistant protocol personnel. This staff, which formed the mayor's operations team, was responsible for:

- Planning and coordinating a media preview of each village and a ceremonial opening of each village
- Planning and coordinating the team welcoming ceremonies for the delegations housed at each village
- Conducting VIP village tours for IOC members and their guests, royal families, heads of state, bid city delegations, high-level government officials, corporate sponsors, team officials and LAOOC officials from other venues

- Development of the mayor's gift program and setting policies and procedures for the distribution of gifts to different categories of guests. All mayors agreed to follow established guidelines in this distribution so that all guests in each category would receive the same items.
- Management of the hosts/hostesses assigned to the mayor's office
- Issuance of passes to special guests visiting the village

Neither the mayor nor his management staff predicted the heavy work load encountered during village operations. Scheduled operating hours were from 0800 to 2000, but more often there were staff in the office from 0700 to 2300. Questions centered around the changing of accreditation, the issuance of additional passes to guests of delegates, the protocol of welcoming ceremonies, the internal transportation system, the protocol of gift giving and the hosting of social events.

The gift program was designed so that there would be uniformity of distribution for the three villages. After discussion among the mayors and protocol directors, the gift-giving program was finalized and the gifts available for distribution were limited to a village-specific pin, a flag-sized village banner (five-foot by eight-foot), village souvenir banners (24-inch by

36-inch) and village posters (22-inch by 34-inch). The mayors also presented to each chef de mission a replica of a sheriff's badge that was imprinted with "Chef de Mission, Games of the XXIIIrd Olympiad" and presented to assistant chefs a badge which read "Games of the XXIIIrd Olympiad."

Village pins for the athletes were presented to the chef de mission or a designee at the reception following each welcoming ceremony. The mayor of the village presented the souvenir banner to the chef de mission during the welcoming ceremony. Gifts were presented to VIPs, heads of state, LAOOC officials and university officials when they visited the mayor's office.

A host or hostess was assigned the task of maintaining a distribution log of each gift item, who received it, the date it was delivered and by whom.

The village mayors recommend that future organizers utilize staff who, as a unit, possess the following skills:

- Ability to make decisions in a high pressure environment
- Knowledge of at least one major foreign language
- Familiarity with media operations and public relations
- Understanding of the Olympic Family structure, its hierarchy and operations
- Experience in international relations diplomacy
- Experience in planning special events (receptions and dinners)
- Flexibility within a broad interpretation of pre-established rules

7 A welcoming ceremony at the USC Village

15.03.3 NOC relations

Before being incorporated into Olympic village operations, the NOC Relations Department functioned as the LAOOC contact for all National Olympic Committees. This included communications by letter, telex, telephone, in person with attaches, in person during delegation visits, and by publication of "Communique" a bi-weekly newsletter sent to all NOCs that included information on a wide variety of logistical and technical questions, LAOOC policies and procedures and detailed orientations to villages and venues.

Prior to the Games, the NOC Relations Department maintained all data on financial matters, athlete registration, projected number of officials, Los Angeles arrival dates and automobiles assigned per NOC. NOC Relations also coordinated mailings to NOCs, collected and shipped various publications and responded to requests for information. NOC Relations personnel were also key members of the training force for Olympic envoys and aides. After transferring to the villages, NOC relations personnel assisted with accreditation, sports training, transportation, medical problems, financial questions and travel concerns.

During early 1984, the recruitment, selection, appointment and training of Olympic envoys was undertaken by the NOC Relations Department. Once chosen, envoys assisted in the recruitment and selection of aides. Envoys were employees of the LAOOC and functioned as the Organizing Committee's official representative to a designated NOC or to a cluster of smaller NOCs. Each envoy was responsible for the relationship between the LAOOC and his NOC and was the primary contact person for the Olympic attache named by the NOC.

Each envoy was fluent in the primary language of his NOC and understood the customs and traditions of that country. Envoys were appointed as early as 1982, but most were selected six months prior to the Games. Functioning initially on a part-time basis, most took a leave of absence from existing employment beginning 1 July 1984, until the conclusion of the Games. The responsibilities of the envoys included the following:

- Ensuring that the attache and the team were furnished with all available information, including travel arrangements, village assignment, hotel accommodations and administrative and financial matters
- Familiarization with the organization of the LAOOC, its operating policies, systems and procedures, the location of all venues, training sites and procedures for using them
- Assisting NOCs to meet all their commitments with respect to Games participation

- Attendance at briefing sessions at the LAOOC and involvement with visiting delegations from his NOC
- Assisting in the accreditation procedures for the NOCs' representatives, competitors, officials, guests of honor and journalists
- Leading the NOC service team which consisted of NOC aides and drivers during the Games operating period
- Providing any other assistance the NOC required. The envoy was an essential contact between the village mayor and the NOC

Envoys were selected by the LAOOC based on their commitment to the Games, their understanding and support of the LAOOC and its goals and their understanding of the country to which they were assigned. Envoys as a group demonstrated an interest in world affairs, could exercise keen, mature judgment in potentially sensitive situations and could maintain a diplomatic and calm demeanor during times of stress. One envoy was chosen to represent each of the larger NOCs (delegations larger than 100 persons) and up to four smaller NOCs shared an envoy. It was expected that envoys, aides and drivers would function as a management team working with each chef de mission and assistant chef. Each envoy was responsible for his NOC and during village operations reported to the mayor of his respective village. The envoys greatly facilitated operations during the Games and their use is strongly recommended.

15.04 Village in-processing and registration

The Olympic Arrival Center (OAC) formally opened 14 July 1984. Located at the Los Angeles International Airport, more than 10,000 village residents cleared U.S. Customs and received their accreditation there.

15.04.7 Pre-arrival communications

During the village planning phase, as much information as possible was gathered regarding expected team sizes, their make up-expected number of men and women and the sports that NOC expected to enter and arrival/departure dates. The gathering of this information began in August 1982 when a questionnaire was sent to all NOCs. This was followed by a second questionnaire given to all NOCs visiting Los Angeles in January 1983 for the meeting of the IOC Executive Board with the NOCs. Questions ranged from the type of banking services most preferred by the NOCs to storage

needs. The answers elicited from the countries were of great help in the village planning process.

Communications with the NOCs during in-processing was conducted by the Sports, NOC Relations and Accreditation Departments. Villages Department communications with the NOCs focused mostly on financial/accommodations information as well as on various entry and financial deadlines. This information was sent to the NOCs in "Communique", an LAOOC publication distributed every two weeks from 1 March 1983 through 15 May 1984.

More than 90 percent of the NOCs expressed a village preference and some even expressed an interest in particular residence halls within a village. In accordance with a village pricing policy agreed to between the IOC and LAOOC in January 1983, NOCs were required to advise the LAOOC of their maximum delegation size and pay a village deposit of \$35 per person by 1 March 1984 for teams larger than 50 persons. In return, the LAOOC was required to notify each NOC of its village assignment by 1 April 1984. After 1 June 1984, final assignments to specific villages and room blocks were made. The NOCs were then notified of the assignments by 15 June 1984. A chart of the allocated rooms was sent to the NOCs which allowed the teams to make specific room assignments.

15.04.2 Arrival of cargo and freight in advance of the teams

The Material Logistics Department was charged with responsibility for the management and coordination of inbound Olympic cargo. Cargo delivered to the villages included:

- USC Village and swim stadium; 2,568 pieces weighing 310,941 pounds
- UCLA Village, gymnastics and tennis; 973 pieces weighing 42,642 pounds
- UCSB Village, canoeing and rowing; 69 pieces weighing 18,320 pounds

15.04.3 In-processing at LAX: The Olympic Arrival Center

A majority of the Olympic Family members processed through the Olympic Arrival Center were holders of "F" Olympic identity cards. Teams usually were led by their chef de mission who received a "C" Olympic identity card. On occasion, the chef preceded his delegation's arrival at the OAC and verified and paid for all the members of his delegation. This facilitated the in-processing of team members once they arrived since payment was completed and accreditation credentials were accurate. Prior to accreditation, NOCs were required to pay a \$700 deposit for each team member staying in the village. This was based on a 20-day stay at \$35 per day. Funds for unused days were refunded to the NOC after departure.

15.04.4 Village arrival and move in of the teams

Many members of teams did not arrive with their delegation. Three basic arrival patterns at the villages occurred:

- The chef de mission arrived at the village before the team, conducted a room inventory, signed for all the keys and advised village staff of the team arrival schedule.
- Team members arrived in one group with their chef de mission.
- Team members arrived before or without their chef de mission.

Teams who arrived before or without chefs were the most difficult delegations to handle since often there was no advance arrival information and no team leader responsible for the athletes.

The Villages Department utilized three separate notification systems to stay informed about team arrivals at the OAC which included: telephone notification from finance personnel at the reception desk, corrected team lists sent by telecopier to the village housing office after teams checked in at the OAC, and telephone notification from the envoys/aides once the teams departed from the airport. The NOC Relations Department kept each village informed of all delegation size changes which occurred prior to each team's arrival, but frequently the teams arrived at the airport with more athletes and officials than anticipated. This caused a number of last minute changes in room assignments. It is vital to establish a reliable communications procedure between the team accreditation area and the village to insure that upon village arrival the teams have sufficient space allocated to them. Failure to properly update the village housing office of the actual accredited team sizes and expected arrival time can lead to a chaotic reception at the village.

In some cases, NOCs requested additional space in order to house their athletes by sport. Whenever possible, adjustments were made to space allocations in order to accommodate reasonable requests. Very few teams had a constant number of athletes staying in the Los Angeles villages since housing was also provided for athletes competing at Lake Casitas and Coto de Caza. Many NOCs also provided private housing for some of their athletes outside the villages. Space allocations enabled these athletes to return to the village if they wanted.

The male/female breakdown of an NOC was critical to determining the proper allocation of space. Men and women were not housed together in the same

Housing of Olympic Athletes and Team Officials (Villages)

apartments, but did share a central hallway or entry. In the residence halls, men and women were separated by floor or wing. They never shared bathroom facilities. At two of the villages there was some apartment style housing; therefore, when a team arrived with only one person of a sex, a complete apartment had to be assigned to that person and as many as five spaces were lost.

Once delegations arrived at the OAC, the village housing office was notified of the delegation size. If the delegation size differed from earlier projections, the housing manager rearranged the delegation's room configuration to fit the actual delegation size. The housing clerks adjusted the number of pre-packaged keys to match the new room totals. Each morning, the housing office sent a schedule of arrivals to the village protocol office so that village management could prepare to informally greet the delegations. The reception team walked the delegation to their assigned housing pod entrance where the athletes picked up their luggage. NOC aides were responsible for familiarizing themselves with their delegation's housing and NOC office area. If there was no aide assigned to the delegation, the NOC services group assigned a host/hostess. Before entering the housing pod, the key packages and inventory sheets were given to the chef who was required to sign for the keys. The NOC aide assisted the chef in taking inventory of the delegation's assigned rooms and then turned in the inventory sheet to the NOC service center. The rooms were re-checked against the inventory sheets immediately before departure.

While the athletes completed their accreditation procedures at the OAC, their luggage was loaded onto the bus that took them to their village. Buses accommodated 26 athletes and their luggage. Before luggage was loaded onto the bus, it was security screened and checked for identification. If there was no identification on the luggage, an ID tag was issued by an attending host/hostess once the proper owner was identified.

The bus carrying the athletes and their luggage arrived at one of the village bus entry gates and then proceeded to a central disembarking point where the athletes usually unloaded their own luggage. The athletes, with the help of baggage handlers, loaded their luggage onto waiting trucks that delivered the luggage outside the housing pod where the athletes claimed their bags on their way in. If there were any unclaimed items, the driver loaded them back on the truck and took them to a secured storage area.

15.04.5 Welcoming ceremonies

Between 14 July and 5 August 1984, the mayors hosted welcoming ceremonies for the 140 countries residing in the villages. The stated purpose of the team welcoming ceremonies was to provide official recognition by the LAOOC of the arrival and residency of an NOC in the Olympic village. Equally important was that the welcoming ceremonies provided a special occasion for the promotion and encouragement of international friendship and goodwill through the personal contact that was made between the mayor or his representative and the individual delegations.

In preparation for the welcoming ceremonies, information about the 140 countries was compiled, including the name of the envoy, attache, chef de mission, president and secretary-general of the NOC. Also, the number of athletes and the language of each country were noted in order to determine which countries' ceremonies could be grouped by a similar size, language and culture.

Each envoy was contacted and notified regarding the time and date for his delegation's welcoming ceremony. The ceremonies were held during the first three weeks of village operations. A tentative date for each ceremony was often selected during initial discussions with the envoy or chef and then confirmed upon arrival through the mayor's office. The procedures were reviewed, the flag and anthem were checked and guest lists for the country were discussed. The chef could select an athlete to carry and raise the flag. Each country was requested to submit its guest list in writing at least 24 hours before its ceremony so parking and entry passes could be secured. The number of guests was originally limited to approximately 10 per ceremony, but this proved unworkable. Some countries with large local populations requested passes for 40 or more guests. These requests were accommodated, but they complicated the entry procedures and the post-welcoming ceremony receptions. Guests were requested to arrive 20 minutes before the ceremony in order to allow enough time for gaining access into the village and to allow for picture taking at the ceremony site. The LAOOC's specially commissioned Olympic music was played during this period.

Envoys brought the chef de mission and the athlete flag bearer to the mayor's office 15 minutes prior to the ceremony. Interpreters joined the meeting in the event clarification was needed. The script was reviewed and the flag bearer and an assisting mayor's hostess were shown how to carry and raise the flag. It was critical that the chef verify that the correct anthem and flag were used.

Once the ceremony began, the background music was turned off, guests took their seats and athletes were escorted into the ceremonies area. Olympic fanfare music was played as the mayor, chef, envoy, flag bearer and hostess marched in single file up to the podium. If more than one country was welcomed, the mayor entered first with the interpreters on his right. The chefs followed and walked side by side, then the envoys, followed by the flag bearers and hostesses. In multiple country ceremonies, the countries were welcomed in the order they were recognized by the IOC.

Since there were only three flag poles, a maximum of three countries could be welcomed at one time. During the ceremony, the entire script, with the exception of the introductory and concluding paragraphs, was read and interpreted for each country separately. In this way, even if three countries had their ceremony at the same time, each still felt special.

The mayor usually welcomed each country with the following words:

"As mayor of the (name of village) I am pleased to extend a very warm welcome to all of you-athletes, chefs de missions, team officials, team staff and special guests of your National Olympic Committee(s).

"We hope we have created an interesting and exciting Olympic village, a place where the Olympic spirit can thrive.

"There are (number of countries) represented with (number of athletes and officials) residing at the (name of village). In the spirit and tradition of the Olympics we know that friendships among the village neighbors will extend beyond the stay here and will transcend the differences in geography, politics and language."

The mayor then introduced the envoy who in turn introduced the chef. The mayor then invited the country to raise its flag as its anthem was played. The village banner was presented to the chef and the athletes and other delegation members were invited to the podium for an official photograph. Each country was given six eight-inch by ten-inch photos of its assembled delegation and a copy of the negative as a gift.

After each ceremony there was a reception for the NOC officials and guests in the mayor's reception area. At USC and UCLA, athletes were only included in the reception when their numbers were small enough to fit into the room. At UCSB, the entire team and their guests were always included at the reception since the numbers were smaller than in Los Angeles. The mayor, or one of the deputy mayors, toasted each country and presented the chef with village pins for each athlete and official. In some cases, the village pins were personally attached to team uniforms by the hosts and hostesses.

Several days after the ceremony, the chef or envoy was advised of the time and place to pick up the gift photographs. Arrangements were made in case the delegations wanted to order more prints before they left Los Angeles. Most countries were particularly pleased and appreciative of this gift and service.

The welcoming ceremonies were held in a special ceremony area near each mayor's office. The entire procedure from the time the envoys and chefs met at the mayor's office until the end of the reception took approximately one hour depending on the size and number of countries involved.

The welcoming ceremonies were successful and were performed smoothly and graciously. One hundred forty countries were officially recognized and welcomed to the villages. Since there were many countries participating for the first time and many others which were not favored to win a medal, the welcoming ceremony provided an opportunity for the delegations to see their flag individually raised and hear their anthems played. This was a very special experience for most of the participants and many of the teams wore clothing unique to their country and sang their country's anthem.

Nearly all NOCs wanted to have more guests than they had NOC guest passes. Although all requests were accommodated, the main entry access control system was strained. Limiting the number of guests or prohibiting them was not a viable solution and future organizers should allow village access to all guests requested by each NOC as well as accommodate unexpected arrivals, if possible.

A total of 785 participants checked into the villages by the end of the first day on 14 July. These numbers gradually increased with the largest proportion of arrivals occurring on 23, 24 and 25 July. Total villages population peaked on 4 August with 10,084 residents.

**15.05.2
Occupancy after move in**

Participants began moving out of the villages as early as 30 July, three days after Opening Ceremonies. Athletes who were eliminated in the early rounds were often sent home by their NOCs. At UCSB, some rowing and canoeing teams chose to live outside the village in houses, hotels or apartments since the village was a one hour bus ride from the competition site.

As many as 200 participants chose to stay in housing closer to Lake Casitas prior to semi-finals or finals. Rowing participants housed at UCSB left the village on 6 August since two of the three residence pods were returned to the UCSB campus. These participants had the option of either returning to the village of their respective country or returning home.

**15.05.3
Team move out patterns**

Many participants, including almost 50 percent of the total residents at USC, moved out of the villages on 13 August following Closing Ceremonies. The UCSB Village closed on 12 August and the remaining athletes had the option of going to their country's village in Los Angeles or returning home. By 14 August, only two percent, or 189 residents, remained.

A task force was formed two weeks prior to the end of the Games to develop departure procedures for NOCs. The task force consisted of the housing, transportation, finance, and NOC support operations managers. Envoys were given several briefing sessions before and during departures to explain procedures and to encourage them to coordinate the NOCs' departures. A five-part form was handed to the envoys to distribute to their NOCs. The completed forms were required to be returned to the NOC support operations manager 72 hours prior to departure for distribution to the following:

- The travel liaison; to reconfirm airline flights
- Transportation; to provide buses from the village to the airport three hours before flight time with one hour of preparation time
- Hosts/Hostesses; to help team members and guide them to their buses. They also punched holes in accreditation badges to void them.
- Housing office; to set up appointments for a check out inventory. This was to ensure proper assessment of loss/damage charges to NOC accounts.
- NOC offices coordinator; to set up appointments for the check out inventory of NOC office space, again to ensure proper assessment of loss/damage charges to NOC accounts
- Finance; to finalize accounts with chefs de mission and punch holes in their badges to void them, stopping charges to NOC accounts. To aid finance in deauthorizing delegations, tables were set up outside of each residence hall for staff to punch badges and log names and badge numbers of team members and officials. Chefs de mission were generally the last to depart in order to enable them to close out accounts.

15.06 Village operating programs

15.06.1 Access control

From 25 July through 12 August, roughly 12,000 people per day passed through the gates of each Los Angeles village. This included athletes and officials who resided in the village, village staff members and village guests, including press. At each village there was a main pedestrian entry, a staff entry and vehicle entries used primarily for access by the athlete transportation system and law enforcement. Vehicle entries were usually used during early morning hours by trucks, vans and other vehicles for replenishing consumable goods and for maintenance.

The LAOOC gained exclusive control of the village areas roughly one week before the villages opened. Not until two days before the villages opened, however, was a serious access control effort begun. The large number of construction personnel who required access to the villages, combined with the limited number of accreditation badges available for the staff, made it unreasonable to strongly enforce access control procedures before 12 July.

The village main entries were used for the daily pedestrian access of the following:

- Village residents (athletes and officials)
- News media (maximum of 200 passes at USC and UCLA, 40 at UCSB)
- NOC guests (passes were based on the following delegation sizes)

Delegation size	Number of passes
1 - 24	2
25 - 50	3
51 - 100	4
101 - 200	6
201 - 300	7
301 - 400	8
401 - 500	9
500 plus	10

8 One of the rooms at the USC Village.

- Mayor's guests
- Olympic Family
- LAOOC administration
- University staff

The main entry was also used for deliveries such as packages, newspapers and flowers. It was staffed 24 hours per day and a bar code reader was used to identify deauthorized badges. The main entry staff worked closely with village security to maintain an orderly traffic flow. Security was responsible for the magnetometer operation and assisted in confiscating de-authorized badges.

The mayor's staff and main entry staff communicated daily, especially during welcoming ceremonies and dignitary visits. The mayor's office also assisted NOCs when their guest pass limitation was exceeded. Hosts and hostesses worked in conjunction with the main entry staff to escort the guests from the entrance to the accreditation room and then to the location in the village they planned to visit. During village check out, main entry staff helped de-authorize badges of departing residents.

The number of guest pass requests were numerous which placed a heavy burden on the main entry staff. Even though all guest requests were supposed to be submitted 24 hours in advance, many NOC delegations added last-minute requests. Once the chef and assistant chef de mission were familiar with the Electronic Messaging System, they sent their guest lists by EMS which was helpful for adding names inadvertently left off an initial request or for adding names of those who appeared without warning. Some

chefs felt more comfortable using handwritten forms and both methods were used.

The guest pass limitations proved inequitable for the larger delegations. The smaller delegations had few problems with the allotted four to five passes per day, but delegations with 300 to 500 members were constantly exceeding their limits and leaving many disgruntled guests waiting for other guests who were already inside the village to leave, thus freeing a pass. The mayor's office provided extra passes to occasionally relieve this problem.

The entry staff was responsible for checking in and issuing badges to village staff as they reported for work. The entry staff also stopped all employees who did not have a security clearance or were not scheduled to work, de-authorized badges of people who were terminated from positions, prepared and issued temporary employee badges, changed badge inserts, issued temporary passes for entertainers and checked the validity of all badges.

The most difficult problem for entry staff was the repeated need to issue temporary badges for staff who required access to the village and had not yet been issued a permanent badge. Another frequent request was to correct access codes on a number of badges which were labeled incorrectly or too restrictively. Approximately 15 percent of the village staff was allowed access to the village through both the main entry and staff entry. This was due to their function as either a host/hostess, envoy or a member of the village management team.

Vehicles were allowed to enter the village only when prescheduled by village management or by use of identification passes. Vehicular entries were controlled and staffed by village security.

15.06.2 Language services

Language services at each village were designed to meet the language needs of the village staff, residents and visitors and consisted of both interpretation and written translation services. The village language services manager and the assistant manager coordinated the deployment of interpreters from the language services office which was located in the NOC service center. From this central location, the Managers were able to respond to interpretation requests as well as monitor the activities and location of the interpreters on duty. Each interpreter's location was tracked at the language office and interpreters were assigned pagers whenever they left the office so they could be recalled or reassigned to duties of greater priority. Interpreters were responsible for three primary areas:

- Village telephone bank; one or two interpreters covered a minimum of five major languages at all times during operating hours. The telephone bank fulfilled two principal functions: to support the village telephone switchboard and provide assistance to callers from anywhere in the village.
- Dispatch pool; interpreters were "on call" to assist as needed throughout the village. The major areas of need were the polyclinic, at welcoming ceremonies, in the residence halls and at the main entry.
- Other services; language services at the village assisted other LAOOC staff, particularly the envoys and aides. While most envoy/aide teams

were fluent in the language of their NOC, they were unable to meet all the language needs of their delegations, especially the larger ones. As a result, the village interpreters were called upon to assist the chefs de mission, coaches and team members.

In addition to interpretation, written translation services from French into English and vice versa were provided. All village administration translation requests, as well as those made by NOCs residing at the villages, were coordinated through the village language center. Even in cases where NOCs requested translation services at venues, they were directed to make their requests through the village language center.

Translation services for NOCs were provided on a fee basis. Only the NOC chef de mission, attache, envoy or aide could request these services. Translation fees were approximately \$25.00 per page with a \$20.00 minimum charge applied to all translations under one page in length. Requests for translation from and into languages other than French and English were referred to outside companies through the NOC services center. At the UCLA Village, 40 documents were translated. All but one were requested by LAOOC management. Most translations were for signs, memos and bulletins.

15.06.3 Maintenance

The Maintenance Department was responsible for the custodial work in all buildings and groundskeeping within the village confines. For plumbing, electrical and air-conditioning operations, services were provided through a contractual agreement with each of the universities. In addition, separate agreements were drawn up to provide for carpentry and specialized electrical skills. Trash removal was also handled under a

9 More than the standard quota of press were allowed into the village to attend this special welcoming ceremony.

Housing of Olympic Athletes and Team Officials (Villages)

separate contract. A centralized trash collections area was established within each village. Three cubic yard trash bins were scattered throughout the villages and when full were towed by an electric cart to the central area.

15.06.4 Material logistics

Village Material Logistics was responsible for the procurement of materiel, maintenance of supplies, movement of furniture and equipment, NOC freight storage and transfer and the operation of emergency supply and equipment purchasing functions. Each village created its own warehouse operation using large trailers.

The most difficult period was during the village move in and move out, each roughly one week in length. During village operations, materiel logistics staff were available 24 hours per day.

15.06.5 Press operations

Accredited journalists had limited access to the three villages to meet with and interview athletes and team officials. Members of the media were always escorted when they were in the villages. Areas of access included:

- An international zone or interview area which was located near the main entrance at USC and near the training track at UCLA and on Main Street at UCSB; these areas served as a "mixed zone" and were equipped with tables, chairs and tents. They were open from 0900 to 2100 daily, except at USC on 28 July and 12 August when that village was closed to guests. Athletes and officials met with the gathered journalists in these zones but journalists could not leave the area. EMS terminals and intra-village telephones were provided for contacting NOC offices and setting up interviews.
 - Athlete training/press viewing areas were located at USC and UCLA and were set up much like the mixed zones. Journalists, accompanied by an escort, could watch training and interview athletes within a mixed zone area. These areas were open from 0900 to 2100 from 14 July until 11 August and were closed 28 July.
 - Daily press tours were given for up to 25 journalists. This was a 45-minute walking tour through the village with views of Main Street, welcoming ceremonies, NOC services center, training areas, dining halls, disco, polyclinic and the transportation plaza. More than 400 press went on tours at the USC and UCLA villages while they were open.
 - Two days after the villages opened, journalists were granted viewing privileges for the NOC welcoming ceremonies. Although press access at the ceremonies was at times difficult to control, the journalists who attended appreciated the opportunity.
 - The remaining method for press access to the villages was through use of a guest pass from an NOC, the village mayor or village administrator. These passes allowed the press, with an accompanying escort, access to all areas of the village except the residence halls. Television cameras were allowed in on NOC guest passes.
- The overall press policy in the villages was as follows:
- All accredited media entering with a village press pass were escorted to the press areas. They could not conduct interviews or stop to "set up" a photo session en route. An isolated picture taken along the way was not prohibited as long as it did not impede traffic. All interviews and photography took place at the press areas.
 - NOC-invited press were issued NOC guest passes and were confined to NOC offices and to press areas. They also were escorted, but the escort could leave them in an NOC office if they intended to be there for an extended period of time.
 - The NOCs were responsible for making sure their invited media guests followed LAOOC policies and NOCs risked the loss of their guest passes for infractions. Escorts were called by an NOC representative when the journalist was ready to depart.
 - Each NOC was asked whether it had any objection to having media present at its welcoming ceremony. The desires of the NOC in this regard were honored. NOCs could invite members of the press to the ceremony for exclusive coverage or could open their ceremony to all media if they wished.
 - Any television crew (including an NOC-invited crew) other than the host broadcaster could film, interview, etc. from the press area only, except when on a tour. They did not have access to any other area of the village and were escorted at all times.
 - The host broadcaster had use of 15 village media passes above the media allocation of 200 at each of the Los Angeles villages. ABC selected six locations within the village for television coverage; one for live coverage and five for taping. They were required to notify the mayor when and where they intended to set up for each day's filming, up to a maximum of two locations per day. Athlete interviews were permitted in these areas only in addition to

already identified press areas. ABC was also permitted access to the village on two occasions prior to 28 July to produce vignettes of the village facilities for the benefit of all television broadcasters. They were allowed to tape locations such as the athletes' dining area, a typical residence hall room, Main Street and others. No interviews were permitted during the production of the vignettes.

The international zone or interview area proved to be the most popular for journalists, yet many complained about what they viewed as extremely limited access within the village, making their jobs difficult to accomplish. Once the Games began, activity in the international zone was very low since most media were at the venues. At the venues, media journalists could view the competitions and had easy access to the athletes for interviews. Press attendance at the USC and UCLA villages was as follows:

A total of 200 press passes were available at both USC and UCLA and 40 at UCSB. In retrospect, it would have been acceptable to allow press access to the common areas of the village, striking a better balance between athlete privacy and the public interest.

15.07 Services available to the teams

15.07.1 Accommodations: Location and size

There were two types of housing at the USC and UCLA Villages: residential halls with two and three beds per room and apartment units that could house from five to 10 residents each. Whenever possible, an NOC was housed as a unit within an adjacent block of rooms. Men and women were not housed in the same apartment or on the same wing of a floor and different NOCs did not share sleeping rooms or apartments. There were three residence halls at UCSB that consisted of a combination of rooms. One bedroom units were used for chefs and team doctors and double rooms were used for two athletes. NOCs were housed by sport with rowing participants located in the two northern residence halls and

10 The Cromwell Field track at the USC village.

10

canoeing/kayaking participants in the southern residence halls. At all the villages, chefs were assigned their own room which doubled as an office.

Each NOC could rearrange its block of rooms and increase the number of athletes per living area to allow for more administrative space within the delegation's living quarters. The LAOOC did provide additional office space for NOCs with more than 25 participants. NOCs could request extra-long (213 cm) beds which the LAOOC provided at no additional charge to roughly 10 percent of all village occupants.

Any additional equipment had to be ordered in advance. In the case of technology equipment, such as photocopying machines and extra telephones, a charge was assessed which had to be paid in advance.

Rooms were furnished as follows:

- Single bed
- Bed linen
- Blanket
- Pillow
- Towels and wash cloth
- Coat hangers
- Reading lamp

- Desk
- Desk chair
- Dresser
- Closet
- Wastebasket
- Fans
- Bed board (on request)
- Extra-long (213 centimeters) beds (on request)

The USC and UCLA Villages were originally planned to accommodate a total of 12,000 participants: 7,000 at USC and 5,000 at UCLA. UCSB had space for 1,200 total occupants. After the withdrawal of the eastern bloc countries from the Games, these numbers were reduced to 6,000 for USC, 4,500 for UCLA and 1,000 for UCSB. Actual occupancies at all three villages were somewhat lower, with 5,689 at USC, 3,684 at UCLA and 856 at UCSB.

Each of the village residence halls had common recreation and lounge areas on the ground floors well away from athlete sleeping areas. Each lounge had a television viewing area and each recreation complex consisted of both an indoor and outdoor area. The indoor area had table tennis and pool tables and areas to play cards, chess, backgammon and other table games. Each outdoor area had volleyball and basketball courts, patios and lawns. The LAOOC provided a variety of recreational sports and games equipment which could be checked out

at the front desk of each building with the deposit of a room key. Each residential floor of each residential hall had a floor lounge which was furnished with appropriate furniture and had a television viewing area for the use of residents.

There was a front desk at each of the residence complexes that was staffed by clerks who provided general information and assistance to residents. The clerks, when possible, were multi lingual and had immediate telephone contact with language services. They also:

- Maintained key control
- Provided emergency lost key service
- Requested room maintenance
- Requested equipment maintenance
- Requested janitorial service in public rooms
- Checked out recreational sport and games equipment
- Supervised conference room set up crews

Housing of Olympic Athletes and Team Officials (Villages)

□ Controlled conference room access

The accommodations and the attendant services were well received by the NOCs. Space problems affected mainly the low-rise apartment units which housed up to ten persons per unit. The NOCs found it difficult, if not impossible, to mix component teams. For example, six boxers could, in theory, be mixed in two rooms of an apartment with four male equestrian competitors. However, competition times, training times and other differences made this difficult. It is recommended that future organizing committees try to avoid large multi-bedroom apartment accommodations.

15.07.2

Health services

Health services were provided at several locations in the villages including the polyclinic, massage therapy area and the wrestling, gymnastics and athletics training sites. The polyclinics provided emergency/general medical, dental and optometric services 24 hours per day for all village residents, Olympic Family members and LAOOC staff. In addition to medical services, the following related programs were operated and directed by Olympic Health Services within the villages:

- Public health program; sanitarians monitored food, water and housing conditions.
- Doping control ancillary station; tested athletes who could not produce a sample at competition sites.
- Gender verification; tested all female athletes.
- Mobile medical outreach team; numerous emergency medical technician volunteers who were recruited by the American Red Cross provided medical assistance and rapid first aid response within the villages 16 hours per day.
- Massage therapy; licensed therapists provided relaxation massages to athletes 12 hours per day.

15.07.3

NOC support operations

The NOC service center was designed to provide assistance required by the National Olympic Committee chefs and team leaders so that they could effectively manage their delegations. The goal of the service center staff was

to provide complete administrative assistance to the chef and his team in one central location.

The NOC service center offered the following services: telex, printing, general information, photocopying, conference room scheduling, NOC mail and messages, NOC transportation scheduling, safe-deposit boxes, typing, lost and found, customs broker, messenger/escorts, language services, NOC offices management, equipment rentals, cashier, Games results and travel/departures assistance.

The service center became an information center for the entire village. For the first three days after the village opened (14-17 July), the function of the service center was entirely informational. There were no early requests for any of the services which were offered, with the exception of sending telexes. Telex service was heavily in demand each morning at

0630 and again after 2000. A 24-hour service is recommended on village opening and closing days.

The service center was open daily from 0700 to 2200 hours. The hours of most customer activity were: 0700-0830, 0930-1100, 1500-1700 and 2100-2300. Chefs or team officials arrived early each morning to send telexes, pick up messages and mail, open safe-deposit boxes or check their account status. The early morning rush lasted until approximately 0830 hours at which time most chefs attended daily meetings. After the meetings, there were usually additional efforts to obtain guest entry passes and meal tickets, pickup mail and request typing and photocopying services. A valuable informational item was the daily chef de mission bulletin which contained information on a variety of village-

related topics such as welcoming ceremonies, NOC guest policies, local laws, use of vehicles, departure information and other topics.

Most requests during the hours 1500-1700 were for information such as events in the village and ticket and sightseeing information. The late evening hours, 2100-2300, were especially busy, particularly when departures began. During this time period, most requests were for transportation to the airport, telex service and settling NOC accounts. Rarely did service center activity cease before 2300 hours and once departures began, it was necessary to maintain a 24-hour operation.

It became evident that the service center would have to provide some services which had not been planned. These included:

- Guest pass authorization for chefs
- Flower and large package deliveries to athletes
- Tracking lost mail and luggage

The service center worked closely with the Transportation Department to handle athlete transportation and motorpool (NOC allocated vehicle) requests and to refer Olympic Family members to vendors for limousines and other vehicles. An additional transportation desk was set up to handle transportation arrangements from the village to the airport during the departure periods.

The Finance Department provided a cashier to handle invoices, guest meal tickets, account status information and final account services. It is

recommended that an area large enough to accommodate a finance desk, transportation desk, departure desk and possibly a travel desk be allocated to facilitate departures.

The LAOOC NOC offices operation was directly responsible for the set up of office space for use by the NOCs, including inventory of all space, ordering of all furniture and supplies, recapture of office space from the NOCs and returning the space to the university. Office space was provided to each NOC in the housing area with supplemental space provided elsewhere for NOCs with delegations of 25 or more.

A total of more than 200 separate village office spaces were prepared. Many of these spaces were located in the housing areas in the chefs de mission's rooms, while others were located outside of the housing areas or on separate floors of the residence halls. These separate offices were set up accordingly:

NOC village office space

NOC size	Description of office space
25—100	Minimum of 500 square feet, including: conference room for eight people, one semi-private office, work spaces, one secretarial space, waiting area.
101—200	Minimum of 700 square feet, including: conference room for 12 people, one semi-private office, four work spaces, two secretarial spaces, waiting area.
201—300	Minimum of 900 square feet, including: conference room for 16 people, one semi-private office, seven work spaces, two secretarial spaces, waiting area.
301—500	Minimum of 1,200 square feet, including: conference room for 16 people, two semi-private offices, ten work spaces, three secretarial spaces, waiting area.
501 +	Minimum of 1,500 square feet, including: conference room for 20 people, two semi-private offices, fifteen work spaces, four secretarial spaces, waiting area.

NOC delegations smaller than 25 persons received no additional office space other than that in the chef's room. These NOCs used the facilities and services provided by the NOC service center.

The NOC offices included the following equipment:

- One television
- One electric typewriter
- One EMS terminal
- One telephone (restricted to village/venues only, telephone with operator assisted international access.)
- One telephone (charge-a-call)

In the housing area, each NOC received space for the chef de mission. In addition to the standard furnishings for housing, the chef's room included:

- One electric typewriter
- One side chair
- One package of stationery supplies
- One file cabinet (two-drawer, lockable)
- One telephone (restricted to village/venues only)
- One television
- One iron and ironing board

11 An example of the temporary construction at the UCLA Village.

12 Athletes visit a convenience store.

Housing of Olympic Athletes and Team Officials (Villages)

For NOCs consisting of 51 members or more, each NOC received one additional room for use by a team physician. The room served as the doctor's sleeping accommodations and office. In addition to the standard furnishings, the team doctor's room included:

- One side chair
- One package of stationery supplies
- One massage/examination table
- One lockable cabinet
- One refrigerator
- One examination light

15.07.4

Training facilities and sites

Five of the 30 Olympic training sites were located at UCLA and four were located at USC. This included training for tennis at UCLA, and swimming, wrestling, athletics and gymnastics at both main villages. Also located in each village were sports information centers designed to provide coaches and team officials with up-to-date information on training and competitions. They also served as a location where changes to training schedules could be requested. Each office had 12 desks that handled requests for one, two or three sports. The offices were open daily from 0700-2200, 14 July to 12 August. The sports information centers were also responsible for distributing start lists and results and for providing information regarding the competition venues, training sites, transportation system, sport equipment and Los Angeles in general. The athletics secretariat used the sports information centers to distribute athletic competition numbers and to collect participation confirmation forms for all events.

Training sites at the villages were pre-scheduled according to the following criteria:

- Artistic gymnastics; one session (three-hour) per team per day and one session (one-half hour) per team per day.
- Rhythmic gymnastics; two sessions (one and one-half hour) per team per day.
- Swimming; two sessions (two-hour) per team per day.
- Synchronized swimming; one session (three-hour) per team per day.
- Tennis; one session (one-hour) per team per day.
- Wrestling; one session (two-hour) per team per day.

Athletics training was not scheduled.

Teams had the opportunity to sign up for additional training as available. By providing these additional times, teams were able to customize their training schedules based upon their particular needs. No problems were encountered in accommodating team needs throughout the Games.

Located at both the USC and UCLA villages were bicycle repair/bicycle storage areas and an armory. The bicycle repair area was open from 0800-2200 hours from 18 July to 7 August and 1000-1500 hours from

8 to 12 August. The bicycle area was devoted to the repair and storage of road bicycles only. Track bicycles were stored and repaired at the velodrome. Most of the cycling teams stored their equipment in the bicycle area but used their own mechanics to repair their bicycles.

Each NOC was assigned an individually secured storage area and LAOOC staff controlled access during the day. The cycling venue provided technicians to staff the bike area for two hours per day during the Games. Considerable discussion occurred on whether cyclists should store their bikes in their rooms or in a separately secured area, as was provided. In retrospect, a storage area worked very well and no bicycles were allowed in the rooms. It is important to have the bicycle storage area as close to the sleeping rooms as possible or cyclists will insist on taking bicycles to their rooms.

The armory provided an area in the village where the fencing athletes could work on their equipment. Like the

bicycle repair area, the facility provided athletes with an area other than their rooms to repair equipment, thus preventing the rooms from becoming soiled with grease and metal shavings. The armories were approximately 20 feet by 30 feet with three work benches. They were staffed by a supervisor and four armorers, and were open from 0800 to 2200 hours from 18 July to 12 August. The armory received little use and probably could have been eliminated since the armory at the competition site was sufficient,

15.07.5 Transportation

Transportation provided buses to take athletes to and from training sites, to competition sites on a pre-scheduled basis and, on rare occasions, transportation for athletes or officials who missed their buses. Usually, it was left to the NOCs to provide assistance to team members who missed scheduled transportation. The LAOOC assisted NOCs in obtaining charter buses for excursions and guided tours of Los Angeles.

Although initial plans did not provide for an intra-village transportation system, such a system evolved through the use of electric carts. The relatively long distances from the residence halls to the main village entries caused village residents and

staff alike to seek a means to expedite their transit. The village staff expected to operate with few electrical carts for logistical support, but ended up with more than two hundred maintenance, security, passenger and supply carts to support an unplanned but highly efficient transportation system. The availability of electrical carts for VIP tour purposes was essential.

15.08 Services available to village residents

Village programs included all activities for athletes (as opposed to chefs or team officials) other than the "basics" of food, housing and medical services. The goal was not to satisfy the desires of all athletes from all nations, but to make them as comfortable as possible by providing broad forms of entertainment, recreation, Main Street facilities and spiritual counseling.

Once the basic services were established, the critical factors regarding program planning were: levels of service, hours of operation and anticipated use by athletes. It was assumed that usage patterns would change dramatically from early village operations, when athletes were still training, to the last two weeks of operation when many athletes had completed competition. This proved correct and athletes rarely sought entertainment or recreation before they completed competition. It was anticipated, however, that athletes would spend many evenings outside the villages to satisfy their entertainment needs after the conclusion of their competition efforts. This did not occur and most residents stayed in the villages.

15.08.1 Entertainment

The village entertainment program consisted of main stage concerts, the village coffeehouse, a cinema program, disco and outdoor specialty events. The goal was to provide a comprehensive entertainment program that gave the athletes an outlet from their competition pressures as well as providing a forum where athletes could mix and socialize. All entertainment operations opened on 14 July and closed 14 August. Each village had its own cinema. The American Film Institute, in conjunction with the LAOOC, selected the films that were shown to the athletes. Built around the theme of "America's Movies," the program was designed to acquaint visiting athletes with the history and flavor of life in the United States as well as with the history of American cinema. One hundred twenty feature films were selected along with 216 short-subject films. The films were grouped into eight thematic sections:

The cinemas operated daily from 1300 to 2300 hours but hours of operation were expanded to 1000 to 2300 one week into the Games. Approximately 16,700 residents used the USC cinema during the Games with attendance averaging 50-75 during the day and 250-400 in the late afternoon and evenings. The average daily attendance was 700-900 at USC.

At UCLA, facility planning, based primarily on cost considerations, resulted in the establishment of two movie theatres. One was in a lounge of a residence hall with a seating capacity of 250. The second theatre was outdoors in an existing amphitheatre with a 600-person seating capacity. The indoor cinema showed films from a videotape format, while the outdoor cinema presented 35 mm films. The use of an outdoor cinema required the construction of an air-conditioned projection booth and wide screen. The hours of operation for the indoor cinema were 1200-2300. The indoor cinema showed feature films, shorts, cartoons and documentaries. The outdoor cinema opened at 2030 hours and showed one feature film a night until the last week when two feature films were shown each night.

Attendance was much higher at the outdoor cinema. This was due to the setting, the showing of newer and more famous films and the timing. No food or beverages were provided in the cinemas. A temporary tented structure with seating for up to 250 was constructed at UCSB.

The cinema program was the largest celebration of American film in history and one of the largest film festivals in the nation. Most athlete criticism was that the program was too large. Once athletes discovered a good film had played, they were dismayed to learn that it would not be repeated.

As part of the cinema program, appearances were scheduled by individuals associated with specific aspects of the films. These enhanced the basic program and were held in the cinema lobby and village square or Main Street. Performers who donated their time and appearances at the villages included:

- Esther Williams
- Walt Disney animators
- Walt Disney characters
- Darth Vader of Star Wars
- Cinema program poster artists

The appearances were well received and the timing of the appearances was important. Darth Vader appeared on the day of the Star Wars movies, Disney characters on Disney theme day. Athletes enjoyed taking pictures with the characters and liked having their posters autographed.

Housing of Olympic Athletes and Team Officials (Villages)

Other facets of the entertainment program included the village coffeehouse and disco. The coffeehouse created an atmosphere of fun and relaxation; a "winding-down" environment for athletes and officials. A program of live music, jazz, country and soft pop was provided. The decision was made, for cost reasons, to use the same facility as both a coffeehouse and a disco at UCLA and UCSB.

Local bands, covering a wide variety of music styles, were booked to perform in the coffeehouse/disco. Coffeehouse music included acoustical guitar, country, jazz, light rock and blues. Disco groups played rock and roll, new wave and punk music. Sound and light equipment was rented and installed for the entire period.

Self-service food and beverage service was planned and provided on a complimentary basis by the village food service contractor for both the coffeehouse and disco. The coffeehouse menu included pastries, fruit and light snacks. The disco food service was limited to popcorn and light snacks. Beverage service was the same for both the coffeehouse and disco and included soda, fruit juices, coffee, tea and espresso. Although no alcoholic beverages were served, athletes were not prevented from bringing them into the area on their own.

At UCLA, the coffeehouse hours were from 0900 to 1800; disco hours were 1900 to 2400. The one hour break allowed for tables and chairs to be removed from the dance floor. Taped music was played during coffeehouse hours except when a group was performing. Coffeehouse groups performed from 1600 to 1800 hours and played two 45-minute sets with a 15-30 minute break in between. Attendance was low for the coffeehouse performances, probably because the athletes were either training or watching competition in the late afternoon.

A staff disc jockey played recorded music when there were no live performances. The disco groups performed from 2030 to 2230 hours and played two 45-minute sets with a

15-30 minute break in between. The athletes enjoyed the disco groups but preferred to sit and listen to them rather than dance to their music. The athletes frequently danced when the DJs played popular rock and roll records.

At UCLA, the disco was an open-air facility which was located very close to some residence halls. The disco staff lowered the music level around 2230 so people could sleep. At UCSB, the disco was an open air facility and closed at 2200 since the athletes had to arise as early as 0400.

Another part of the entertainment program was the main stage concerts held outdoors at UCSB and UCLA and indoors at USC. The series consisted of four concerts at UCLA, three at USC and two at UCSB between 25 July and 8 August. Attendance varied with a high of 3,000 people for the Beach Boys. The facilities were planned to accommodate 5,000 people at UCLA, 6,400 at USC and 900 at UCSB. The concerts provided a passive entertainment experience (as opposed to the disco) and a chance for many athletes from each village to gather together.

The concerts did not attract as many athletes as originally envisioned. There was no "perfect" time to get full participation. Prior to the Games, the villages did not have a high occupancy level and during the Games, many athletes had curfews to observe. In the last days of the Games, athletes were leaving or interested in final competitions.

The entertainment program also provided exposure to U.S. cultural endeavors. Outdoor specialty entertainers provided afternoon diversions for the athletes and were scheduled at 1600 hours.

This program included:

- Eskimo athlete demonstration
- American Indian dancers
- Comedy jugglers (bilingual)
- Frisbee demonstration team

The library room offered various books and magazines for check out. The books were mainly popular English language paperbacks, collected during an LAOOC book drive, and donated foreign language magazines. Pictorial books were also available.

Complimentary copies of the "Los Angeles Times" newspaper were delivered every morning to the library. Foreign and other domestic newspapers were transferred from the convenience store to the library the day after their delivery.

The music listening room offered six stereo/cassette units which had headphones. Pre-recorded music tapes were available for check out from the attendant. There was one music listening room attendant assigned to check out tapes and books and to ensure that the tapes, pictorial books and listening equipment did not disappear. Both the music listening and library rooms operated from 0900 to 2100 hours. They were rarely used until after Opening Ceremonies, at which point there were four to eight athletes in each room at all times. Less than 60 books were checked out by athletes throughout the duration of the Games although most athletes read foreign newspapers and magazines.

15.08.2 Food services

Food services provided the athletes with a varied menu planned to accommodate the requirements of all countries. Food was accessible 24 hours per day utilizing a full and limited service menu. To minimize food handling, village traffic and nighttime noise, efforts were made to purchase and store products within the village in sufficient quantities to last for the entire Games.

Food services opened 14 July for breakfast and closed 15 August after lunch. Meal hours were:

Food service meal hours

Meal	Time	Time
Breakfast	0600-1000	(0400-1000UCSB)
Lunch	1100-1500	
Dinner	1700-2300	(1700-2100UCSB)

Limited service-all other times

Pre-game preparation was thorough in all food service areas including menus, purchasing, staffing, training, equipment installation and orientation. Athlete flow was surprisingly steady with few rush periods. The scheduling of competition and training contributed to this and there was frequent use of limited service dining. There were few NOC catering requests since teams could eat before or after any meeting and special catering was a charged-for service. Athletes missed very few meals with an average of 2.92 meals consumed per occupant daily. An alcoholic beverage policy was devised for the villages as follows:

- Dining halls; NOCs could serve only their own wine and beer to their delegation in the dining areas.
- NOC offices and catered events; NOCs could serve alcoholic beverages in their NOC offices and at their catered events in the village.
- Chef's lounge; NOCs could bring their own alcoholic beverages to the chef's lounge where glasses and mixers were available.

Food service for the Olympic village staff was handled in an area separate from the athlete food service operation. Food service consisted of box lunches, which initially proved to be less than satisfactory. Later, the quality of the box lunches was raised and cakes, ice cream and hot dogs were provided to add diversity. Because the village staff worked for nearly 40 days, it was essential that some variety in the menu be provided.

Team receptions following welcoming ceremonies were held in the mayor's hosting area. Ceremonies were held nearly every day for each arriving team from 14 July-5 August. The receptions started around 1600 and food provided consisted of cold hors d'oeuvres, vegetable platters, fresh fruit, snacks, punch and soda. Beer and wine were also served. Besides the afternoon receptions, there were daily morning receptions and mayor's meetings. These were small in nature and assorted pastries, fruits, cheeses, juices and coffee were served.

15.08.3 Information and results

Each village had its own set of information kiosks designed to provide general information as well as sports information. At USC there were nine kiosks, UCLA had three and UCSB had two. All kiosks had at least one EMS terminal that allowed access to information on sports results and training schedules. At each village there was one kiosk at the transportation departure/arrival area which provided answers to schedule questions. One of the kiosks at USC and UCLA was used solely for sports competition and results information. These kiosks had up to four EMS terminals and one printer to accommodate athletes and officials who requested competition results. The kiosks operated from 0700-2300 hours during the entire period that the villages were open, although occasionally outlying kiosks were closed early if athlete traffic was slow. Services and items available at the kiosks included:

- Bus schedules
- Daily results publication
- Competition schedules
- Electronic Messaging System terminals and printers
- Flyers on village events and entertainment
- Guides to Los Angeles attractions
- Maps
- Posters
- Sight-seeing information
- Village information
- "Villager" newspapers

The kiosks were used extensively. Although most questions dealt with the villages, those who staffed the kiosks found their role as information disseminators changed into one of "problem-solvers." Problems, such as tracing lost luggage and assisting with an athlete who missed a bus, were manageable. The EMS terminals were very popular and were used

extensively. However, there were few inquiries for information on sight-seeing and tourism and the travel desks on Main Street received most of those questions. Overall, the most requested information at the kiosks included: sports and transportation information, where to shop for particular items in the village and assistance in meeting the personal needs of athletes.

15.08.4 Main Street

Each village Main Street was designed to serve as a mini-town within the confines of the secured village and provided goods and services to village residents. All village Main Streets offered the same services with the exception of UCSB which had no hair salon. The services and shops on Main Street included:

- Bank
- Calling assistant center
- Convenience store
- Dry cleaners/laundry
- Hair salon
- National park display
- Post office
- Travel services office
- Video games arcade

All services and shops operated between 0900-2100 hours except for the calling assistance center which was open 24 hours and the post office which operated from 1000-1900. Services and goods offered were determined by the LAOOC based upon prior Olympic experience and the level of service that was believed to be appropriate for the village. Operators for each commercial or retail service were selected principally from the LAOOC's group of official sponsors and suppliers.

Most operators used personnel who could speak several of the principal working languages of the IOC-French, German, Spanish and English. Each operator had access by telephone to the LAOOC's Language Services Department for assistance in other languages.

The bank offered the following services:

- New accounts
- Cash withdrawals
- Cashing of travelers checks

Housing of Olympic Athletes and Team Officials (Villages)

- Currency exchange
- Check cashing
- Wire transfers
- Cash advances for eligible Visa and Mastercard holders

Bank operating hours were 0900-2100 daily. The services used most often were opening of new accounts, cash withdrawals, cashing of travelers checks and currency exchange. Each village branch handled approximately \$1 million in cash during the village operating period. LAOOC staff and contractors were allowed to use the bank for deposits and cashing of personal and payroll checks.

Foreign currency exchange totaled approximately \$150,000 with large teams such as People's Republic of China, Federal Republic of Germany, Great Britain, Japan, France, Italy, Australia and Canada accounting for most of the exchange. Overall, the setup worked well. Minor improvements could have been made by having a daily posting of currency exchange rates, some additional signs in French and the addition of small photocopying machines.

The calling assistance center was operated by Pacific Bell at USC and General Telephone at UCLA and UCSB. It offered local, national and international calling. Payment could be made using cash, travelers checks and telephone credit cards. The center operated continuously from 14 July to the closing of the village on 15 August. The most used service was the "time and charges phone" for international calls. This system allowed residents to make the call first, with the time and charges printed out at the end of the call. Approximately 20,000 calls were made during village operations with the majority made by European participants. The usage of the calling assistance center corresponded to village population, time zone differences and training and event schedules. The busiest time at the center was between 0600-1200 and 2200-2400. Entire teams such as football, basketball and volleyball would come in to use the center if they won an important game. The level of service offered was adequate, and, with the exception of a few surges in usage, there were no long waits to use the phones.

Changes that might have improved the operation include: using private, closed phone booths since the semi-private booths were insufficient when the center was crowded; controlling payment before calls were made since follow-up for payment after the caller left the center was unsuccessful and setting up a separate area where residents could receive calls.

The convenience store sold sundries, newspapers, magazines, personal care

products, snacks, commemorative rings, sport apparel, casual apparel, stationery, film developing and miscellaneous souvenirs. Payment was accepted in cash, travelers checks, Visa and Mastercard. Operating hours were 0900-2100.

Popular items at the convenience store included:

- Soft ice cream cones
- Personal care items such as toothbrushes, toothpastes and disposable razors
- Film developing
- Candy and snacks
- Newspapers
- Olympic postcards
- Sam the Olympic Eagle* dolls
- Olympic T-shirts
- Olympic pins
- Olympic hats
- Olympic sports bags
- Olympic towels
- Olympic pens and pencils
- Olympic keychains
- Olympic stationery

Certain items were hard to keep in stock, such as Postcards (more than 160,000 were sold), *Sam the Olympic Eagle* dolls, Olympic pens and pencils and Olympic pins. These items were purchased in large quantities by a number of residents and should be stocked in adequate supplies. Purchases of between 50 and 100 of the same items were common.

The dry cleaners/laundry offered dry cleaning, laundry, pressing and alterations. The services were offered on a one day turnaround as long as the garments were brought in before 1300 hours. The shop was open from 0900-2100. The most used service was dry cleaning, with laundry second. Village residents, LAOOC staff and contractors were permitted to use the facility.

Laundry service needs were not high since many residents used the village washers and dryers which were available at no charge. Requests for alterations peaked with Opening Ceremonies. The level of services seemed adequate for the village. Peak use hours were 0900-1200. Because of early training hours, the facility could have opened as early as 0730.

The hair salon was operated by Vidal Sassoon and offered the following services:

- Haircuts
- Hair styling
- Permanents
- Tinting
- Makeovers

These services were offered daily from 0900-2100 and were free of charge. The salon was widely used by village residents with women using it to a greater extent than men. Most clients chose to get their hair styled. At each village there were seven styling chairs, a reception area, a two-sink washbowl and a storeroom changing area. The receptionist booked appointments, completed appointment cards and directed people when they came in for their appointments. The assistants were responsible for shampooing, assisting stylists and clean-up. The salon was very popular and was fully booked for the period of operations. The only slow period was the first couple of days of village operations. During the last three weeks, the salon could have used additional stylists since they were fully booked a week in advance.

The national parks display created by the United States National Park Service showcased the scenic wonders of the national parks. Through the use of banners, pictures, park rangers, brochures and computers, information was given to the village residents. The display was staffed from 0900-1200. The most popular aspects of the display were the pictures, brochures and the park rangers in their uniforms. Some residents planned visits to the national parks with the aid of park rangers.

A multilingual computer software package allowed users to view or print out national park information in English, French, German and Spanish. This display was well received and functioned like a gallery. Because it was free standing and open, people could go through at their own convenience. While not an essential service, the display did offer a different type of diversion for the village residents.

The United States Postal Service operated the post office as a full retail unit offering:

- Stamps
- Parcel post
- Express mail
- Insured, registered and certified mail
- Philatelic items
- Silver Olympic coins

The post office was open from 1000-1900 hours daily. Most transactions involved stamp sales and postcards had the highest mailing volume. Special Olympic commemorative stamp books, silver Olympic coins and Olympic postcards were popular. This service was open to anyone living or working in the village. Three postal windows were in operation inside the postal unit and a glass countertop was used to display commonly requested items. The postal clerks rang up the transaction and it was displayed on a

readout to the side of the counter. A mail collection box was setup outside the postal unit.

The postal staff could have been increased by two clerks during peak periods. The volume of business was very high with transactions at each village totaling \$10,000 on some days. The peak use times tended to be between 1000 and 1300 hours, however, there was a steady flow of customers throughout the day. While postcards and letters accounted for the highest mail volume, packages accounted for an increasing volume as the end of the Games approached. The post office could have opened at 0700 to accommodate the early training and competition schedules. Lines formed daily at the postal unit prior to the 1000 opening.

The travel service was jointly operated by American Express, United Airlines and the LAOOC. The following was offered:

- Buying and selling of traveler's checks
- Advancing cash to eligible recipients
- Arranging land tours, accommodations and land transportation
- Arranging or confirming airline tickets
- Tracing lost luggage
- Completing departure information

The operating hours were from 0900-2100. Widely used services included buying and selling of traveler's checks, arranging and confirming airline tickets and assisting with departure information. Brochures and discount coupons for local and national attractions were displayed in racks. With the exception of lost luggage and cashing or buying of travelers' checks, activity in the office was slow for the first two weeks. There were only a few inquires about local points of interest. Requests and bookings increased as Closing Ceremonies approached.

Atari designed and provided games for the video arcade. The 22 video machines at USC and UCLA and 10 at UCSB were occupied from the moment they opened to the moment they were closed. Not only were all games in use, but there were usually friends watching friends play, or athletes lined up waiting for their turn at the games. The scheduled hours of operation for the video arcade were 0900-2100. This lasted for approximately two nights and then the hours were changed to 0900-2330 at USC and UCLA. The rooms were popular and crowded and it made sense to keep them open as long as possible.

One attendant was assigned to each arcade room. The attendant provided instruction on the video games and monitored their use. An attendant was unnecessary, but it was important to have someone from the Main Street staff check the room periodically to see if any machines were broken and to make sure that LAOC staff did not use the video machines. In retrospect, the number of video games could have been doubled and there still would have been overcrowding.

15.08.5

Recreation facilities

Each village provided recreation equipment and facilities for the village residents. Facilities used for recreation included a swimming pool, sauna/massage area, video viewing rooms and a weight room. The front desks of each residence hall checked out recreation equipment to the residents. The types and quantities of recreation equipment provided at each village included:

Table games

Item	Quantity
Monopoly	16
Kahala	16
Checkers	16
Chess	16
Dominoes	16
Backgammon	16
Scrabble	16
Playing cards	36
Table tennis equipment	10
Table tennis balls	100
Table tennis paddles	8
Table tennis tables	8
Pool tables	10
Pool equipment:	
Cue sticks	28
Pool ball sets	10
Racks	12
Repair kit	
Chalk	
Bridge	10

Outdoor games

Item	Quantity
Frisbee	16
Horse shoes	6
Tennis racquet	16
Tennis balls	300
Badminton set	10
Shuttle cocks	60
American footballs	12
Rugby balls	12
Soccer (foot) balls	24
Volleyballs	10
Volleyball nets	5
Basketballs	16

Athletes could check out recreation equipment 24 hours per day at the front desks, except for pool and table-tennis equipment. This equipment could only be checked out between 0800 and 2300 so noise in the residence halls was minimized during sleeping hours. The pool and table-tennis equipment was the most heavily used. A few chess and pool tournaments were organized for interested residents.

Swimming and sunning facilities were provided for all village residents. At UCSB, the pool was outside the village area. The initial operating hours for the pool were from 0900 to 1930. Many requests were received to open the pool earlier and it was changed to 0600 one week after the village opened. The pools were used heavily during the entire period of village operations.

A temporary facility was built for the sauna/massage area. Three portable 10-foot by 10-foot saunas were brought into the village and placed adjacent to the massage area. The massage area was a tented structure, enclosing two dressing rooms (men and women), five rooms for private massages and an office. Each dressing room had chairs, a metric weight scale and lockers for athletes to store their clothes. Each massage room had a massage table. Massages done in this area were for relief of tension and general stress. An injured athlete was sent to the polyclinic for treatment. Three portable saunas, two for men and one for women, were constructed adjacent to the massage facilities. Each sauna could hold up to 10 persons.

The sauna/massage area operated from 0700 to 2200. The area operated on a "first-come, first-served" basis. As demand for massages increased, it became necessary to schedule athletes for 15 to 20 minute massages. The saunas remained on a "first-come, first-served" basis. There was a heavy demand for these services.

Video tapes of competition events and Opening and Closing Ceremonies were produced by the Main Press Center staff from the host broadcaster's feed. Tapes were shipped by the Press Operations Department twice a day to each Olympic village. Video viewing

rooms were open from 29 July to 15 August and provided athletes an opportunity to view tapes of the Games. During the two weeks of village operation prior to 29 July, athletes could view their own competition or training tape in these rooms. The video viewing rooms were in continuous use and were very popular. Heaviest usage was in the early morning and early evening through closing. Athletes were waiting each morning for the rooms to open and most evenings athletes continued to view tapes until 2200 or 2300. During peak viewing periods at each village an average of 300-400 athletes used the room.

It would have been beneficial to the athletes to have had larger viewing rooms with expanded operating hours. There was enough demand to warrant and utilize more than 10 video-cassette players. The concern with a larger operation was the security of the tapes, however, capturing accreditation badges in exchange for tapes worked effectively. The need for "team" viewing rooms was not fully thought out before the Games began. It was inevitable that teams would want to check out tapes and view them privately. This was accommodated by having the teams reserve a conference room through the NOC service center.

A weight room was provided for athlete use as a supplement to sports training. Existing weight rooms were used at USC and UCLA while a temporary weight room was constructed at UCSB. The weight room operated from 0700 to 2200. Heaviest use was early morning and late afternoon through the evening. There were usually two weight room attendants on duty. Two were necessary during heavy use hours to help the athletes with unfamiliar equipment. The weight room was frequently used. No towels were provided to the athletes in the weight room.

15.08.6

Religious services

Cooperating with the Interreligious Council of Southern California, the LAOC provided worship services, hospitality and counseling from five major faith traditions: Islam, Protestant, Roman Catholic, Judaism and Buddhism. Within each center there were hospitality lounges, a Christian Science reading room, a Buddhist meditation room, an Islamic mosque, one non-denominational chapel and the religious services office. The lounges and meditation rooms were open from 0830-2300 hours each day. The mosque, Christian Science reading room and the sanctuaries in the Roman Catholic church and the Protestant church were open 24 hours.

Worship services were offered daily at 0730 and 1730 and masses were held at 0730, 1200 and 1700. Buddhist meditation was held on Wednesdays and Fridays at 0730 and Shabbat services were Friday evenings and Saturday mornings. All services were publicized on the EMS and flyers were distributed at all information kiosks.

During the first two weeks the villages were open, residents visited the lounges to talk, but no formal counseling was required. There was very little interest in communal celebrations of prayer, but individual, private prayer in chapels, mosques, meditation rooms and lounges was observed. Since many staff members wore traditional clerical dress or traditional costumes, the ministry in the village was evident. Athletes approached them and spoke with them as they walked around the village. After competition began, an increase in the attendance at worship services was noticed. Since the athletes' training schedules conflicted with scheduled worship times, attendance before competition was complicated. Athletes picked up Bibles that were provided in many languages and came in to discuss issues of faith. Those from the Islamic tradition used the mosque at scheduled prayer times and required a much larger mosque for the traditional Friday prayer. At all three villages the religious services program was not as heavily utilized as had been expected.

15.08.7

Tickets

The ticketing operation located on the village Main Street at USC and UCLA was responsible for dispensing the required tickets to Olympic Family members and to village athletes on a complimentary basis.

15.08.8

Village newspaper

The "Villager" was the newspaper for all three villages. Twelve editions were published including one every other day after the Games began. It was distributed to the information kiosks, the housing lobbies and the mayor's office. The paper dedicated one page to each village and the remaining eight pages contained general information. Unfortunately, the paper was laid out so that it was difficult to tell that a village-specific page ended and that other information applied to all three villages.

Housing of Olympic Athletes and Team Officials (Villages)

15.09 Housing at sites outside of the Los Angeles area

Small villages were established at the outlying football sites in Palo Alto, California, Annapolis, Maryland and Cambridge, Massachusetts. At these sites the teams were accommodated as follows:

Cambridge

Harvard University's Quincy House
Norway
Cameroon
Canada
Iraq

Annapolis

Annapolis Hilton Hotel
Yugoslavia
Chile
France
Qatar

Palo Alto

Stanford University's Branner Hall
Federal Republic of Germany
Egypt
USA
Costa Rica

Security and access control were conducted at these sites in the same manner as at the villages in Los Angeles. One of the most difficult problems at these outlying villages was controlling journalists who often attempted to enter the athletes' dining and sleeping areas. Media interest was particularly strong since these were the only Olympic activities in communities outside of Southern California.

Food services at Stanford and Harvard were operated by the universities and at Annapolis by the hotel. Video movies, television viewing rooms and games were available for the athletes' entertainment.

15.10 Summary and recommendations

The housing of the athletes and officials in three separate villages worked successfully. Athletes at each village had the opportunity to meet and interact with participants from other countries. A significant diversity of cultures and nationalities existed at each village to give them an international flavor. The services offered at the villages proved to be exactly what was needed. There were no indications from the athletes that they felt something had been missing from their village experience. Team officials appreciated having their teams housed together and also appreciated the facilities offered at the NOC service center. Those organizing village-type housing in the future should consider the following points:

The village mayor concept worked very well. Management of all the villages went smoothly which can be attributed to strong mayor/village administrator management teams. The mayors functioned as the senior officers of the villages with overall operational responsibility but focused mainly on the day-to-day ceremonial duties. The village administrators were responsible for conceptual planning and Games operations. This team effort is necessary since the combination of ceremonial and operational duties would have been too much for one person to manage over a 40-day period.

It is essential for the village housing operations to have strong ties with the athlete in-processing and accreditation operation. This is necessary to ensure that there is clear communication regarding team sizes, male/female ratios and expected village arrival times.

The LAOOC continually sought detailed team information from all the NOCs that planned to attend the Games. This data proved difficult to gather but valuable once it was acquired. The information was solicited through questionnaires sent to the teams and through interviews with NOC representatives in January 1983. The interviews proved to be the most informative and were valuable in the conceptual planning for the villages. Though most of the data was not entirely accurate, it gave the planning teams a much better picture of what to expect. Questions included:

- Expected team size for each sport with estimates of the number of competitors, officials and support staff broken down by sex
- Extra officials and their accommodations needs
- Arrival and departure dates
- Training needs prior to the opening of the villages
- Estimates of sports equipment to be brought to the Games
- Medical equipment to be shipped
- Special food requests or dietary restrictions and food to be shipped to the village
- Telephone needs
- Transportation needs
- Storage space needed
- Office equipment needs
- Bed size requirements
- Cultural interests regarding music and films
- Village preference

The welcoming ceremonies proved successful and a special ceremony for each NOC should be continued. Special attention should be paid to inviting all team members to the ceremony and, if possible, to the reception afterwards.

The move in periods, especially during the week prior to Opening Ceremonies and the move out period during the last week of village operations proved to be the most difficult for village staff. Careful preparation is necessary to ensure move in and move out proceed smoothly.

Early identification and accreditation of all staff is essential prior to the opening of the village. This may appear self evident but the LAOOC failed to do this adequately, making it difficult to secure the villages early. It would be best to have all staff accredited one week before the villages open.

Guest pass limitations for the NOCs, especially the larger ones, should not be too restrictive. The larger NOCs of 400 or more participants were allowed only nine or ten guest passes, which created difficulties on occasion. Roughly two passes for every 25 participants would have struck a better balance. Allowing teams the flexibility to have the mayor sign for additional passes was a worthwhile alternative.

The NOC service center concept was extremely successful and appreciated by all team administrators. Use of a service center should continue so that all team administrative needs are located in one central area.

Office space, particularly for the larger teams, was essential. The facilities and space provided by the LAOOC satisfied all team needs and a similar set up is recommended to future organizers. Media access to the village should have been less restrictive. A better balance would have allowed journalist access to the common areas of the village such as Main Street and the training sites. Media should continue to be excluded, except under special circumstances, from the residence halls and athlete dining areas. Village press passes should allow access for a certain time period, perhaps two or three hours.

Athletes should be accommodated two to a room whenever possible. Larger, apartment style facilities proved inefficient for team space allocations, despite the increased space they provided.

16

Housing of Dignitaries, Sponsors, Sports Officials and Guests (Accommodations)

1

1 The Biltmore Hotel, site of the IOC headquarters.

16.01 Accommodations concepts and policies

The Organizing Committee was responsible for finding suitable housing and making it available to members of the Olympic Family during the Games. The Olympic Family is a generic term for various groups of individuals who are involved with the Olympic Games. For the 1984 Games, this group consisted of International Olympic Committee (IOC) members and guests, National Olympic Committee (NOC) members and guests, accredited journalists, Olympic Organizing Committee (OOC) representatives for the 1988 Olympic Games and Olympic Winter Games, Organizing Committee sponsors, patrons and special guests, including government officials.

To accomplish this difficult task, the LAOOC concentrated its efforts on two primary resources: Southern California's large hotel and motel industry and local universities and colleges for less expensive campus housing.

The first step was the formation of the Official Olympic Hotel Program in 1980. Besides being the instrument for the acquisition of sufficient housing for members of the Olympic Family, this program was designed to facilitate goodwill between the LAOOC and the hotel industry in Southern California. It assured a good occupancy rate during the Games period for the industry in return for a guarantee to hold rates to those charged during the first six months of the Olympic year.

Based upon estimates made from studies during the beginning stages of planning, the LAOOC's goal was to acquire 20,000 hotel rooms and an additional 4,500 beds through campus housing. As the Games grew nearer, however, it became evident that this estimate was high and that the Olympic Family would require only 16,000 hotel rooms. At the time of the Games, the Organizing Committee had acquired 17,362 hotel rooms and 4,265 campus beds.

The LAOOC never took an active role in housing Olympic spectators and visitors but did, however, help establish and cooperate with a coalition of 13 area visitor and convention bureaus. The Organizing Committee forwarded all visitor requests for information about hotel rooms and private home rentals to the coalition for response and action.

The coalition consisted of the Anaheim Visitor and Convention Bureau, the Beverly Hills Visitors Bureau, the Buena Park Visitor and Convention Bureau, the Burbank Chamber of Commerce, the Long Beach Convention and Visitors Council, the Greater Los Angeles Visitors and Convention Bureau, the Newport Beach Convention and Visitors Bureau, the Oxnard Convention and Visitors Bureau, the Palm Springs Convention and Visitors Bureau, the Pasadena Convention and Visitors Bureau, San Diego Olympic Information, the Santa Barbara Conference and Visitors Bureau and the Ventura Visitor and Convention Bureau.

16.02 Acquisition of accommodations

16.02.1 Determining housing needs

The Accommodations Department worked closely with other LAOOC departments and was dependent upon them for information to process Olympic Family member accommodations requests. It could not make the necessary hotel reservations until it received accurate estimates from various departments, such as Press Operations, Corporate Relations, the sports departments, NOC services and Protocol.

All media requests were made on the Press Application for Accreditation sent directly to Press Operations which made housing assignments manually and forwarded its reports to Accommodations where the appropriate individual or group reservations were made.

The housing needs of the 23 International Sports Federations (IFs) were determined through questionnaires sent by each of the Organizing Committee's respective sports departments. Although detailed information was sparse, enough was furnished for the Accommodations Department to estimate the IFs' needs.

LAOOC sponsor and supplier needs were relayed to Accommodations from the Corporate Relations Department and included guest and hospitality rooms as well as accommodations for sponsor staff and technicians. Allocations were determined by the senior management of the Organizing Committee. Specific assignments were made by Accommodations in conjunction with Corporate Relations. Many sponsors and suppliers had greatly overestimated their housing needs and were unable to use some of the hotel rooms they had paid for. NOC Services mailed a letter and Biltmore Hotel questionnaire to the president and secretary-general of each NOC on 1 February. The letter informed them that rooms were being held for them at the Biltmore Hotel and

that they must complete the questionnaire and return it, together with a 20 percent deposit, prior to 1 March to reserve the rooms. They were also informed that a limited number of rooms were available at the Biltmore for special guests of NOC presidents and secretaries-general which could be reserved by means of the enclosed questionnaire.

The Protocol Department distributed a Biltmore Hotel questionnaire to each IOC member at the Olympic Winter Games at Sarajevo, Yugoslavia and requested it be completed and returned to the Organizing Committee's protocol representative in Sarajevo no later than 17 February 1984. The questionnaire also provided for accommodations for an accredited guest for each IOC member, as specified in the Olympic Charter, and included information regarding the availability of accommodations for additional guests. IOC members were informed that payment in full for additional rooms must be received by the Organizing Committee by 15 May.

16.02.2

Official hotel program

The cornerstone of the Organizing Committee's official hotel program was the hotel agreement. The signatories of the agreement were the LAOOC and either an independent hotel or a conglomerate of hotels managed by a hotel company. The following conditions were highlighted in the agreement:

- The hotel(s) agreed to rent 80 percent of the total rooms of the property to the Organizing Committee which, in turn, would rent them to members of the Olympic Family.
- The Organizing Committee guaranteed it would rent all contracted rooms for the 17-night period of the Games, from 27 July-12 August 1984.
- The hotel(s) agreed to charge a rate equal to the average regular rate charged from January to June 1984. The Organizing Committee agreed to direct all pre-Olympic hotel business to official Olympic hotels.
- The Organizing Committee agreed to allow official Olympic hotels the right to purchase tickets for guests staying in the remaining 20 percent of the rooms, thereby allowing those tourists staying at the hotels the opportunity to purchase tickets for the Games.

3 The Marina City Club, an Official Olympic Hotel.

4 The Los Angeles Airport Hilton, one of the LAOOC's 72 Official Olympic Hotels.

Housing of Dignitaries, Sponsors, Sports Officials and Guests (Accommodations)

From its inception, the LAOOC recognized that acquiring accommodations for the Olympic Family was an essential element of staging the Games and had to be successfully accomplished well in advance of the event. Therefore, during the early years of its existence, the LAOOC launched its hotel program and canvassed Southern California for high quality hotels and motels that were large enough to accommodate groups of Olympic Family members and were in close proximity to Olympic venues.

The Organizing Committee was particularly successful in accumulating much of the quality room space in downtown Los Angeles which was a key area for two reasons. First, because of the close proximity of the Coliseum, the Sports Arena and the USC athletes' village, the downtown area was at the center of the Games, and, second, by controlling the bulk of the downtown hotel space, the Organizing Committee and the traffic planners were able to manage the flow of downtown traffic during the Games.

For the most part, the hotel program was completed by December 1982 when a hotel steering committee was formed. At that time, the LAOOC had reached agreement with a majority of the official Olympic hotels. The final total of official hotels was 72, though at one time the total was 78.

The steering committee, which consisted of representatives of the official Olympic hotels and four Organizing Committee staff members, met three times. At the meetings, members discussed Olympic business and Organizing Committee policy as it related to the hotel industry. Among the items discussed were ticket needs, payment schedules and room releases.

Since the Organizing Committee valued good relations with its official hotels, many of which were affiliated with the Olympics for more than two years, it appointed a hotel administrator to maintain management contracts with the hotels. This was an important position because of the transient nature of the hotel industry. As it was, there were several ownership turnovers at official hotels and it was the job of the hotel administrator to maintain the integrity of the agreements.

The 72 official Olympic hotels were located throughout the Olympic area, giving Olympic Family members the opportunity to be housed in close proximity to venues and Olympic areas of their choice. Of the 17,362 hotel rooms, 34 percent were located in downtown Los Angeles, 23.1 percent near the Los Angeles International Airport, 16 percent in Orange County,

11.1 percent in or near West Los Angeles, 6.5 percent in Long Beach, 4.2 percent in Pasadena, 2.7 percent in the San Fernando Valley, 1.6 percent in the Santa Barbara-Lake Casitas area and .4 percent in San Diego. A room breakdown by area is as follows:

- Downtown, 5,910 rooms
- Los Angeles International Airport, 4,014
- Orange County, 2,786
- West Los Angeles area, 1,930
- Long Beach, 1,145
- Pasadena, 739
- San Fernando Valley, 478
- Santa Barbara-Lake Casitas area, 290
- San Diego, 70

The following is an alphabetical listing of the official Olympic hotels, including the number of rooms available to the Organizing Committee and the contracted room rates:

Hotel	Rooms available	Rates
Airport Park Hotel	135	\$118

16.02.3 Campus housing program

The campus housing operation was set up to provide accommodations to members of the Olympic Family that were less expensive than hotel accommodations and were in close proximity to their work areas.

The LAOOC acquired 4,265 beds on five campuses: Loyola Marymount University (728 beds), Pepperdine University (1,532), Mount St. Mary's College (298) Occidental College (1,007) and the University of Southern California apartments (700). Reservations were made per bed, not per room, and averaged \$35 per night. Most rooms contained two beds.

While each of the campus housing contracts was different, they fell into two major categories: one was an agreement between the Organizing Committee and the college or university as a housing site only and the other was with the college or university as a housing site within a venue. The contracts with Occidental College and Mount St. Mary's College fell in the first category, and those with Pepperdine University, the University of Southern California and Loyola Marymount were in the second. Each agreement specified the number of beds and usually covered a 30-day period, from 15 July to 14 August, with provisions for early arrival, if needed.

A front desk operated 24 hours a day at each campus housing location. Each was staffed by a campus administrator, an assistant administrator and a number of room clerks who were divided into three eight-hour work shifts. There were 14 clerks at Pepperdine, 11 at Mount St. Mary's, 10 each at Occidental and Loyola and seven at the USC apartments.

The following services were provided by the front desk personnel:

- Guest registration
- Mail
- Telephone messages
- Lost and found
- Nightly room audits
- Collection of all fees, including charges for lost keys, room damage and extended stays
- General information

A wide range of housekeeping services was provided daily at each campus housing area-making the beds, cleaning rooms and bathrooms, vacuuming hallways and public areas and replenishing toilet articles and linens. Twice a week, housekeeping personnel replaced bed linens and vacuumed the guest rooms and thoroughly cleaned all bedrooms, living quarters and bathrooms.

Either the LAOOC or the respective college provided blankets, reading lamps, tissue paper, plastic cups, wire hangers, bars of soap, ash trays and baskets for guests. Ice buckets were provided at Occidental College only and televisions were installed at each facility in selected common areas.

Also distributed were information packages which contained house rules, transportation schedules, emergency information, a campus map, lost key charge policy, available food services, gift shop areas (where applicable), security suggestions, campus facilities locations (telephones, vending machines and laundry), housekeeping information, check-out procedures, damage liability policy, lost and found policies, and mail and message center procedures.

The front desk personnel maintained contact with other Organizing Committee operations that affected and influenced their operation and were apprised of important Games information to pass on to the guests. This information included facts and updates regarding transportation and competition schedules, food services, health services and emergency procedures, language services, financial services and all other information pertinent to the guests' stay. The campus housing staff also coordinated the transportation of its guests—many of whom were sports federation officials, LAOOC staff and journalists—with the Transportation Department.

Although the Organizing Committee did not intend campus housing to equal the standards of hotel accommodations, it, nonetheless, anticipated and received complaints from some guests regarding conditions, such as sharing bathrooms and the lack of telephones, televisions and air-conditioning. These complaints, however, were not as great or as severe as feared. Dissatisfied guests had the option of upgrading accommodations to hotels if they wished, provided they paid the increased rate.

Overall, campus housing ran smoothly and the great majority of the guests were pleased with the accommodations, the cost and the services provided.

Staffing requirements were overestimated by the Accommodations Department. The check-in period was extremely busy and required all the manpower that the campus housing operations had at its disposal, but after that, business slowed considerably. There were two clerks scheduled per shift, but only one was needed.

The overall quality of the work accomplished by the clerks was excellent. While they adhered closely to written procedures, they proved to be flexible when necessary and applied common sense solutions to problems that were not anticipated. The recruitment of staff from the

respective campus locations was successful in that it assured that employees would be familiar with the housing sites and concerned with the campuses they were representing.

16.03 Assignment of groups

The total of accommodations assignments—including both hotel rooms and beds at the campus housing sites—was 19,332. A breakdown of those assignments by groups is as follows:

Group	No. of Rooms	Percent
Sponsors	5,841	30.2
Electronic Media	4,097	21.1
Organizing Committee staff	2,729	14.1
Print media	1,974	10.2
Suppliers	1,259	6.5
IFs	1,093	5.6
Government officials	774	4.0
IOC, NOCs, Olympic Organizing Committees, extra officials	629	3.2
Patrons	70	0.3
Others	866	4.4

Organizing Committee staff assignments were paid for by the LAOOC and groups included were: Organizing Committee staff whose jobs required that they live in close proximity to their jobs during the Games, ceremonies' technicians and band members, domestic federation officials and delegates, interpreters and handicapped Olympians.

16.03.1 Systems used to monitor and assign accommodations

The LAOOC's Accommodations Department utilized two computer software systems to manage its operations successfully: the Personal File System (PFS) to control and track all housing inventory data and the Hotel Reservations and Guest Accounting Program to maintain the status of housing assignments for Olympic Family members.

The PFS system, known as the "bible" by department personnel, was introduced in December 1983. It was especially flexible and gave Accommodations the ability to report data in numerous formats, including inventory by hotel, groups and group types.

The LAOOC installed the IBM System 38 in June 1983 for its accommodations operation and converted the Hotel Reservations and Guest Accounting Program to manage Olympic Family inventory, reservations and deposits. Basically, the program was designed to handle a single hotel-to operate a hotel's reservations, front office system, accounting procedures, night audits, housekeeping tasks and inventory and the food and beverage cashier system. Accommodations utilized those aspects of the program

that applied to its needs and modified it to service multiple hotels.

The program had the capability to reserve accommodations for individual Olympic Family members as well as for groups and to track and update all deposits. It was also modified by Accommodations to monitor the number of rooms available by assigning Olympic Family members through a group code system-to available hotel space. The computerized inventory was derived from the information stored on the PFS inventory report.

All reservations entered into the system included the following data:

- Arrival date
- Departure date
- Number of persons
- Organizational affiliation code
- Hotel code
- Room type
- Room quantity
- Room rate
- Name (last, first, title)
- Address (city, state, zip code, country)
- Organizational affiliation

Based upon data entered, the program calculated the deposit due and generated a written confirmation/deposit request which was mailed to the appropriate party. The program also was capable of posting and tracking deposits-which were accessible only by a security code—and generating updated confirmation/deposit requests to advise the guest of any balance still due or to confirm payment in full.

5 Loyola Marymount University, one of the sires for Olympic campus housing.

Housing of Dignitaries, Sponsors, Sports Officials and Guests (Accommodations)

The program was capable of generating numerous management reports, but only two, the "Future Delegate List" and the "Expected Arrivals By Hotel," were pertinent to the housing of Olympic Family members. The "Future Delegate List" reported all reservations by group and in alphabetical order. It also listed the total cost to each group, the amount paid and the balance due. Accommodations, Finance and Internal Audit used this information to monitor the status of housing accounts.

The "Expected Arrivals By Hotel" listed all arrivals in alphabetical order and was the rooming list that the Organizing Committee provided to the official Olympic hotels. It was also used to review hotel-by-hotel deposit information.

16.03.2 Assignment dates and dissemination

Accommodations set timelines for all goals and responsibilities of the hotel and campus housing operations and met all of them successfully except for those pertaining to payment requests and confirmations which in some instances were late by as many as 30 to 45 days. There were numerous reasons for these delays, one being the difficulty in sending payments through the international mail, another being the slowness with which some of the necessary housing information was gathered and still another was the dilatory response of Olympic Family members. Nonetheless, Accommodations overcame the delays with hard work and ran a successful housing operation.

The original goal of the Organizing Committee was for all Olympic Family members except print journalists to pay a 20 percent deposit on all accommodations by 1 February and to pay in full by 1 April. Print journalists were asked to pay a seven-day deposit by 1 February and the balance upon arrival in Los Angeles. However, the Organizing Committee did not begin mailing deposit request/questionnaires to Olympic Family members until January and February which made it almost impossible to make its own deadlines.

16.03.3 Assumption of agreements by groups

All sponsors, electronic broadcasters and governmental agencies signed an *Assignment, Assumption and Release Agreement* that established the accommodations liabilities of the Organizing Committee, the "Official Olympic Hotel" and the member of the Olympic Family. In this agreement the

LAOOC assigned all or a portion of its hotel room inventory to the Olympic Family member. The hotel and the Olympic Family member, in turn, agreed to transfer all financial obligations and contractual liabilities from the LAOOC to the Olympic Family member.

16.03.4 Collection of deposits and closure of liability

The LAOOC demanded full pre-payment of accommodations prior to the arrival of all Olympic Family members except for members of the written press who were required to pay a seven-day deposit by 1 February 1984 and the balance upon arrival.

Collection was difficult because of the large number of international organizations involved and the diverse methods of payment. Almost every organization had its own particular system for paying the bill. It was not unusual, for example, for an Olympic Family member group to be responsible for some of its delegates' payments and for the Organizing Committee to be responsible for the rest.

The LAOOC's original payment schedule requested Olympic Family members to make a 20 percent deposit based upon estimated hotel room rates by 1 February 1984 and to pay in full no later than 1 April. The written press, technicians and some suppliers and National Olympic Committees (NOCs) paid the majority of their deposits on time, but the overall payment schedules of the NOCs, IFs and the IOC were redesigned out of necessity.

In all cases, pre-payment billing was based on a 17-night minimum stay, unless the LAOOC was notified of early arrivals in advance. In those situations where it was necessary to change arrival dates shortly before the start of the Games, the difference in payment was collected at the in-processing centers.

In a deposit request/questionnaire sent to the NOCs in January, the LAOOC requested that the 20 percent deposit be paid by 1 March. But because of problems encountered with international mail service and the complicated process of sending money out of some countries, the deadline was extended.

The LAOOC posted the deposit against the account when it arrived and entered the reservation in a computerized accounting system. The LAOOC then mailed a confirmation notice to the NOC and requested full payment by 1 April. The same difficulties were encountered again and forced the extension of more deadlines. Some NOCs, it turned out, did not make full payments for accommodations until arrival in Los Angeles.

Collecting room payments from the IFs was even more difficult because of the complexity of payment responsibilities. Determining who was responsible for payment within some IFs was so difficult that the LAOOC didn't even bother to request room deposits. In those cases, only a request for full pre-payment was issued.

Part of the confusion was due to the fact that IFs were responsible for the rooms used by their international delegates, while the Organizing Committee paid for rooms used by two technical delegates of each IF and all domestic officials. In instances where an IF president or secretary-general also was an officer or member of an NOC or the IOC, his room obligations were picked up by either the NOC or IOC.

Billing of IOC members was particularly difficult since a decision regarding which members were to receive the Olympic Charter-mandated rate and which were assigned a single rate for a double room had to be made. Also, IOC members who requested suites were responsible for paying the difference between the charter rate and the suite rate. All IOC billing and collecting was done on an individual basis.

Upon receipt, deposits and full payments were entered into the computer and a confirmation generated. The system was capable of printing nine different texts on the confirmation forms and reflected the status of each account, to include:

- Request for 20 percent deposit
- Received deposit, request for full payment
- Request for full payment
- Full payment received, reservation confirmed
- Payment not received, reservation cancelled
- Re-confirmation

16.03.5 Room returns and covering payments by the Organizing Committee

Through the success of the hotel program, the LAOOC realized its original goal as early as 1 April 1983. The program produced 19,563 rooms for Olympic Family members in a total of 78 hotels throughout Southern California.

When the LAOOC realized it had over-estimated its needs, it began reducing the number of rooms. Several factors were involved in the Organizing Committee's success in this venture. They were:

- Release agreements negotiated with those hotels that wished to be absolved of their obligations
- Ownership changes at hotels where the new owners refused to comply with the terms of the Organizing Committee's hotel agreement
- Success in dropping undesirable properties from the hotel program

These factors more than compensated for room additions generated by new official hotels and renovations at existing official hotels.

16.04 Liaison with hotels

Eight hotel liaisons were added to the Accommodations Department staff on 1 June 1984 to establish a working relationship with each official hotel and to maintain an accurate accounting of rooms. The 72 official hotels were divided into eight geographical areas, meaning that approximately nine hotels were assigned to each liaison officer.

The liaison officers acted as the conduits for all communications that passed between the hotels and the Organizing Committee dealing with hotel payments, total room block, early arrivals, reservation changes, late departures and numerous day-to-day problems.

The liaisons handled all changes and protected the LAOOC's interests by making sure that no unauthorized incidental charges or room additions were applied to the master accounts. The liaisons called Accommodations' headquarters at the Main Press Center (MPC) each morning during the Games to verify changes. They also reported there in person on occasion to pick up paperwork and the most recent computer printouts that related to their hotels.

16.05 Operations during the Games

The Accommodations and Finance Departments of the LAOOC worked closely together during the in-processing and registering of Olympic Family members upon their arrival in Los Angeles for the Games. Accommodations staff was responsible for verifying Olympic Family members' arrival dates, departure dates, housing locations and payment status.

Registration was conducted at three locations for three separate groups within the Olympic Family. International Sports Federation (IF) officials and NOC delegations were processed at the Olympic Arrival Center (OAC) at the Los Angeles International Airport; print and electronic media were processed at the MPC and presidents, secretaries-general of sports federations and distinguished guests were processed at the Biltmore Hotel.

16.05.1 Collection of payments due

In most cases, the Olympic Family member was required to produce a receipt for housing issued by the LAOOC's Finance Department before being accredited for the Games. Accommodations Department reservation agents and Finance Department cashiers worked together to determine the status of accounts and who was responsible for paying outstanding bills.

It was the policy of the LAOOC to accredit federation officials regardless of the status of their accommodations

account. However, it would not accredit IF presidents or secretaries-general until all of their IF accommodations payments were up to date. All outstanding payments were payable and due at the time the IF secretary-general verified the accuracy of the federation rooming list.

Numerous problems were encountered at the Biltmore Hotel where most accounts were handled individually. Deposit accounts were confusing and, in many cases, inaccurate. Biltmore clients were familiar with the Games and knew they would be accommodated regardless of the accuracy of deposit information.

**16.05.2
Room shifts and changes in arrival/departure dates**

Room assignments were first delivered to the hotels in late 1983 and were regularly revised during the first half of 1984. A complete rooming list was not compiled by the LAOOC until 27 June 1984 and was not delivered to the hotels until 5 July. This list was official and used for all billings except where changes were authorized by a hotel liaison. Changes were entered into the computer system, and reservations change of status forms were generated on a daily basis.

The system ran smoothly and was accepted by the hotels. For its part, the LAOOC was prompt in making payments as they came due to maintain good relations with the hotels and the highest level of service and accommodations for Olympic guests.

At the OAC, Accommodations had little involvement with NOC team delegations, except in cases where the number of a teams' officials exceeded the number allotted to reside in the athletes' village. Those officials, who were the responsibility of the NOC delegation chef de mission, were housed at campus housing sites or hotels. For the most part, those extra officials whose NOC delegations stayed at the USC Village, were housed at the Occidental College housing site, and those whose delegations were housed at UCLA, stayed at Mount St. Mary's College.

Although the LAOOC was seldom informed of the arrival of additional officials, its operation was prepared to handle the situation and did so successfully. After officials were processed and were cleared through Accommodations, reservation agents alerted the appropriate campus of the incoming guest either by telephone or pager. The system worked smoothly.

The second group of arrivals at the OAC was the IF officials, whose reservations had been made by IF presidents or secretaries-general. Most officials required various kinds of reservation changes, either because arrival and departure plans had changed or because groups included additional people. Hotel and campus liaison officers were apprised of the changes and notified the appropriate official hotel or campus housing site.

6

6 Map of the Los Angeles area showing the location of housing for dignitaries, sponsors and guests.

Housing of Dignitaries, Sponsors, Sports Officials and Guests (Accommodations)

In-processing at the Biltmore Hotel was especially time-consuming because of the prominent nature of the guests. Although deposits and written verifications of dates had accompanied all reservations, approximately 75 percent of all Biltmore reservations required changes. Those changes were for one or more of the following reasons:

- Revised arrival and departure dates
- Revised number of guests in the party
- Room rate changed to charter rate or revised because of special status of guest
- IOC payment granted for special NOC delegations
- Pre-payment revised because of rate or arrival changes
- Pre-payment posted to village account instead of Biltmore Hotel account
- LAOOC failed to receive wire of pre-payment (this situation required research by Finance Department personnel)
- Different party responsible for payment
- Guest name spelled incorrectly or not identified in advance

16.05.3

Sale of unused rooms and settlements with hotels

The LAOOC made initial deposits of approximately one dollar per room per night upon signing the original hotel agreements during the period from 1981 to 1984. For those accommodations that were not assumed by other groups, it paid a second deposit-20 percent-upon receipt of the rate verification and room adjustment questionnaire from Olympic Family members.

Full pre-payment for the 17-day period was hand-delivered to each hotel by the liaisons on 27 June, 30 days prior to the arrival of the guests. Liaisons audited the rooms for early arrivals until 27 July, the beginning of the

17-day contractual obligation. On 27 July, charges for early arrivals were calculated and payments made within seven days.

The overall occupancy rate for Olympic Family member accommodations was 87 percent. The LAOOC had limited success negotiating reductions in payments for its unused hotel rooms. In those incidents where hotels would not release the LAOOC from its obligations to pay for unused rooms, the LAOOC made payments in full.

16.05.4

Use of the Biltmore Hotel for the IOC

In 1982, the Biltmore Hotel was selected to serve as the headquarters for the IOC. In the hotel agreement signed with the LAOOC, the Biltmore Hotel agreed to give the LAOOC 90 percent of its rooms, instead of a minimum of 80 percent as agreed to by all other official Olympic hotels. The Biltmore also agreed to make the necessary resources available for the IOC to hold its 88th Session there.

The LAOOC agreed it would occupy all of the Biltmore Hotel's public rooms, thereby denying outside groups access to any Olympic functions held there without the permission of the Organizing Committee. This was necessary to maintain access control at the hotel over sponsor groups and other special interest groups.

The LAOOC had 900 rooms reserved at the Biltmore for a period of 17 days for Olympic Family members and their guests. They included members of the

IOC, presidents of International Sports Federations, presidents and secretaries-general of NOCs and "G" accredited guests including heads of state, ministers of sports and other dignitaries.

The United States Olympic Committee (USOC) had 187 rooms, 50 of which were repurchased by the LAOOC to meet its heavy demands. Nonetheless, 99 rooms went unused during the 17-day period.

As IOC headquarters, the Biltmore Hotel was treated as a venue by the LAOOC. Venue management was responsible for protocol operations and the successful operation of the following departments: Accommodations, Accreditation, Finance, Government Relations, Health Services, Language Services, Material Supply, Press Operations, Security, Technology, Ticketing, Transportation, Travel and the Host/Hostess Program.

16.06 Summary

The LAOOC accomplished its goals of providing suitable housing for Olympic Family members during the Games and maintaining reasonable hotel prices. The high value of the U.S. dollar was felt by all visitors, but through negotiations with its official hotels, the Organizing Committee was successful in stabilizing the rates at those hotels to rates charged during the first six months of 1984.

Although the modified in-hotel computer program used by Accommodations worked well, a more refined, operation-specific system would have worked even better. For example:

- A hotel or airlines reservation system would have been more time efficient and would have eliminated the many useless functions provided by the hotel and guest reservations package.

A well-proven system would include user documentation. The hotel guest program had been recently developed and used at only one hotel before it was adopted by the LAOOC. User documentation was unavailable and was needed.

The program was not capable of assisting in checking in guests and the job had to be done manually. Future use of any system should include the check-in feature.

Accommodations' liaison program was extremely successful, particularly in the key area of maintaining communications between the Organizing Committee and the official hotels.

The campus housing program, in addition to being an operational success, solved many accommodation problems. With its great availability of beds and low cost, campus housing was able to accommodate large groups such as ceremonies dancers, band members, extra NOC officials and Organizing Committee staff members at the last minute.

The Accommodations Department recommends that any future housing operation makes sure it has sufficient staff to handle the financial aspects of the operations and to assist in managing excess inventory. It also strongly recommends that all hotel agreements include a release clause.

17

Human Resources

17.01 Permanent staff of the Organizing Committee

The original plan for staffing of the Organizing Committee called for two different types of staff: a permanent staff and a Games staff. The difference between the two was based strictly on the hiring date of the employee. Those employees hired before 30 May 1984 were designated as permanent staff and accorded all privileges and benefits described below. Employees hired after this date were considered part of the Games staff. Soon after the acceptance of Los Angeles' bid for the 1984 Games, the Human Resources Department (HRD) was established to hire permanent staff.

Although technically not part of the permanent staff, the volunteer members of the Citizens Advisory Commission (CAC) provided early support and guidance to the LAOOC. Even before the bid for the Games was awarded to Los Angeles, the Organizing Committee knew that citizen support and involvement would be necessary to stage the Games. The CAC was established to take advantage of the knowledge and skills that its members possessed, and the diverse elements of the city of Los Angeles its membership represented. Initially, recommendations for membership on the CAC were sought from the LAOOC Board of Directors and the office of the Mayor of the city of Los Angeles.

Eventually, people from all over Southern California were represented on the Commission. The desire to serve on the CAC was very high, and membership was closed at 3,000. Most of the members chose to serve on one of the 25 subcommittees, which were created to focus on many aspects of the Games. Programs were set up to familiarize the CAC members with the history and procedures of the Games in the hopes that many of these people would later serve as a core of knowledgeable and dedicated volunteers when it came time to staff the Games.

17.01.1 Growth of staffing 1979—1984

After the Games were awarded to Los Angeles in 1978, many in the community immediately responded with resumes and inquiries regarding employment and other opportunities with the Organizing Committee. The LAOOC was not in any position to hire staff immediately until it could evaluate its short-term staffing needs.

Original core management projections in 1979 set the needed administrative staff total at approximately 350 people. This staff was expected to run the operations of the LAOOC until prior to the Games when they would be supplemented with a Games staff of about 10,000. Within a year, the LAOOC knew that both of these projections were conservative and would have to be revised.

Initial planning of permanent staffing needs was a simple process of isolating a particular function that needed staffing, determining how many people were required to staff the position and then finding them.

Early use of this technique was restricted by the size of the office space available to the LAOOC. With each major jump in planned staff size, it was necessary to re-evaluate the size of a suitable administrative headquarters.

As the LAOOC moved toward a more formal management structure, staff was hired to manage the Human Resources Department. Policies were developed for department heads who needed to hire staff. For example, a job requisition form was utilized. This form was filled out by a department head who had identified a position that needed to be staffed, and provided job details and salary information. Once committed to paper and approved by senior management, the position could be filled.

Throughout the planning stage, departments were undertaking many major projects and did not have time to work on staffing requirements. When the departments did develop staffing projections, the projections were turned over to a rapidly expanding Human Resources Department. This served two purposes: it allowed Human Resources management to develop its own long-term staffing needs and it assisted the departments in the recruitment of qualified personnel for these positions.

Date	Human Resources Staff	LAOOC Permanent staff
Dec 1979	0	11
Nov 1980	2	19
Jan 1982	3	45
Aug 1982	5	90
Dec 1982	10	147
Jun 1983	21	390
Dec 1983	65	575
May 1984	70	1530

Each re-evaluation of the individual departments' staffing requirements led to a new estimate of total permanent staff required prior to the Games. Although several members of the LAOOC's management staff had been involved in human resources development for large corporations and special events, nobody had the background necessary to make accurate long term projections of permanent staff for an undertaking with the magnitude of the Olympic Games.

17.01.2 Recruitment of staff

Recruitment of staff began in two different areas of the LAOOC: the Human Resources Department and the specific department requiring staff. Human Resources utilized a data base of potential employees created from more than 10,000 resumes that were sent to the Organizing Committee once

Los Angeles was awarded the bid for the Games. These resumes were reviewed and coded for particular qualifications that might be of benefit to the LAOOC. Heads of departments usually did their own department's staffing projections. Job requisitions were then prepared establishing the pertinent information for each job, including salary range, start date and job responsibilities. These job requisitions were then turned over to Human Resources to begin the recruitment process. When a particular position had been identified by the department and forwarded to Human Resources, the coded resume data base was used to find potential applicants for the job. Human Resources then called the potential applicant to arrange for preliminary interviews.

If the position required less specialized skill, with an emphasis on good attitude and desire to work for the LAOOC, applicants were usually drawn from people known by administrative staff, specifically those staff members already working in the particular department. Once these people were identified, the applicants were referred to Human Resources for final interviews and completion of the hiring process. Through 1983, this was the predominant process for acquiring permanent staff.

Originally, job recruitment planners envisioned the need for special inducements in the hiring process to obtain the necessary qualified personnel. This kind of inducement-oriented recruitment was never used, since there was an unflagging desire on the part of the United States' public to work for the LAOOC. Even with the prospect of short-term employment (usually less than three years), professional-level staffing was accomplished with an absolute minimum of advertising.

The LAOOC also determined that personnel with an entrepreneurial background would make the best staff to run the Games. Using the concept of corporate "networking," the LAOOC asked current staff members to recruit former associates who had suitable experience. This network might have initially eliminated tapping corporate areas outside the experiences of early staff members, but as the network spread out (concurrent with the growth of the staff), all corporate areas were explored in the search for qualified staff.

With the establishment of the Human Resources Department, a staffing system, policies, procedures, programs and personnel file systems were developed, and hiring of key people intensified. As the LAOOC's staff increased, additional responsibilities were assumed by Human Resources. Employee relations, equal employment opportunities, compensation, new employee orientation and volunteer services all became part of the Human Resources Department's responsibilities.

Due to the sensitive nature of the positions open on the LAOOC staff, background investigations on each hiree were conducted by the Security Department with appropriate law enforcement agencies.

A keystone of the LAOOC's personnel function was its commitment to the ideal and goal of equal opportunity and full participation of minorities, women and socially and economically disadvantaged individuals in all Olympic activities. In order to achieve this goal, Human Resources attempted to free the employment process of either conscious or inadvertent bias because of race, religion, national origin, sex, age or physical handicap. Special affirmative action efforts were implemented to assure that individuals were given an equal opportunity and were appropriately represented. All contractors and subcontractors were asked to support these efforts by refraining from discrimination and by promoting affirmative action.

The initial equal opportunity effort was the adoption of an Affirmative Action Resolution by the LAOOC Board of Directors in 1979. This resolution was followed by the formation of a staff that remained at least 23 percent minority and 54 percent women throughout the planning stages. Minorities and women were appointed to top positions on the Executive Operations Committee, the Board of Directors and the Citizen's Advisory Commission.

The total permanent staff of 1,629 was broken down to the following three categories:

Occupational Group	Quantity
Officers and managers	455
Professionals	682
Clerical and technical	492

An analysis of employment within the LAOOC's permanent staff shows that minorities were employed in the following job groups:

Occupational group	% of staff
Officers and managers	10
Professionals	22
Clerical and technical	35
Total minority representation	23

An analysis of employment within the LAOOC's permanent staff shows that women were employed in the following job groups:

Occupational group	% of staff
Officers and managers	23
Professionals	58
Clerical and technical	76
Total female representation	54

These figures are in contrast to the composition of past Olympic organizers, which were dominated, especially at the executive level, by non-minority males. The wide diversity of the Los Angeles area was reflected in the LAOOC's staff.

17.01.3 Salaries and benefits for permanent staff

Salaries and benefits were awarded to LAOOC staff employees on the basis of their classification. The different classifications were:

- Regular full-time employees were those employees who worked at least 40 hours weekly and who maintained continuous regular employment status. All full-time employees were eligible for all employee benefits, paid vacations, paid holidays and paid sick leave.
- Regular part-time employees were those employees who worked less than 40 hours but in no event less than 20 hours and who maintained continuous regular employment status. Regular part-time employees were not eligible for employee benefits, paid vacations or paid sick leave, with the exception of certain holidays.
- Temporary employees were those full-time and part-time employees whose service was intended to be of limited duration. The classification of temporary employees who worked in excess of 90 days was reviewed.
- Non-exempt employees were those employees who were not exempt from the minimum wage and maximum hours provisions of the Fair Labor Standards Act and the California Labor Code.
- Exempt employees were those employees who were exempt from the minimum wage and maximum hours provisions of the Fair Labor Standards Act. These employees were administrators, professionals or supervisors whose positions met the occupational guidelines for determining such exemptions as established by the Fair Labor Standards Act and the California Labor Code.

It was the policy of the LAOOC, through the use of a sound and well-administered compensation program, to evaluate, appraise and pay its personnel equitably in direct relationship to their performance, duties and responsibilities. It was also the LAOOC's policy to maintain basic salary structure at a level comparable to salaries paid within the community. Initially, the LAOOC was very competitive in the Los Angeles job market, with early employees probably receiving less than equivalent salaries as against those for comparable jobs in the private sector. As Games time approached, the LAOOC felt the need to pay more than equivalent jobs in the private sector in order to ensure the hiring of qualified employees. With a rapidly approaching deadline (the opening of the Games) which could not be extended or delayed, the LAOOC

raised salaries for prospective employees. In essence, the LAOOC was paying people for the risk they were taking by coming aboard at a late date for only a very short term of employment.

The LAOOC's objectives for the compensation program were that the program be:

- Internally equitable; to provide salary ranges for all positions that fairly reflected the value of each position relative to the others.
- Externally equitable; to provide salary ranges in all positions at a dollar level that was competitive in the labor market and at a level required to attract and retain effective employees.
- Personally motivating; to serve as a vital management tool in motivating employees toward specific achievement of essential end results with flexibility within a position's salary range to recognize different degrees of individual performance.

Overtime was given to all non-exempt LAOOC employees whose jobs began prior to 1 April 1984 using the following pay policy:

- One and one-half times the employee's regular rate of pay for all hours worked in excess of 8 hours up to and including 12 hours in any work day, for hours worked in excess of 40 hours in a work week and for the first 8 hours worked on the 7th day of work in any work week
- Double the employee's regular rate of pay for all hours worked in excess of 12 hours in any work day and for the all hours in excess of 8 hours on the 7th day of work in any work week

In keeping with the guidelines of the compensation program, a comprehensive health care insurance package was provided to qualifying staff members. Dependents could also be added to the policy for reasonable fees.

Under specified policy, staff members were given compensatory absence, vacation, sick leave, disability absence, worker's compensation and holiday benefits commensurate with those received in the corporate sector.

With the move of the administrative headquarters to Culver City in September 1983, the permanent staff was given a once-daily \$2 meal allowance for use at the in-house cafeteria.

To assure that employees would stay with the LAOOC through the critical periods of the Game and phase-down and to assist them while they were moving into other careers following their termination with the LAOOC, a

1

severance allowance policy was established in March 1984. This allowance applied to eligible employees as follows:

- For employees hired on or before 31 May 1983, five percent of base earnings from date of hire through 31 May 1983, and ten percent of their earnings from 1 June 1983 through termination or 31 December 1984, whichever is earlier
- For employees hired on or after 1 June 1983 and prior to 1 April 1984, ten percent of base earnings through termination or 31 December 1984, whichever is earlier
- Continuation of medical insurance coverage for up to four months determined by the following formula or until the employee obtains new employment, whichever is earlier
- One month's medical insurance continuance for each 12 months of regular full time service—maximum continuance: four months, minimum continuance: one month—minimum severance allowance for eligible employees will be one month's pay at final base earnings rate

In May 1984 with the Games rapidly approaching, the LAOOC senior management announced the formation of the Job Opportunities Program to aid staff members in their search for jobs after completion of their responsibilities with the LAOOC.

17.01.4

Structure of permanent staff 1979—1984

The initial group of individuals hired by the LAOOC either had specific experience in operating a large event-oriented organization or had the ability to work well with the public, since the LAOOC was interested in developing good rapport with the Los Angeles community. During this early phase, 1979-1981, the size of the staff allowed for free flow of information within individual departments and throughout the Organizing Committee as a whole.

There was a rapid evolution of the management structure as the size of the staff increased dramatically. Senior management created new levels of management as the need arose, but these titles (and all job titles) were secondary to the constant need for free flow of information to each and every member of the permanent staff. From the earliest structure, which had six department managers, a general manager and a president, the LAOOC evolved into a large operation with a president, executive vice president/general manager, six group vice presidents, 25 vice presidents, 43 associate vice presidents and numerous department managers and directors. Department managers organized regular staff meetings attended by all members of the department. As the organization became more complex, staff meetings were held for several related departments (i.e., support operations) at one time. The content of these meetings was relayed to the senior management in weekly managers' meetings. The content of these weekly managers' meetings was disseminated to all departments for information and review.

Throughout the development of the LAOOC's management structure, staff members were encouraged to use their own networking capabilities to recommend appropriate people for unfilled staff positions.

The lines of communication among the permanent staff members which had been established during the pre-Games time period, 1979-1984, were thrown into temporary disarray by the movement of staff from department-based positions to positions during the Games which were venue-based. This was caused by the change from horizontal (department-based) reporting flows to a vertical (venue-based) structure. Rather than utilize the flow of communications through department managers to vice presidents, information was conveyed by venue managers and directors to the sport commissioners. This period of tumultuous adjustment was necessary for the creation of autonomous venue staffs, which were capable of managing the Olympic activity which took place at their sites.

17.02 Staffing at the time of the Games

LAOOC employees hired after 30 May 1984 were considered short term, temporary Olympic Games staff. This staff was not hired in the same manner as permanent staff, nor were they entitled the benefits accorded the permanent staff.

The Games staffing function of the LAOOC was developed and implemented by the Human Resources Department until May 1984 when the function was realigned with the Accreditation Department. Even after this realignment, Human Resources management was very much involved in the daily operations of Games staffing.

17.02.1 Early response to Games staffing interest

With the establishment of the LAOOC, long-range planning evolved for the staffing of the LAOOC during the Olympic Games. Original estimates placed the number of staff needed at approximately 10,000. Where this staff would come from and whether this staff would be paid or not were questions that were put aside for the time being in order to take care of more pressing matters.

The question of volunteer staffing of the Games continued to be debated in the early planning stages. A major breakthrough came with the publication of an article in 1982 in the "Los Angeles Times" that reported

chairman Paul Ziffren as stating that the LAOOC required 10,000 "volunteers" to work at the Games. There was massive response to this article from people wishing to volunteer their time to the Organizing Committee, and it gave credence to the idea that the Southern California community would support the effort of a volunteer Olympics. It is ironic that the volunteer Games staffing program resulted from a misinterpretation of the LAOOC's plans in the press, prior to the LAOOC's actual decision.

In the spring of 1981, prior to the publication of the "Times" article, some segments of the Los Angeles community had come forward to volunteer their services to the LAOOC. A volunteer services program was established and volunteers, based on their skills, were placed throughout the LAOOC. During the first year, volunteers were primarily used as clerical support. By the summer of 1982, needs outside of the clerical area had been identified and the Human Resources Department developed and implemented a plan to utilize volunteers as hosts and hostesses for the January 1983 meeting of the IOC Executive Board with the NOCs. This use of volunteers was the first effort on the part of the Organizing Committee to staff non-clerical positions with volunteers.

Even as plans were formalized to rely on volunteer help for the LA83 events, the LAOOC still had not decided to staff the Olympic Games with large quantities of volunteers. Each 1983 event was looked upon as a test of the effectiveness of volunteer staffing. Certain positions were identified as needing paid personnel while other positions appeared ideally suited for volunteers.

During the last quarter of 1982, the volunteer services function of Human Resources focused its attention on filing and processing nearly 6,000 pieces of mail the LAOOC had received from the general public offering its time and effort. These individuals served as a foundation for the efforts to staff, on

a volunteer basis, the 1983 events. The Human Resources staff went through the applications and selected qualified applicants for interviews at the LAOOC administrative offices in Westwood. More than 2,000 applicants were interviewed and rated for potential interviewer positions at the four Olympic staffing centers that opened in the fall of 1983.

The final test of the volunteer program came when individuals were identified and trained to work the January 1983 meetings and the LA83 events. The effectiveness of the volunteers under circumstances similar to the Games was enough to convince the senior management of the LAOOC that the volunteer program would work for the Games.

17.02.2 Procedure to identify required staff

The identification of staff positions required for the Games came from the LA83 events. These events were the proving ground for a majority of the Games functions that would be performed during the Games. The LAOOC management group in charge of the production of a specific 1983 event used the staffing information of the previous event for planning their own event. The collected information from each event was used by the Venue Development Department for projecting the quantity of staff necessary at each venue during the Games. The focus of the Venue Development Department was not primarily on the staffing requirements but on the procedures necessary to make each venue operational. This procedure finally resulted in manpower plans for each site as a part of the venue development plans. These plans were created from November 1983-March 1984.

The manpower plans led to the creation of job requisition sheets used to track the need for a job (and therefore a Games staff member), and whether that job had been filled. Each requisition identified a type of job, a job location, the requirements of the job, the number of people to staff the job and the pay status of the job.

2

3

² Temporary employees review plans.

³ Kevin Lewis (left) and Russell Derek discuss services to be provided for the physically challenged.

Staffing numbers which could not be projected based on the 1983 events, such as security or transportation, were developed by the departments themselves using the management's past experiences in planning for large events. These internal projections were then discussed with the individual venue's development group to make sure that staffing needs would be adequate to perform each function within the venue. Interaction between the departments and the venues, the bulk of which took place in the spring of 1984, caused major changes in the staffing requirements already established by the Venue Development Department. The venue management, after reviewing staffing requirements developed by the departments, requested additional staffing to satisfy venue needs, placing stress on the individuals (personnel coordinators) hired to staff specific venues and the staffing process in general. All jobs, regardless of when specified, required job requisitions for tracking purposes.

Since the production of the 1984 Games was done within a "staffing vacuum," whereby the management of the Organizing Committee could not rely on individuals with experience in sport/event planning to determine accurately the staffing needs of an entire Games, the Human Resources role was to identify existing staff expertise in individual areas and compile the information to present a complete picture of the overall staffing needs. Where the picture was incomplete, the Human Resources and Games Staffing departments identified a staff member who could utilize his previous experiences to determine an effective number of staff for that particular site or function.

To further complicate the job of Human Resources, the department needed to fill uncertain and ever-changing staffing needs in a very short amount of time. Certain staffing needs came to light just weeks before the Games were to begin.

17.02.3 Programs for the recruitment of staff

Much in the same way that permanent staff was recruited both by the individual departments and Human Resources, so too was the Games staff. The central focus of the LAOOC was on the recruitment of volunteers through the use of four Games staffing Centers in Westwood, Long Beach, central Los Angeles and East Los Angeles. These centers were advertised to the general public as places where applications would be accepted and interviews conducted for employment during the Olympics. Other than advertising in local daily newspapers and running public interest spots on local radio and television stations, there was no major public relations program used to recruit staff for the Games. Requests for positions, even prior to the advertisements, were much larger than the number of anticipated staff positions.

Recruitment of staff by sport commissioners and other venue-based management was actively done in the areas relating directly to their sports. As an example, staffing for the equestrian events was primarily accomplished by the equestrian management which recruited people who had a strong interest in equestrian sports or who were normally involved in the production of equestrian sports events on a non-Olympic basis. Unfortunately, not all of the sports were capable of filling their own staffing needs and, at the last minute, Human Resources tried to fill the remaining spots. Approximately 50 percent of all Games staff was hired through the staffing center process, with the remainder of the Games staff coming from department and venue referrals.

Certain departments which required specialized personnel aided recruiting by soliciting staff from among colleagues not working for the LAOOC. For example, the Transportation, Press Operations and Health Services Departments played large roles in acquiring their own venue-based staffs.

The LAOOC continued its commitment to affirmative action and the equal opportunity program in its Games staffing policies. Staffing projections for the entire Games staff placed the number of personnel at 80,000. The functions of the 80,000 Games staff were as follows:

- 32,000 volunteers
- 12,000 LAOOC paid staff
- 36,000 contractor paid personnel

The figure for LAOOC paid staff includes the permanent staff of 1,600 that were hired prior to 1 June 1984. Approximately 44,000 of the 80,000 Games staff personnel were under the direct supervision of the LAOOC's management staff. The remaining 34,000 personnel, selected by the LAOOC, were employed and supervised by contractors. In keeping with the affirmative action policy of the LAOOC, minority participation in these companies was substantial. A breakdown of the ethnic groups within the Games staff under direct supervision of the LAOOC reveals the following:

<i>Ethnic group</i>	<i>Amount</i>
Non-minority	34,926
Blacks	4,622
Hispanics	3,496
Asians	2,265
American Indians	134

Minority participation approximated 24 percent of the LAOOC's total work force.

4

17.02.4 Role of the personnel coordinators

The role of the personnel coordinator was to acquire Games staff for a particular department or venue. The personnel coordinator's job was to ascertain the manpower needs of the assigned department or venue and seek out qualified personnel to satisfy those needs. Department personnel coordinators were identified at the end of 1983 and early in 1984 and given the responsibility of Games Staffing for their assigned department. With almost every department, this meant finding suitable personnel for department positions at every Olympic site—not just competition venues and villages. Once the personnel coordinator was identified for each venue, the staffing information for each of the venue departments was channeled to that person. This venue personnel coordinator, in effect, became the temporary supervisor of all the department personnel coordinators who were staffing positions at the venue. In theory, the department personnel coordinators were responsible for filling all positions for their departments at each of the venues, and the venue personnel coordinators needed only to make sure that new staff completed the staffing process, and new jobs at the venues were filled. Unfortunately, single personnel coordinators were placed in charge of large departments and could not fulfill the staffing requirements by themselves. This meant that both the department personnel coordinator and the venue personnel coordinator were placed under extreme pressures to complete the staffing process.

Adding to an already difficult job, the venue personnel coordinators were hired very late in the staffing process, as late as spring of 1984, and received very little training on how to accomplish the staffing process. Although the work background of the personnel coordinators should have been in human resources management, it tended toward a more general corporate background.

5

4 LAOOC President Peter V Ueberroth and Executive Vice President/General Manager Harry L. Usher (front row) attend a general staff meeting four months before the Games.

5 A volunteer helps out on the telephone by answering one of the numerous questions posed by the general public.

6 Volunteer George Gerber is honored by the LAOOC.

7 Temporary employees help out.

Even with all of these problems confronting the personnel coordinators, the job of staffing the Games was completed on time. The personnel coordinators were given strong support by the rest of the Human Resources Department staff and individual departments and venues gave additional assistance to their own personnel coordinators.

17.02.5 Staffing centers

The concept of a neighborhood staffing center was developed in order to facilitate the acquisition of personnel for Games positions. Each staffing center had the capability of identifying prospective staff, completing paperwork for requisitions, interviewing prospects to determine interest and expertise, matching interviewees to appropriate Games positions, hiring staff and, finally, credentialing staff.

An analysis of community impact was done before determining the location of the staffing centers. The general location of each was determined by the proximity to the center of several Olympic venues. Since the Olympics were being held, in part, to benefit the community, the LAOOC decided the staffing centers should be placed in areas which could derive the greatest possible benefit from them.

After lengthy evaluation, four staffing center locations were decided upon, and a search was begun for existing structures to house the centers. A staffing center was established in east Los Angeles on the campus of East Los Angeles College, site of the field hockey competition for the Games. Another staffing center was located in the Crenshaw area of central Los Angeles, near the venues for athletics, boxing, basketball, swimming and the USC Village. The third staffing center was located in Long Beach near the venues for archery, volleyball, fencing and yachting. The fourth staffing center was located on the UCLA campus in the LAOOC building near the venues for gymnastics, tennis and the UCLA Village in Westwood.

Each of these buildings was converted from its original use to an interior layout that allowed for a large flow of street traffic. Phone and data lines were established from the staffing centers to the administrative headquarters in Culver City for use of the Games Staffing computer system. Chairs and tables were brought in to accommodate the interview process. The earliest staffing center to become operational was the Crenshaw center in October 1983. This center was expected to process the largest number of potential applicants and by its close had processed in excess of 35,000 applicants. The Long Beach and Westwood centers began operations in November 1983 with the East Los Angeles center following a month later.

Each one of the staffing centers had a paid staff of five people with some centers having close to 400 volunteers. The paid staff performed administrative and training functions while the volunteers answered phones and conducted interviews of potential Games staff. This system, with its heavy reliance on volunteer interviewers, worked very well since all of the volunteers were given extensive training. The only drawback to this system was the high ratio of volunteers to paid staff. There were times when volunteer interviewers did not have paid staff available for interview consultation.

The concepts of using the staffing center and utilizing volunteers to interview and hire other volunteers to staff the Games worked very well. Placement of the centers in areas most impacted by the Games allowed the citizens of the areas to make even more of a contribution to the Games by their participation as Games staff members. From late 1983 to the second week of July 1984, the staffing centers processed and interviewed more than 100,000 applicants for Olympic Games positions.

17.02.6 Staffing sign-up procedures

Applicants for Games positions came to the LAOOC in two different ways: as a direct referral from someone already employed by the LAOOC or by drop-in to one of the staffing centers.

Applicants who were direct referrals from other staff members were

directed to the personnel coordinators in charge of the department or venue which had the position available. The applicant completed a 1984 Games staff application. Once the information from this form was input into the Games Staffing computer software system, the personnel coordinator placed the applicant's name and number on a job requisition sheet. This linked the applicant to the requisition number and told the Games Staffing software system that a specific position had been filled. The new staff member was given a completed terms and conditions letter to read and sign. This form detailed the conditions of employment, the rate of pay (if any), the applicant's name, application number and requisition number.

Through word of mouth, information received from the LAOOC's Public Information Department and advertising, the general public became aware of the availability of jobs with the Games and the existence of the staffing centers as a vehicle for interviewing for those jobs. A person interested in working for the LAOOC who dropped in to a staffing center, was greeted by a receptionist and directed to a table set up for completing application forms. Once the applicant completed this form, he was directed to a volunteer interviewer. The interviewer reviewed the completed application and discussed with the applicant the types of jobs available. When the interviewer and the applicant agreed upon a position, the applicant was matched to the job requisition sheet for the agreed position. The applicant reviewed and signed the Terms and Conditions form and then proceeded to the credentialing area of the center for Olympic accreditation. Information from each of these staffing procedures was input to the Games Staffing computer system. In this way, interviewers could keep abreast of the status of each applicant and each requisition in the system.

Human Resources

Early in the operational life of the staffing centers, the potential employee completed the staffing process through the interview stage and was then told that he would be contacted at a later date regarding a position. The interviewer would code the application on the basis of the applicant's work experience, special qualities and the interview. This coded application was stored in the Games Staffing computer system until a later date when it was matched to an appropriate job requisition. Applicants were later called to find out if they would accept specific job positions. If they did, they were asked to come in to a staffing center to sign the terms and conditions form and go through the accreditation process.

17.02.7

Staffing selection procedures

A majority of the positions within Games staffing did not require specialized background, but they required a desire and ability to spend the required period of time to be trained as well as work the Games. Positions which did require special skills or backgrounds were usually filled through permanent staff referrals. When the required number of personnel was not found through this technique, the Games Staffing computer system was used to isolate available manpower with the special skills needed.

A major part of the application was directed toward a self-evaluation regarding:

- Personal attributes
- Sports skills
- Clerical abilities
- Technical abilities
- Driving experience
- Miscellaneous skills
- General background and experiences
- Language skills

Information on these evaluated areas was coded onto the back of the application form. The interviewer reviewed this coded information and, knowing the areas of the Games staff

requiring additional personnel, attempted to match the applicant with an appropriate position.

Aside from specialized information contained on the application form, personnel hired through the staffing centers were selected solely on the basis of the personal impression left on the interviewer at the staffing center.

A drawback to the self-evaluation process, standard coding of answers and brief interviews was a lack of refinement in matching applicants to specific jobs. The coding and evaluation process allowed for only general matches, thereby creating a rift between very highly qualified specialists and those involved with the staffing process. These individuals were called because their availability matched the time frame of a rather menial job and they were offended at being offered such a position. Fortunately, the large flow of applicants made up for any such matches.

Direct referrals were required to complete the usual applications but this was only to establish the individual in the Games Staffing computer system. If the individual had been pre-approved for a position by the department initiating the job requisition, the interview process was unnecessary since the individual had already been found appropriate for a particular position. All that was required was the individual's signature on a Terms and Conditions form denoting his approval of the terms of the position.

Although background investigations of applicants were not directly a responsibility of the Human Resources Department, the HRD staff did turn over to the Security Department the information contained on the applications that would allow thorough checks to be made with the appropriate law enforcement agencies. These background checks were made possible by

legislation enacted on behalf of the LAOOC, through the efforts of the accreditation subcommittee of the Security Planning Committee.

17.02.8

Scheduling, training and orientation

Prior to instituting Games staffing procedures, the LAOOC determined initial staffing schedules for each department, function and site. Although it was anticipated that these schedules would be revised as the Games neared, it was necessary to have a schedule framework for developing the number of personnel required to staff a particular position. This information was then used to create the job requisition stating the number of people required.

Once the positions were filled on the Games staffing requisitions, it was necessary to train and familiarize the newly hired personnel in their positions. Since most of the Games staff were stationed at one venue throughout the course of the Games, it was determined that their training, wherever possible, should take place at that venue. Planning for training and orientation was severely restricted by California law requiring payment to employees for training. To further complicate planning for these orientation and training sessions, most of the venues were used for other activities until just prior to the Games.

8 LAOOC Executive Vice President/General Manager Harry L. Usher addresses the staff at the LAOOC's Marina Center headquarters.

9 A volunteer keeps track of scores at the 1983 World Archery Championships.

8

9

The only viable solution to these problems was the scheduling of training and orientation sessions for single days with attendance by Games staff not being mandatory. Wherever possible, orientations were held at the actual sites. The LAOOC was counting on the excitement and commitment of the new staff to make this style of orientation a success.

As a prelude to the orientation sessions themselves, the Human Resources Department launched an intensive program to train staff members who would be leading the orientation sessions. A workbook was prepared by the department containing suggested agenda for orientations, tips on public speaking, budget guidelines and materials checklists. Venue-specific trainers were given background information on the venue site, the Olympic sport and the commissioners.

A general orientation session agenda

- IX. Instructions to assemble in groups
- X. Individual group/department orientation sessions

A staff handbook was given to each person attending the general orientation. This handbook was designed to give a careful explanation of the policies and procedures of the LAOOC and every effort was made to provide the handbook to the Games staff which were not present at the orientation.

The last portion of the agenda broke the general orientation session into smaller groups to allow for familiarization and practice run-throughs for each of the venue departments. In some cases, this was the only on-site training that any of the Games staff received until the Games began. This program was successful as more than 80 percent of the Games staff in the local area attended the orientation sessions.

Functional departments of the LAOOC created their own training programs for Games staff. Personnel who required specialized training in the areas of finance, transportation, health services, accreditation, etc. were given training at the administrative headquarters and other available venues prior to the Games.

Venue management personnel, including both Games staff and permanent staff, were trained and tested in their responsibilities using "tabletop" sessions. These sessions revolved around a series of anticipated problems at the site during the Games, and management personnel were required to identify specific courses of remedial action to these problems. The remainder of the session was used for analysis and discussion of problems and solutions.

17.02.9 Operations at sites

As venues became operational, the human resources function moved from a centralized department operating out of the administrative headquarters to a venue function. In most situations, the venue personnel coordinators became the personnel managers at these venues. Larger venues, such as the Los Angeles Memorial Coliseum, had larger personnel staffs with several personnel assistants and personnel clerks. Their job was to make sure that venue staff arrived and performed their jobs during the day. When personnel did not show up for their positions, the personnel manager found someone to fill the position temporarily. Usually this replacement came from a general pool of applicants still available in the Games Staffing system. If a staff member was lost permanently, the personnel manager, in conjunction with the manager of the venue department affected, determined if a replacement was needed or whether the position could remain unfilled for the remainder of the Games.

If a replacement was needed, a human resources manager who staffed the operation center at the administrative headquarters during the Games could draw a replacement from the Games staffing computer system. Fortunately, the attrition factor at the venues was less than 3 percent and this resource was rarely used.

17.03 Post-Games job opportunities program

17.03.1 Concept and goals

With the high caliber of permanent staff and temporary nature of their Olympic positions, it was anticipated that many of the staff would begin to look for new positions outside of the LAOOC just as the most crucial part of

LAX	16 June	422	398

LAOOC operations began, specifically during the move into the venues just prior to the start of the Games. The loss of key personnel and the stress placed on staff who required employment immediately after cessation of the Games were issues the senior management addressed before they reached a critical point. Their response to these anticipated problems was the severance program already outlined and the creation of the Job Opportunities Program.

The program was initially created with the intention of taking the pressure off the staff member torn between LAOOC responsibilities and seeking on-going career possibilities outside of the LAOOC. By establishing a special program to assist in placement of LAOOC staff in new jobs after the completion of their responsibilities with the LAOOC, the senior management felt they had ensured that most staff would remain throughout the Games with their minds focused on LAOOC tasks rather than personal issues.

With the creation of the program, senior management initiated a two-pronged approach to job placement: a direct appeal to the business community (both local and national companies) to interview LAOOC staff after the Games were completed, and the creation of a data base detailing the job experiences and career aspirations of the LAOOC staff. Businesses interested in hiring LAOOC staff were asked to leave open any positions which became available through attrition during the Games period in

exchange for which the LAOOC would give the companies easy access to the staff for interviews after the Games were over. The staff that qualified for this program, the approximately 1,100 hired prior to 1 April 1984, were required to submit resumes and information sheets to show their interest in participating in the program.

As an adjunct to this potential employer/LAOOC staff matching process, the program developed workshops in resume writing, self-assessment, salary negotiation and job interviewing to increase the marketability of the LAOOC staff after the Games. A weekly newsletter was distributed, reporting on available positions and announcing presentations by companies to the staff.

17.03.2 Early operations

The program was low-key until the beginning of the Games. The business community was still wary of holding positions open for the LAOOC staff since the staff was still of unknown quality. Without the success or failure of the Games, the companies would have no way of evaluating the performance of the staff. Furthermore, the LAOOC staff was in no position to begin the interview process seriously since all of their time was devoted to making the Games a success.

During the Games, as the Olympic spirit swept through the country, approximately 200 potential employers joined the program. Interviews were conducted with LAOOC staff only when it did not affect the staff member's ability to conduct LAOOC business.

17.03.3

Post-Games effort

Once the Games were successfully completed, the Job Opportunities staff went into full operation with the staff expanding from six to 35. Skilled human resources counselors conducted interviews with each of the more than 600 staff members who actively participated in the program. This meant that more than 50 percent of those qualified for the program were willing to give the program a chance to work for them. Participants in the program who found employment on their own or continued to work for the LAOOC after September 1984 were then excluded from the program. Expectations ran high among the staff members that the program would find them high-paying jobs and that they would not have to expend too much effort to get them. These kinds of unreasonable expectations were fostered by the report that an additional 400 companies had signed up to participate in the program as prospective employers. As with any situation where expectations are too high, some staff members were disappointed with the results of the program.

Of the 600 staff members who actively participated, 380 were placed in new positions. Many more were in various stages of the interview process when the program closed on 2 November 1984. Over 3,500 post-Games, face-to-face interviews were arranged through the program. High expectations were a major problem as a large number of companies made offers that were turned down. Salaries for a

majority of the LAOOC staff were higher than the going market rate, therefore opportunities were rejected by many who wanted to hold out for more money.

Although the placement of 380 staff members reflects a majority of the participants, the expectations for the program resulted in anger or disappointment from some of those not placed. Several mitigating factors should be noted. A majority of the positions presented by the participating employers were at distant ends of the job spectrum; executive management or low-paying clerical positions. A majority of the participating staff members were looking for, or had experience in, middle management positions. After the staff's experience with sports/entertainment positions working for the LAOOC, they were inclined toward those same positions in the private sector. Unfortunately, there were very few positions of that nature available from the job program because there were few such positions existing in the private sector.

The program was a good-will gesture to the staff from an appreciative senior management group. If the management had been able to limit the expectations of the staff at the inception of the program by convincing them that the program was an assistance process rather than a placement program, then the staff would have made better use of it. Unfortunately, some staff relied heavily on it to actually find their future employment.

17.04

Summary

The human resource function of the LAOOC was a vital one. The Human Resources Department was charged with four key roles: the acquisition and maintenance of a quality permanent staff, the long range planning of manpower needs for production of the Games, development of a system for interviewing and hiring the large quantity of personnel needed to staff the Games and the implementation of training and orientation for the Games staff.

Acquisition of permanent staff was done in conjunction with already existing staff using a network approach. A large portion of the permanent staff members came to the LAOOC because they had been recruited by the LAOOC staff members with whom they had worked previously. Each department was also responsible for establishing its own staffing requirements and assisting Human Resources in locating qualified personnel to fill these positions.

The LAOOC established a strong policy for hiring which was based on the principles of equal opportunity and full participation of minorities, women and socially and economically disadvantaged individuals. This policy was adhered to for both permanent and Games staffing periods and was an unqualified success. The caliber of staff was exceptional as evidenced by its ability to produce a problem-free and aesthetically-successful Games.

Planning manpower requirements for an event the size of the Olympic Games was nearly impossible. Without the experience of putting on an event of similar proportions, the LAOOC found it necessary to break the Games into smaller units; departments and venues made the manpower assessments. As with permanent staffing, a relationship existed between Human Resources and the other primary departments which required both parties to work on

the manpower plans. The information obtained from this planning was placed in the Games staffing computer system utilizing job requisitions.

Human Resources had primary responsibility for developing the Games staffing system and its satellite staffing centers. By using an innovative system whereby trained volunteers interviewed prospective Games staff, the Human Resources Department proved that volunteers could play key roles in producing the Games. This experiment led to the decision that a majority of Games positions would be volunteer. The Southern California community responded to the challenge of staffing the Games by pouring into the staffing centers to apply for non-paying positions. The LAOOC gambled that people would want to work on the Games for the pleasure of being a part of history regardless of the position offered, and the gamble paid off.

Once the Games staff was identified, it became the responsibility of Human Resources to provide the general training and orientation necessary for the staff to do its job. A series of orientation sessions were held, conducted by trainers working from an agenda prepared by Human Resources. Each session was geared to a specific site or departmental function with the venue department management providing additional more specialized training. In addition to teaching general Olympic knowledge, Human Resources hoped to impart to the Games staff the spirit necessary to make this Games special, for both the staff and the participants. The high quality of the Games and its staff was strong evidence of Human Resources' ability to carry out this task.

1 LAOOC President Peter V. Ueberroth (from left), IOC President Juan Antonio Samaranch and IOC Director Monique Berlioux visit the Los Angeles Memorial Coliseum.

18.01 Areas of liaison between the IOC and LAOOC

To list all of the areas on which the IOC and LAOOC worked together at some point during the organization of the Games would take a book as long as the one you are reading now. Both organizations worked together on many matters of common interest during the preparatory period of the Games of the XXIIIrd Olympiad.

These liaison efforts were broken down into several main areas. The President of the IOC, Juan Antonio Samaranch, was in constant touch with Peter Ueberroth, President of the LAOOC, regarding a wide variety of matters. Planning for medical services and the doping controls during the Games was taken up by the IOC Medical Commission, chaired by Prince Alexandre de Merode (BEL). Protocol matters involving the 88th Session of the IOC in Los Angeles in 1984 were reviewed by Cornelis Kerdel (HOL), the IOC's chief of protocol, and Ashwini Kumar (IND) came to Los Angeles in advance of the Games to inspect security arrangements. Sports matters were handled principally by the honorary director of sports for the IOC, which was Arpad Csanadi of Hungary until his death in 1983, followed by Walther Troger (FRG).

Almost all other matters were routed through the IOC's headquarters office at the Chateau de Vidy in Lausanne, Switzerland and handled by the Director of the IOC, Monique Berlioux (FRA). She and the IOC Secretariat kept up a lively correspondence with various departments of the LAOOC by letter and telex during the organizational and planning period from 1979 through 1984. All of the IOC's logistical and operational requirements were handled by the director, who communicated primarily with Ueberroth and LAOOC Executive Vice President Harry L. Usher, along with several department heads.

Berlioux and accompanying staff members made a number of visits to Los Angeles in the pre-Games period and made three visits in the year prior to the Games in July and December 1983 and May 1984. In addition to general matters, Berlioux and her staff focused on all arrangements being made for the IOC's 88th Session, held immediately prior to the Games on 21-28 July 1984. In the years prior, Berlioux and accompanying staff members made visits to Los Angeles before all major IOC functions and meetings, to visit the sports venues and villages and to negotiate some of the television rights agreements.

IOC members infrequently came through Los Angeles other than for scheduled IOC meetings, but, when they did, they were welcomed by the LAOOC. A number of personalized venue tours were given for members who requested them. A significant occasion for Los Angeles organizers was the first visit of Samaranch,

accompanied by Berlioux, to Los Angeles from 6-12 December 1980, to visit the proposed sports sites and villages and to meet with local governmental and Olympic officials.

18.02 LAOOC reports to the IOC Executive Board and the IOC Session

The LAOOC was asked to report on its progress a number of times during the organizational period from 1979-1984. A brief recapitulation of the highlights of each report is listed below.

18.02.1 Report to the IOC Session: July 1980

The LAOOC's first official report to the IOC was given in Moscow, just prior to the Games of the XXIIIrd Olympiad on 16 July 1980. The LAOOC's written report contained general information regarding the organization of the Organizing Committee on such diverse topics as finance, security, transportation, licensing and merchandising, cultural and fine arts, government relations, ticketing, housing, press, publications, television, accreditation, and youth activities. A note of appreciation for all groups which had been so helpful in the LAOOC's young life to that point was included in the report. Accompanying photographs profiled some of the main venues which were planned to be used for the Games and the senior members of the permanent staff. The foreword to the report noted that "...the LAOOC, since its inception, has been carrying out the planning and operation on a business-oriented basis in the true spirit of Olympic competition."

Major decisions regarding the Games in Los Angeles were taken in Moscow. The LAOOC's logo, the *Star in Motion* was approved by the IOC, as was the mascot, *Sam the Olympic Eagle*. The opportunities for female competitors were greatly expanded as 12 new events were accepted onto the program, nine of them for women only. These included the 3,000-meter and 400-meter hurdles for women in athletics, the cycling road race for women, rhythmic gymnastics for women, three new women's events in shooting, mixed participation in skeet and trap events, women's 200-meter medley in swimming, men's 200-meter medley and 4 x 100-meter relay in swimming and duet competition (for women) in synchronized swimming. Boardsailing was added to the yachting program as well.

The IOC asked for details of the opening and closing ceremonies, competition schedule, press, security and transportation arrangements and village accommodations costs as soon as possible.

**18.02.2
Report to the IOC Executive Board: February 1981**

The IOC Executive Board met in Los Angeles in 1981 at the Century Plaza Hotel, a few blocks away from the LAOOC's initial office in Century City. The LAOOC presented a short written report, participated in discussions with Executive Board members and gave a tour of the sites to those present.

The report highlighted the LAOOC's successes in the areas of licensing and merchandising, noting that the number of sponsors would be less than in previous times, helping to decommercialize the Games while maintaining high standards of dignity and taste. The report also noted the plans of city officials in Los Angeles to refurbish the Los Angeles International Airport in time for the Games, adding a new terminal and customs facilities for incoming international visitors.

In sports, the LAOOC noted its new program of sports commissioners, featuring proven administrators and managers with dedication to and interest in sports. A request was made for the approval of the addition of a marathon race for women to the athletics program of the Games, in view of the growing interest and participation in the event throughout the track and field world.

Notable decisions taken at the meeting included agreement by the LAOOC that transportation would be provided at no cost to IOC members, presidents and secretaries-general of the IFs and NOCs from the airport to the chosen hotel and to the respective venues.

Regarding an LAOOC request for demonstration sports, the Executive Board agreed to consider the proposal of the Organizing Committee and announce its answer later.

Finally, the LAOOC's request for the inclusion of a marathon event for women was accepted, provided that such a race be held separately and at a different time than the men's race.

**18.02.3
Report to the IOC Executive Board: April 1981**

The IOC's Executive Board met in Lausanne in April and the LAOOC delivered another written report. The highlights of this report included a note about the growing Citizens Advisory Commission which had over 800 members at the time. Their role of support and advice to the LAOOC helped to involve the community in the preparations for the Games and many of the area's leading citizens were already members.

The report noted that facilities for 17 of the 21 sports on the competition program were already arranged, almost four years prior to the Games, using existing sports facilities in Southern California. The only two which needed to be built—a cycling velodrome and a swimming stadium—were already funded and the sites were

being readied for construction. The Organizing Committee's first publication, "LA 84" was produced just before the filing of the report and copies were distributed by mail internationally as well as locally.

The meeting itself produced approval for two demonstration sports on the program for Los Angeles: baseball and tennis. A four-team baseball tournament was approved and tennis singles competition in both men's and women's divisions was approved for 16 competitors in each division. The site for canoeing and rowing at Lake Casitas in Ventura County was approved, as well as accommodations for the competitors in Santa Barbara, closer to the competition than either the USC or UCLA Villages in Los Angeles.

**18.02.4
Report to the IOC Session: October 1981**

The second official report of the LAOOC to the International Olympic Committee was presented during the 84th Session of the IOC in Baden-Baden, FRG on 1 October 1981. The LAOOC brought a large delegation to Baden-Baden for the Session, which was preceded by the XIth Olympic Congress. An LAOOC hospitality area was set up and the organizers accredited delegates to this area and presented each with souvenirs, including a lucite clipboard, guide book to Los Angeles and fruit and nuts from California.

The report contained new information that all but two sites for competition events had been located, as well as a site for the Main Press Center of the Games. In addition, the construction of the new velodrome at California State University, Dominguez Hills was almost complete and would be finished in time for initial competition in the summer of 1982. Completion of an agreement with a major sponsor to install a new, world-class track at the Los Angeles Memorial Coliseum and at six other facilities for training was also announced. The planning of the cultural component of the Games was well along with plans for a festival, universal in scope, that would reflect the international make-up of the American populace. Plans already included a pre-opening Gala at the Hollywood Bowl, with an international roster of artists in a program of classical music and dance. A poster series by 15 American artists of works created specifically for the Games was also being planned.

The report also noted the responsibility of an Olympic commemorative coin program which would provide funds for optional services involved in staging the Games, as well as to augment the financial support of the United States

2

Olympic Committee. The IOC's questions about the support of the new Reagan Administration for the Games were answered positively with the news that President Reagan had named his deputy chief of staff, Michael K. Deaver, as his personal liaison with the LAOOC. The report carried the text of a telegram from President Reagan to the president of the IOC, stating that "the United States of America will welcome athletes from all nations to participate in the 1984 Olympic Games in Los Angeles."

The announcement of the signing of agreements with major hotels throughout the Southern California area indicated that the LAOOC had completed the first phase of its plan to acquire housing for the Olympic Family. The LAOOC agreements included assurances that prices would not include any special surcharges during the Olympic period in 1984.

Programs for youth throughout Southern California were also underway with competition programs in athletics, swimming and yachting, plus a teacher's guide to the Games integrating the Olympic movement with the curriculum of children in elementary and secondary grades.

The report closed with useful appendices indicating the seating capacity of each site and the distances from each site to each of the villages and to the Main Press Center, as well as a profile of meteorological conditions in the Southern California area during the Olympic period.

The 84th Session closed with decisions that affected only minor details of the Los Angeles program. However, the LAOOC did report that an offer for the purchase of television rights in Italy from a private television concern for \$10 million had been received, in contrast with an offer from the European Broadcasting Union of \$8.3 million for all of western Europe. The IOC took this matter under consideration.

2 IOC President Juan Antonio Samaranch is flanked by IOC Director Monique Berlioux (left) and LAOOC Vice President Richard Sargent on his first trip to Los Angeles from 6-12 December 1980.

18.02.5 Report to the IOC Executive Board: February 1982

The IOC Executive Board returned to Southern California in February 1982 at the Huntington-Sheraton Hotel in Pasadena. In addition to meeting with the LAOOC, the Executive Board also met with representatives of 23 of the International Federations (those with sports on the Olympic program).

The LAOOC's interim report noted the advancements in all areas. The addition of Anita DeFrantz, a bronze-medal winner in rowing in 1976 and a holder of the bronze medal of the Olympic Order, gave the LAOOC the unique distinction of having an Olympic athlete in charge of the planning for the Olympic villages, home for the athletes during their stay in Los Angeles. The financing of the Games was also in good hands—with 75 percent of the overall sponsorship goal achieved with a total of only 19 sponsors—consistent with the LAOOC's pledge to decommercialize the Games. The first-ever sale of radio rights on an exclusive basis for the United States was also noted, as was the sale of television rights to the 32-nation European Broadcasting Union.

Facility construction was on schedule. The new velodrome at California State University, Dominguez Hills was 75 percent complete at the time of the report, with the concrete track, risers for permanent seats and support buildings already in place. Work on the

new swimming stadium at the University of Southern California had already begun with completion expected in March 1983.

Acquisition of sports sites had moved into a new phase with the conclusion of an agreement to use secondary schools and local colleges as training sites. Opportunities for training in or near the villages were also excellent at both the UCLA and USC Villages.

Information about the Games was also available to Olympic Family members from the four issues of the "LA 84" newsletter. An agreement with a noted Los Angeles publisher was concluded to produce a special guide to the Los Angeles area for the Games.

Security matters were being organized under the umbrella of the Olympic Law Enforcement Coordinating Committee, which represented all of the law enforcement agencies involved with the Games, including a representative of the federal government.

Important matters that came out of the meetings with the IOC Executive Board included a confirmation that national delegations would be housed together as a team and not by sport. LAOOC requests to have entire national delegations (both men and women) housed in the same building (on

different floors) and to open the villages two weeks prior to the Games rather than three as specified in the Olympic Charter, were deferred for study. Regarding officials, the IOC agreed to underwrite the cost of travel and accommodations to the Games for officials approved by the International Federations. These funds will be taken from the IOC's share of television revenues and were expected to amount to \$3.5-4 million.

18.02.6 Report to the IOC Session: May 1982

The LAOOC's third official report to the IOC was presented in Rome's Excelsior Hotel on 27 May 1982. A large delegation reported on a host of new developments, including:

- United States President Ronald Reagan agreed to open the Games. In doing so, he will become the first U.S. President ever to open an Olympic Games.
- Commissioners for all but one sport were named by the time of the report.
- Cultural and fine arts programs including the pre-Opening Gala, a large-scale dance festival co-produced by the Dance Gallery of the Bella Lewitzky Dance Company and a 15-artist Olympic poster series were reviewed.
- Health services were boosted by the announcement that the first drug-testing laboratory in the United States would be installed on the UCLA campus by the LAOOC.

- Sites for all of the 21 sports on the medal program were already selected, using mostly existing facilities. Some of the new facilities, such as the velodrome, had been completed already with all construction expected to be completed in mid-1983.
- Sports competition schedules were revealed for the first time along with a list of equipment as supplied by the International Federations.
- The strong programs for youth were already having a very positive effect, bringing together thousands of youngsters in friendly competitions under the Olympic banner. New facilities for young archers, a nationwide tournament in basketball and a stirring "academic decathlon" were among the highlights of programs which were touching thousands of youth from across the country.

The meetings in Rome produced important decisions for the LAOOC in the areas of NOC attendance and housing. The IOC agreed to set aside between \$3.5-4 million to allow each NOC to send up to six persons, not more than two of which could be officials to Los Angeles. These funds would pay for the airfare and village accommodations costs of the six persons involved. In addition, the IOC agreed to LAOOC requests to open the

3

3 The IOC Press Commission members tour the Los Angeles Memorial Coliseum.

4 IOC members tour Santa Anita Park, the equestrian venue for the 1984 Games.

4

villages two weeks prior to the competitions and to be able to house entire delegations (men and women) in the same building, but on different floors.

In sports, the LAOOC agreed to the inclusion of a new event for women in canoeing, the K-4. In addition, the LAOOC promised to provide appropriate resting facilities for athletes who would be competing during the entire day and not have time to return to their village. For news media, the LAOOC and IOC agreed to allow 200 passes into each village with some additional passes into the UCSB Village, rather than the single total of 300 mentioned in the 1978 Provisional Edition of the Olympic Charter.

18.02.7 Report to the IOC Executive Board: January 1983

The LAOOC welcomed the IOC Executive Board and representatives of 141 National Olympic Committees to Los Angeles from 14-21 January 1983 to share information about the coming Games and about Southern California. The 560 delegates present met with the LAOOC staff and with over 150 volunteers who showed the hospitality and warmth that would become a benchmark of the Los Angeles Games 18 months later.

The LAOOC's written report to the Executive Board noted progress in areas asked about most by Olympic officials. Included among these were the procedures for use of the Olympic identity card as a visa, the location of the main accreditation center near the airport and the possibility of housing NOC officials in excess of the Olympic Charter-mandated limits, outside of the villages. Further details of the Olympic Arts Festival were revealed, including the inclusion of an international section from 1 July-20 July 1984, followed by an all-national program of events from 21 July-1 2 August, in conformity with the Olympic Charter's requirement for national art exhibitions during the time of the Games. The appearance of major companies, including the Royal Opera of Covent Garden, was reviewed along with the plans for a monumental gateway sculpture outside of the Los Angeles Memorial Coliseum by noted artist Robert Graham.

The Biltmore Hotel, site of the meetings, was also announced as the site for the IOC during the 1984 Games. Financial arrangements were flowing smoothly and reports of television rights sales to broadcasters for Canada, New Zealand and the Philippines boosted total receipts in this area past \$260 million. The small commemorative coin program was also doing well with \$5 million already received by the LAOOC.

The announcement of the provision of an electronic messaging system by one of the LAOOC's sponsors promised to increase the ability of athletes, journalists and officials to receive and to retrieve information faster than ever

before and to communicate effectively with other accredited persons at the Games. The LAOOC reviewed its increased publishing program, which was producing new information for the benefit of members of the Olympic Family as well as for the general public and the news media.

In sports, the LAOOC reviewed the opening competitions in the cycling velodrome during the past summer and the great response to the facility from athletes and spectators. The report also noted the site chosen for the endurance portion of the three-day event in equestrian, Fairbanks Ranch, and the agreement of the FEI to hold the final day's jumping competition at Santa Anita Park. A detailed appendix contained the latest list of approved equipment and a review of the training sites for each sport.

The meetings produced major discussions on almost every subject involved with the organization of the Games. An agreement regarding village pricing was signed between the IOC and LAOOC in which the LAOOC agreed to charge \$35 per accredited day for all persons staying in the village. Further, the deposit which was required for all delegations would be paid by the IOC for all delegations estimated to be between one-50 persons; delegations expected to be in excess of this size would have to pay an additional amount. All NOCs would be requested by the IOC to communicate their maximum expected team size to the LAOOC by 1 March 1984.

The LAOOC also agreed to a request by the IOC Executive Board to publish a twice-monthly newsletter for the benefit of the NOCs in order to keep them better informed regarding the preparations in Los Angeles. Invitations to the Games would be sent out to the NOCs by 1 July 1983.

The Organizing Committee agreed to housing deposits for news media limited to one week's stay with the balance due upon arrival in Los Angeles.

In sports, the LAOOC accepted the inclusion of a super-heavyweight division in boxing for the Games, limited to 12 competitors. The LAOOC was asked to resolve the question of the venue for shooting for the Games; the IOC shared its strong preference for a site within the Southern California area or even splitting the shooting events at different sites. The LAOOC also agreed to award diplomas to the first eight finishers in all events, rather than six as required in the 1978 Provisional Edition of the Olympic Charter.

5

6

18.02.8 Report to the IOC Session: March 1983

The LAOOC made its fourth official report to the IOC at the Ashoka Hotel in New Delhi, India on 26 March 1983. Significant progress was made in a number of areas, both as revealed by the LAOOC's written report and by the meetings which followed.

The Olympic Arts Festival was now in the final planning stages planning for a spectacular program reaching over a three-month period in June, July and August. The fine arts poster series had already been completed and the appearances of the Royal Opera of Covent Garden and the Pina Bausch Wuppertaler Tanztheater were already arranged.

Health services at the Games were reviewed and included the polyclinic program for the villages, details of the requirements for practice by visiting physicians of Olympic teams and the provision of health and medical insurance for visiting team members. The preparations for the drug-testing of athletes were explained, including the arrangement of the analytical laboratory at UCLA and the process for athlete sample selections.

- 8 NOC representatives visit the velodrome during IOC Executive and NOC meetings in Los Angeles from 14-21 January 1983.
- 9 The Association of National Olympic Committees in session at the Biltmore Hotel in Los Angeles in January 1983.
- 10 From left, LAOOC Executive Vice President/General Manager Harry L. Usher, IOC Director Monique Berlioux, IOC President Juan Antonio Samaranch and LAOOC President Peter V Ueberroth.

An increased public relations and publications presence was noted, especially in light of the color magazine "Stars in Motion," published quarterly by the LAOOC and the new "Communique" newsletter, which was sent to members of the Olympic Family on a twice-monthly basis, following the request of the IOC Executive Board during the meetings in January 1983.

The sites for preliminary football competition: Pasadena's Rose Bowl and stadiums in Stanford, California, Annapolis, Maryland and Cambridge, Massachusetts were announced. The west coast-east coast arrangement allowed additional areas of the United States to share in the Games. The cost of tickets for all events was noted at an average of \$18 each, excluding the Opening and Closing Ceremonies. The report noted that almost three million tickets would be available at a cost of \$10 or less when tickets were actually placed on mail-order sale later in 1983. Appendices to the report included a provisional schedule of events and a complete list of the LAOOC's sponsors, suppliers and licensees.

The meetings in New Delhi resolved a number of key issues. The LAOOC agreed to continue to look for an appropriate site for the shooting competitions, in advance of a visit by President Samaranch in April. A long-standing debate regarding the use of particular types of equipment in boardsailing was solved when the IOC agreed to a compromise allowing one board in the Olympic competition, while allowing a second board in a special three-event exhibition series to take place after the completion of the Olympic yachting events. The four sites for preliminary football were approved and the number of teams allowed in the demonstration baseball tournament was increased from four to six at the request of the LAOOC. All tennis players, regardless of status, were declared to be eligible to participate in the demonstration singles tournaments for men and women so long as they were 20 years old or under. It was agreed that the men's marathon would be a part of the Closing Ceremonies, so long as no event or demonstration was allowed to take place during the arrival of the athletes.

Regarding news media, the IOC and LAOOC agreed to an additional 100 accreditations for media specialized in one sport while the LAOOC was allowed to distribute 300 accreditations to local media in the three-county area in which the Games were to be held.

In the villages, the LAOOC agreed to hold a special meeting with the IOC and all of the team chefs de mission prior to the opening of the Games.

18.02.9 Reports to the IOC Executive Board: June, August and November 1983

The Executive Board uncharacteristically met five times during 1983 and while the LAOOC did not file written reports at these meetings, items of interest did result from each of them.

In June 1983, the meeting of the Executive Board was held in Lausanne and included a lengthy session between the Executive Board and the IFs. An LAOOC delegation was present to answer questions and to respond to concerns of both groups.

A number of minor points were discussed and the LAOOC agreed to provide a comprehensive system of communications during the Games for the IOC president and director, while the IOC agreed to let the LAOOC handle ticket requests for IOC members and to have NOC team physicians produce certificates verifying their professional status. Three possible sites for the shooting competition were presented with a further recommendation coming from the LAOOC on a single site for that sport. The LAOOC also presented its plan for support of the congresses of many IFs in Los Angeles, including congress sites within hotels located throughout the Southern California area. All of the delegates and members of the Executive Board shared their congratulations for the organization of the III FINA World Water Polo Cup, which had been favorably reported in Europe in May.

At Helsinki in August 1983, an LAOOC delegation was present primarily for observation of the first World Championships in Athletics. A meeting of the IOC Executive Board was held prior to the beginning of the competitions. The IOC requested that the participants in the demonstration sports be housed in the villages and the LAOOC agreed to take the request under consideration. All parties agreed that the individual entry deadline for the Games was fixed at 14 July 1984 for all sports except athletics, for which the deadline would be 18 July 1984. The choice of the shooting venue at the Prado Recreation Area was approved. The Executive Board also congratulated the LAOOC on the organization of the LA83 events in water polo, cycling, swimming, diving and synchronized swimming, all of which had taken place that summer.

In November 1983, at Lausanne, the LAOOC met with the IOC Executive Board once again. A written report was not filed. A major addition to the program was made when the IOC agreed to the LAOOC's request to include exhibition races for wheelchair-bound athletes. An 800-meter race for eight women and a 1,500-meter race for eight men were approved. The LAOOC also agreed to an increase in the number of specialized press to be accredited for a single sport, from 100 to 150.

18.02.10 Report to the IOC Session: February 1984

At Sarajevo, the LAOOC presented its fifth official report and its final written report prior to the opening of the Games of the XXIIIrd Olympiad. The LAOOC delegation met with the IOC on 6 February 1984.

The written report noted the tremendous increase in the pace of the organizing effort, as the number of employees had grown from 250 at the time of the fourth official report in New Delhi to over 1,000 at the time of the Olympic Winter Games in Sarajevo. In every area, the LAOOC reviewed the progress that had been made and the details of the programs which were being completed.

In accreditation, the identity card procedures for entry into the United States had been completed and the identity card instruction manuals and Olympic Family lists were about to be distributed. The report noted that the accreditation badges themselves would be electronically coded as well as visually inspected for access and personal identification. These features would allow for positive control over every badge.

In food service, the athlete menus at the villages were set, using five-day meal cycles. Food services away from the villages were also planned, with box lunches available for athletes at venues which were not located adjacent to a village. Regarding health services, the report noted that the newly installed analytical laboratory at UCLA received accreditation by the IOC—becoming the first such lab in the USA to receive accreditation. In addition, the brochure regarding IOC medical controls was distributed widely following its approval by the IOC.

The Olympics Arts Festival was reported to be on schedule toward its opening date of 1 June. Tickets for the Festival were made available in brochure form in January. Large-scale programs in dance, theatre, music and opera, exhibitions and other events were listed, reflecting both international and national artists.

The preparation in the individual sports was progressing very well following the completion of the successful LA83 event series, which was favorably received by athletes, officials, press, spectators and observers during the summer and fall of 1983. With the experience gained from these events, the planning reached a definitive stage for each site towards the end of 1983. The agreements to hold shooting at the Prado Recreational Area and demonstration tennis at the Los Angeles Tennis Center were noted, along with the schedule for the Olympic boardsailing exhibition.

Interest in the Games was high in the host country, judging by the response to the LAOOC's ticket program. More than 275,000 individual mail-order requests were made for tickets and almost 2.1 million tickets were purchased in the first two months after the tickets were placed on sale. Arrangements for the transport of athletes, dignitaries, judges, officials, press and spectators were well in hand, as was the arrangement of athlete accommodations and offices for officials and teams at the villages.

The youth programs were reviewed and it was noted that more than 500,000 youth had been directly involved in programs backed by the LAOOC and its sponsors. Archery, gymnastics, judo, football, volleyball and five other sports were already being played by young people throughout Southern California. In addition, a youth handbook for the Games had been compiled and distributed to half a million young people, preparing them for the Games with information on each sport and about the background and nature of the Olympic movement.

The meeting itself focused on mostly minor details of the organization of the Games. It was noted that the Athletes Commission of the IOC would have an office at each village during the Games and that LAOOC Chairman Paul Ziffren was nominated and accepted as a member of the new International Court for the Arbitration of Sport. Four new National Olympic Committees—Bhutan, Rwanda, the Solomon Islands and Western Samoa—were recognized and thus became eligible to participate in Los Angeles.

18.02.11 Special meeting of the IOC Executive Board: April 1984

The IOC president, three vice presidents and director met in special session in Lausanne on 24 April to consider the requests and concerns of the NOC of the URS. The meeting was attended by representatives of the LAOOC and by the NOC of the URS.

The outcome of the meeting was an agreement that the URS NOC (and all other NOCs) would seek settlement of their preparational problems regarding the Games through the LAOOC only, especially with regard to the acquisition of the Olympic identity cards and the presentation of the Olympic Family lists, which were due on 2 June 1984. The parties also agreed that all members of the Olympic Family, including accredited journalists, would have free access to competition and training sites during the period of the Games as outlined in the Olympic Charter.

It was further noted that the rules governing the mooring of ships in the port of Los Angeles would conform to international regulations. Due note was taken of the fact that the United States government had agreed to uphold the

principles of the Olympic Charter. The LAOOC was asked to continue to pursue its efforts to provide optimal conditions for Games participants in all respects, in particular, those of security and for the safeguarding of the dignity of the participants.

18.02.12 Report to the IOC Executive Board: May 1984

Two meetings of the IOC Executive Board were held in May 1984. The first was an extraordinary session in Lausanne on 18-19 May to discuss the situation posed by the announcement of non-participation by the URS and other NOCs and the second was a regularly scheduled meeting on 28 and 30 May, with a meeting between the IOC Executive Board and the IFs on 29 May.

The first meeting was held regarding the announced non-participation of the Soviet NOC and other aligned NOCs. The discussion carried over to a meeting with sports organizations of these countries in Prague on 24 May, at which time those NOCs involved confirmed their non-participation.

The regularly scheduled meeting in Lausanne at the end of May was thus concerned with the program at Los Angeles and the more than 130 NOCS who announced that they would be sending teams to Los Angeles. Notable outcomes of the meeting included:

- Increases in the number of competitors allowed in cycling and shooting.
- Addition of the solo event in synchronized swimming.
- Increase in the number of teams in the demonstration baseball tournament from six to eight.
- The IOC will pay for the accommodations costs of the 16 wheelchair-bound athletes who will compete in the exhibition 800-meter and 1,500-meter races, plus three accompanying officials.
- Participants in the baseball and tennis events will be housed in the villages.
- The seating area for news media in the main stadium will be accompanied by television monitors with four channels showing the various feeds for the athletics competition only.
- The ceremony for the transfer of the Olympic flag was changed and the presentation to the mayor of Seoul will take place during the Closing Ceremonies in Los Angeles, rather than during the Opening Ceremonies of the Seoul Games, as at previous Games.
- Three new NOCs were recognized: Djibouti, Equatorial Guinea and Tonga and each was immediately eligible to compete in the Games at Los Angeles.

The LAOOC delegation included 11 commissioners and the vice president for sports, allowing the LAOOC to resolve numerous problems regarding the needs of each IF on an individual basis. The selection of replacement teams for those which were not participating was completed for the most part.

18.02.13 Report to the IOC Session: July 1984

The LAOOC made its sixth and final official report to the IOC on 25 July 1984, just three days prior to the opening of the Games of the XXIIIrd Olympiad. The LAOOC noted the tremendous assistance it had received from all sectors of the Olympic Movement over the past five years and hoped that the LAOOC's efforts would produce a Games of which all concerned could feel proud.

Special mention was made of the role of the thousands of volunteers who made up the majority of the LAOOC's work force for the Games and joined in to assist in a special event which would occur in their city only once in their lifetimes. The IOC noted that the use of volunteers was a staffing method that had much to commend it and would certainly be of use in the future.

The LAOOC was scheduled to make one final appearance before the IOC, in June 1985, at the 90th Session to be held in Berlin, GDR. There, the LAOOC would present its "Official Report of the Games of the XXIIIrd Olympiad" and conclude with its post-Olympic presentation.

18.03 LAOOC reports to the Commissions of the IOC

Although the IOC maintains a large number of commissions working on various aspects of the Games, the organizing committees were represented on only a few of these: the medical, press and television commissions.

18.03.1 Medical Commission

The LAOOC met several times with the IOC Medical Commission and its various sub-commissions: anti-doping and biochemistry, biomechanics and physiology and sports medicine and orthopedics.

The LAOOC met with the full Medical Commission beginning in February 1982 during the meeting of the IOC Executive Board with the IFs in Pasadena, California. The LAOOC met again with the commission in Rome in May 1982, in Sarajevo in February 1983 and in Sarajevo during the XIVth Olympic Winter Games. A special

meeting of the sub-commission on biomechanics and physiology met in Los Angeles in November 1983.

The principal areas of coordination between the LAOOC and the Medical Commission concerned the establishment of a competent laboratory for drug testing and the procedures for such testing, the publication of the brochure describing the IOC's medical controls program, the ability of Olympic team physicians to practice medicine with their teams while in Los Angeles for the Games and the biomechanical filming of certain events for future study and training assistance.

18.03.2 Press Commission

The IOC Press Commission represents the written press (and until 1983, radio as well) and meets with the organizers to assist in the provision of adequate facilities for journalists who report on the Games. A very active commission, its members are mostly journalists, along with representatives of the IFs and NOCs and, of course, members of the IOC.

The commission met with LAOOC representatives in Lausanne in 1980, in Sarajevo in April 1981, in Pasadena, California in February 1982, in Rome in May 1982, in Los Angeles in January 1983, in Sarajevo in February 1984 and in Lausanne in May 1984. The LAOOC filed four written reports covering the meetings from 1981-1983 and distributed the "Facilities for Journalists" brochures as its reports for the meetings in February 1984 (Volume 1) and May 1984 (Volume 2).

A sub-commission, which dealt with questions of accreditation and facilities, was appointed in 1983 and met with the LAOOC in New Delhi in March 1983, in Los Angeles in July, and in Helsinki in August 1983. It also met without the LAOOC in Sarajevo in October 1983 and in Lausanne in November. The sub-commission met with the LAOOC in Los Angeles in March 1984 to resolve accreditation matters.

The major focus of the work of the sub-commission was on accreditation procedures, but extensive time was given to accommodations for journalists, communications facilities, facilities at the Main Press Center, photographic positions and facilities, transportation plans and the provision of seating and sub-centers at the competition sites and in the villages.

18.03.3 Television Commission

This group met several times to discuss matters of interest between broadcasters and included discussions with the LAOOC on several occasions. The main meetings between the groups occurred in Los Angeles in January 1983 and in Sarajevo in February 1984.

18.04 LAOOC responsibility during the meeting of the IOC Executive Board with the International Federations in February 1982

18.04.7 Administration and site

The meeting of the IOC Executive Board with the International Federations was held at the Huntington-Sheraton Hotel in Pasadena, California from 31 January to 7 February 1982. Representatives of 23 IFs attended and almost 350 delegates were present in all.

The LAOOC's role was to arrange the details of accommodations, meeting rooms, entertainment and meal functions. Of course, the LAOOC itself was a focal point of the meetings and much of the discussion centered around the preparations of the Games of the XXIIIrd Olympiad. Thus, the meeting had two different goals for the organizers:

- To ensure that the meeting ran smoothly from the arrival of the delegates to their departure, including all necessary operational details
- To impress the delegates with the preparations which were being made for the forthcoming Games

The Olympic Family Services department handled the logistical planning and operation of the meetings, including contracting on behalf of the IOC for necessary facilities and rooms.

18.04.2 Meeting services

The LAOOC arranged for a number of areas, including accommodations, banking, information desk, meeting rooms, a secretariat office for the IOC, press conference facilities and a press office, transportation office and venue tours.

Although the Huntington-Sheraton was the headquarters hotel for the meeting, the gathering of delegates who wanted to attend functions or meetings quickly exceeded the LAOOC's ability to house them all there. Consequently, nearby hotels including the Pasadena Hilton and the Pasadena Holiday Inn were utilized and a shuttle bus service for delegates was arranged. Journalists were not housed at the Huntington-Sheraton (except for members of the Press Commission of the IOC) and were encouraged to stay at one of the other nearby hotels.

Banking services, consisting mostly of currency exchange, were available near the LAOOC's information desk area. The area was patrolled by an

armed guard and was open from 0800-1700 hours from Monday through Friday, 1-5 February. An LAOOC staff member was available at the information desk from 0800-1800 hours daily for general assistance and information for the delegates.

Meeting rooms required privacy and simultaneous interpretation services. A smaller room for 20 persons was set for commission meetings and meetings of the Executive Board. A larger room was available for the meeting between the IOC Executive Board and the federations and was used for the final news conference of the IOC President.

The IOC brought a large secretariat to handle the flow of paper necessary for the delegates. A separate office facility was set up with six desks, typewriters, supplies and a shredder. Two copying machines were needed, one for high volume reproductions and another smaller machine for back-up. A telex machine was also necessary.

The International Federations also required a small secretariat with three desks in a separate room.

News media were accommodated in a working room on an upstairs level, and there were two different rooms for news conferences. The working room had a desk for the IOC's press office staff and facilities provided for news media by the LAOOC. These included chairs, tables and typewriters for 20 persons, plus four coin-operated telephones which would also accept reversed-charge and third-party calls, two telex machines and one telecopier. About 35 members of the media were accredited for the meetings by the IOC.

Transportation played a major role in the meetings as several groups took extensive venue tours of the sites. A transport and dispatch office was set up to operate from 0800-1800 hours from 31 January through the end of the meetings, but was often open much longer to accommodate special requests.

18.04.3

Program of the meetings

The following is included as a recapitulation of the meetings which were held and an example of the hectic nature of an IOC Executive Board meeting, especially in a host city for an Olympic Games:

Friday, 29 January 1982

- Opening of the IOC Secretariat

Sunday, 31 January

- Venue tour for the IOC Press Commission
- Dinner for the IOC Executive Board and the Press Commission

Monday, 1 February

- Meeting of the International Federations among themselves
- Meeting of the Press Commission
- Dinner hosted by the LAOOC

Tuesday, 2 February

- Venue tour for the IOC Executive Board
- Venue tour for the International Federations
- Meeting of the IOC president with the vice presidents

Wednesday, 3 February

- Meeting of the IOC Executive Board
- Meeting of the International Federations among themselves
- Dinner for the news media hosted by the LAOOC

Thursday, 4 February

- Meeting of the IOC Executive Board with the International Federations
- Dinner hosted by the IOC

Friday, 5 February

- Meeting of the IOC Executive Board with the International Federations
- Venue tour for the IOC Medical Commission
- Sports program: college basketball (UCLA versus USC) or indoor athletics meet (Los Angeles Times Games)

Saturday, 6 February

- Meeting of the IOC Medical Commission
- News conference given by the president of the IOC
- Dinner for the Medical Commission hosted by the LAOOC

Sunday, 7 February

- Meeting of the Medical Commission

18.05

LAOOC responsibility during the meeting of the IOC Executive Board with the NOCs in January 1983

18.05.1

Administration and site

The meeting between the IOC Executive Board and the NOCs in Los Angeles in January 1983 was the first of many test events during 1983 and gave the LAOOC an opportunity to sharpen its skills in the areas of protocol, VIP accommodations and services. It was the last large-scale event hosted by the LAOOC prior to the Games at which the importance of the protocol elements exceeded those of the competition and sports programs.

The meeting was held at the Biltmore Hotel in downtown Los Angeles. This site was chosen because of its location in downtown Los Angeles with proximity to the venues for athletics, boxing, swimming and one of the villages. The Biltmore was also close to freeways which made transport to surrounding sites quite easy. The LAOOC felt that the Biltmore would also be a proper site for the IOC's headquarters hotel and site of its 88th Session in 1984. The IOC wanted to test such accommodations before using them and viewed the 1983 meetings as a good opportunity to do that.

The LAOOC's role was again one of arrangement and organization for the IOC, which set the agenda and program for the meetings. The operations were much larger than at the Huntington-Sheraton as more than 560 delegates and 246 accredited media came to the meetings.

11

12

18.05.2

Meeting services

A wide variety of services were provided for the delegates, IOC secretariat and others.

Accreditation was required for the meeting and was handled after arrival of the guests at the Biltmore. All NOCs were allowed to register three official delegates, but could register others as guests or observers. Hotel registration was handled by a special desk at the same station, placing all arrival, accreditation and registration processing at a single point. NOCs were also encouraged to sign up for interview sessions with the LAOOC at the same time, in order to better acquaint themselves with the program for village accommodations and services at the same time.

Banking services were available from 0800-1800 hours for cashing of traveler's cheques and currency exchange. A representative of the LAOOC's official customs broker was available to answer questions regarding the importation of items for use at the Games.

11 The IOC at its 88th Session in Los Angeles, just prior to the start of the 1984 Olympic Games.

12 IOC members attend the opening of the IOC's 88th Session at the Dorothy Chandler Pavilion.

Exhibits regarding the Games were mounted in a special area in the Regency Room of the Biltmore. An extensive display of venue and village models showed the architectural layout of the facilities which would be used for the Games and renderings and a slide show helped the viewer to visualize these sites as they would be at the time of the Games. A display of the recently-completed fine arts poster series was also mounted. New advances in technology for the Games, including the Electronic Messaging System, were on display in the same area and representatives of the companies involved helped to explain the operations of each system.

A wide variety of entertainment and a gift program was developed for each guest. Entertainment included dinners hosted by the LAOOC on a sound stage of a Los Angeles film studio and in the homes of individual Southern Californians and a dinner hosted by the IOC. A special gift for each delegate was developed and a package for each person with informational items, a guide for the meetings and meeting stationery was given on arrival at the accreditation and registration center.

A guest program was developed for spouses of meeting participants, including tours of Disneyland, Universal Studios and a shopping tour of the Beverly Center. A program of thoroughbred racing at Santa Anita Park was also offered. Sign-ups were required at least 24 hours in advance of the tour requested and could be made at the main accreditation and check-in station from 0900-1700 hours daily.

Health services were extensively provided, including a chief medical officer and a medical aid station open around the clock. A total of 101 patients were received and assisted over the ten days of operation with a one-day high of 19 persons. An information desk was provided in the exhibit area to answer questions about health services for the Games.

Office areas were set up for the IOC and for the LAOOC. The IOC Secretariat featured desks and typewriters as at Pasadena, but massive photocopying requirements included two high-volume machines and thousands of sheets of paper in three colors.

The United States Postal Service produced a special cancellation for the meeting and provided basic retail services at a temporary postal station in the exhibit area from 0800-1000 hours and 1200-1400 hours daily.

Press, radio and television representatives had two areas set aside for their use. An IOC and LAOOC press office was arranged for accreditation and to take interview requests. An adjoining area was used for news conferences with a seating capacity of 50 persons and additional space for television crews. A workroom was located on another level and had facilities for 36

journalists to work, plus nine charge-a-call telephones, three telex machines and two telecopiers. A lounge area with light refreshments and international newspapers was also provided.

A demonstration sports program was offered on 18 January at Beverly Hills High School. A demonstration of rhythmic gymnastics and synchronized swimming was presented with teams from the United States, Canada and Cuba performing. In addition, a sports desk was set up at the main accreditation area to answer questions about the preparations for the competitions in 1984. It was staffed from 0800-1000 hours and from 1200-1400 hours daily.

Tours of the venue sites were available on two different days: 16 or 17 January. Delegates had to register for the tour(s) desired, as the LAOOC provided tours of four different groups of venue sites to suit the varying interests of the many NOCs in attendance.

Transport was provided for all of the special events as well as for arrival and departure. LAOOC staff members were assigned to meet all arriving delegates, provided arrival information had been received. A pre-departure guide was sent to all delegates well in advance of the meeting with details of climate, U.S. border entry and hotel reservation procedures and luggage tags. Transport from the Biltmore to the Los Angeles International Airport was available on 21-22 January at no charge. Buses left on the half-hour from 0500-1600 hours and hourly from 1600-2000 from the Biltmore. Reservations were not required. A travel service bureau was located at the LAOOC secretariat to help arrange return air travel as necessary from 0800-2000 hours daily.

A large volunteer staff worked at the meeting in addition to the permanent LAOOC staff. In all, 182 people contributed 12,233 hours as hosts/hostesses, drivers and medical aid station personnel.

18.05.3 Program of the meetings

As noted below, the meetings in January 1983 were a seemingly endless combination of events put on by different groups who came to Los Angeles:

Wednesday, 12 January

- Opening of the IOC Secretariat
- Opening of the LAOOC Secretariat

Friday, 14 January

- Meeting of the Association of African NOCs
- Reception for Association of African NOCs, hosted by the LAOOC
- Venue tour for the IOC Press Commission

Saturday, 15 January

- Meeting of the Council of the Association of National Olympic Committees (ANOC)
- Venue tour for the IOC Press Commission
- Venue tour for the IOC Television Commission

Sunday, 16 January

- Meeting of the IOC Press Sub-Commission
- Meeting of the IOC Television Commission
- Meeting of the IOC Working Group of Assistance to the NOCs
- Premiere opening of the technology and venue model displays in the Regency Room at the Biltmore Hotel
- A screening of the ABC Sports/LAOOC film, "Sharing The Dream"
- Venue tours (Northern, Southern and Central/Western) for the delegates

Monday, 17 January

- Meeting of the IOC Press Commission
- Meeting of the General Assembly of the ANOC
- Press conference given by the International Amateur Athletic Federation
- Venue tours for the delegates and members of the Executive Board of the IOC

Tuesday, 18 January

- Meeting of the Executive Board of the IOC
- Meeting of the General Assembly of the ANOC
- News briefing given by the IOC director
- News conference given by the Organizing Committee of the XIV Olympic Winter Games-Sarajevo 1984
- Program for guests of delegates at the Beverly Center and Universal Studios
- Presentation of 1912 Olympic medals to the family of Jim Thorpe Reception following the Thorpe presentation hosted by the United States Olympic Committee
- Sports demonstration of rhythmic gymnastics and synchronized swimming and reception and dinner following hosted by the LAOOC

Wednesday, 19 January

- Meeting of the Executive Board of the IOC
- Meeting of the IOC Commission for the Olympic Movement
- Meeting of the General Assembly of the ANOC
- Program for guests at Santa Anita Park
- Reception and dinner for the delegation in the homes of Southern Californians
- Reception and dinner for the accredited media at the home of the LAOOC news secretary

Thursday, 20 January

- Meeting of the Executive Board of the IOC with the National Olympic Committees

- Program for guests at Disneyland
- News briefing(s) given by the IOC director
- Report of the LAOOC to the Executive Board of the IOC with the NOC
- Reception and dinner hosted by the IOC

Friday, 21 January

- Meeting of the Executive Board of the IOC
- News briefing given by the IOC director
- News conference given by the president of the IOC
- Report of the LAOOC to the Executive Board of the IOC

18.06 LAOOC responsibility during the meeting of the 88th Session of the IOC in Los Angeles in July 1984

18.06.1 Administration and site

The 88th Session of the International Olympic Committee was held in Los Angeles for the first time since 1932, when it was held in the Music Room of the Biltmore Hotel. The Session returned to the very same site 52 years later as the LAOOC organized the Session in the Biltmore following the successful meetings there in January 1983.

Again the LAOOC was called upon for various types of technical assistance from the IOC, which utilized the Biltmore as its headquarters hotel for the Games in addition to being the site of the Session.

18.06.2 Meeting services

All of the Biltmore's many conference and meeting rooms were taken up by the Session's requirements. The main floor was taken up by the meeting rooms and the secretariats of the IOC and LAOOC, while the upstairs conference areas were used for smaller office requirements. The move-in process, including all room conversions, was completed within seven days of the LAOOC's occupancy of the Biltmore.

A central area was set up to speed in-processing and accreditation. The Galeria Room housed the accommodations area for the Session and for all guests staying at the Biltmore and the accreditation area for all persons in categories "A," "B," and "G." Representatives of the LAOOC's Finance Department were present to clear up any questions regarding advance deposits or remaining payments. As the LAOOC had rented 90 percent of the Biltmore's rooms, it had a substantial responsibility to be sure that the guests were assigned and had paid properly; no accreditations were processed until all financial matters had

been settled. The accommodations group was present from 0700-2200 hours daily from 14 July-12 August, while the Finance Department representatives were available from 0700-2400 hours daily; accreditation was open from 0800-2400 hours from 14-31 July and from 0800-1600 hours from 1-12 August. Delegates could also purchase Olympic Family insurance on the spot there.

A desk was arranged for guest program sign-ups, host or hostess requests and for meal services and extra tickets for meals in the Renaissance Room. Transportation and travel representatives were present to assist delegates with their air and ground travel requirements; the travel desk was open from 0900-1700 hours from 19-22 July and from 0800-2000 hours from 23 July-13 August. A ticketing desk was present to distribute necessary tickets to those Olympic Family members who were required to have them to attend the events from 0700-1900 hours daily during the competition period.

Food service was available for three meals per day in the Renaissance Room for the Olympic Family. Entry was controlled by tickets which were distributed in the Galeria Room, and breakfast was the most heavily attended meal. A special room was set up for lunch and dinner service for the IOC Secretariat.

Health services were located in a third floor complex and were available on a 24-hours per day basis. A large one-bedroom suite and three adjoining rooms were used for medical treatment and waiting (two rooms), office space (one room) and the bedroom of the suite was used for the Medical Command Center with liaison to all venues, Olympic hospitals and ambulance dispatch. The living room of the suite was converted for use as a meeting room for the IOC Medical Commission during the Games and simultaneous interpretation equipment was installed.

The IOC Secretariat was placed in the Music Room and required substantial office machinery. Two telex machines and two high-volume Xerox copiers were installed in addition to 20 desks and switchboard for the administrative staff of approximately 25 persons.

Special arrangements were made for the secretariats of the president of the IOC and for the director. The quarters of President Juan Antonio Samaranch were contained on two floors and included extensive technology, including: EMS, television monitors showing the host broadcaster feed from all venues, plus additional television and video-cassette recording equipment in four other rooms. Seven telephone lines were installed along with one telex machine, one telecopier and two small photocopiers. Office space for nine assistants was present, plus two conference rooms, a private office and a private dining room. There were four

separate bedrooms for the use of the president and his staff. Director Monique Berlioux's suite included a waiting room for ten persons, two combination offices/conference rooms and two bedrooms for her and two staff assistants. Four telephone lines were installed along with two small photocopiers in the offices and television and video cassette equipment in the waiting room.

The IOC Session itself was held in the Crystal Room with simultaneous interpretation available for the members. Executive Board and various commission meetings were held in the Colonnade Room, adjacent to the Crystal Ballroom.

Meeting space for associated IOC functions and offices was provided on the second level conference area. Offices were arranged for the IOC's director of Olympic Solidarity, protocol and for the IOC's honorary director of sports. The Olympic Solidarity secretariat was also placed on this level and desks for six people were installed, along with photocopier and television equipment. An "Olympic Club" was also set up by the IOC, with refreshments, seating for persons and wide-screen television. Although only persons holding accreditations of the "A", "B" or "G" category were admitted, the area proved very popular. A small office for support staff for the sports director was also arranged for three persons. Banking services for all Biltmore guests was arranged on this level as well and was open from 0900 to 2100 hours daily from 15 July to 13 August. The LAOOC also placed its calligraphy team on the conference level in a secured area to allow them to work in some privacy.

Offices for the LAOOC were located in the Olympic Room. Representatives of the Government Relations Department were present along with the LAOOC's vice-president for protocol, who also worked out of this office. Protocol representatives were available in the Olympic Room on an around-the-clock basis beginning on 14 July and through 12 August.

Press services for the Session were light and were concentrated in the Regency Room. An accreditation and information area for the IOC was set up and working facilities for journalists, including tables, typewriters, EMS, six charge-a-call telephones, two telex and telecopiers were arranged.

Games results and exhibitions by cities hosting future Games or bidding for the right to host future Games were also placed downstairs in the Regency Room. A massive copying center utilizing four Xerox 9500 copying machines was setup alongside results receiving composing equipment.

13

Office space for the LAOOC's material supply and technology groups was also located nearby. Although the results center operated very well, little interest was shown in the printed results with EMS available upstairs and because all results were reprinted in bound form in the "Olympic Record" newspaper, which was distributed free to delegates residing in the Biltmore.

The exhibit space in the Regency Room was well used. Exhibitions were maintained by Seoul, host city for the Games of the XXIVth Olympiad and by 1992 bid cities Amsterdam and Barcelona (Olympic Games) and Cortina (Olympic Winter Games). Lillehammer and Falun, also bidding for the 1992 Olympic Winter Games had hospitality areas on the conference level.

Several convenience services for the delegates were offered in the Galeria Hallway, just outside of the LAOOC's protocol offices in the Olympic Room. These included a service desk for DHL's international courier service, a

13 Poster for the 88th Session of the International Olympic Committee.

message and information desk (open 0700-2000 hours daily), an Olympic messaging system kiosk for leaving tape-recorded messages for registered delegates and a small United States Postal Service station for the convenience of the delegates.

Transport services had headquarters across the street in a major garage complex. Each IOC member was assigned one car and a driver with a total of approximately 110 dedicated vehicles. Other VIPs or guests were assigned cars and drivers for temporary use upon approval of the president of the IOC or of the LAOOC. About 250 cars were available for this purpose. Bus transportation arrangements were made for such special events as the opening of the 88th Session of the IOC, the Pre-Opening Gala concert at the Hollywood Bowl, the Opening and Closing Ceremonies and the LAOOC's own reception.

**18.06.3
Opening of the 88th Session of the IOC**

The LAOOC arranged the necessary preparations for the opening of the 88th Session of the International Olympic Committee which was held on Tuesday, 24 July 1984. The site was the Dorothy Chandler Pavilion of The Music Center in Los Angeles, chosen for its architectural beauty as well as its downtown Los Angeles location, not far from the Biltmore Hotel. The IOC approved the choice of the site in January 1984.

The Olympic Charter regulations regarding the Session and the Opening Ceremony were very specific, leaving the LAOOC to carry out the pre-determined course of events. A logo was designed and approved by the IOC in February 1984 and an informal letter to all IOC members and the presidents and secretaries-general of the IFs and NOCs was sent on specially-designed stationery in June. Tickets for admittance to the ceremony were printed in conjunction with the LAOOC's Ticketing Department, which was able to incorporate the special 88th Session logo.

The distribution of the invitations and tickets proved to be one of the more exhausting exercises in the entire operation of the Opening Ceremony. All invitations and tickets for locally-invited guests were sent out in the first week of July. A wide-spread delivery process was undertaken when guests and teams began to arrive in Los Angeles and deliveries were made to guests in the Biltmore Hotel, to guests in private homes around Southern California, to hotels near some of the venues where the IFs were headquarters and to the villages for the teams.

The LAOOC handled transport from the Biltmore to the Chandler Pavilion while other guests were encouraged to drive their own cars. A total of 15 luxury passenger buses were used, making two trips each in the transport of almost 1,000 people from the Biltmore. Special cars were used to transport the president of the IOC, honorary life president of the IOC, director of the IOC, president of the United States Olympic Committee, mayor of the city of Los

Angeles and the governor of the state of California.

Hosts and hostesses assisted in all phases of the transportation to the Chandler and seating and service upon arrival. Thirty were assigned to IOC members, 20 assisted in the departure from the Biltmore, 24 distributed programs on arrival at the Chandler, 62 helped with direction and seating, six assisted with ticket distribution as necessary and ten others were available for assistance at the reception following the ceremony.

In the Chandler Pavilion itself, space was available for 3,128 seats. The distribution of the seats was divided into six categories, roughly along the same divisions as for Olympic accreditations:

- "A" (205 seats); IOC members and guests
- "B" (873 seats); IOC commission and secretariat members, presidents/ secretaries-general and technical delegates of the IFs and presidents and secretaries-general of the NOCs
- "C" (786 seats); chefs de mission of the competing teams, directors, offices, staff and guests of the Organizing Committee and representatives of the cities bidding for future Games and Sessions
- "E" (272 seats); press, radio and television personnel
- "G" (467 seats); distinguished guests and government officials
- "P" (525 seats); others

Approximately 2,600 persons actually attended the opening of the Session. In addition to the protocol ceremony, a special presentation of an Olympic flag was made to the Los Angeles Mayor Tom Bradley, and a special performance was given by the San Francisco Ballet.

The following speeches were given by the president of the United States Olympic Committee, William Simon, the president of the IOC, Juan Antonio Samaranch and the governor of the state of California, George Deukmejian:

Speech by William E. Simon

"We come together tonight to open the 88th Session of the International Olympic Committee, on the eve of the Games of the Twenty Third Olympiad and as president of the U.S. Olympic Committee, it is a great honor for me to welcome all of you to the city of Los Angeles, the Queen City of America's Golden West.

"Almost a century ago, from the single-minded vision of Baron de Coubertin, the Olympic Games arose again from their slumber of a millennium and a half. Beginning slowly at first, the Olympic Movement has grown steadily ever since. For there is some thing about the guiding motto of the Olympiad: 'Citius, Altius, Fortius'— Swifter, Higher, Stronger—that has excited the imagination of millions on every continent of the globe.

"For who can fail to be excited by the magnificence of the great Olympic performers? Who, in a village in Kenya, does not honor the name of Kipchoge Keino? Who amid the snows of Finland, does not honor Paavo Nurmi and Lasse Viren? Who in Cuba is ignorant of the

great champions, Stevenson and Juantorena? What American sports fan has never heard of Jesse Owens and Mark Spitz? (Who, in a remote village in the Soviet Urals, lives unaware of the exploits of the fleet Tatyana Kazankina and the mighty Alexeev?).

"But the people of the world honor not only their own national champions in the Olympics. They honor the champions of all lands, all tongues, all nationalities, all political systems. For as the British poet Kipling so beautifully put it:

'There is neither east nor west nor border, nor breed, nor birth when two strong men stand face to face though they come from the ends of the earth!'

"In the Games about to open, many strong men and strong women will stand face to face, though they come from the ends of the earth. The 1984 Olympics will have the largest number of national delegations ever. Many countries will be represented for the first time. They will, I am convinced, have one of the most memorable experiences of their lives.

"For athletics, as much as any avocation of human beings since the dawn of time, has provided a worthy opportunity for men and women of all nationalities to bridge the barriers that divide them, and to speak to each other from the heart. And the work of the International Olympic Committee,

perhaps more than any other international organization of our time, has made this possible.

"Think of it: in a world of tension and conflict of many kinds, in a world where untold millions live in fear of attack or destruction, the Olympic Movement has gleamed like a shining beacon, sending its beneficent rays out to bring light across a sea of darkness.

"Through its hard work, through the tireless efforts of men and women of many countries, the IOC has time and again achieved what the greatest statesmen can only dream about: It has brought together all mankind in the spirit of understanding, of mutual respect, of friendship, in the pursuit of excellence.

"Can the success of these efforts go unnoticed? Can the people of the world not see that the achievement of the Olympic Movement must be expanded into many other areas of human life? Can we, all of us, from whatever land, who fear for the future of our civilization and our planet, can we not see that the spirit of the Olympics must be the spirit of the future if mankind is to have a future at all?

"Tonight, at the opening of these Olympic Ceremonies, I challenge all of you who are dedicated to the ideals of sport and to the ideals of the Olympic Movement. I challenge you to strengthen those honored and vital ideals. I challenge you to give them new meanings, and to work to give ever more of the world's young men and women the chance to participate in athletic competition across the borders that may divide them. And above all, I challenge you to work tirelessly to show your own

governments how much the world can benefit from adoption of the Olympic spirit and ideals in all aspects of our international intercourse."

Speech by Juan Antonio Samaranch
"We are gathered here together in Los Angeles, just a few days before the opening of the Games of the XXIIIrd Olympiad. This is the second time we meet this year, following on the successful Olympic Winter Games in Sarajevo. We had hoped that our Session and these Games would be held in the presence of the entire Olympic Family; however, events beyond our control have prevented this, to our sincere regret.

"Despite repeated verbal and written assurances, from the Organizing Committee for the Games in Los Angeles, the Municipal authorities, the Government of the United States and its President, in addition to the entire Olympic Movement, a few National Olympic Committees have found it impossible to send their athletes to the 1984 Olympic Games mainly for security reasons. It is not for me at this moment to judge their motives for this decision. That is the responsibility of this Session.

"Nonetheless it is true that for the third time in succession the Games have been tarnished by the absence of some members of the Olympic Family. In 1976 in Montreal. In 1980 in Moscow. And now in 1984 in Los Angeles. For various reasons, the very people for whom the Games are intended, the

athletes who have worked hard and confidently for many long years to ward their participation in the Games, have found themselves excluded from this great quadrennial festival of youth and sport.

"One thing is certain: such decisions can only cause harm to the whole Olympic Movement.

"As for us, the leaders of the Olympic Movement, we must state clearly and more forcefully than ever that this practice is quite unacceptable to us.

"In the first place, because, as always, those who suffer most are the athletes, and the athletes alone. They are the principal victims and for many of them it is a tragedy. They have lost their only chance to take part in an event for which they have worked so hard for so long: a great celebration of youth and sport, without any political, racial or religious discrimination, where the only goal is to measure one's strength against an opponent in an atmosphere of friendship, brotherhood and fair-play. The athletes have little chance of having their opinions taken into consideration, and it is for this reason that the IOC setup an athlete's commission to give them a forum in which to express their views. This commission has spoken out clearly against boycotts.

"Secondly, because this negative action is also likely to destroy the edifice which has been so patiently erected by our predecessors and by ourselves.

"Finally, because it allows the intrusion of political elements into sport while at the same time failing to offer any valid solution for the tense situation in international relations.

International Olympic Committee

"Once again, sport and Olympism have to pay a high price for the periodic eruption of political tension in the world.

"As in 1980, the International Olympic Committee, the Organizing Committee, the International Federations and the National Olympic Committees have done everything that is within their power to try to avert this tragedy. Once more, we have taken up a firm crusading stance to preach reconciliation and attempt to persuade those responsible to reverse their decision. We have fought right up to the fast minute, held the door open up to the last moment. Alas, in vain.

"The Games due to open shortly will nonetheless be a very great event. A record number of over 140 National Olympic Committees will take part, many for the first time, and I am sure that new talents will come to light. As in 1980, the Olympic Movement, through the Organizing Committee, will ensure the success of the Games of the XXIIIrd Olympiad.

"At every Olympic Games, there have always been wonderful demonstrations of generosity, friendship and courage by athletes from countries whose governments are at odds. These examples are ample proof that sport is one of the few opportunities which exists in the world through which we can successfully surmount our differences.

"If I have learned one thing in my life, it is that only through human contact can our differences be overcome and dialogue opened. Perhaps that is what our world today lacks the most.

"It is our responsibility therefore, as members of the International Olympic Committee, and of the International Federations, the National Olympic Committees and all the other sports organizations, to struggle firmly to convince world leaders that to hold sport as a hostage only serves to create new sources of conflict, for thus we lose irrevocably one of the greatest opportunities open to us to meet in a friendly manner and to seek mutual understanding.

"In fact, it is not the future of sport and Olympism which is at stake. It is the future of mankind. For this reason I take the liberty of calling upon all those responsible to try to understand the seriousness of the situation and facilitate our task while respecting our principles and the dignity of the athletes.

"The International Olympic Committee does not have at its disposal any measurable or conventional powers, as do the governments of the world. However, if it were suddenly necessary for governments to repay all those people who have freely and generously given their time to sport, very few states would be in a position to do so.

That is why it is so important, as I have stressed many times already, that the Olympic Movement be recognized for what it is, a non-political voluntary body, and that our rules be respected and honored by all.

"This is what I continually stress during my numerous contacts with those in positions of responsibility throughout the world. The National Olympic Committees and the national sports organizations must work in close collaboration with their governments and must maintain good relations with them. But on the other hand, governments must accept our approach to life, our rules and our traditions, and respect our independence and autonomy.

"This is all the more essential when one considers the current international situation. Today's world can be roughly divided between two radically different political systems, each one having developed its own sports organization. It would therefore be totally unrealistic to try to impose one upon the other. The Olympic Movement, and more particularly the International Olympic Committee, has accordingly the heavy task and responsibility of forming a bridge between these two worlds and offering their athletes equal opportunities and conditions so that they may train and compete under the Olympic flag.

"One of the aims of the Olympic Movement is, in fact, to educate young people through sport in a spirit of better understanding and friendship, thereby helping to build a better and more peaceful world.

"Current events are a clear indication of to what extent this ideal is necessary, not only in the domain of sport, but in all walks of life. I can

assure you that the Olympic Movement will do everything in its power in order to preserve this ideal.

"We must think of the future. Once the Games are over, we must begin the work of re-building. Our main concern must be to avoid jeopardizing the future of the Movement.

"This will be the main task of this Session. Over the next few days we shall have to examine the various possibilities open to us in order to try and avoid a repetition of so many unfortunate events. I would like to stress here that the prime responsibility, among many others, of the National Olympic Committees, the main purpose for which they were established by our founder, is to organize their sportsmen and women and to seek their proper representation at the Olympic Games. This, I repeat, is their primary function. We must therefore study all possible ways and means to facilitate this representation and, perhaps, legislate for it through the Olympic Charter.

"The Olympic Movement is one of the greatest social forces of our era. The traditional image which the IOC has offered for many years of an institution only concerned with the organization of the Olympic Games once every four years has now evolved into something much broader.

14 The IOC Press Commission meets.

"Following the steps of Baron Pierre de Coubertin, the International Olympic Committee has firmly directed its action towards a long term program, intended not only for top level athletes, but also for all those who share the Olympic ideals, whatever their age or their physical capacities.

"We continue to maintain close links with all National Olympic Committees throughout the world by meeting them on their own soil in order to offer them whatever kind of help they require, mainly through Olympic Solidarity.

"We are conscious too of the fact that the work to be accomplished is very great and we are aware that we cannot carry it out alone. Nor is it our intention to do so. By giving our patronage and assisting the continental and regional Games, by helping the organizers of mass sports events and popular races, by bringing disabled athletes to compete for the first time on Olympic tracks, by encouraging the setting up of sports museums in every country and promoting the organization of art exhibitions devoted to sport, we intend to fulfill the aims of the Olympic Movement.

"We are not in competition with anyone, nor do we seek supremacy. On the contrary, our actions are open to all those who wish to join us in reaching our goals, and they are intended to complement the work of other groups throughout the world.

"One of these groups has as its task the defense of Fair Play and the fight against violence in sport. I should like to say a few words on these points.

"What is Fair Play if it is not dignity and self-respect?

"Human dignity as it is defined in the Charter of Human Rights. Each one of us, every person on this Earth, possesses this dignity, not acquired at the price of some achievement, but naturally inherent to mankind. It exists independently of social rank, position or wealth. It cannot cease to exist, but must constantly re-assert itself

"For several years now, we have witnessed an alarming increase of foul play, acts of violence and cheating either on an individual or organized basis. It must be said that these incidents in sport reflect what is happening in other fields of our modern society.

"Sport cannot survive without its social principles. We must also be conscious of our own behavior in life.

"We must admit that we shall never be able to codify the doctrine of Fair Play fully. This is true also of the doctrine of Olympism which must become part of our existence, depending on the values and standards of the society we live in. They cannot be compressed into detailed precepts, nor can we back them by sanctions. They are an attitude of the mind. It is only by moral and intellectual education through sport that we can hope to achieve this.

"Finally, on behalf of the members of the Olympic Family, may I take this opportunity to thank the Los Angeles Olympic Organizing Committee, and in particular its chairman, Mr. Paul Ziffren, and its president, Mr. Peter Ueberroth, and all their collaborators in all fields, and the representatives of the media and the television authorities, for all their excellent work in preparing this great festival of youth and sport which is about to begin.

"On behalf of the IOC, I wish to thank the Los Angeles County Board of Supervisors and the Music Center for providing this beautiful facility for tonight's ceremony.

"Our thanks go also to the state of California and the city of Los Angeles, whose mayor, Tom Bradley, has shown us such unfailing support throughout the long years of preparation, and to all those bodies throughout this country who have given their aid.

"This is why, as a mark of recognition to the city and the citizens of Los Angeles in thanks for all they have done for the Games and the time and effort they have devoted to the Olympic Movement, I should like to present an Olympic Flag, as a token of our respect, to remain forever in the City Hall."

Speech by George Deukmejian

"On behalf of the President of the United States, the people of America and the citizens of California, it is a great honour to welcome you to Los Angeles for the 88th Session of the International Olympic Committee.

"This is not the first time our state has been honored by the presence of the Olympic Games or infused with the Olympic spirit. We hosted the 1960 Winter Games in Squaw Valley and the 1932 Olympic Games right here in Los Angeles.

"Our state has changed a great deal since then. For one thing, we have a few more cars on the road than we did in 1932!

"Through these years the Olympic spirit has endured. It has bound our nations and peoples together as equal partners in the same human community.

"I have listened with frustration and anger to some recent suggestions that perhaps the time for the Olympic Games has passed. On the contrary, we need the Olympic Games today more than we ever have. You know this, the citizens of your countries know this and that's why over 140 teams will be competing in the 1984 Games-more nations than ever before in history.

"Nearly 8,000 athletes-the world's best-will be competing over the next several weeks. Some will win and some will lose, but they all embody the common dreams we share, regardless of our nationality, religion or race. They mark our will to survive, our courage to compete and our determination to achieve and excel with dignity and grace.

15

"*These Olympic dreams assume many shapes. Just a few days ago, the Olympic torch, which has made its way from the cradle of the Games in Greece and through 9,000 miles of American cities, plains, farms and mountains-the torch arrived in Sacramento, our state capital. And for one long, but triumphant kilometer, it was carried by Danny Hansen, a 12-year old boy who is confined to a wheelchair. And when he finished his 'run', he was asked if he thought he had proven himself Danny didn't say anything, he just smiled and we all knew his answer.

"It is for these unknown and unheralded champions all over the world that our athletes compete. They are much more than proud representatives of nations; they are ambassadors of the human spirit.

15 IOC President Juan Antonio Samaranch presents Los Angeles Mayor Tom Bradley with an IOC flag during the Opening of the IOC's Session in Los Angeles.

"You, as members and representatives of this committee, are custodians of that spirit. Guard it well. Preserve it for all time. Please never let the Olympic torch burn out.

"Ladies and gentlemen, it is now a great honor to open the 88th Session of the International Olympic Committee in Los Angeles, California."

Following the opening of the Session, a reception was held in the Grand Hall and adjacent lobbies of the Dorothy Chandler Pavilion. Hors d'oeuvres, fresh fruit and an open bar were available to the guests.

18.06.4 Program of the 88th Session of the IOC

The following program includes all meetings and the guest program. All meetings were held in the Biltmore Hotel unless otherwise noted:

Tuesday, 17 July 1984

- News conference given by the president of the IOC (Main Press Center)

Friday, 20 July

- Meeting of the Council of the Olympic Order
- Meeting of the Program Commission

Saturday, 21 July

- Meeting of the IOC Executive Board
- Meeting of the Eligibility Commission

Sunday, 22 July

- Meeting of the IOC Executive Board
- Meeting of the Eligibility Commission
- News briefings by the director of the IOC at 1300 and 1800

Monday, 23 July

- Meeting of the IOC Executive Board

Tuesday, 24 July

- Meeting of the Finance Commission
- Meeting of the Medical Commission
- Opening Ceremonies of the 88th Session of the IOC (Dorothy Chandler Pavilion of The Music Center)

Wednesday, 25 July

- 88th Session of the IOC
- Meeting of the director of the IOC, director of protocol of the IOC and the chefs de mission of the competing teams
- News briefings by the director of the IOC at 1300 and 1800 hours
- Program for guests at Saks Fifth Avenue in Beverly Hills
- Reception for the delegates given by the LAOOC

Thursday, 26 July

- 88th Session of the IOC
- News briefing given by the director of the IOC at 1800

- News conference given by the Organizing Committee of the Games of the XXIVth Olympiad—Seoul 1988

- News conference given by the Organizing Committee of the XVth Olympic Winter Games—Calgary 1988

- Program for guests at Disneyland (87 participated)
- Reception for the delegates given by the IOC

Friday, 27 July

- Meeting of the IOC Executive Board
- News conference given by the president of the IOC (Main Press Center)

Saturday, 28 July

- Meeting of the IOC Executive Board

Sunday, 29 July

- Meeting of the Association of African NOCS (ANOCA)

Monday, 30 July

- Program for guests; boat cruise at San Pedro

Thursday, 2 August

- Program for guests; breakfast at Neiman Marcus and visit to the J. Paul Getty Museum

Tuesday, 7 August

- Meeting of the Executive Council of the Association of NOCs (ANOC)

Wednesday, 8 August

- Meeting of the physicians of the ANOCA with the chairman of the IOC Medical Commission
- Program for guests; Universal Studios Tour (86 participated)

Thursday, 9 August

- Program for guests; shopping tour on Rodeo Drive in Beverly Hills (45 participated)

Sunday, 12 August

- Meeting of the IOC Executive Board
- It should be noted that the Executive Board usually met daily at 0800 or 0900 hours during the competition period and that the IOC Medical Commission met twice daily (morning and evening) in the Medical Command Center on the second floor.

18.06.5 Reflections on the operation of the Session

For the most part, the operation of the Session went very smoothly. The guests were accommodated and accredited quickly, financial arrangements were taken care of in a satisfactory manner and the operation of the secretariats of the IOC, NOCs and LAOOC operated smoothly. The LAOOC was able to meet most of the needs of the IOC members, president, director and secretariat without tremendous difficulty and in good time. The following points should be taken into account by future organizers of sessions:

- The IOC must approve the choice of hotel and rooms to be used well in advance. Unless a choice is made well ahead of time, last-minute problems will not be resolved. For Organizing Committees of Olympic Games, it is preferable to have a trial meeting with the IOC in the hotel to be used for the Session, as the LAOOC did with the Biltmore during the meetings in January 1983.
- Space plans should include flexible space which can be quickly adapted or changed for additional meeting space or for receptions. Emergency back-up spaces should be negotiated for; the LAOOC simply reserved all public room space at the Biltmore and had sufficient space to accommodate many last-minute requests.
- Delegate information became scattered over a wide variety of publications. Organizers should investigate methods of combining information into a single document to ensure meaningful transmission of the information to the delegates.
- One of the major projects for the LAOOC was the distribution of invitations. Sessions organizers will be asked to distribute numerous invitations to different groups of people at different times. Although the best method for distribution is to hand out all invitations at once upon arrival, it is also important to enlist hotel or staff assistance on short notice for the dissemination of functions which occur late in the meeting schedule.
- Signs to announce meetings will be needed and last-minute schedule changes will necessitate last-minute sign making. An on-site sign making capability would be ideal.
- Staff must be regularly informed of the newest information regarding

arrivals, departures, meetings, receptions and schedules. Regular staff meetings can help this process tremendously. Having staff cross-trained in other duties is very valuable for back-up in case of problems with sickness, late arrivals or oversleeping by staff.

18.07 Liaison with the IOC during the Games period

The IOC and LAOOC remained in close contact throughout the Games period. In addition to the IOC president and director, the LAOOC regularly met with two commissions of the IOC.

The LAOOC's vice president for protocol held a daily meeting with the IOC president and reviewed the transactions of the previous day and any requirements for the current day. This was followed by a coordinating meeting which included the LAOOC and other parties such as the IOC Executive Board. At this second meeting, it was determined which IOC members would make presentations of medals that day. The LAOOC's Olympic Family Services Department was then responsible for the dissemination of this information to the parties concerned.

The Medical Commission of the IOC met daily in the morning and evening to consider the results of the drug-testing program during the Games and to review the procedures at the venues for drug testing over the past 24 hours. The Medical Command Center in the Biltmore Hotel had sufficient space and facilities for these meetings on a daily basis.

A sub-Commission of the IOC's Press Commission met daily with the LAOOC's vice president for Press Operations, usually at 0830 hours. These meetings were usually conducted during breakfast and quite informal. The members discussed the previous day's events and the requirements for additional facilities for journalists' problems which had to be resolved and the requirements, if any, for restricted-entry to events by the use of special tickets. The Press Commission had an office reserved for it at the Main Press Center, which was used for meetings after the breakfast session.

19

In-Processing upon Arrival

19.01 Concept of the In-Processing Center

Thousands of athletes, technical officials, International Olympic Committee (IOC) members and National Olympic Committee (NOC) members arrived in Los Angeles during the weeks before the official opening of the Games. In order to fulfill their roles during the Games they had to be properly greeted and processed. This included identifying each individual with respect to national and organizational affiliation, recovering baggage and cargo, settling fees for Olympic accommodations and food services, identifying/verifying/fabricating appropriate Olympic credentials and transporting each individual and his baggage and cargo to an Olympic Games housing site.

With more than 20,000 Olympic Family members arriving to attend the Games, the in-processing center became a vital venue. It was the responsibility of the Organizing Committee to provide a place where the in-processing procedure could be completed as quickly and as graciously as possible. The first view of the United States, Los Angeles and the Olympics for a majority of the Olympic Family would be the in-processing center and the LAOOC wanted to create a favorable first impression.

By bringing together the protocol, delegate registration, accreditation, materiel management (cargo and luggage), finance, government relations and transportation functions at one site, the entire in-processing system achieved a flow-through ability far better than the alternative of fragmenting the system into individual, autonomous departments in separate locations.

19.02 Determination of the In-Processing Center location

To facilitate the in-processing of Olympic Family members in an orderly and efficient manner, the LAOOC attempted to limit the number of in-processing points. With the vast majority of Olympic Family members arriving in Los Angeles at the Los Angeles International Airport (LAX), a plan developed in early 1983 was considered whereby a solitary in-processing center would be established at LAX. This plan was evaluated and discarded since the LAOOC decided to keep media and athletes separated except during interviews. In addition, it was the LAOOC's desire to give special and separate processing to certain Olympic Family members for protocol reasons. Since it appeared that the concept of a single center for processing of all

Olympic Family members was unworkable, various alternate plans were considered.

In April, 1983, the Venue Development Department determined that processing centers would have to be established at specific Olympic focal points: either an entry point into the United States (i.e. LAX) or central work area, (i.e. the Main Press Center or the International Broadcast Center for the press, radio and TV personnel) or primary residential areas (i.e. the Olympic villages for athletes or the Biltmore Hotel for IOC/NOC dignitaries) or primary administrative areas (i.e. the LAOOC Administrative Headquarters in Culver City). These sites were reviewed in an attempt to establish the perfect combination of in-processing sites. Consideration of the sites was based upon several factors, primary among them the minimizing of combined processing, travel and waiting time. Other factors included: minimizing management decision points to be staffed, security as it related to the Olympic Family and the assets of both the Olympic Family and the LAOOC, costs and ease of management coordination/resolution of problems encountered during in-processing.

An early candidate for the primary in-processing point was the LAOOC Administrative Headquarters complex in Culver City. This site was discounted since it was too far from the airport to adequately handle travel-specific problems that could typically occur upon arrival, specifically customs cargo or baggage handling. Separate in-processing facilities were considered for each of the three villages but the idea was dropped for fear that delegations might receive housing prior to proper accreditation and completion of payments to the LAOOC. Additional combinations of sites were evaluated until it became clear that none of the combinations worked well unless LAX was included as the primary processing point.

In fall, 1983, the LAOOC made a final determination of the in-processing sites. LAX would be used as the primary in-processing point for each of the National Olympic Committee delegations (mostly athletes and technical officials), with the Biltmore Hotel serving as a secondary point for processing of "A" and "G" identity card holders and the Main Press Center

at the Los Angeles Convention Center serving as the processing point for all of the accredited media. This decision set a precedent. Never before had a complete in-processing center for an Olympics been located at an airport.

The decision to go with the LAX location was not without risk. The new Bradley International Terminal was still under construction with an undetermined completion date and the airport was expecting greater than normal traffic flow during the Olympic period. The LAOOC remained firm in its selection of LAX as the location at which the fastest in-processing could take place.

Even with the determination of these three sites for in-processing, the selection process was not complete. Within LAX, four locations were considered for the in-processing site: an off-loop site just north of the airport, the new Bradley International Terminal basement, the old separate terminal on the south side of the airport and an air-supported "bubble" structure just behind the old international terminal. Each location was reviewed by the LAOOC and in October, 1983, the "bubble" was selected as the most appropriate place for the in-processing site. This decision was reached primarily because of the accessibility of the bubble by both the normal and special traffic loops of in-coming aircraft. In addition, the structure could be dedicated solely to Olympic in-processing without extensive reworking of the physical plant. LAOOC Security Department considered it the first choice because it was a separate structure with limited, controllable access points.

Negotiations were started with the Department of Airports of the city of Los Angeles to establish a leasing agreement for the use of the "bubble" structure (hereafter referred to as the Olympic Arrival Center or OAC). Contingency plans were established to relocate the OAC to the LAOOC Administrative Headquarters complex in Culver City if the Bradley International Terminal was not completed on time, requiring the Department of Airports to use the bubble for normal airport business. By the end of 1983, the arrangement with the Department of Airports had been finalized and the development of a venue operating plan for the OAC began in earnest.

The following sections will be devoted to in-processing which occurred at the OAC since the majority of the Olympic Family was processed through this point. Details of the in-processing procedure which occurred at the Biltmore Hotel will be discussed in chapter 26 and the procedures used for the media at the Main Press Center will be detailed in chapter 23.

19.03 Development of the In-Processing Center plan

In the original venue operating plan for the Olympic Arrival Center, the primary purpose of the center was to process and accredit NOC team members and technical officials. The overall LAOOC responsibility at the airport was to greet and assist all arriving Olympic Family members and to provide transportation for them and their cargo. This simple statement belies the great amount of work and planning that was required from late 1983 through the spring of 1984 to make the OAC operational.

As originally planned by the Venue Development Department of the LAOOC, the OAC would contain 15 different, functioning departments working together to process the Olympic Family. Using the information derived from the processing of athletes at the 1983 pre-Olympic events and from post events discussions, the operating plan for the OAC was revised and refined with a subsequent reduction in the number of operational departments during the Olympics processing period. Of the original 15 departments considering operations at the OAC, only 10 actually provided services during the Games.

The Finance and Accommodations departments, working together, verified and collected any balance due for accommodations for officials of international sports federations. These departments also verified and collected balances due for accreditation for the NOC's athletes and officials residing in the villages and verified and communicated hotel and village assignments. A secondary responsibility was the issuing of receipts upon collection of outstanding balances as a prerequisite to the accreditation process. Finally, they reviewed and distributed daily audit and management reports generated by the accommodations and NOC accounting system.

The Accreditation Department was responsible for the verification of the Olympic Family member's status. This was determined by placement on the Olympic Family list and payment of all fees due to the LAOOC. Once the Accreditation staff verified a person requiring credentialing, they photographed the individual and fabricated an Olympic credential.

The Government Relations Department served as a liaison between all government agencies at the airport and Olympic Family members. The Government Relations staff also provided protocol services to non-Olympic VIPs.

Material Logistics was charged with requisitioning, purchasing, receiving, warehousing and inventorying all supplies and materials for the OAC. The department was required to deliver all requisitioned equipment to the OAC prior to the OAC becoming operational.

The Transportation Department was primarily responsible for all arrival and departure functions of the Olympic Family at the airport. These responsibilities did not include activities which took place inside the OAC. The function of greeting incoming Olympic Family members was carried out by the host/hostess staff operating under the guidance of Transportation. It was also the responsibility of the Transportation Department to move Olympic Family members from the arrival terminals to the OAC. If an Olympic Family member or other VIP personnel did not require in-processing at the OAC, he was taken to his lodgings by Transportation staff.

As part of the management function, Transportation was required to establish an operations headquarters at the Airport College (at 96th Street and Sepulveda Boulevard) for all the Olympic transportation systems at LAX. All staff check in, personnel functions and the escort program were headquartered at this site. Allied Skycap Services was contracted to move baggage from the Bradley International Terminal to the OAC.

The Technology Department provided services to the other departments functioning within the bubble of the OAC. Telecommunication, facsimile, word processing and computer (both micro and mini-computer operations) equipment were installed, tested and operational prior to the opening of the OAC. Power, lighting and maintenance support were also provided by the Technology Department.

Greeting and escort services to Olympic Family VIPs were provided by the Protocol Department. This process included notifying the U.S. Immigration and Naturalization Service and the Customs offices of the impending arrival of the VIP and then escorting him from disembarkation through the credentialing procedures at the Biltmore Hotel.

The role of the Security Department was defined as providing a safe environment for all members of the Olympic Family from their arrival at the airport to their arrival at their accommodations. This involved a coordination of efforts among the Los Angeles Police Department, the Department of Airports and various airline officials. Security also had to coordinate the transportation of the Olympic Family with the Village Security Managers, the Transportation Department, the California Highway Patrol, the Los Angeles County Sheriff's Department, the Department of Airports and the Los Angeles Police Department.

A Venue Management unit was established to coordinate and supervise all operations at the airport, inclusive of the OAC, the greeting function at all terminals, the Airport College transportation area and the Cargo Distribution Center. Beverages for the Olympic Family and box lunches for the staff were provided by the Food Service Department.

There were five LAOOC Departments which determined that their services would not be necessary at the OAC or could be provided by another department or organization already functioning at LAX. The Awards/Ceremonies Department felt that the distribution of commemorative medallions to the Olympic Family could be accomplished better away from the busy OAC. Health Services anticipated a low demand for medical services at the OAC and felt that Red Cross personnel stationed at LAX could handle requests. With the decision to in-process the media at the Main Press Center, Press Operations did not require a position within the OAC. Any questions regarding the media were handled by the OAC venue management team. The Public Information function was handled by existing traveler's aid booths in each of the terminals. TV Operations did not require a presence at the OAC since issues involving the electronic media were handled as a courtesy by ABC television, the host broadcaster.

19.04 Liaison with the LAX

The LAOOC's Government Relations and Venue Development Departments dealt specifically with the Department of Airports' General Manager and Operations Manager on issues relating to the Olympic Arrival Center prior to the establishment of a venue management team for LAX operations.

1 Los Angeles International Airport is the site of the Olympic Arrival Center.

2 Olympic Family members pick up their luggage and await transport to their accommodations.

In-Processing upon Arrival

The Department of Airports (DOA) operated under the Board of Airport Commissioners who reported to the mayor and City Council of Los Angeles. With the mayor's backing, the Board of Airports' commissioners and general manager were asked to assist the LAOOC in the development of the plan for an in-processing center at LAX.

As detailed previously, several potential sites were considered within the LAX complex but all parties agreed the Federal Inspection Service (FIS) bubble was the best site for the in-processing center. In early 1984, conditional agreement was reached on the LAOOC's use of the bubble.

Modification plans for the FIS bubble were prepared from March through May, 1984. These plans were presented to the Chief Airports Engineer on 31 May 1984. The requested modifications fell into four basic categories:

- Cleaning and painting the structure
- Installation of temporary electrical wiring and telephone lines
- Removal of baggage conveyors
- Installation of flags and banners

On 18 June, the Board of Airport Commissioners granted permission for the placement of the Olympic Arrival Center in the FIS bubble. Work on the modifications began immediately using contracted services outside of the DOA.

The Department of Airports had access to the bubble during construction and was kept aware of activities related to the development of the OAC. Likewise, the LAOOC was informed of construction progress of the new Bradley International Terminal since any major production slowdowns would result in the DOA's need to take back the bubble for regular LAX use.

19.05 Liaison with the incoming officials and teams

19.05.1 Communications in the planning stage

Communications with the Olympic Family, inclusive of International Federations and National Olympic Committees, with respect to in-processing, were limited to materials sent by the Sports, NOC Services and Accreditation departments. The information dealt with ticketing, financial/ accommodations, sport registration and accreditation policies and deadlines.

The Accreditation Department was in charge of sending out packets of information since a large percentage of the material directly involved the registration and accreditation of the Olympic Family. Unfortunately, when Olympic Family information was needed, there was no single department in charge of compilation and dissemination of the returned data to each of the departments.

Even with the establishment of the LAX Operations staff, the information flow continued to the departments that had initially requested the information. Communications with the Olympic Family in the planning stages should have focused to a much greater extent on the development of a relationship between the Organizing Committee and Olympic Family officials who were capable of putting together accurate information for in-processing.

The envoy program established by the LAOOC served a function similar to the education program of the chefs de mission. With the envoys serving as formal hosts to specific NOC delegations, the LAOOC had the ability to transmit important processing information in a more direct, personal manner. The development and utilization of the envoy program was effective and well-timed, however, more intensive training of the envoys in their assigned responsibilities would have facilitated the communication flow between the Organizing Committee and the Olympic Family.

Potential Olympic in-processing sites

- 1 Primary entry point into United States (i.e. LAX)
- 2 Central work area (i.e. Main Press Center)
- 3 Primary residential (i.e. Biltmore Hotel or Olympic Villages)
- 4 Primary administrative area (i.e. LAOOC administrative headquarters in Culver City)

Packets of information that went out to the Olympic Family in 1983 did not specify the location of the in-processing center but this had little effect on either the LAOOC's or Olympic Family's planning processes. Even in this planning stage, the procedures for in-processing had more to do with accurate and timely registration of delegates than with the transporting of personnel from disembarkation points.

19.05.2 Pre-arrival information and instructions

Since there was never a policy established which set up one LAOOC department as the originator of all information to be disseminated to the Olympic Family regarding instructions for in-processing and registration, the bulk of the responsibility was left with the three departments involved in the planning stage; the Sports, NOC Services and Accreditation departments. Since it was the Accreditation Department's responsibility to register all Olympic Family members prior to credentialing, this department developed a packet of information which integrated information from all three departments. This package included:

- Blank identity cards
- Olympic Family lists
- Instructions
- Entry forms by number
- Entry forms by name
- Form requesting team size estimates

This package went to each of the National Olympic Committees. Similar packages, without entry forms, were mailed to the International Olympic Committee and to each International Federation. In addition to these forms which dealt with delegate and sport registration, the packet contained information on the actual in-processing procedures; where to go upon arrival at LAX, greeting the delegation, payment of monies owed and transportation to one's accommodations. The packet also included information pertaining to customs and immigrations.

Return of the completed forms was required no later than 2 June 1984. A copy of the Olympic Family lists also had to be submitted to the U.S. State Department at this time. The necessity of having these forms, particularly the Olympic Family lists, returned more than a month prior to the arrival of the first NOC delegation was because of the need to use these lists as the source information for pre-printing Olympic credential inserts.

The accurate completion of the Olympic identity cards was imperative since they were to be used by the Olympic Family member as his entry visa into the United States and, subsequently, as an identification document for in-processing and accreditation.

Problems completing the forms in the information packet were generally directed to Accreditation. In cases where there appeared to be infringements on the Olympic Charter, the International Olympic Committee Director's office was consulted. In several instances, information which was to be returned to the Sports Department was returned in error to Accreditation (and vice versa). This resulted in some inaccurate attempts to do long-range planning and scheduling of Olympic Family arrivals.

19.05.3 Scheduling

The initial plan for the Olympic Arrival Center called for the development of a master schedule for all incoming NOC delegations and other large blocks of Olympic Family personnel. Each OAC department was concerned about the number of people that would be processed through LAX and the Olympic Arrival Center. The Accreditation Department developed its own database of arrival times and delegation size in order to anticipate the number of credentialing lines needed to achieve a workable process flow-through time. The Transportation Department, using different sources of information, developed its own statistics to anticipate staff and vehicular needs during the in-processing period. The LAX Venue Management group also created a database for in-processing in order to create a plan for staffing needs in the areas of technology, food service, materiel management, finance/accommodations, personnel and security. None of these databases was completely accurate since each of them drew on different sources of information which may have been outdated or superseded by the time it was used by the department. In effect, without a single, accurate source of arrival data, each department was planning for a different Olympics- the result would have been disastrous if long-range planning had not anticipated the worst situation, thereby giving the OAC personnel exceptional flexibility when the "worst possible" scenario did not materialize.

Early attempts were made to have NOC delegations re-scheduled to a more convenient arrival time. These attempts were quickly abandoned as more and more delegations changed what appeared to be firm arrival times. Much time was wasted trying to anticipate what effect international weather patterns would have on the arrival times of delegations coming from all over the world. Since there was no way to lock NOC delegations into a specific arrival date and time, time and effort would have been better spent testing all phases of the in-processing procedures to ensure that they would be 100 percent effective in case of high volume/high stress periods and training the chefs de mission to be better prepared for in-processing prior to the arrival of their delegations at LAX. The factors affecting efficient in-processing were controllable by the LAOOC; the factors affecting arrival times of the delegations were not.

3

19.06 Games operation

19.06.1 Conversion and staffing of the LAX bubble

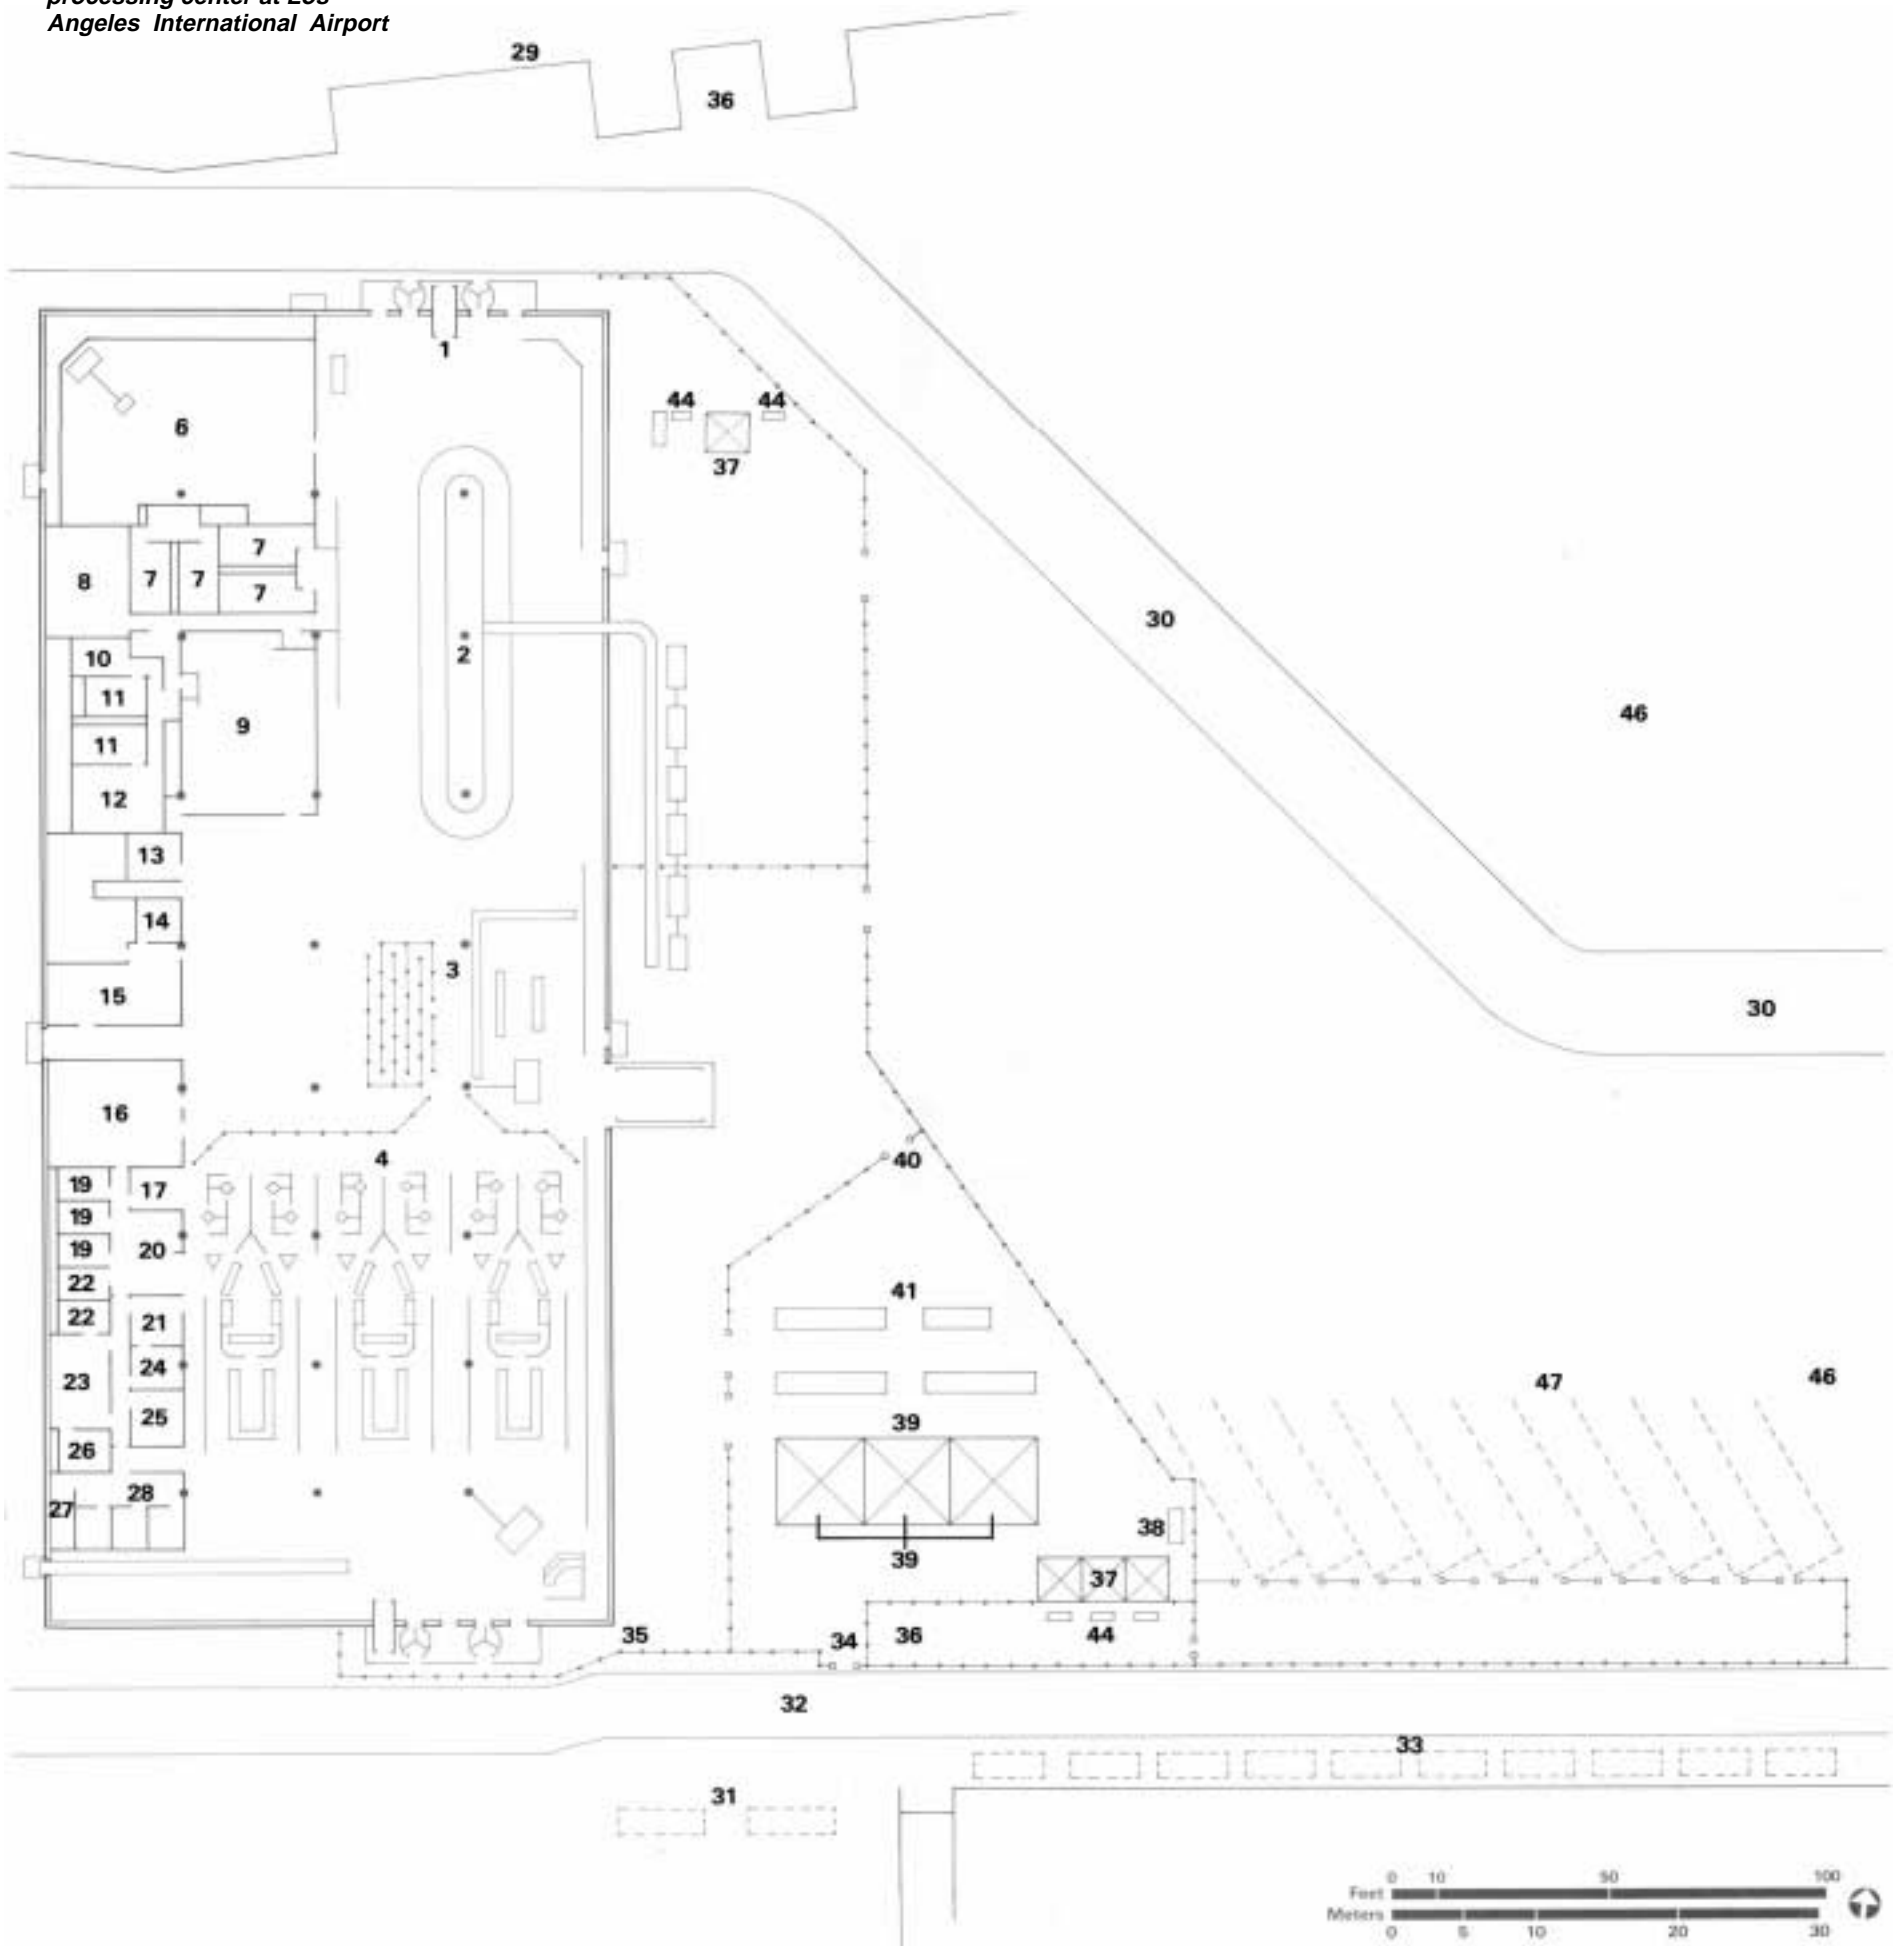

Once conditional approval had been given by the Department of Airports to use the FIS bubble structure for the Olympic Arrival Center, the LAOOC's Architecture/Construction Department began plans to convert the bubble from a baggage inspection facility to a structure capable of processing approximately 10,000 Olympic Family personnel through its doors in the course of a two-week period. Because the bubble would be the first glimpse the Olympic Family would have of the Los Angeles Olympics, particular attention was paid to the accompanying Look. Security considerations were also a high priority since processing of NOC delegations with high exposure/high risk profiles would take place there.

Aside from the removal of two high-capacity baggage conveyors, very little of the existing interior of the bubble had to be removed. The majority of the work was in the restructuring of the interior to accommodate the various working departments of the Olympic Arrival Center. Temporary offices were built along the west wall of the bubble to house the Security, Delegate Registration, Finance/ Accommodations, Data Entry, Accreditation, Government Relations, Transportation, Technology, Communications and Venue Management departments. Lounges were designed for guests, the Olympic Family and the staff who would be working around-the-clock in three eight-hour shifts.

3 Individual team members are matched with pre-printed inserts before receiving their Olympic credentials.

4 The Japanese team begins in-processing at the Olympic Arrival Center.

Olympic Arrival Center building plan

5

5 LAOOC mascot Sam the Olympic Eagle greets the Peruvian team.

The Technology Department consulted with each OAC department to ascertain their equipment and power needs. Of primary importance was the planning of the lay-out of IBM System 38 terminals for use in the production of Olympic credentials and verification of Finance/Accommodations accounts. Telephonic and Electronic Messaging System (EMS) links were laid for communication with the LAOOC Administrative Headquarters and each Olympic venue.

In addition to the modifications made to the FIS bubble, several other LAX sites required minor structural or cosmetic changes. At the Bradley International Terminal, a ticket counter and back office were converted into a coordination center for hosting, inbound baggage, intra-airport transportation, NOC aides and VIP greeters. In Terminal 2, a ticket counter and back office were converted into a hostess lounge and secondary coordination office. An airline lounge on the mezzanine level of Satellite 2 was converted into a VIP waiting and hosting area. Also in Satellite 2, office space was established for a Government Relations office in the Immigration and Naturalization Services (INS) area. A partition was designed to separate the east and west halves of the Customs baggage

inspection area. Budget Rent-a-Car booths were converted to information counters and required extensive placement of signs. Signs were also placed to indicate Olympic Family bus pick-up points on the arrival level of the vehicle loop.

The conversion process of the bubble was planned from March through May of 1984 but actual construction did not begin until the middle of June. From the date the Department of Airports granted approval to the LAOOC to use the FIS bubble to the day the OAC opened was a very short 22 days.

Even before the conversion process began, staffing policies were being established for the Olympic Arrival Center. With only one LAOOC staff member working on the OAC project in 1983, the project did not start gaining momentum until May, 1984, when OAC staff totaled eight. From May through June a major push was undertaken to hire and train all OAC personnel. By 1 July 1984, approximately 932 OAC volunteers and paid staff had been hired. Each department manager conducted a training program with his personnel and a full-scale dress rehearsal was held with all OAC departments participating. Staff members who would be utilizing the IBM System 38 within the OAC were given hands-on training on identical terminals.

19.06.2 Early arrivals

Prior to 10 July 1984, the Olympic Arrival Center was not operational for the in-processing of Olympic Family personnel. Delegations or individuals arriving before this date were greeted and assisted through customs and immigrations procedures whenever possible and LAOOC transportation was made available for VIP Olympic Family members.

In an attempt to test and refine some of the in-processing procedures, the greeting and transportation functions of the in-processing system were utilized for in-coming Olympic Arts Festival performers from 28 May through 20 July 1984.

Although the OAC did not officially open to NOC delegations and other Olympic Family members until 14 July, chefs de mission (holders of "C" Olympic Identity cards) for each NOC delegation were allowed to pre-process their delegations. This meant the chef could correct and verify the Olympic Family lists for his NOC and settle the NOC's account with the Finance/Accommodation staff at the OAC without the entire delegation having to wait for these procedures to be completed. Once the Olympic Family lists were finalized and the account settled, the lists could be coded and changes to the credential inserts processed through the System 38. Without the pressures of large delegations all wishing to be in-processed at the same time, the OAC staff was capable of processing the chefs in an extremely efficient manner. Unfortunately, not all of the chefs took advantage of these four days to pre-process their delegations. An example of the time saved was in the processing of the People's Republic of China delegation. With more than 200 athletes in the delegation, the entire group was processed in less than 45 minutes largely due to the chef doing all his paperwork in advance of the delegation's arrival.

Although the early arrival system was not established to process NOC delegations (en masse) through the OAC, venue management determined that certain delegations arriving within this four-day period would be allowed to go through the OAC and complete in-processing. This decision served a two-fold purpose; it saved the delegation time and potential aggravation since it would not have to come back after 14 July to be processed and it allowed the OAC to test all of the in-processing procedures before the bulk of the NOC delegations arrived.

Early arrival processing

	10Jul	11Jul	12Jul	13Jul	Totals
B	0	0	4	0	4
C	6	3	43	13	65
O	0	0	0	0	0
F	35	6	44	60	145
Fo	32	1	38	23	54
Fx	0	0	0	0	0
J	0	0	0	0	0

The LAOOC management anticipated the value of early processing of chefs de mission and worked on several different incentive plans to gain compliance of the chefs.

Unfortunately, none of the incentive plans were ever used and a valuable chance to markedly speed up in-processing was lost. Future OCOG s should give careful consideration to any plans that would gain high compliance of the chefs to pre-process their delegations.

19.06.3

Processing of Olympic Family

Upon arriving at LAX, members of the Olympic Family were greeted at their arrival terminals by LAOOC staff from either the Protocol or Transportation/Hosting departments. Holders of "A", "B" and "G" Olympic identity cards were met by a host or hostess from the Protocol Department stationed at LAX. Holders of "D" or "J" Olympic identity cards were met by a host or hostess from the Transportation Department which provided a majority of the hosting functions within LAX.

The Olympic Family members, regardless of the department providing the host function, were escorted through the immigration and customs procedures. Special lines were established for the use of the Olympic Family in both immigration and customs to speed in-processing.

Once the Olympic Family members cleared customs they were transported (by OAC Transportation staff) to their specific Olympic in-processing center. All "A" and a majority of the "B" and "G" Olympic Identity card-holders were driven to the Biltmore Hotel to complete in-processing. "D", "J" and the remainder of the "B" and "G" card-holders were driven around the LAX vehicular loop to the Olympic Arrival Center. Determination of which in-processing center used was based on accommodations for the Olympic Family member; when an Olympic Family member was staying at the Biltmore he was in-processed at the Biltmore (see Olympic Family Services for details of in-processing at the Biltmore). Everyone else was processed at the OAC.

The "B" and "G" card-holders which were processed at the OAC were escorted into a special greeting area of the OAC. In this area the card-holders were verified against previously submitted Olympic Family lists. Once the list was verified as accurate, the card-holders were escorted to Finance/ Accommodations. "D" and "J" card-holders were escorted directly to Finance/ Accommodations upon their arrival at the OAC.

In the Finance/ Accommodation area, "B" and "G" card-holders settled the balance on their accommodation and registration fees. While this transaction was occurring, the information from the verified Olympic

6

Family list was taken to the insert processing area to be checked against the pre-made credential insert. Since "D" and "J" card-holders had not undergone earlier verification from the Olympic Family list, the staff of Finance/ Accommodations was required to complete this process which was extremely slow because of the high number of changes in the lists. Each time a change was made to the list, an official of the appropriate International Federation had to be consulted. This resulted in long waits for the officials ("D" and "J") and extra work for the OAC staff. Once the new lists were verified, the officials had to settle all outstanding balances on their accommodations. As with the "B" and "G" card-holders, information from the lists was conveyed to the insert processing area while the financial transactions were taking place. The insert processing staff generated new credential inserts for the Olympic Family whenever errors or changes were made on the Olympic Family lists. After completing the Finance/ Accommodation portion of in-processing, Olympic Family members moved to the insert processing area where after showing their Finance/ Accommodation receipts, they were given credential inserts and escorted to the badge issuance area. "B" and "G" card-holders had their credentials made in a VIP badge processing area while the "D" and "J" card-holders went through the same lines as those used for processing NOC delegations.

At the badge issuance area, the Olympic Family members were photographed, the photograph was glued to the front of the credential insert and the Olympic Family member signed the back. The credential was laminated and embossed and then given to the Olympic Family member with a chain attached.

The Olympic Family member, now in possession of his Olympic credential, was escorted out of the OAC to the curb of the vehicular loop of LAX where he was reunited with his luggage. Awaiting the "B" or "G" card-holder was an LAOOC driver and car to take him to his accommodations. The "D" or "J" card-holder was met at the curb by LAOOC transportation (either a car, van or bus) to take him to his accommodations. This completed the in-processing cycle at the OAC.

19.06.4

Processing of teams and accompanying officials

Chefs de mission and aides for each of the NOC delegations were given "C" Olympic identity cards. If the chef de mission and aides arrived prior to the arrival of the NOC delegation, they were treated as special members of the Olympic Family since it was in their power to make the in-processing of their delegation a speedy and problem-free one.

The procedures used when the chef arrived before his delegation were identical to those used when he accompanied his delegation except that his athletes and officials did not have to wait while the chef completed Olympic Family list verification and settlement of outstanding Finance/ Accommodation accounts. The athletes and officials, holders of "F" Olympic Family identity cards, were treated in the same manner as "C" card-holders. Their involvement in the processing began when they were escorted to the the insert processing area of the OAC. Prior to this point, they waited in the lounge area of the OAC until the chef de mission completed early processing procedures.

6 The Canadian team gets its first glimpse of the Olympic Look inside the OAC "bubble. "

In-Processing upon Arrival

The chef de mission and his delegation were greeted at the disembarkation terminal by LAOOC hostesses and the LAOOC envoy to the country. The entire delegation was escorted through the immigration and customs proceedings utilizing special lines established specifically for their use. The delegation was then taken to the OAC by LAX transportation rather than using the LAX vehicular loop. Luggage was also transported to the OAC. Whenever a team was deemed security sensitive, arrangements were made to have the airplane carrying the team unload at the terminal nearest the OAC. Special immigration and customs procedures were set up to allow for safe processing of these teams away from the general, heavily trafficked areas. Various law enforcement agencies provided extra security as these teams were taken by the most direct route to the OAC.

The chef and his aides were escorted directly to the delegate registration area of the bubble, while the remainder of the delegation waited in the lounge. The OAC staff at the lounge provided refreshments to the waiting delegations but many teams arrived having endured long and uncomfortable flights from their homelands and their patience was inversely proportional to their desire to find comfortable beds.

At the delegate registration area, the chef was required to verify his Olympic Family lists; making any additions, deletions and spelling corrections. Once verified, the lists were turned over to the Coding Manager of Olympic Family Accreditation for proper coding of each individual for sport and function.

Once the chef completed the verification process, he was escorted to Finance/Accommodations to settle the account for all persons in the delegation. While the chef was engaged in this process, the verified and coded Olympic Family lists were delivered to the insert processing section of the OAC. The new information was entered in the IBM System 38 computer and new credential inserts were printed. Those names on the Olympic Family list which remained unchanged were printed prior to the arrival of the delegation and stored, pending distribution to the delegation members.

Upon settling his NOC account, the chef proceeded with his delegation to the insert processing area to pick up the credential inserts. Each delegation member had to provide positive identification before he was given his credential insert. The chef and the delegation then proceeded to the badge issuance area where they were photographed and the Olympic credentials were made. With the in-processing completed, the chef and the delegation were reunited with their luggage and transported to their accommodations at the Olympic Villages.

19.06.5 Review of arrival patterns and processing times

The relationship between a specific arrival time and the amount of time taken to in-process groups of people was entirely dependent on the type of person needing in-processing and the flow of additional personnel at that time through the OAC. Naturally, when a large quantity of people was moved through a process that had limited expandability there was a tendency for the flow-through time to be increased, in some cases quite dramatically.

The original venue plan called for equal staffing throughout the three eight-hour shifts but this plan was modified to accommodate the greater influx of Olympic Family personnel in the afternoon and evening. The arrival times were grouped in this time period because of the location of the Games and the international flight schedules. There was a fair amount of morning traffic before 1000 hours and a small but regular amount of post-midnight activity.

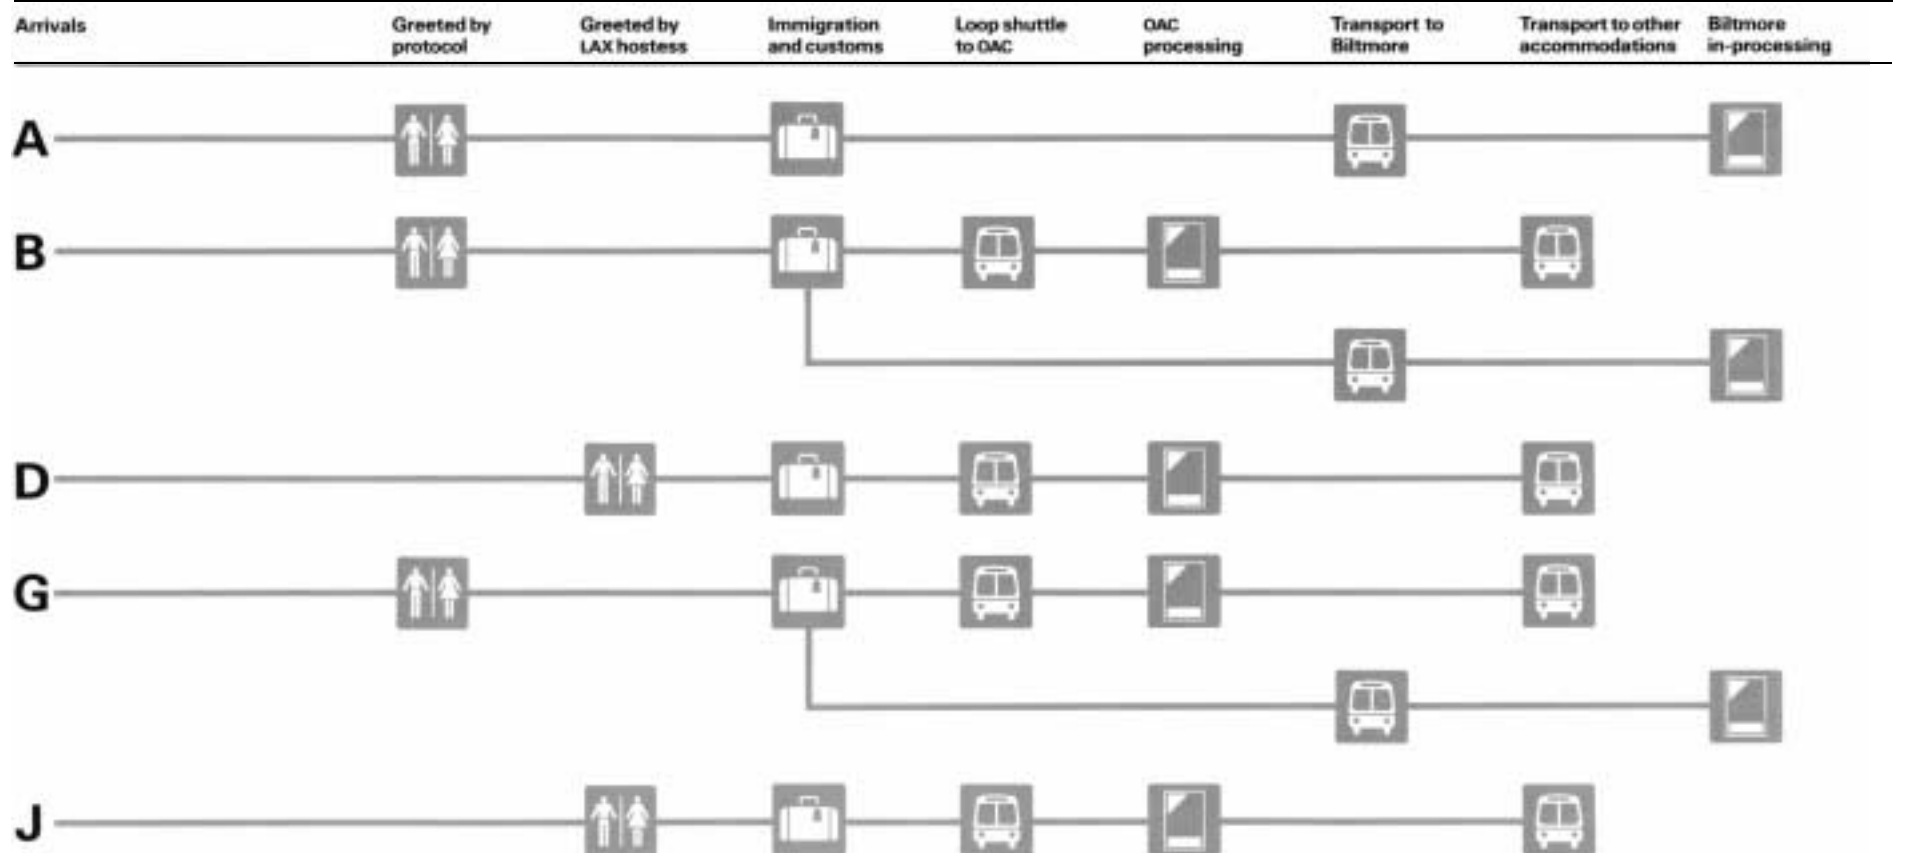

Additionally, a large factor in the determination of arrival dates for NOC delegations was the 20-day minimum Olympic Village stay required of all NOCs. This resulted in many of the NOCs planning an arrival date which would have allowed them to compete in their events and fulfill the 20-day

clause. Since large numbers of athletes were competing in the track and field events (which had final competitions near the close of the Games), their arrival times were generally 20 days prior to that date. This peak is reflected in the processing curve on 22-26 July. Forty-six percent of all personnel processed through the OAC were processed on these five dates.

The average in-processing time for a medium-sized NOC delegation (60 athletes/40 team officials) was difficult to figure since the problems of one NOC were vastly different from those of any other. However, utilizing the common-most problems for in-processing, the time breaks down in the following manner:

Function	No. of changes	Time
Verify spelling names	12	15 min.
Delete 15 athletes	10	15 min.
Verify function/title/sport	15	15 min.
Calculate officials	10	30-60 min.
Discuss who is Fo, who is Fx		
Choose sport for Fx		
Call for housing/Mayor approval		15-30 min.
Time for finance/accommodations approval		10-30 min.
Reprint badges	47	20-30 min.
Average in processing time		2 hours minimum

OF in-processing

This average NOC delegation could have greatly reduced the amount of in-processing time if the chef de mission had arrived prior to his delegation's arrival and gone through pre-processing procedures at the OAC in the four-days (10-13 July) set aside for that purpose. As an example of this pre-processing, the People's Republic of China, with a delegation in excess of 340 people, went through processing at the OAC in 45 minutes. By contrast, one small delegation of 50 people took over 5 hours to process because of the loss of their Olympic Family lists and the downtime of the System 38 computer.

Certain factors outside the control of the NOCs which affected processing time were the physical layout of the OAC and the creation of the expeditor program. Venue planning had not taken into consideration the size of the delegation representatives' party nor the length and confidentiality of the delegate registration process. Private rooms for this process would have assisted in speeding up the registration process. On a more positive note, the expeditor program was established after the OAC had begun operations. An LAOOC staff member was assigned to a specific NOC to guide them (and their paperwork) all the way through in-processing. Having one individual on staff who was aware of the status of each aspect of in-processing for that NOC had a marked effect on speeding up the process.

As discussed previously, the processing of "D" and "J" technical officials lacked the detail and procedure necessary to ensure an adequate flowthrough time. Better communication with the International Federations during the planning stages

as well as periodic updates would have resulted in much less confusion at the in-processing point. The creation of a separate department that provided the same service as delegate registration but specific to the IFs would be an ideal solution to the same problem.

Processing of the smaller groups of Olympic Family personnel ("B" and "G" identity card holders) went smoothly primarily because of the limited number processed on any given day.

With hindsight, it is easy to see where the mistakes were in the LAOOC's in-processing but it is also easy to see that for a majority of the Olympic Family, moving through the OAC was relatively painless. With earlier and better communication with the Olympic Family organizational leaders and an extended training period for all staff working in the OAC, the process would have been a quick and enjoyable one for all.

The evidence speaks for itself; with over 13,500 Olympic Family members processed through the OAC and transported to their accommodations during a one month period, the concept of a complete in-processing center at LAX was validated.

19.07 Out-processing

The system for out-processing of Olympic Family personnel was entirely different from that of in-processing. The inflow of Olympic Family for the Games was carefully monitored and controlled. It was vital that each and

every member of the Olympic Family be identified and properly credentialed in order for the Games to be run effectively and within the confines of the Olympic Charter. The out-processing and departure of the Olympic Family after the Games was more an effort to be conscientious and to leave a good feeling with departing guests.

The departments of the OAC which were operational in out-processing were primarily Transportation and Government Relations. Both the Security and Food Services Departments continued their roles which were established during the time of in-processing.

Transportation, in both its role as LAX greeter and as transporter of the Olympic Family, relied on strong communications with its staff at the Olympic Villages and other Olympic Family accommodations. This communications link was necessary in order to alert transportation management when an Olympic Family individual or NOC delegation was scheduled to depart from LAX. Once departure times had been verified with the airlines, transportation management arranged for some form of transportation to carry the Olympic Family personnel and their luggage from their accommodations to the appropriate airline terminal. In addition, Transportation assisted in the transporting and processing of Olympic Family cargo.

NOC delegations, groups of technical officials and special Olympic Family individuals were met at the airline terminals by LAX greeting staff (part of the Transportation Department) and escorted to the appropriate waiting area or gate. This greeting staff was responsible for assuring that the departing Olympic Family and their

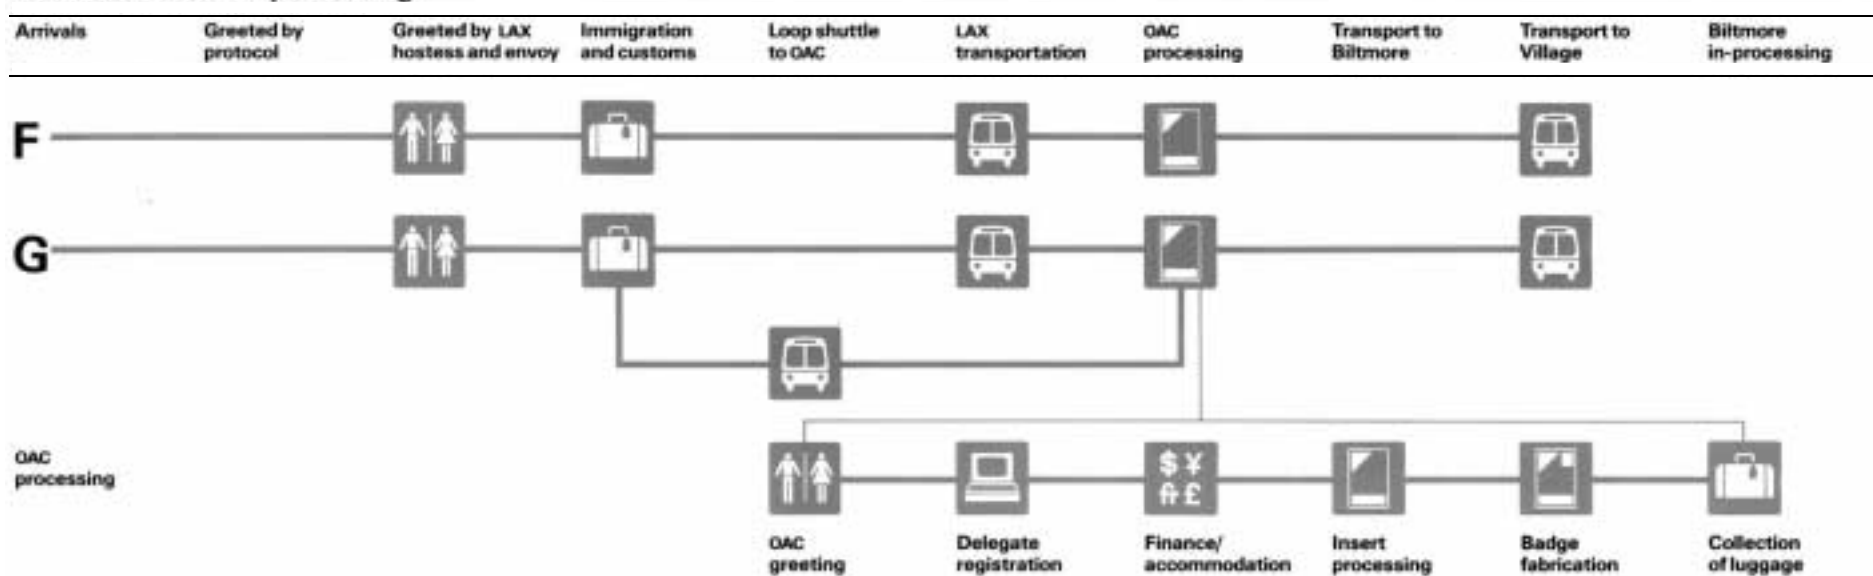

travel requirements were quickly met. Problems such as a forgotten passport were handled quickly and completely by the greeting staff. Government Relations was on call if there were any problems that could not be resolved in this manner.

Security sensitive delegations were transported to the OAC where they waited until 30 minutes prior to their departure. They were then escorted to their departure terminal. For their convenience and safety, their baggage was processed at the OAC by airline representatives. While waiting for their departure, delegations in the OAC were treated to snacks and closed circuit television.

Security and law enforcement agencies provided protection for all NOC delegations from their accommodations to their departure point at LAX. The one security incident that occurred during out-processing involved a bomb planted in the wheel well of a bus carrying an NOC team. The bomb was discovered with no one being injured. Through later investigation, it was determined that the member of the law enforcement agency who discovered and removed the bomb, was actually involved in planting it.

Aside from this one incident, the out-processing of the Olympic Family was effective and uneventful. Only time and the comments of Olympic Family visitors to Los Angeles will tell whether LAOOC could have improved on the process.

Team and official in-processing

In-Processing upon Arrival

19.08 Summary

The development of the plan for an Olympic Arrival Center at LAX for in-processing of Olympic Family members and NOC delegations proceeded according to the initial plans of the LAOOC's Venue Development Department. The physical structure and the internal technology of the bubble were completed on schedule, a pleasant surprise since this type of facility had never been used in prior Olympics. The development of an operating plan for the LAOOC departments at the OAC and staffing for in-processing were completed in time for the opening of the OAC on 10 July 1984. Training of the OAC staff was rushed because of the nearness of the training period to actual operation of the bubble. Nonetheless, the OAC staff proved more than capable of performing their jobs.

The compilation and distribution of information regarding Olympic Family and NOC delegation registration and pre-arrival documents worked well although inconsistencies in the incoming information pointed up the need for a solitary department capable of handling all pre-registration and information processing and then, during the in-processing period, multiple departments, each overseeing the processing of a particular subgroup of the Olympic Family.

The effort to have chefs de mission pre-process their delegations was a worthwhile one. The major reduction in in-processing times for delegations warrants an even greater effort to induce chefs de mission into coming to the in-processing center prior to the arrival of their delegations.

All the efforts of the OAC staff came together with the arrival of the Olympic Family in Los Angeles. Each Olympic Family delegation was greeted warmly at its arrival gate by members of the LAOOC. This goodwill continued as the delegations were moved from their arrival point to the Olympic Arrival Center. The Design and Architecture Departments had worked closely to come up with an appealing Look to the interior of the bubble. Each member of the Olympic Family was made to feel welcome as a special guest of the United States and the city of Los Angeles. In-processing procedures within the bubble were tailored to make the delegate's visit as efficient and hospitable as possible. This first meeting of Olympic Family visitors and LAOOC hosts was designed to leave a pleasant and lasting impression on the city's guest.

The concept of a primary in-processing center located at an airport has been validated by the success of the LAX Olympic Arrival Center. Future organizing committees should consider an airport in-processing center as their first choice to provide the easiest and most effective in-processing service.

¹ Simultaneous interpretation services are provided for all IOC and NOC meetings at the Biltmore Hotel.

20.01 Concept of language services

The worldwide scope of the Olympic Games required a comprehensive language services department to service all participants in all areas of the Games to ensure swift and accurate communications.

To accomplish this, the Organizing Committee created an independent Language Services Department in April 1983. The department was responsible for the definition and planning of a language services program, identification of sources and recruitment of language candidates, language certification, training of interpreters and coordinators and the supervision and deployment of the Games staff.

Prior to the formal establishment of an independent Language Services Department, the language needs of the Organizing Committee were coordinated by a manager and two assistants who worked under the umbrella of the Human Resources Department. A translation chief coordinated the translation of all incoming correspondence, while actual translation projects were turned over to freelance translators and

independent translation companies. The other assistant coordinated interpretation requirements for visiting IOC/NOC delegations as well as for formal Organizing Committee meetings, as required.

The Languages Services Department included a manager and two assistants in April 1983 with a French translator/editor added in June. Administrative help and a recruiting coordinator joined the staff in October prior to major expansion in January 1984. Planning, recruiting and training and translation staff was identified as the recruitment and orientation program began in earnest. Interpretation and translation management, a personnel coordinator and translation support were added in April. Beginning in June, substantial additional short-term staff—including 43 venue coordinators and supervisors for the translation pool and conference interpreting services—joined the Language Services Department.

20.02 Determination of the level of service

The language services program was designed to provide two essential services: translation and interpretation.

Since the IOC Charter specifies English and French as the official languages of the Olympic Games, the Organizing Committee was committed to publishing all public documents pertaining to the IOC and the Olympic Games in both languages. Where necessary, the Organizing Committee translated documents and correspondence from and into English and other languages, most notably Spanish, which along with German, French and Russian are the official working languages of the Olympic Games.

To determine the extent of its interpretation service, the Language Services Department worked from the following set of assumptions pertaining to the language proficiency among members of the Olympic Family:

- Approximately 50 percent of the Olympic Family had a knowledge of English.
- The knowledge of English was more prevalent among organizers than athletes.
- The “buddy” system provided informal language assistance.
- Primary language services were most needed in formal situations.

The Language Services Department considered that the 10 most frequently spoken languages were: English (spoken in 43 countries), French (23), Spanish (22), Arabic (18), German (6), Russian (5), Portuguese (4), Mandarin (3), Italian (3) and Dutch (3). This accounted for 130 nations or more than 80 percent of all teams eligible to come to the Games.

After extensive research and analysis by sport and by country, language services decided to provide interpretation services in 24 languages. They were: Amharic, Arabic, Bulgarian, Czech, Danish, Dutch, Finnish, French, German, Greek, Hungarian, Italian, Japanese, Korean, Mandarin, Norwegian, Polish, Portuguese, Romanian, Russian, Serbo-Croatian, Spanish, Swedish and Turkish.

The Language Services Department was responsible for the staffing of the venues, the Olympic Arrival Center, the three athletes’ villages and the Main Press Center with a sufficient number of qualified interpreters that it had recruited, trained and managed. Additionally, simultaneous interpreters were provided at the Biltmore Hotel for all IOC meetings, the Main Press Center for news conferences and at all International Federation Congress sites. The Language Services Department also tested and certified

language-qualified applicants for positions as VIP and NOC aides, hosts and hostesses, information specialists and drivers who were deployed and managed by other departments.

20.03 Pre-Games translation service

A full-time French editor provided quality control of the French-English and English-French translation projects from June 1983 through March 1984. Additionally, the French editor coordinated a pool of approximately 30 freelance translators who worked on a project-by-project basis. Large translation jobs were usually subcontracted to local translation companies. In March 1984, the Language Services Department enlarged its translation staff to handle the steadily increasing workload. The translation operation at the start of the Games consisted of two French editors, one translation manager, two word processor supervisors and one assistant manager. They supervised an additional 28 translators who were assigned to the Organizing Committee by the Monterey Institute of International Studies (MIIS).

Approximately 60 percent of the translation work from April 1983 through March 1984 was done in-house. From April 1984 until 10 July 1984, increased demand for translation work required language services to assign more than 80 percent of the jobs to freelance translators and/or translation companies.

From April 1983 until 10 July 1984, 5,483 pages or approximately 1,370,750 words (based on 250 words per page) were translated. The breakdown in languages was as follows:

- English to French, 2,904 pages (63 percent)
- French to English, 784 pages (12 percent)
- English to Spanish, 163 pages (4 percent)
- Spanish to English, 394 pages (8 percent)
- English to other languages, 417 pages (6 percent)
- Other languages to English, 821 pages (7 percent)

Beginning in April 1983 and continuing through the Games, the translation operation of the LAOOC's Language Services Department translated 6,600 pages or 1,650,000 words. Among the major projects translated from English to French were:

- Competition forms, 400 pages
- Venue signs, 8,000 signs
- NOC "Communiqués," 120 pages
- "Olympic Record" stories and fillers, 700 pages
- "Villager" stories and fillers, 340 pages
- "Stars in Motion" magazines (6 issues), 150 pages
- "Pharmaceutical Guide," 60 pages
- "Chef de Mission Manual," 60 pages
- "Athletics Handbook," 80 pages
- "Entertainment Guide," 50 pages
- "Arts Festival Guide," 60 pages
- "Medical Guide," 50 pages
- "Transportation Guide," 30 pages
- "Sport Sites Guide," 30 pages
- "Customs Manual," 20 pages
- "Athletes Village Guide," 50 pages
- "Sailing Instructions and Measurement Regulations for Yachting," 25 pages
